PREFACE.

S the happiness of Mankind is an object of infinitely greater consideration, than the recording of those shining events, which from their nature are fo destructive to it, we could have wished that the present year had been less fruitful in the production of historical materials: this unhappily is not the case. The War that has broke out between the great Empires of Russia and Turky has opened a new, and it may be feared, in its consequences, an extensive field for History. The Invasion of the Island of Corfica has also, from the bravery of its defenders, been productive of remarkable events; and, from the motives that influence their conduct, is an object deserving confideration. The unhappy disturbances in our Colonies, as well as those which have happened at home, are matters of fuch importance to us, as demand our utmost attention. A new War which has broke out

A 2

PREFACE.

in the East Indies, is also an object of great consideration. To these particulars we have paid our utmost attention, and hope we have given such an account of them, as will

prove fatisfactory to our Readers.

The Compilers of a work of this nature have some particular difficulties to encounter. While on one hand we are attentive to the felecting of materials, and restrained by the limits assigned to the different parts; on the other we are anxious for fear of omitting such things as our Readers may wish to see preserved. A due sense of the obligations we are under to the Publick is, however, fuperior to every other confideration; and as the prefent year has been uncommonly productive of remarkable events that do not properly come within the line of History, the Chronicle and its Appendix have, on that account, been extended to an unufual length. In this, as in every thing elfe, we hope our endeavours will meet with the fame indulgence which we have so long experienced.

THE

HISTORY

OF

E U R O P E.

CHAP. I.

Rupture between the two great empires of the East and North. Invasion of the island of Corsica by the French, in consequence of a treaty concluded with the Republic of Genoa, by which that island is ceded to the French King. Different opinions of the importance of Corsica, and some observations on the conduct of the neighbouring powers. Seizure of the Pope's territories in France and Italy. The strict union substisting between the Princes of the Bourbon line becomes more formidable from the conjunction of the House of Austria and Court of Portugal. Deplorable state of Poland. Some observations on the state and conduct of the great belligerant powers in the North. Germany.

AR has again broken out.
The whole eastern fide of
Europe, from the polar circle to the
middle of the Mediterranean, is
interested in its issue. The great
empires of Russia and Turkey, the
Vol. XI.

most powerful in Asia as well as in Europe, are engaged. Religion has entered into the quarrel, and added to its bitterness. The misferable country of Poland is the theatre of a contention, not more [B] destructive

destructive in its consequences, than fingular in its causes and pretexts. The despotick power of Russia becomes the guardian of Polish freedom; and the catholick religion slies for protection to the standard

of Mahomet

As yet the nearer parts of Europe are not directly engaged. France has indeed made an extraordinary movement, and it is not easy to foresee what the event may be. That ambitious power bore a full share in the calamitous effects of the last war. These seemed fully sufficient to correct, for some time.that-reftless disposition, which had so often proved fatal to the general repose. Loaded as she is with a heavy debt, and wounded in many essential parts of her commerce, it would require all her attention, together with a confiderable length of time, to lessen the one, and effectually to restore the other. Ease and the leifure of peace might feem also necessary, to bring the great improvements the is attempting in agriculture to any degree of perfection.

In this fituation, she has however ventured upon enterprises, which at another time might have plunged her into a war, and entirely prevented the attainment of objects apparently fo necessary to her. About the middle of the last fummer she sent a considerable body of forces to take possession of the island of Corfica. This meafure was in confequence of a formal treaty concluded with the republic of Genoa, by which the latter cedes, for an indeterminate time, the kingdom of Corfica to the French King. Thus was a nation disposed of without its consent, like the

trees on an estate.

It might have been apprehended that this procedure would be confidered as an infraction of the treaty of Aix La Chappelle, by which it had been provided, that no change should be made in the state of Italy.

From various causes so extraordinary a step has hitherto produced no visible motion in any of the powers interested in that treaty; the smaller acquiescing through sear, some of the greater from a change in political connexion, and others perhaps waiting the issue of secret negociations, or a more favourable juncture for the affertion of their rights.

The island of Corfica was of very little consequence while in the hands of Genoa. As an independent state, it could be no object of jealousy or danger to any other. As an acquisition to France, it may be regarded as an object of consideration, especially to the mari-

time powers.

Much has been faid on one fide and the other of the value of this Island. Some have set it up as a place of infinite importance, fertile in its foil, producing all the materials of an extensive trade; abounding with large forests full of the best ship timber, and not destitute of harbours equally fafe and commodious. Whilst others have represented it as totally barren and unproductive; full indeed of woods; but producing no timber of value in ship-building, and the coast totally destitute of harbours. Probably both these pictures may have been overcharged. It is certain, that the fituation of the island seems to give it a command of a great part of the coaft of Italy; and if the harbours are

not

not of the best, some by art and expense may be rendered tolerable, and small privateers may issue from them capable of giving great diturbance to trade in time of war. The French have spoken their opinion of the value of this island very distinctly, by going to so much expense and running such risques in

order to acquire it.

The King of Sardinia, a wife and politic prince, who has fo long and so ably supported the balance of Italy, feems to have been the only power who regarded it in the light in which it deserved. It is said, that he applied upon this occasion to a great power and ancient ally, and proposed their jointly taking fuch effectual measures, as would have infured fuccefs; but this application being without effect, he was obliged to remain an unwilling spectator of an evil, which standing alone he must be unable to remedy. The inactivity of the house of Austria upon this occasion ought to be attributed to some other causes besides either indolence or inattention. It is probable that the difturbances in Poland, and the war breaking out between the great neighouring powers, can only account for this conduct, and may from their nearness and other circumstances be so interesting, as to draw the attention of the court of Vienna from every other object to their confideration only.

Whether it was from a deep and critical knowledge of the political temper and complexion of the times, or whether it proceeded from a fortunate concurrence of events only, France feized the lucky minute for the invasion with impunity of that island; a measure which at other times, and in other

fituations, would have drawn upon it the resentment of half Europe. The Genoese immediately put into the hands of the French troops the few places which they still possessed in the island, and which consisted of Bastia the capital, and of a few other fortified towns. If the court of France has not yet had the fuccess in that attempt which their fanguine expectations formed, and the general opinion imagined, it is only to be attributed to the invincible courage of the Corficans, and to the great qualities of their chief Paoli. But as it is impossible for a poor and little nation, confifting of less than 200,000 souls, to maintain fingly a continual war against such a great and powerful monarchy, fo the brave and vigorous opposition hitherto made by the Corficans can, without fome powerful affiliance, serve only to render their fall glorious.

The attempt upon Corfica is not the only extraordinary event, which this year has produced in the South of Europe. The peaceable estates of the Sovereign Pontiff, both in France and in Italy, have for once had their flumbers broken by the alarms of war, and have fuffered invafions and bloodless conquests from those, who had been long looked upon and fliled the best sons and defenders of that church. This may be regarded among the first apparent effects of that fettled and strict union which at present so closely binds the different branches of the house of Bourbon. Happy if it should have none more confiderable!

The conjunction between the members of this compact and the houses of Austria and Portugal; both of which may now in some measure

[B 2] be

be regarded as links of the same great chain, that embraces in the Brickelt manner the whole South of Europe, adds too much weight to an alliance already too powerful, and of fo alarming and dangerous a tendency. Nor does the unformity of conduct observed by those powers in the late disputes between the Pope and the Duke of Parma leave any room to doubt of the closeness of the present connections between them. And though as protestants we may he glad of any event that reduced the power of the Roman Pontiff, yet as good politicians we must regret, that any accident should throw fo noble a country as that of Italy into the hands of fo formidable an alkiance.

If the South has not yet exhibited all the calamities of war, the state of affairs in the North has unhappily assumed and still bears the most melancholy appearance. The flattering and fanguine expectations which were formed on the conclusions of the late diet in Poland, and the intervention of the Ruffians in the affairs of that kingdom, were totally overthrown almost as soon as they were formed; and that unfortunate country has been fince the theatre of the moit cruel and complicated of all wars; partly civil, partly religious, and partly foreign. It must be allowed that the measures relative to the diet, as well as those which for some time past had regulated all the transactions in that country, feemed pregnant with fuch feeds of discontent, as might well he expected to produce, fooner or later, some very extraordinary confequences. We have seen a foreign army, under colour of friendship, take possession of a country to which they did not even pretend a right; we have feen them, for a course of years, peremptorily dictate to the members of a once great and free nation, the measures they fhould purfue, and the laws they should establish for their own internal government; and we have feen them feize the fenators of that nation, and fend them prisoners to a foreign country, for daring to have an opinion in their own national councils. It is not then to be wondered at, that the Poles, a brave and haughty nation, long nursed in independence, and whose nobles had exercifed in their respective districts an almost unlimited fovereignty, should ill brook a submission to such unnatural acts

of foreign power.

The confequences have accordingly been fatal. The refentment excited by patriotism from a sense of national injury and dishonour, being embittered and inflamed, by the spirit of cruelty and animosity, which is almost always inseparable from religious disputes, that unhappy country has exhibited; in the course of the year, scenes of horror, calamity, and defolation, with which we are happily but little acquainted in this quarter of the world. Citizen destroying citizen; foreigners drenching the vast plains of a great country in the best blood of its inhabitants, and the fields covered with the unburied bodies of those that used to till them, are but a part of the horrors of this dreadful picture. We fee a great Monarch, who wants neither parts nor fenfibility, a filent and helpless spectator of the ruin of his country, and indebted for his own protection to the destroyers of it. We also see a great and

antient

antient Nobility, who have for a fuccession of ages been famous for their martial exploits in the defence of their country, now sly for refuge to the common enemies of the Christian name, and offer to put themselves and their country into hands so odious to them.

Russia is upon the eve of a trial of power and skill, with a great and potent neighbour. The concest will probably be very bloody, and it is as probable, will be attended with no fignal advantage to either fide. The Russians have certainly at present great advantages, with respect to military knowledge and discipline. On the other hand, the enthusiastic valour of the Turks, their numbers, and the resources which arise from their extensive dominions, may be supposed in a great measure to compensate for these deficiencies. To this it may be added, that the inequality in point of experience and discipline will daily lessen by a continuance of the war, and that the Turks are naturally capable of being very formidable in the field.

t is indeed probable, that there will be extraordinary exertions made on both fides. If the Empress of Russia possesses a spirit worthy of a successor of Peter the Great, the present Grand Signior is said also to shew an extent of mind and capacity, much superior to any of his late predecessors. no other powers interfere in it, the war, notwithstanding, may not be of a long continuance. The frontier provinces on both fides are poor, barren, and uncultivated; and the greater part of the few inhabitants, a miserable banditti; that have scarce any thing to lose.

The expence and difficulty of fupporting armies in distant wastes, that afford few of the necessaries of life, is very great; nor is a battle in fuch a fituation attended with the consequences that it is in rich and cultivated countries. The climate is also harsh, the winters are long and fevere, and armies foon grow weary, when they experience all the possible incommodities of war, and none of the usual pleafures or emoluments of it. It is true that Poland will, for these and other reasons, become in a great measure the principal seat of the war; but the calamities of the past year have placed that unfortunate country in almost the same situation with those we have described. The favage and barbarous manners of the fwarms of irregular troops that are employed on both fides must also put a stop to tillage and cultivation wherever they direct their course; and they undefiguedly abridge the duration of a war, by cutting off the means that should support it:

It does not appear that the court of Russia was at all desirous of entering into this war, if peace could have been possibly preserved, without giving up its favourite fystem in Poland; and the occafional disorders committed by its troops on the Ottoman frontiers do not feem to have proceeded from any fixed defign of giving umbrage to that court; at least till matters were carried to fuch lengths, that there were no longer any hopes of preserving harmony. There is no doubt, however, but this court foresaw that war would be the probable confequence of its conduct in that country; an event,

 $\begin{bmatrix} B & 3 \end{bmatrix}$

which

which the repeated remonstrances of the Porte, and the anxiety it shewed at the pursuit of those measures, sufficiently indicated. It was accordingly well prepared for this event; its armies were in good condition, its stores and magazines well provided, and the disposition of its troops such, that they might be readily affembled in bodies upon the frontiers.

Notwithstanding any difinclination this court might have to entering into the war, it betrayed no fymptoms of weakness or meanness in endeavouring to avoid it. On the contrary, it shewed Oct. 5. great dignity and firmness, upon the arrest of its minifler at Conftantinople; upon which occasion it loudly justified his conduct, and applauded his foirit, in not making any humiliating concessions; or submitting to conditions, that were derogatory to the honour and glory of the empire. In a word, there is a fpirit and firmness visible in all the measures of this government, and an apparent vigour in the different departments of its administration. from which great things may be expected.

The conduct of the Grand Signior, in regard to the transactions in Poland, has been hitherto blameless and irreproachable; and feems entirely confiftent with the character of a good neighbour and faithful ally. The affairs of that country have, for fome years past, greatly attracted the attention of the Porte; nor could it indeed have been an indifferent spectator to the late measures pursued there. The great and growing power of the Russian empire, and the fupreme afcendant it has acquired in

all the transactions of the North. were in themselves, objects of sufficient jealousy to fo near a neighhour. But the almost absolute dominion which it had lately acquired, and the unlimited authority it exercised, in so considerable and extensive a country, and posfessed of such great natural powers as Poland, was an object of fuch moment, as the Grand Signior could not possibly have overlooked, without giving up every pretension to true policy, and even to common prudence.

In fact, while its kings were elected, its laws passed, and its states governed under the influence of a Russian army, Poland could be confidered in no other light than as a province to that empire; and the splendid titles of Kingdom and Republic were only a mockery and cruel infult on its degradation. The Poles might have urged, and the Turks might have been convinced, that the pretences of fulfilling treaties, protecting the Diffidents, and guarding the freedom of election, was an uleful fort of office-language, which made a very good figure on paper, and had a plausible effect in manifesto's, to the vulgar, or to those who were but little concerned. But these glosses could bear no political test of examination; as reasons of the fame, or a fimilar nature, might be eternally found for the keeping of an army in any country, under pretence of friendship or protection, and at the same time converting it to all the purposes of a conquered province. In truth. the same reasons would have held, for fending a Russian army to Constantinople, to protect the Divan, to prevent riots among the Janiza-

ries, and to restore the Christians in that empire to their antient

rights and privileges.

There is no doubt, but that the applications which have been repeatedly made for fome years by numbers of the Polish nobility to the Grand Signior have had their weight with him. The proposals lately made by the nobility of Podolia, and some other provinces, who, it is faid, have offered to put themselves and their countries under the Turkish government, upon certain conditions, must also be flattering to the ambition of this prince. Without entering farther into the motives, it is certain that the preparations for the war in the Turkish empire, exceed any thing of the same nature that has been . known for more than an age; that no expence is spared in the military departments, and that the Sultan himself attends to every thing with a care and affiduity, which fufficiently shew how deeply he interests himself in the consequences.

What part the great powers of Germany will take in this war, or whether they will take any, must be at present a matter of great uncertainty, and perhaps not yet decided in their own breasts; as it will probably depend upon future contingencies, and the particular corrounstances that may attend the progress of a fire, that has been kindled at their doors. It is certain, they have been particularly attentive to what has already passess.

fed; have compleated their armies, and taken every other meafure to be prepared for all events, that may happen in a discussion for interesting to them. The King of Prussia has, in general, approved of the conduct of the court of Russia in the affairs of Poland, and has, upon every occasion, shewn his disapprrobation of the acts of the Confederates. The power of Russia is at once formidable and necessary to him.

The court of Vienna has been much more referved, and, without any public declaration, has yet shewn no marks of satisfaction at the measures pursued in that country. It may be remarked, that upon the requisition, said to be made by the empress of Russia at Vienna, to know what part that court would take in the war, the answer was delivered in very coolterms, 'that they would remain neuter, and that their armies were defigned to protect their own dominions.' It is also observable. that some Russian troops having foon afterwards purfued a party of the Confederates within the confines of Hungary, where they killed feveral of them; as foon as Nov. 5. the news reached Vienna, Prince Kaunitz fummoned Prince Gallitzin, the Russian ambasfador, and defired him to acquaint his court, that their Imperial Majesties expected immediate fatisfaction for this violation of their territories.

C H A P. H.

Proceedings of the Grand Commission in Poland; among many other regulations, refolve to suppress the jurisdiction of the Nunciature. The Pope's Nuncio delivers briefs to the King, Primate, and Bishops, and a manifesto to the Great Chancellor, in which he threatens with excommunication those who subscribe to the acts of the Commissioners. The late Marshal of the Confederacy in Lithuania enters a protest against all the acts of the Grand Commission, and against every thing that shall be transacted under the instruence of foreign arms. All the treaties between the Republic, the Empress of Russia, and the King of Prussia, are ensured and renewed. Great immunities are granted to the Russian merchants. The Diet meets, and ratisfies all the acts of the High Commission. The two great Consideracies are declared to be at an end; patriotic behaviour of the Grand Marshals. The Diet breaks up, and every thing is immediately after in confusion. Inconsistency of the accounts we receive, of the state and conduct of the different parties in that country.

THE Grand Commission that was appointed last year in Poland, sinally to adjust the affairs of the Dissidents, had its powers also extended to other objects of the highest importance in the government of that country. The commissioners accordingly resumed their deliberations immediately after the holidays; the conferences were held at the palace of prince Repnin the Russian ambassador. Among other Jan. 14th, regulations they pre-

1768. that the King should enjoy a yearly pension of one million and a half of florins, to be paid by the treasury. That Prince Radzivil should have an annual pension of 600,000 florins, by way of indemnistration for his losses, and for three millions which the republic owed to his family. That the Treasurer of the Crown, who had hitherto enjoyed a pension of 120,000 florins, should have it augmented to 200,000; that the Great Treasurer of Lithuania should

have an augmentation of 40,000 florins to his yearly appointments; Count Fleming, the Bilhop of Widda, and some others, were also to come in for considerable sums; and it was ordered that the sum of 12,000 Polish ducats, should be granted as a yearly appendage, or portion, to the two Princes of Sayony. The revenues of the country were thus, under a Russian direction, disposed of for the support of a Russian interest, and for enabling the chiefs of that faction to stand upon a level with the throne.

Among other matters of great moment that were transacted by the High Commission, it was agreed to confirm a treaty very advantageous to Russia with respect to commerce, which had been passed between the two nations in the year 1686. A singular circumstance in this decree, and one which marks the spirit of the whole proceeding, is that the treaty is for the future to be understood and received in the form in which it exists in the ar-

chives

chives of the Russian empire, and not as it was published and hitherto received in Poland.

It was also resolved by the Commission to suppress the jurisdiction of the Nunciature, and that instead thereof, a fynod, or ecclesiastical council, should be erected, of which the Primate was to be President. That this tribunal should decide. as the dernier refort, all such ecclefrafficel causes as had been hitherto carried to the court of Rome, or laid before the Nuncio from that court residing there. That the tax on Pope's bulls should be abolished, or at least reduced, and that a new regulation should be made concerning the tythes. A minifter plenipotentiary was also to be tent to Rome, to inform the Pope of their motives for re-establishing the Dissidents in their ancient rights, and to defire his Holiness to withdraw his Nuncio, and not to fend any more to Poland, but to invest the Prince Primate with the character of Hereditary Legate.

While the High Commission was employed in this manner, a brief was delivered to the King, and another to the Primate, by the Pope's Nuncio; in the brief to the King it was faid, that he ought rather to abdicate the crown, than to fign things that were so prejudicial to the Roman Catholic religion. The Nuncio also addressed a brief to the Bishops; and he delivered on the part of his Holiness, a manifesto to the Great Chancellor in which he informed all those who may fubscribe to any articles of that nature, that they should be excommunicated. The Marshal of the confederacy of Lithuania also entered a protest, against all the acts of the commissioners, and

against every thing that was now transacting, or that should be transacted, under the influence of foreign arms. This protest also contained many fevere invectives against the Russians, and animadverted upon their conduct in general in the bitterest terms. But. previous to the Marshal's taking these steps, he had the precaution to fell all his estates, and immediately after quitted the country and retired to Rome, to shelter himself from all pursuits.

The diet having met, Feb. 1. was again adjourned for three weeks; the motives afigned for this measure were, that feveral things that tended to exasperate the minds of the people, particularly the protest before, mentioned, and the briefs delivered by the Nuncio, were to be laid before them. In the mean time the commissioners, who seem to have subflituted themselves in the place of the diet, and affumed the whole legislative authority of Poland, proceeded with the utmost vigour and expedition. When a diet agreeable to their interests could be called, there was no doubt of their giving the form of ratification to their refolves. They were, however, confiderably retarded in the execution of one part of their commission, that which regarded the finances, by the opposition of the clergy, who absolutely resused to part with any more of their revenues towards defraying the public expences. The commissioners however fixed the public contributions at 23 millions of Polish floring per annum; they also ordered a coinage of one hundred millions of filver, and twelve millions of copper.

All the treaties between the Republic, the Empire of Russia, and the King of Prussia, were renewed and confirmed; and the Empress of Russia was declared and continued guarantee of the rights and privileges of the Polish nation. The Russian merchants were to be exempted from the payment of any particular duties established in Poland; but were to be subject to the customs of transit appertaining to the Republic. By the abovementioned treaty of commerce, and by these new regulations, Rusfia took possession of the whole commerce, as before the had done of the whole government, of Poland.

· By another regulation, the Dukes of Courland were not to be obliged to receive in person the investiture of that duchy from the Kings of Poland; and the Courland nobility were to be exempt from all toll duties throughout the king-

The diet, after two more adjournments, at length finally met; a confiderable body of Ruffian troops attended as usual, to prevent diforder, and to promote unanimity. The States had very little trouble: they had nothing to do but to ratify all the articles that had been passed by the High Commission; and as an instance of the harmony that subsisted between all the parties, it was agreed, that fuch conclusions as the commissioners had passed among themselves, in their private deliberations, should be confirmed and ratified, as well as those which they had passed jointly with the Russian ambassador. The treaty which the commissioners had entered into with the ambassador, as well respecting the Dissidents, as the state in gene-

ral, and whatever other matters. was declared to have the force of a law, and was to be confidered as a fundamental and perpetual constitution. It was then declared. that the general confederacy of the states, as well that of the Dissidents. were now at an end, and the deputies made an entry to that purpose in the journals; after which, the business for which it affem-March 5. bled being now finished, the King closed the diet.

It may perhaps be worth observation, that in this complicated treaty, or whatever other name it can be called, which includes at once both public and private, foreign and domestic affairs; that it was at the request of the commissioners, and seems to be underflood as a favour, that Prince Repnin gave his consent, that the following words might be inferted in it, viz. "without prejudice to the treaty of Oliva, or that of Carlowits," though the support of those treaties was almost the fole pretence that foreigners could have, for intermeddling in the affairs of

that country.

The commissioners had proposed to affign to each of the Grand Marshals of the two confederacies, the fum of 100,000 florins, in confideration of the great expences they had been at in the discharge of their employs with dignity. This offer was rejected by both the Marshals, who nobly refused to accept of any retribution or recompence whatfoever, and declared, that in all their endeavours for the public good, they never had in view to be of charge to the state, much less to feek any interest of their own at the expence of their fellow citizens; that they were happy in having ferved their country to advantage, and sufficiently satisfied with the success of their labours. In return for this unexampled patriotism and disinterestedness, it was resolved to return them thanks in the name of the Republic, and to enter the whole transaction in the archives

of the kingdom.

It might now appear that the affairs of Poland were fettled upon a fixed and permanent basis; at least it might be imagined, that the prefent regulations would, for some considerable time, have secured its tranquillity. But nothing can be more inexplicable, by the imperfect lights that are afforded at this distance, and which appear only through a doubtful medium, than the late and present state of affairs, and the conduct of the different parties in that country.

Last year the whole nation ran into confederacies; all these lesser confederacies were at length swallowed up; and became parts of two great ones; the general confederacy of the States, and that of the Dissidents: and soon after a thorough union and coalition took place between those two. A diet was called, at the defire of all the parties; Prince Radzivil, at whose return home the whole nation kept festival, presided in it. The Diffidents were reinstated in their rights, which was a measure that both the confederacies expressed their defire of, and made one of the articles of their union. The diet was finally closed, and both the confederacies voluntarily diffolved in the greatest harmony; the Marthals thoroughly fatisfied; and the respective parties so to all appear-E LIA TAKE TO THE TOTAL ance.

Immediately after this pleafing appearance of quiet and tranquillity, without mention of any intervening act that can account for it, we fee every thing in confusion, and the whole kingdom in a flame. The Dissidents are every where cruelly oppressed, no mention now in their own immediate defence of any union, or of those numerous and powerful confederacies, which they formed last year upon grounds fo much less urgent. Prince Radzivil, who fo lately guided the voice of the whole nation, and feemed to be the only man in it capable of causing any great revolution, is now no more heard of, feems to have lost both power and popularity, and cannot preferve peace even in his own neighbourhood.

The extraordinary violence of the measures pursued by the Ruffians, particularly the unheard-of outrage of feizing the fenators, and carrying them prisoners out of the country, must, till we can acquire clearer information of the transactions there, be regarded as the primary cause, as well of those feeming inconfistencies of conduct, as of all the succeeding calamities. The apparent authority with which they dictated the subsequent meafures both of the Diet and the High Commission, whose deliberations, if they can be called fuch, were carried on under the muzzles of their musquets, and whose conclufions in many things had more the appearance of edicts coming from a Russian Governor, than of the refolutions of a Polish Senate, could not fail of producing the highest and most general dissatisfaction.

It was also said about this time, that the Bishop of Cracovia was removed from his former place of imprisonment, to the satal castle of Schlusselburgh; a report, whether true or salse, which could not sail of exciting the utmost grief and indignation.

There is no doubt that the court: of Rome and the clergy, particularly that part of them who are more immediately under its direction, finding how much its power er in that country was to be circumscribed by the new regulations, made every effort, and used all their influence over the minds of the people, to blow up into a flame those seeds of discontent, which were already glowing in their breafts. It is as little to be doubted, that these efforts had their full effect, and contributed greatly to extend the enfuing calamities; but still they are only to be considered as secondary causes, which indeed

operated with great force, when applied to minds already exasperated with oppression. Nor do the gruelties committed on the Diffidents overthrow this opinion; for it is well known that in civil wars. the minds of men are fo embittered, and their animofities become fo violent, that every trifling diftinction, whether of party, dialect, or even diffrict, will frequently excite the most inhuman cruelties. And even in the instance before us. it is faid that the Greek peafants, in the course of their insurrections this year, were guilty of the greatest barbarities to the Protestant gentlemen who had the misfortune to fall into their hands, though they were under the fame common denomination of Dissidents with themfelves; and that they had been fellow fufferers under the fame oppression, and in the same cause, for so great a number of years.

CHAP. III.

A Confederacy formed in Podolia. The Confederates take the city and castle of Bar; and oblige the commander of the crown troops in that province to take refuge in the fortress of Kamineck. Several other Confederacies formed, particularly at Halics, and in the city of Lublin; in the last of which places a skirmish ensued with the Russians, by which great mischief was done, and part of the city burnt. The Russian general Podhoriczani deseats a considerable body of the Confederates of Barnear Constantinow. The Confederates of Halics, under the Staroste Potocki, take the town of Brezani; but are soon after deseated by Colonius Weisman, and pursued into Moldavia. City of Cracow taken by the Confederates of Cracowia, who are besieged by the Russians. Engagements near Bar; the city and castle taken. Insurrection and barbarities of the Greek peasants in the Ukraine.

THE members who composed the Diet were scarcely arrived at their respective places of abode, when the news was received at Warfaw, that a confederacy was formed in the province of Podolia, into which feveral magnates and persons of the first distinction had

entered.

entered. That they had chosen M. Krasinski for their Marshal, had already raised 5,000 men, and were also raising the peasants, to whom they promised money and arms, and made the city of Bar their head quarters. This confederacy painted a wounded cagle on their standards, and the motto, "To conquer or die;" they afterwards added, "Pro religione et libertate," for religion and liberty.

Nothing ever shewed less judgement, or was more rash and premature, than the conduct of this confederacy. The Russians, deceived by the fairness of appearances, and by the strenuous remonstrances of the Porte, were just going to withdraw their forces out of the kingdom; and difpatches were received at this very time from Constantinople, which would have quickened their departure. It may eafily be judged from what has fince appeared, what the consequences would have been, if the confederates had temper or prudence to have waited for this event. In that case, the whole nation would have been up in arms before the Russians could have returned: fo that, instead of destroying petty disunited parties, and crushing every confederacy in its infancy, they would then have met with numerous and powerful bodies of men, ready to encounter them, and who, if they did fall in the defence of their country, would at least have the fatisfaction of not dying wholly unrevenged.

The first act of this confederacy was the taking the castle of Bar; which was looked upon as a considerable fortification, and was tolerably provided with can-

non and military stores. The confederates soon after attacked the commander of the crown troops in Podolia, who was obliged to take refuge in the fortress of Kamineck, with the loss of 2,000 of his men, who seem to have suffered themselves to be taken prifoners, and then enlisted with the confederates.

Several other confederacies now began to be formed, particularly at Halics, a town of Red Russia, where they chose M. Potocki, Staroste of Trembohol and Great Cup-bearer of Lithuania, for their chief. Another was formed at the city of Lublin, which the Russians attempted to carry off at its first meeting, but were opposed by the inhabitants, who founded the alarm bell, and fired at them out of the windows; a desperate skirmish then ensued in which the Russians set fire to the city by their cannon, and five palaces, a convent, and above a hundred houses were burnt to the ground; the defence was notwithstanding fo vigorous, that they were obliged to retire without executing their defign. The Russian army, under General Krefchethichow, formed a line in the palatinate of Cracovia, to prevent the progress of the confederates of Bar, who were now grown very numerous, and who plundered that General's baggage after defeating the convoy that attended it.

In the mean time, manifestos were daily published by the confederates, and counter-declarations in the King's name. The Polish troops either refused to sight the confederates when they met, or joined them, which they fre-

quently

quently did in whole bodies. Nothing can more clearly shew, the general sense of the nation, and the uniformity of opinion that prevailed, than that in the course of all the troubles, and the sanguinary executions that ensued, it does not appear by the accounts that have been published, that there was scarcely a drop of blood drawn, in any conslict between the national troops and the consederates.

The first action of any consequence that happened was at Constantinow, where the Russian General Podhoriczani, eager to acquire the honour of a victory, which he thought would be easily purchased, attacked with his cavalry, without waiting for the coming up of the rest of his forces, a superior body of the consederates of Bar, who received him so warmly that he was obliged to retreat, with the loss of 300 of his men left dead upon the spot.

This General, who is a native of the province of Montenegro, in the Turkish dominions, and faid to be descended from the famous Scanderbeg, foon took a fevere revenge for this difgrace. Having rejoined his forces, he marched fuddenly with all imaginable speed and privacy back to the camp of the confederates, which he found in a state of diforder that can scarcely be credited in these days of a civilized nation, or of any people that had ever deferved a military character. They had celebrated their victory with the most extravagant mirth and debauchery, and were lying in this state, without centinels, guards, or advanced posts, when the Russians poured in upon them. The rest was only a slaughter, and a slight. The confederates lost, in killed, wounded, and prisoners, 2,200 men, besides eight pieces of cannon. The remainder sted into Moldavia, and were protected by the Hospodar, or Prince of that country.

An attempt was made about this time by the confederates of Bar; to carry off the Prince Primate and Prince Repnin, by night, from Warsaw, in which it is said they were near fucceeding, but were however prevented by the vigilance of the Russian guards. All the provinces almost in the kingdom had now entered into confederacies, except the great dutchy of Lithuania, which was with difficulty kept quiet by the influence of Prince Radzivil and the Prince Primate. The Russians had however fo interfected the country, were fo alert in their motions. and judicious in the choice of their posts, that they prevented almost all intercourse between the different confederacies; fo that there was no concert observed in their motions, no mutual affiftance given, and they were generally cut off fingly, with little loss to the affailants.

The Staroste of Kamineck was sent to Dresden, with letters, and probably proposals to that court from the confederates of Bar; but the Princes of Saxony resused to see him, and sent him word, that they would have nothing to do with the measures in which he had so imprudently embarked, and recommended to him to quit Dresden, which he did immediately. That court then made a declaration, by its resident at

Warfaw.

Warfaw, that it would not interfere in any manner with the confederates, and that any deputy that came from them to Drefden should be fent back without an audience.

Count Branicki, Great Master of the artillery of the crown, received a commission to take the field with fome regiments. The object of this commission was not to fight the confederates, but to endeavour to bring the crown troops, who had joined them, back to their duty, by publishing an amnesty in their favour. It was in the instruments issued by the chancery upon this occasion, that the confederates were first branded with the name of rebels. do not find that the amnesty brought any of the troops back to their duty; on the contrary, a plot was discovered in the regiment of dragoon guards, which were the King's own body guards, and which were on the point of going off in a body to join the confederates. What is remarkable, and from our imperfect relations of these matters unaccountable, is, that the officers of this regiment were almost all Prote-Rants.

Scarce a day now passed without skirmishes between the Russians and the confederates, in which the former, as it might be expected, generally had the better; and the animosity was grown to high between the two nations, that wherever they met they came to blows; a great deal of blood was spilt, and great cruelties were committed upon every occasion. The nobles of the neighbourhood having under some other pretence, but in reality to form a confederacy, affembled in the city of Gnesna; the Russians who were in the city and neighbourhood engaged with them fabre in hand in the streets, where M. Zoblocki their chief, and a great number of the nobles, were cut to pieces. At the fair of Prasmits, though within eight leagues of Warfaw, a tragedy of the fame nature was acted; the natives and Russians quarrelled, and a number of lives were loft. Innumerable mischiefs were done in all parts of the country; a party of confederates pillaged and burnt the town of Zaleswick, which seemed to be a barbarous injury and infult pointed at the King, who had taken great pains in establishing several valuable manufactures there. The confederacy of Halics, under the Staroste Potocki, took the town of Brezani, where they found above fifty pieces of cannon, the uniforms of two regiments, and a great quantity of ammunition.

This confederacy now thinking itself formidable, the Marshal Potocki published manifesto's, in which he stiled himself Chief of the colours of the Confederates. On these colours were a red cross, with this device, 'By the Aid hereof, Victory.' This parade was however of little use; the marshal was attacked by Colonel Weisf-

man, and so totally de-May 21. feated, that it was with the

greatest difficulty he made his escape, with the Countess his spouse, and a few particular friends, in a boat to the Turkish side of the Neister, the Cossacks having pursued them so closely, that they fired

into the hoat, and killed two or three persons by the Counters's side.

Colonel Weissman crossed the Niester, and pursued the routed confederates a confiderable diftance within the Turkish territories in Moldavia; the Basha, who commanded in that neighbourhood, fent him word, that he acted contrary to treaty by entering with an armed force into the Ottoman territories; that he had already informed the Porte of it: and that he now cautioned him not to advance any farther, or that he would be under a necessity of drawing out his forces against him." The Russian officer pleaded ignorance of the limits, and retired: the Staroste Potocki made the best use of this protection; and his scattered party having by this means found an opportunity to rejoin him, he took a circuit through a great part of Moldavia and the territory of Choczim, recroffed the Niester, and sdddenly attacked in the rear, and defeated, a part of those Russians who had been in pursuit of him, after which he fafely joined the confederatês of Bar.

Almost all the palatinates of Great Poland were now confederated, as were the nobility of the province of Cracovia, who seized upon the capital city of Cracow, and established their head quarters there. Several engagements happened between the Russians under general Kreschetnichew, and the confederates of Bar; in one of which the latter gained some advantages, and shewed a conduct not usual with them. The Russian General having taken

an advantageous situation near Bar, thought proper to intrench his army, to wait the arrival of General Apraxin, who was marching with a considerable body of troops to his affishance. Count Potocki rightly judging it of great importance, if possible, to give a blow before the junction of those two bodies, formed his troops into several divisions, and having in a great measure concealed his numbers and motions, he with

a part of them made an May 28.

attempt upon the Ruf-

fian camp. In this attack being repulfed, he was purfued with great fury; upon which the troops he had in referve appeared by degrees to fupport him; and the purfuers being now too far advanced, the whole Rushan army were obliged to draw out of their lines, and a bloody engagement ensued, in which the latter were faid to have suffered a considerable lofs.

No authenticated detail has been published of the transactions in this part of the world; nothing can be more imperfect, more contradictory, or unfatisfactory, than the loofe and unjointed accounts we receive of them; no connection is observed, dates are feldom given, and proper names are so varied and disfigured, that it is frequently by weighing and comparing a number of circumstances, that any conclufion can be drawn from the reprefentations given. We now faw the confederates of Bar very formidable, and attack the Russian General in his camp, who found entrenchments scarcely sufficient to cover his army; in a fortnight after, without any action intervening

that

that we have any account of, this confederacy is almost totally dispersed, and the poor remains shut up and closely besieged in the city and castle of Bar.

June 10. about this time iffued An Univerfalia was for the holding of a general diet; the treasury also at Warsaw gave public notice, that a pardon would be granted to the Marshal of the confederacy of Great Poland and to his adherents, provided that they furrendered in three weeks, and made a submission for their fault. Large bodies of Russians were now continually marching into the kingdom; and their troops were fo dispersed in every part of the country, and their activity fuch, that numerous though the confederacies were, they were gemerally attacked and routed as foon as formed: and it did not unfrequently happen, that they were crushed in the very bud, in the first instance of their assembling. A continued flaughter attended these actions; and blood, violence, and rapine covered the whole face of the country. The Russian minister Prince Repnin, being apprehensive of the confequences of the irruption which Col. Weissman had made into the principality of Mo'davia, made a declaration to Messrs. La Roche and Saul, refidents from Moldavia and Wallachia at Warfaw, That the conduct of that officer was absolutely contrary to the orders of his court; that therefore the Colonel, though he had otherwife rendered himself commendable to her Imperial Majesty, would be put under arrest, and turned out of his place; and that they might inform their Princes and the Ottoman Porte thereof, whilst he Vol. XI.

would at the same time send notice of it to the Russian minister at

Constantinople.

The confederates of Great Poland about this time received a fevere check; a confiderable body of them, under the Sieur Raydzinski, being entirely defeated, and the scattered fugitives forced to fly for shelter into Silesia; upon this occasion the town of Pisdry was reduced into ashes. Soon after this affair, the town and June 28. castle of Bar were taken; the confederates were faid to have loft 4000 men upon this occasion, including the prisoners. The Rusfians took at this place fixty-nine pieces of cannon, with a quantity of military stores, and other booty to a great amount, fo that the shares of several of the common foldiers, in money, goods, and jewels, amounted to three or four thousand ducats a piece; the inhabitants of Podolia, Volhinia, and the Ukraine, having, from the supposed strength of the castle, deposited their treasures there, as in a place of common fecurity. Messrs. Krasinski, Potocki, and the other great chiefs, had made their escape during the fiege; they afterwards went to Mohilow and to feveral other towns, where they attempted to form new confederacies; and, notwithstanding the destruction that had hitherto attended that measure, so violent and general was the ferment, that they found the people every where ready to join them. They were, however, so closely pursued by the Ruslians, and fo continually routed, that they could not make any head, and were at length forced to fly for protection to Choczim, a Turkish fortress built on the opposite fhore shore of the Niester to Kamineck, where they for some time experienced a miserable reverse of fortune, and were reduced to the greatest indigence and distress.

The first thing almost that we hear of the confederates of Cracow, is their being befieged in that capital by the Ruf-July 6. fians. Here they made a very long defence, which must "in a great measure be attributed to the King's remonstrances, who prevailed on the Russians not to destroy the city by firing against the houses; it must however be allowed, that the confederates defended it with great bravery. A train of artillery was fent from the arsenal of Warsaw to assist in the fiege. Count Bruhl, who was Staroste of Warsaw and General of the artillery, refused this service, and defired leave to refign, as he would not on any account make himfelf answerable to the state for the confequences of fuch a measure. News was received that the first great column of the Russian army under General Romanzow, confisting of 50,000 men, was advanced as far as Bialacerkew. This intelligence, alarming as it was, did not in the least damp the rage which possest the minds of the people; fo that though every day brought an account of some engagement, and every engagement was attended with the destruction of a confederacy, yet new ones started up faster, and in greater numbers, than they could be destroyed. The antipathy and abhorrence to the Ruffians was fo violent, that it feemed totally to abforb every other paffion and feeling of the human mind; fo that, notwithstanding the dreadful examples around

them, and the continual havock they were witnesses to, they rushed headlong upon a destruction, which they did not seem to wish to avoid.

An infurrection of the Greek peafants, which now happened in the province of Kiovia and the Ukraine, was attended with fuch circumstances of barbarous and inhuman cruelty, that it feemed to take off from the horror of many of those scenes which this unhappy country had already presented. Those peasants, who had long groaned under the tyrannical oppression of cruel masters, were now a fignal instance of the badness of that policy, which would deprive any part of the community of their rights as men, and degrade them to the condition of flaves. The poor in all countries meet with much injury and oppression from the rich and the great; yet we find, that where they are allowed to participate in almost any degree of the common rights of mankind, and to partake of the general gifts of nature, they will in times of public diffress adhere to the fortune of their superiors with the most persevering fidelity, and freely spend their blood in the defence of benefits, of which they partake so small a share. But in the country of which we treat, where the bulk of the people can claim no rights, the cruel hour of weakness and distress was instantly feized upon, as the happy opportunity to revenge upon their masters all the past injuries and oppressions which they had suffered from them.

The peafants accordingly finding that most of the arms, ammunition, and stores, and many of the best men, were drawn out of

the country, affembled in great bodies, and committed the most favage cruelties, murdering without distinction gentlemen, ecclesiaftics, Jews, Catholics, and united Greeks; and sparing neither women nor children. The Sieur Deffert, Governor of Palawoes, and his Lieutenant, having fortunately got timely information of their defigns from the Bishop of the united Greeks, faved their · lives by flying to Rowna in Vol= hinia; but the barbarous peafants maffacred the Bishop for his humanity. The Governor of Smila had so little notice of his danger, that he escaped to Rowna in his shirt only, and left his wife and child facrifices to their fury. Fifty Prussian hussars, who had the misfortune to be in the country buying horses, were murdered by them, under pretence that they were Polish gentlemen in disguise. To the Jews they bore a particular animofity, as they had been long employed by the nobility as stewards in the management of their estates, in which office they treated these people with great cruelty and oppression, who now took a most cruel revenge, slaughtered many thousands of them, burnt their houses, destroyed their books and papers, and seemed as if they would leave no vestige that they had

ever existed among them. Having called in the Haydamacks or Zaporoutské Cossacks to their assistance, they seemed to threat the utter destruction of the country; whole starosties, districts, towns, villages, were sackt and burnt; and the devastation they made was beyond description. Count Potocki, Vaywode of Kiow, had no less than ten towns, and one hundred and thirty villages, destroyed in his own territories.

The Russian General Apraxia having at length marched with a body of forces against these miscreants, he flaughtered a great number of them, hanged a great many more, and took about 800 prisoners, most of whom were sent in chains to work upon the fortifications for life. The Haydamacks immediately retired upon his approach; and so great was the terror which the Russians spread among the peasants, that several thousands of them quitted the country along with the Haydamacks, with a refolution never to return. The court of Warfaw, to prevent fuch calamities for the future, issued strict orders to all persons who were possessed of estates in that country, to treat their tenants with lenity, and not to give them any just causes of complaint.

CHAP. IV.

Siege of Cracow. The confederates defire a capitulation, which is refused by the Russian Generals. The city at length taken by slorm. Deplorable state of the country. Insurrection of the Greek peasants at Mozyr in Lithuania. A new irruption of the Haydamacks into the Ukraine; and a second insurrection of the peasants in that country. Town of Zwaniec plundered and burnt by the Turks. Several confederacies formed in Lithuania. Strange conduct of the confederates in that dutchy; those of Ocsamia invest Prince Radzivil, and are themselves surrounded and taken by the Russians. Motions of the Turks and Tartars. Manifesto's dispersed by the confederates. The Russians form lines upon the frontiers.

GEN. Apraxin after this service marched with all expedition to the fiege of Cracow, which was still closely invested by the Generals Bock and Chreschetnichow. The confederates defended the place very bravely, and made feveral desperate sallies; as provifions grew scarce, they maimed their horses, and turned them outfide of the gates, where they were shot by the Russians; and their putrid carcaffes lying under the walls, in that hot feafon of the year, infected the air, and added to the calamities of the befreged. There were a great number of Diffidents in the city, who were thut up in the Jesuits Convent, and their wives in that of the Nuns of St. Andrew: their houses, shops, and magazines were fealed up, and the Marshal of the confederacy posted centinels at them, to prevent their being plundered. Prince Martin Lubomirski, Chief of the confederacy of Sanock, being apprehensive of the danger of continuing longer in the city, made a desperate effort, at the head of Soo of his followers, to force his way through the Russian lines, in which he succeeded, and got clear off,

with the loss of about Aug. 3.

At length the Russians, after a bloody dispute, took a quarter of the city called the Casimirs, and an entrenchment guarded by feven pieces of cannon. The confederates also burnt to the ground one of the finest suburbs belonging to the city, because it was useful to the Russians in their approaches, by which an immense loss was suftained, not only by the inhabitants, but by the merchants of other places, who had goods deposited there to a great amount. The befieged, however, finding their condition become every day more desperate, and no possible hope of relief lest, proposed to capitulate, which was refused by the Russian Generals, who said the Empress could not grant a capitulation to persons who had rebelled against their King. This cruel declaration having drove the confederates to the utmost despair. they prepared to defend themfelves, as became men in their fituation, to the last extremity.

The Russian army being strengthened by the arrival of several considerable bodies, an ex-

press arrived from Prince Repnin to General Apraxin, with orders to storm the place. The necessary difpositions being accordingly made; the affault was begun at two o'clock in the morning, and lasted above four hours; and to divide the attention, and increase the confusion of the besieged, two false attacks were made at the fame time. When the Russians got to the foot of the wall, they blew open two of the gates with petards, in order to let in the cavalry; but the befieged had flopt up the way, by planting chests filled with stones, and digging several deep ditches in the streets; notwithstanding all these difficulties, and the continual fire of the confederates, the Russians forced their way through them, and entered the

They had no fooner got in, than the confederates made a terrible fire upon them from the adjacent houses; and the priests were very active in encouraging the people to make a vigorous defence. Nevertheless, the Russian officers and soldiers are faid to have committed no excesses, though they might have made a terrible flaughter; but immediately published, by found of trumpet, that all who would lay down their arms should be pardoned. had the defired effect; and most of the principal Poles furrendered immediately, and the people following their example laid down their arms; a small party only of the mutineers retired into the Jesuits convent, and defended themselves there, so that the conquerors were obliged to take the building by force. This event would have proved fatal to the Jesuits, if Prince Repnin had not before granted them a pardon, on

account of their protecting the Diffidents against the fury of the mutineers, even fo far as to give them money to support them under their misery. The loss of the Russians upon this occasion amounted to about five hundred men, and some officers of note were wounded; the confederates, having expended all their ball, loaded their pieces frequently with money, which they fired among the conquerors; and this new species of ammunition is complained of as doing great mischief. The number of confederates taken amounted to above three thousand; most of whom, soon after, got their liberty, upon taking an oath and engaging in writing, not to enter again into any confederacy, but to continue faithful subjects to the King and to the Republic; to return quietly to their respective habitations, and to conform themselves in every thing to the new conflitutions agreed upon in the last Diet.

This is the Russian account of the taking of Cracow; other accounts. however, do not acknowledge the moderation that is here faid to have been observed upon that occasion; on the contrary, they reprefent the flaughter to have been very great; and fay, that few of the Poles escaped with life, who were in any of those houses from whence the firing was made in the streets. During the fiege, the Russian detachments had the greatest success in all parts in routing and dispersing the different confederacies; and the confederates of Siradia, Zywiee, Peterkau, Siewics, and many others, had been totally dispersed.

A confederacy had been formed at Gostin, by the Sieur Dzierzanowski, one of the King's Chamberlains. This gentleman, who was of a diffinguished family, but reduced in fortune, had been an officer in the Spanish service in South America. Upon hearing that a native was elected King of Poland, he conceived fuch joy at that event, that he quitted the Spanish service, and returned home, upon which the King made him one of his Chamberlains. The pleasing expectations which he had formed, were probably but little answered by the picture which his country presented However it was, at his return. whether from patriotism or ambition, or thinking the King rather enflaved than protected by his Russian allies, he now raised troops against him, and became Marshal of a confederacy. This confederacy, like the rest, being soon dispersed, the King offered a reward of 2000, and Prince Repnin of 1000 ducats, for taking him; and he was the first Chief of the malecontents who had a price fet upon his head.

Notwithstanding these continued fuccesses, the troubles seemed every day to increase; and the face of the country exhibited every spectacle, dreadful, shocking, or degrading to human nature. The roads were to human nature. every where impassable, being covered with a ruined, desperate, and armed people. The cruelties, which from the beginning had been practised on both sides, had extinguished all the feelings of humanity, and steeled the heart against every motion of compassion or mercy. Villains of all forts took advantage of the public calamities, and appeared in bodies armed, as if they were flying parts of fome ruined confederacy; under which fanction they committed the most barbarous outrages. The fields were covered with the unburied dead, whose bodies

tainted the air, and made the country unhealthy and loathsome. It was computed, that by this time, above fixty Russian officers, who had been fent express as couriers, upon different occasions, had been murdered upon the roads. Colonel and Major de Goltze, sons of the celebrated Baron of that name, and many other persons of the first distinction, met with the same unhappy fate. Whole diffricts were in many parts entirely depopulated, the people being either cut off, or fled to remote places. Some German officers, who had been to buy horses, declared, that in a tract of country fixty miles long by thirty, they had not met a living human crea-

Every meeting of the Nobility was attended with blood-shed, and the fabre was the refult of all their debates. The Universalia that were issued for a general Diet answered no purpose; most of the Dietines broke up in diforder, the Nobility refused to attend them; and there were but few Deputies elected. The Dislidents were every where plundered, and treated with great cruelty; and there was not a Protestant gentleman in the two provinces of Great or Little Poland, estate was not pillaged, and his houses burnt. Those in the towns. who were very numerous, had no greater fecurity, but were liable to every species of outrage; and the more unhappy the affairs of the confederates grew, the greater were the cruelties which they exercised on those unfortunate people, as if they would retaliate on them all the miferies that they fuffered.

The infurrection in the Ukraine was fcarcely supprest, when another of the same nature broke out at

Mozyr,

Mozyr, in Luthuania, where the Greek peafants murdered a great number of gentlemen with their vives and children ; and burnt and ceftroyed a great part of the coun-The Haydamacks also made afecond irruption into the Ukraine, where they burnt three towns, above fity villages, and massacred near 1000 persons; the greater part of tiefe unhappy victims were Jews, nost of whom they cruelly burnt to ceath... It was, probably, this irrupton of the Haydamacks, and perhaps the return of some of the fugtives, who had before quitted the country, that excited another infurrection among the pealants of the Vkraine, who in the latter end d August rose in great numbers, and gain renewed all those barbarities for which they had been fo lately castised. The Chiefs of the confderates of Bar, being kindly teated in Moldavia and Wallaoia, were joined by great numbers c their adherents, and began now t make frequent excursions across te Neister; so that Count Branicki, the commanded a confiderable beey of Crown troops in those parts, bund more employment than he vas equal to, in endeavouring to appreis the peasants, and to repel be incursions of the Confederates nd Haydamacks.

The Grand Dutchy of Luthuania, aving been kept in quiet through ne influence of Prince Radzivil, ad hitherto escaped the calamiies which wasted the rest of the naton. The happy effects of this conact were now so visible, and the refent fituation of affairs made any eviation from it so useless and danerous, that a confederacy there an only be attributed to a blind itality; or to one of the most extraordinary or most unaccountable \$... movements of the human mind. Yet it was under these circumstances, were when the two great confederacies were totally destroyed, all the others weakened and ruined, the whole country occupied by Russian troops, and the grand army in full march towards it, with the recent transactions of Cracow before their eyes; that the nobles of Luthuania, by forming three new confederacies. chose to encounter singly all those dangers and troubles which they had been hitherto witnesses of. These confederacies were very confiderable, as well from the quality as the number of the persons who composed them, insomuch that Prince Radzivil, even at their first appearance, was afraid they would have carried off 5 or 6000 foldiers which he kept in his own pay, though he had two fortified towns to cover them.

The conduct of the Porte, and the protection and shelter afforded by it to the confederates, could not but be alarming to the Ruffians; but whatever jealousies they entertained on this head, were carefully kept from the public notice in Poland, where these circumstances were attributed to the partiality of the Basha of Choczim. The Turks had hitherto refrained from committing any kind of excess upon the borders; but in the interval between the recall of that Basha and the coming of a new one, a number of them went to the fair of Zwaniec, a Polish town upon the frontiers, where a quarrel happened between them and the inhabitants, who affembled to drive them out of the town; but the former being supported by fresh numbers of their fellows, who through design or chance [C4] That year you came

came to the fair; they killed feveral of the inhabitants, pillaged the town, and then reduced it to affect.

The new Basha having arrived at Choczim, was waited upon by Count Branicki. who made a complaint of the violences committed at Zwaniec, and demanded restitution. This was in part granted, the effects that were stolen upon that occasion being reitored; and feveral of the Turks, who had committed the outrage, thrown into irons. In respect to other matters, the Basha expressed in-general terms a defire to preferve a good understanding with the Republic of Poland; but faid, that as he did not chuse to interfere in the disputes that distracted that country, he would not turn out of the Turkish territories the confederates who had fled there for protection. It was at the same time obferved, that he received the Chiefs of the confederacy of Bar with great distinction.

Several large detachments of Ruffian troops had been fent to Lithuania, where the deligns of the confederates were fo ill-formed, and fo miserably supported, that it would appear as if they had confederated from no other motive, than to rain the country, and to destroy them-The first division of Russian troops defeated and dif-Sept. 14. perfed a large body of thefe confederates with great eafe, between Xuren and Vilcomiers. where they killed about two hundred of them, and took as many prisoners. The confederacies of Kowno and Wilkomierz, which were the first that were formed, and who fet the example to the rest, broke up of themselves without receiving a blow; and their Chiefs, after returning some

prisoners they had taken from the Russians, retired into Brandenburgh Prussia. The confederates of Prazaw, though unsuccessful, shewed more vigour, and had a very sharp encounter with the Russians, in which they were however defeated, with the loss of a great number of men, eight pieces of cannon, and

all their baggage.

The contederates of Ocizmania were still considerable, when they formed one of those strange designs, which may excite curiofity, but can never be accounted for, and in parfuance of which they were taken like wild beasts in a toil, and their confederacy annihilated in a moment. The scheme laid, was either to furprize or force Prince Radzivil, who was guarded in his fortified capital by a body of his own forces, equal or superior to theirs; and was protected by a confiderable body of Ruffians under General Ismaelow. who were posted within two leagues of him. To execute this defign, above three thousand of the confederates marched to Niefwifz, the Prince's refidence, and peremptorily demanded; that he should either enter into their confederacy, or deliver up his troops, artillery, and ammunition. The Prince absolutely refused to comply with any of these demands, and the design bate continued to long, that while they invested the town, they were so effectually furrounded by the Russians, that not a man of them could escape. In this situation they offered to renounce the confederacy, on having liberty to

retire; but this being refused by

the Russian General, they applied to

Prince Radzivil to intercede in their favour. The Prince accordingly

dispatched a courier to Warlaw,

with

with a letter to Prince Repnin in their behalf, at whose return, upontheir delivering up their arms and ammunition, and engaging not to enter into any future contederacy, they were permitted to depart.

The defigns of the Porte being now become apparent, great bodies of the Russian troops began to file off towards the frontiers of Turky. while new ones arrived every day in the kingdom. Prince Martin Lubomirsky, who with his adherents had for a long time found shelter in the mountains that border on Hungary, and from whence they did great mischief; found means now to get a manifetto posted up against the churches of Cracow, and Nov. 7. fome other places, in which he invited the nation to a general revolt; and affured them of the affiftance and protection of the Porte, in virtue of a treaty which he pretended to have concluded for that purpose. It was also said, that the confederates of Bar, to interest the Grand Signior the more strongly in their favour, offered to refign the provinces of Podolia and Volhinia into his hands, and to become his fubjects upon the fame terms that are granted to the inhabitants of Moldavia, and some other provinces of his empire. They also published manifesto's, and had them dispersed throughout the kingdom, wherein they denied all allegiance to the King, declared his election illegal; and were filled with the bitterest invectives against the Russians.

Large bodies of Tartars now appeared upon the frontiers; and a confiderable Turkish army was affembled between Choczim, Bender, and Oczakow. The Russians also formed a line of troops along the Turkish frontiers of Poland, as well

as their own country; General Romanzow had the command of the grand army, which was to act offenfively, affigned to him; and General Soltikow, that on the frontiers of Poland. The season was too far advanced for any military operation of confequence to take place before the spring; nor were either of the great powers as yet thoroughly prepared for fuch an undertaking. The Tartars, as well as the confederates in Moldavia, who now amounted to eight thousand men, attempted some excursions across the Niester; but they were attended with little fuccess, and they were generally obliged to retire with precipitation.

The winter, however, afforded but littlerepose to the unhappy country of Poland; where, upon the departure of the Russian troops to the frontiers, the remains of the dying confederacies again lifted up their heads, and immediately refumed all their wonted licentiousness. The province of Great Poland was particularly harraffed, where Malaczewski, being appointed Marshal of a new confederacy formed at Kalifch, became infamous for the great mifchiefs he occasioned; and for the horrible cruelties which he committed upon the Dissidents.

No confederacy had been formed during these troubles in Polish Prussia; yet they were subject to occasional inroads of the confederates, who, sometimes, did much michies. A party of five hundred horse now appeared between Thorn and Grandents, who stopt and unloaded some of the corn vessels on the Vistula; and threatened the villages severely, if they did not furnish them with men, arms, and money. A considerable party of confederates, amounting

mounting to about three thousand, carried off the tribunal at Bromberg; after which, they committed great derredations along the banks of the W arta; but were, at last, defeated " by Colonel de Bock, with only five hundred Cossacks. The kingdom in general fuffered a prodigious depopulation; exclusive of the havock made by the fword and its attendants; the peafants in great numbers quitted their habitations, and either fled the country, or turned robbers, and did more mischief by staying in it. Great numbers of people of rank fled from all parts of the kingdom for refuge to the neighbouring countries; the city of Koningsberg and its environs was for crowded with Polish ladies, and other refugees, that, though a capital, it could not provide lodgings

for them, and numbers were obliged to go to remote places in the country for accommodation.

It may, perhaps, be worth observation, that the Russians have taken all Prince Radzivil's troops, confifting of five or fix thousand men, into their fervice; except about two hundred, who they have left as a guard to his perion. They have alfo placed garrifons of their own troops in his two fortresses of Niefwics and Sluck. Whether this has had any effect upon that Prince's subsequent conduct, time must determine; but it is certain, that he immediately retired to one of his country feats, where he has ever fince refided; and though his long absence from court occasioned much speculation, he has not yet gone there.

CHAP. V.

Russia. Declaration on the war with Turky. Preparations for it. Adventurer Stephano. Great bravery of the Montenerius; are at length defeated by the Turks. Conduct of the Porte with respect to Poland. Affair at Balta. New Vizir appointed. Russian Resident summoned to the Diwan; several articles proposed to him; is sent to the Castle of the Seven Towers. Turkish manifesto. Vast preparations for the war. M. Obrescow, the Russian Minister, is removed from the Castle of the Seven Towers to the Keefer's house, through the intervention of the English Ambersale.

THE affairs of Ruffia have been of late so intimately blended with those of Poland, that little remains to be noticed in our accounts of the one, that has not already occurred in those which we have given of the other. We have before observed, that the court of Petersburgh was not desirous of entering into the war with Turky; if that measure could have been avoided without the giving up of a very savourite system with respect to Poland. In the declaration made by this

court to the other Christian powers, upon the arrest of its minister at Constantinople, great complaints are made of the common enemies of both empires, who blackened at the Ottoman Porte all the actions of her Imperial Majesty, and sowed the seeds of discord there by the most false imputations. To these incendiaries, and to the success of their impositions upon the Turkish nation, it attributes that spirit of discontent which found its way

way even into the Seraglio, which occasioned the late change of the ministry at Conftantinople, the arrest of the Eussian Resident, and all the firefequent confequences. The declaration concludes with an appeal to all the Christian Powers, in regard to the integrity and justice of the Empress's conduct, an expectation of the just assistance of her friends, and of the good wishes of all Christendom. Our readers will fee this declaration, as well as the manifesto published at Constantinople, in the State Papers of this volume,

By the latter part of this declaration it appears, that the Empress intends to call upon those powers in alliance with her, for fuch affiftance as they are obliged by treaty to furnish; a circumstance which may not be without its inconveniencies to fome of them. Upon the first accounts received at Petersburgh of the arrest of M. Obreskow, and of the subsequent proceedings at the Porte; an ordinance was Oct, 21. issued that one man in every three hundred throughout the whole Empire should be furnished, to compleat the armies. Soon afterwards a fecond ordinance was iffued, that one manin every hundred and fifty should be supplied. was supposed, from the latest calculations that had been made of the number of inhabitants in the Empire, that 50,000 recruits would be furnished in consequence of the latter order, who were immediately to be fent to join the regiments that are to make the first campaign. This political estimate must be erroneous, or it must shew that the late accounts of the populousness of the Russian territories have been extremely exaggerated. If thefe #c,000 are supposed to be only the

1 50th part of those that are able to bear arms, it will, with the usual allowance for old men, women, and children, represent the degree of population in this empire at a height that is not warranted by the best accounts of the country, any more than it is by former calculations. On the contrary, if this number contains the same proportion of the whole inhabitants, then the total number in the Russian dominions will not amount to more than seven millions and a half. This is probably much below the truth.

The Adventurer Stephano, at the head of the rebellious Montenerins, of whom we took notice in our last volume, has this year been very troublesome to the Porte; and these mountaineers in many fevere skirmishes have behaved with great fierceness and courage. The Venetians were also obliged to draw lines to cover their frontiers in Dalmatia, and were very uneasy about the consequences, as the Turkish Generals, surprised at the resistance they met with, began to charge them with privately supporting the rebels. At length the Basha of Bosnia, being joined by the Bey of Romelia, and some other Governors of the neighbouring provinces, formed an army of near 50,000 men, with which he attacked a for-tification built on a high Sept. 3. rock, which belonged to the Montenerins, and which they defended with great bravery for three days, against the repeated assaults of their enemies, and was at last carried by storm, with a great slaughter on both The Turks then attacked a monastery, situate among very high rocks, where Stephano and the main body amounting to 10,000 Greek and Catholic Christians law. Here the engagement was renewed

with great fury, and the Montenerins for a long time withstood and repelled the most desperate attacks of their enemies, who, by their own accounts, lost a multitude of men. Numbers and superior discipline at length triumphed, over an obstinate courage, and the advantages of fituation; the Turks took the, monastery, and made a cruel flaughter of the rebels.

Nothing can put the bravery of these poor people in a more conspicuous point of view, than the high encomiums which the Turkish General paid to the behaviour of his own troops, and the great honour he faid they acquired in those engagements; at the fame time he candidly confessed, that Stephano and his adherents had behaved with the greatest resolution. The lavage trophies of this victory were in the barbarous manner of the Turks fent to Constantinople, where they were exhibited with great parade to the people. These trophies confifted of twenty-one of the heads of the principal rebels, and a great quantity of nofes and ears, which the unfortunate prifoners who had been taken were deprived of; to these were added two banners, a golden cross, and fome other ornaments belonging to the monastery, and several prayer books.

The Adventurer Stephano, who did not by his conduct difgrace the choice of those whom he commanded, had the good fortune to efcape from this bloody conflict, and retired with the remainder of his adherents to the inaccessible parts of the mountains, which were in the mean time furrounded by the Turks, who carried on a cruel war, burning and deftroying the villages in the vallies, and atpeace and order among the inha-

the foot of the hills, and massacring a great number of the inhabitants, without distinction of age or fex. It happened fortunately for the Montenerins, and probably faved them from total destruction, that the Polish affairs became fo interesting as to interfere, and take off the edge of the Turkish resentment against them. Porte being accordingly unwilling to have any part of its attention : diverted by the rebellion of a few miserable mountaineers, the Bashan patched up a kind of treaty with them; by which, on condition of: acknowledging themselves vasfals to the Grand-Signior, they were fecured in the possession of their country and lands, and the Ottoman army marched towards the borders of the Danube. Stephano: immediately upon their departure descended from his fastnesses. and has fince appeared as publicly as ever, while the number and attachment of his adherents is faid' to increase daily.

There can be no doubt but that Poland has been the principal, or, comparatively speaking, the only object that has in a great measure engaged the attention of the Porte for some time past. We accordingly find, that it has made numberless representations on the interference of the Russians, and the continuance of their troops in that country. The mode generally observed in the answers was, to represent the troops, which the court of Peteriburgh had upon that fervice. as only a handful of men, who had no artillery, were not even commanded by a Russian General, and were fent at the particular request of the Republic, and entirely under its direction, to preserve

bitants for a little time, till their domestic troubles were composed. It also appears, that, upon repeated applications of this nature, frequent promises were made, that the Russian troops should be entirely and immediately withdrawn from that country.

In this fituation were affairs, till the late bloody hoslilities were commenced between the Russians and the confederates; in which the latter being generally overpowered and closely pursued, were frequently obliged to fly for shelter and protection into the Turkish territories. The Russian officers could not always upon these occafions preferve a strict attention to the boundaries of the two nations; but fometimes purfued the fugitives beyond the limits, and wreaked their vengeance on them, though under the Turkish protection. Complaints being however made of these violations of territory and good neighbourhood, proper fatisfaction was given; Colonel Weisman, as we have already observed, was put under arrest; and some Cossacks and other irregulars, who were charged with execifes, were hanged on the frontiers.

At length, a confiderable body of Russian troops pursued a party of the confederates, who sled for July 21: ta in the Lesser Tartary, which the Russians attacked and took sword in hand, and massacred indiscriminately Turks, Tartars, and whoever came in their way, to the number, the manifesto published at Constantinoplessays, of a thousand men, women, and children. This fact is however totally denied by the Russians with respect to them-

felves, who fay that the outrages and pillage at Balta were committed by the Haydamacks. On the other hand, the Turks observe, that the troops who took Balta had a train of artillery, and that it is notorious that the Haydamacks never make use of any.

It is probable that the Porte, being already determined on a war, represented the affair at Balta in the most aggravating colours, on purpose to excite the indignation of the people, and to dispose them to that event. It may also be ea-fily supposed, that some of the Russian irregulars, considering the nature and disposition of those people, might, without the knowledge of any officers of high rank, much less the consent of that court, have readily joined in a scheme of rapine and pillage with the Haydamacks, or any other of the lawless tribes who infest those countries.

However it was, the news of fo much Musfulman blood being shed no fooner arrived at Constantinople, than it caused a prodigious ferment, and every thing from thence bore the appearance of war. Orders were dispatched to the Basha's of Bosnia, Romelia, and other governors of the European provinces, to collect their troops, and march them towards the Neister: feveral other more distant chiefe had orders to furnish their contingents, and the commanders of irregular troops to raife feveral thousand volunteers. Large bodies of Janizaries and other forces. and great quantities of provisions and military stores, were daily shipt off for the port of Varna on the Black fea; the Dgebelli Timariots, who hold their lands without being obliged to personal fervice, were ordered to fend their fubflitutes. This body, which confills entirely of cavalry, is compu-

ted at 6000 men:

While things were in this fituation, the Grand Vizir, being of a pacific disposition, and it is said averse to the war, was deposed, and Selictar Hamzey Pacha appointed. This change in the administration, which from the beginning left little room to doubt of a war, foon gave convincing proofs of it. In a few days after the ar-Oct. 3. rival of the new Vizir, a grand council was held, at which affifted all the great officers and ministers of state, and the officers of the militia; M. Obrefcow, the Russian Resident, was also invited to attend. The audience was given contrary to the usual custom with open doors, and in the prefence of above 600 perfons. The intention of the Porte, in thus making their proceedings public, was to convince the people of the justice of their cause, if the Resident resused to agree to the articles which were intended to be proposed to him.

The conference was short but very animated. Some animadversions being first made on the affair at Balta, the Resident was asked, when the Russian troops would depart from Poland, and what object they had in view in continuing there; to which the Resident replied, that the Russian troops would not quit Poland, till all the Poles had submitted to their King. It was then finally demanded, whether, according to the treaties between the two empires, the court of Russia would refrain from interfering, under any pretence of guarantee or promise, in

the affairs of that country. It was also required of him to sign articles to that purpose immediately, as well as for the fpeedy withdrawing of the Russian troops; and that the allies of his court should guarantee the performance of these articles. To these extraordinary propositions M. Obrescow answered, that his powers were limited, and that he could give no answer upon those heads, which were matters that lay only in the breast of his Sovereign. The report of this conference being made to the Grand Signior, he immediately ordered the Russian Minister to be sent prisoner to the Castle of the Seven Towers; to which place he was directly conducted, together with his fecretary. three of his interpreters, and feveral more of his domestics.

This barbarous and unjust method, of confining the Residents of those powers with whom they break, is peculiar to the Turks, who keep no Ambassadors at Christian courts, and regard the European Ministers as little more than Confuls, who superintend the trade of their respective countries. In former days, the Christian Ministers who have had the missortune of being confined upon these occasions have been treated with great cruelty and indignity, which however has not been the case of

late years.

As this act of hostility is always regarded as equivalent to a declaration of war; so now the whole empire seemed to be in motion; and another great council laving been held a few oct. 8. days after, the war was announced in form to all the orders of the state. As the Tartars from their

fituation

fituation must be of considerable importance, and bear a great share in this war, the Sultan thought proper to re-establish Crim Gueray, their late Chan, in that dignity. This Prince, being accordingly fent for to Constantinople from his country house, was received with great distinction, and loaded with rich presents by the Sultan, whose example was followed by the Vizir and all the great Officers of state; and his son was appointed a Seraskier, or Commander of 30,000 men. The new Grand Vizir had enjoyed his dignity only a very small time when he resigned it, as was faid on account of his bad flate of health; whether that was the real cause or no, he retired without any marks of dislike or difgrace, and was fucceeded by Mahemet Emin Pacha, the Kaimachan, or Grand Vizir's vicegerent; a man faid to have parts, and to be of an enterprizing and ambitious spirit.

Soon afterwards the Reis Effendi, or Great Chancellor, communicated to the foreign Oct. 30. Ministers, to be transmitted to their respective courts, a manifesto containing the causes which influenced the Porte to enter into a war with Russia. manifesto, which turns almost folely upon the conduct of the Rusfians in Poland, calls in question the election of the King, whom it pretends they had made by force and violence, contrary to the inclinations of the people, and the fense of the Republic. That, in support of this violent measure, their armies had ever fince continued to over-run that country; ... that they deprived the people, who had a free right to elect their own

· France in a col

King, of their estates real and perfonal, and took away their lives, because they would not submit to a person whom they had not elected as their King; and that the Sublime Porte, out of friendship to Rufsia, and an unwillingness to proceed to extremities, had disguised her griefs, and deferred her refentment, for three years past. The manifesto mentions the arrest of the Russian Resident, and seems to infinuate an apology for that mode of acting, by faying, 'that, according to the antient etiquette of the Sublime Porte, the faid Resident must remain in the Castle of the Seven Towers.'

The manifesto in itself is only a loofe vague composition, the reafoning confused, and the charges not properly proved. It fets forth, as an instance of the unfitness of the present King, that he is not of a Royal family, which the Porte must well know to have been the case of many Kings of Poland, and that some of the greatest Princes that ever filled the Throne were called to it from a private station. It also seems late, as well as ftrange, to dispute the validity of an election at the end of four years. without the having made any declaration against it in all that time. or the giving any testimony that the person elected was not acknowledged as King.

In the mean time the preparations for war were carried on with the greatest ardour imaginable, and such vigour and expedition shewn, that a letter from Constantinople says, 'More provision has been made here for war in eight days, than would have been done in any other nation in Europe in as many months.' Above 300

letters

letters were dispatched in fix days to different parts of the empire, to order the necessary preparations to be made for the forming of a prodigious army early in the fpring. The Grand Signior himfelf, sometimes in disguise, and fometimes publickly, examined closely into the state and conduct of the army, and was a minute enquirer into every thing that had any relation to the military department. This Prince frequently attended to the exercises of his matroffes, who fprung feveral mines before him, with which he feemed much pleafed; and his whole conduct not only testified his desire to acquire military knowledge, but also how deeply his mind was en-

gaged in the event.

The news of war, which in most other countries causes some alarm, had a very different effect upon the Muslulmen, who in most parts of this empire received it with the highest demonstrations of joy. The commanders and principal officers of the different corps vied with the greatest emulation, and spared no expence in endeavouring to procure the finest and most could field equipages, so that nothing could be more splendid than their appearance. In the Afiatic provinces especially, this magnificence and defire of shew and parade was carried to the highest extreme; the tents of the grandees were of gold or filver stuffs; their standards fattin richly ornamented; and all their arms mounted with filver. They carried with them large fums of money, which many of them were obliged to borrow till the end of the campaign; and their tents were filled with their richest and most valuable ef-

fects. If this brings to view the antient magnificence of the Eastern armies, it also reminds us of their inefficacy, when opposed only to handfuls of men covered with rufty iron, but whose minds and bodies were tempered to the hardness of the armour which they wore.

· A prodigious park of artillery was formed, confifting, it is faid, of 600 pieces of heavy cannon; and the Grand Signior's tents and field equipage were prepared, fo that it was supposed he would make the campaign in company with the Vizir. Notice was given to the Chancery of State, the Department of the Finances, and several other of the public offices, that they should be ready to follow the Grand Vizir to the army in the fpring, and that they should carry all the state papers from the beginning of the prefent century with them. The Officers of the Department of Foreign affairs also received the fame orders, much to the diffatisfaction of the foreign ministers, to whom it will be very troublefome.

Great bodies of the Afiatic troops were continually wafted over to the European fide of the Hellespont; but the great disorders they committed, in their march through the suburbs of Constantinople, occasioned an order, by which they were latterly obliged to take shipping at the Dardanelles, from whence they were transported by the Black sea to Gallipoly. The Sultan feemed very defirous to introduce a more rigorous form of discipline among the troops. To this purpose, every corps of the army was obliged to encamp regularly, and lie in their tents; and no officer

of whatever rank, was allowed to lodge in a house during any part of the march. He also made many regulations to prevent the diforders, to which that country, from its peculiar form of government, is liable in time of war. Among the rest, wine was forbid under the severest penalties; and all those who were possessed of any quantities of it were obliged to stave it, or else to send it out of the country in a limited time, on pain of confiscation, and an arbitrary fine being imposed on them. Being doubtful of the fidelity of the Greeks, the Christians throughout the empire were ordered to deliver up all their arms, except the Greek and Armenian merchants, who were allowed to keep such as were necessary for defence in their jour-This order was received with great reluctance, and, except near the capital, and in places where a military force commanded immediate awe, feems to have been but little complied with; the Christians of the Morea in particular, and of feveral of the islands in the Archipelago, absolutely refused to part with their arms, and fome blood was shed in different places upon that account.

The Sultan demanded a contribution of 650,000 piasters from the Jews, Greeks, and Armenians, who dwelt in the capital, which they readily paid; and he promifed that no other demand should be made upon them during the war. When we consider the violent influence that religious prejudices have upon the Turks, and restect that almost all the trade and the money transactions

Vol. XI.

of that great city are carried on and negociated by those people, we are at a loss which to admire most, the moderation of the original demand, or the lenity that granted the future indemnity. A prodigious fum of money, if we can believe the accounts; 20,000,000 piasters, was allotted to accelerate, and carry into execution, the necessary preparations for the first campaign only; and it was said 250,000 men were defigned for that service, exclusive of the Tartars. All the different bodies of troops, as they arrived, were fent off towards the Da nube; which, as it was too late for any fervice before the foring, and the constitutions of the Aliatics in particular were very unfit to bear the rigour of the winter in that climate, does not feem at first fight to be the result of the best policy. It is probable that the Porte was apprehensive, that the Russians might have made fome extraordinary efforts in the winter, and that they did not chuse to keep a multitude of troops of different nations too near the capital.

Notwithstanding the measures that were taken to preferve order and quiet, yet fuch are the bad effects of the Turkish policy, that the streets of Constantinople were constantly crowded with armed men, who made it very dangerous to the natives as well as to foreigners. It is a part of the Ottoman military system, and defigned to keep up that enthusiasm, which they have found so useful, among their troops, that every Mussulman, who enlists himfelf as a foldier to fight against the enemies of their faith, devotes [D]

ANGERTAN OUTLAND

his life as a martyr to die in the cause of religion. From their being considered in this functified light, there is no redress for the exorbitances that are committed by the new levies in the beginning of a war; and a number of wretches enlist, only to make use of this licence, while others go about armed, and pretend to have enlisted, merely for the same

purpose.

The day after the arrest of the Russian Resident, the English Ambassador presented a memorial, in which he proposed, that, in consideration of M. Obreskow's bad state of health, he might be confined in his own hotel, instead of the Castle of the seven towers. Although this request was seconded by the Prussian Minister, it produced for the present no effect. The English Minister, not discouraged, presented in some time another memorial, couched in very

ftrong terms, in which he reprefented. 'That if M. Obreskow, who was well known to be in a very bad state of health, should happen to die in his present confinement, the publick would look upon that event to have been premeditated by the government, which would bring upon the Porte the reproach of all other powers: and that besides, if during the course of the war any Ottoman Nobleman should be taken prisoner by the Russians, he would be exposed by way of reprifal to the same fate.' This remonstrance, though not entirely complied with, produced a happy change in the fi-tuation of the Russian Minister, who with his retinue was removed from a close unhealthy prison, to the house of the Keeper of the Castle of the seven towers. where they were commodioutly lodged_

CHAP. VI.

The Empire. Conduct of the court of Vienna. Of the Electoral house of Saxony. King of Prussia. Liberal donation to his subjects in Silesia. Extraordinary disturbances at Neuschattel; murder of the Sicur Gaudot. Flourishing state of Denmark. Attention paid by the King to the arts, and encouragement given to the professors of them. An order given for a general survey of that kingdom. State of Sweden. Extraordinary exertion of vigour and spirit in the King. Abdicates the Crown. A proclamation issued, for an anticipated convocation of the states. The King resumes the Government.

THE prefent Emperor feems calculated to make a diffinguished figure in the system of Europe, and may probably restore that empire to a degree of weight and dignity, which it has not known for some time. We already see that he has new modelled and

reformed the armies, has introduced feveral afful modes of economy, is attentive to every department of government, and has gained the love and admiration of the people to a very high degree.

The marriage which has taken place this year between the King of Naples and the Archdutchess Caroline, and the other that is concluded between the Duke of Parma and the Arch-dutchess Amelia, are circumstances that could not be pleasing to those who thought the house of Bourbon already too formidable. The ties of blood between Princes are however fo little attended to, when they at all interfere with their political interests, that nothing conclusive can be drawn from a speculation of this nature. Experience shews that no fyslem founded upon so uncertain a ground is at all to

be depended on.

The military arrangements were this year very numerous in the Imperial dominions, one project continually treading on the heelsof another; among the œconomical fystems in that department, they enlarged their corps of cavalry, confolidating two fquadrons into one; and they incorporated 22 regiments of foot into as many old ones. Great pains were taken to remount the cavalry, fo that in a few weeks feveral thousand horses crossed the Elbe, that were bought for the Austrian and Saxon troops. As this court has not been inattentive to what paffed in Poland, feveral small camps were formed during the fummer, in Bohemia, Moravia, and Hungary; and when, towards the latter part of the feafon, the transactions in that country became more interesting, a considerable line of troops was flationed on the frontiers. All these camps were vifited by the Emperor in person, who examined into every depart-

ment of the military, reformed a multitude of abuses, and introduced new and stricter modes of discipline. In one of these tours which he made into the kingdom of Hungary, the Basha of Belgrade invited his Imperial Majesty to visit that fortress, and affured him that he should be received and treated with the fame honours as the Grand Signior.

An edict was iffued this year by the Emperor, which required the several governments of Germany not to permit their subjects to leave the empire, or even to dispose of their effects, if an intention of departure was suspected. In respect, to domestic matters, mildness in government, and a tenderness and condescension to the people, feem to be the ruling principles at present of the court of Vienna. Many regulations have been lately made that are highly beneficial to them, particularly in respect to quartering the army, which was one of their heaviest grievances. We took notice in our last volume, that the Empress Queen had given her foldiers liberty to marry; flie has lately published an ordinance, whereby, as an encouragement, fhe grants to all ferjeants, corporals, and foldiers, who are married, three kreutzers per day, above their common pay, for every child of either fex they have. This encouragement to matrimony among the non-commissioned officers and foldiers of her army, fo contrary to general practice, may well deferve the attention of other powers.

Uncommon pains have been taken in the electorate of Saxony this year, for the encreasing and [D 2] putting putting on a respectable footing Sept. 16. its army. The Prince figned the reins of government, which he held with great prudence and moderation, into the hands of his nephew the Electoral Prince, who was then in the eighteenth year of his age. By proper management, the Electoral family may by degrees recover that folendor, which had been fo much impaired by the late war. The election of Prince Clement, who was already Bishop of Fresinguen and Ratisbon, to the Archbi-Feb. 10. fhoprick and Electorate of Treves, is a great addition to its strength and dignity. This has however been fince farther increased, through the particular fortune of that Prince. by the death of the Prince Bishop of Augiburgh to whom he was coadjutor; so that he now enjoys three great bishopricks, besides his Electorate. There is no doubt but the court of Vienna will interest itself deeply to procure the Prince Administrator an equivalent for the Dutchy of Courland, a measure which in the present fituation of affairs may probably be readily acquiefced in. marriage also now concluded on. between the Electoral Prince and the Princels of Deuxponts, will be in its effects a very confiderable alliance, as that family fucceed to the Palatinate of the Rhine. upon the death of the present Elector.

It would correspond but badly with a knowledge of the King of Prussia's general character, to suppose him inattentive to the extraordinary transactions which the present year has produced in his neigh-

bourhood. He is indeed in a confiderable degree a party in the affairs of Poland, not only as a guarantee, but as having in every respect, except sending forces there, fupported the measures that have been purfued by the Empress of Russia. As he probably forefaw the confequences that thefe measures might possibly be productive of; he has taken fuch care, in compleating his armies, filling his magazines, and flationing his troops, as to be thoroughly prepared for any event that may happen.

Among other military measures, he ordered an augmentation of forty men to every company of foot, one half of which are to be foreigners, to prevent the taking of too many useful hands from tillage and manufactures at home. The foldiers are also permitted to marry; and to relieve the inhabitants from quartering the troops, he has ordered barracks to be crected for them in different parts

of his dominions.

The instance which that Monarch has this year given, of his great attention to the distresses of his people, and an equal disposition to relieve them, as it redounds greatly to his honour, is also perhaps one of the most politic acts of his life. A number of families in the dutchy of Silesia, many of them of good note, had, in confequence of the late war, or other misfortunes, been obliged to mortgage their estates deeply. By this means many gentlemen, as well as others, were reduced to great necessities, their rents being almost wholly confumed by ufury, lawfuits, and the other ill confequences of fuch an unhappy fituation. The

King

King having heard of the distresses that those families laboured under, ordered the circumstances of the particular cases, and the proper estimates to be laid before him, and generously granted a donation for the discharge of the debts. This noble bounty was fo extensive, that some incumbrances from thirty to forty thousand rixdollars were discharged by it. Such an act of benevolence must secure the attachment of the most doubtful or

wavering subjects.

The remarkable disturbances that happened in the principality of Neufchattel in Switzerland, and the consequent murder of the Sieur Gaudot the King's Advocate, are of fo extraordinary a nature, that they will not admit of being paffed over without notice. As an oppofition to the King's will in any of his fubjects may appear strange to fuch of our readers as are not acquainted with the particular circumstances of that principality, it may not perhaps be unnecessary to premise a few words on that subject.

Few states possess so much liberty as the inhabitants of those fmall territories of Neufchattel and Valangin have hitherto done. A remarkable instance of this happened in the year 1707, when, upon the failure of iffue in their own princes of the line of Longueville, they, by their own authority, assigned the succession to the government of their country to the King of Prussia. At that time there were feveral princes and states, among whom was the Elector of Hanover, afterwards George the First of England, who laid claim to the succession. Previous to the pretentions of these feveral competitors being admitted, they were obliged to swear to the observation of nine general articles, which confirmed the former rights and privileges of the people, in case the adjudication should be in their favour.

A dispute happened some time ago between the Governor and the people, upon the exertion of some act of authority, which they looked upon to be illegal, and a breach of their privileges. The King supported the Governor; but the people were firm, and would not recede. His Majesty then referred the dispute to the Canton of Berne, not only as principal of the Helvetic body, but also as an ancient ally of the Neufchatolois. The process was conducted at Berne for the King by the Sieur Gaudot, a native of Neufchattel, and his Advocate General. This gentleman managed the affair fo well, that in two years time he obtained as many fentences in the King's favour against his country. It is to be observed, that the people never admitted the appeal, nor would make any defence to the process, as they absolutely denied the authority of the court. They now accordingly refused to fubmit to the fentences, and faid that the States of Berne were no judges of their rights. The States however ordered a body of 8000 men to march to the frontiers. with orders to enforce the fentences; and the Neufchatolois, unable to contend with power, were unwillingly obliged to submit to them.

The King was so much pleased with the conduct of the Sieur Gaudot, that he appointed him his Attorney General, Lieutenant Governor, [D3]

Governor, and Receiver of the Rents. The people however regarded this gentleman in a very different light, and looked upon him as the betrayer and destroyer of his country, and that these rewards were the wages of his infamy.

Upon his return after fo long an absence to Neufchattel, where he was to be installed in his new dignities, he came in company with M. Derschau, the King's Minister, and unfortunately, whether from an eagerness to see his family, or from vanity, refused that gentleman's invitation to go to the caftle. Upon his entering the town, he found the streets filled with people of all ranks and ages, who received him with univerfal histing, reviling, and exclamation; and the crowds were for great, that he was obliged to quit his coach at some distance from his house, and pass through them on foot, His enemies, who included all his fellow citizens, fay, that he entered the town with all the parade and air of triumph; that, to display it the more, he quitted his coach, and passed through them, hewing every fwelling mark of felf-importance and dignity. It is to be remembered, that the fpectators were not disposed to see any of his actions in a favourable light.

His house was first besieged by a great number of boys, who revised him with all manner of injurious appellations. He attempted to disperse them by threats, when one of them spoke to him in the following remarkable terms: 'You are the chief cause of our fathers being compelled by force to yield up their privileges, the loss of

which will fall heaviest upon us: our revenge is just, and we are resolved to exert all our powers to recover our liberty, which we will begin to do by excirpating

This extraordinary slege lasted about thirty hours; the boys were foon joined by crowds of men and women. M. Derschau having applied to the magistrates, they deputed one of their body to defire the people to disperse; but they were answered, that as they had let the right of police be taken from them, they had no authority now. A free company of grenadiers belonging to the city was ordered under arms; they took their arms, but would neither act against their country, nor protect the person whom they looked upon as its enemy. The Prussian account fays, that the grenadiers fired feveral shots into the house at the unhappy Advocate.

The next day M. Derschau offered to fend him out of the country, with a promife that he should never return, and fent a coach for that purpose; but this was refufed, and the coach, though it was attended by the King's livery, was turned upfide down in the street. No expectation of help being now left, and all hope at an end, the lady of the unfortunate Sieur Gaudot defired leave to quit the house; which was immediately granted, and she departed without the least infult. fecond night the people broke into every part of the house, and at length discovered the room where the unhappy man and his nephew had barricadoed themselves. The Sieur Gaudot shot the first who broke in dead, and wounded two

others;

others; but received at the same time so many shots, that he died almost instantly. His nephew es-

caped through a chimney.

As foon as the Sieur Gaudot was dispatched, one of the affasfins looked out of the window. and cried out with a loud voice 'He is dead; long live the Prince, and may all traytors perish!' This news was received by the populace with the loudest acclamations of joy; and so violent and general was the hatred conceived against him, that it was with the greatest difficulty his friends could procure him a burial. communities refused the use of their church-yards; no man would make a coffin for him; and no native would affift in carrying the

body to the grave.

This gentleman's unhappy fate is a striking instance, how dangerous it may be to offend in a certain degree (let the community be ever fo small) a whole people; and that the greatest power may prove infufficient to protect the offender from their resentment. As to the conduct and motives of this unhappy gentleman, they are too common to stand in need of observation. The part he acted in conducting the process at Berne may perhaps be defended upon the principles of his profession, and a regard to the duties of the office which he held. The Sieur Gaudot unfortunately did not leave even this defence as a protection to his memory. He published a book some time before his death, in which he endeavoured to prove, with great learning and a train of fallacious arguments, that the Sovereign had an undoubted right to deprive the people of all their

privileges. It is remarkable that his brother, an old veteran Officer, was the most strenuous affertor of the rights of the people, and offered to be the foremost in the most desperate measures in their defence.

The Neufchatolois were not fo feverely punished as might have been expected, confidering the nature and greatness of the offence, and the power of the offended. A garrifon of 600 men were fent by the four neighbouring Cantons, to affift the magistrates in reftoring order and punishing the affaffins. General Lentulus encamped at Anet, within a league of the territories of Neufchattel, with 1400 men and 20 pieces of A few of the affaffins were executed, and others fled the country. The magistrates and clergy were obliged to make a fubmission to the King. The city was condemned to pay the whole expence of the process at Berne, amounting to above 2000 louis d'ors; and to make a compensation to Gaudot's widow, for the damage done to her house, and the loss of her furniture. Some of the citizens were deprived of their arms for a twelvemonth; and the grenadier company, men and officers, were entirely broke and abolished for ever.

The kingdom of Denmark, through a happy fuccession of wife and benevolent Princes, is at present one of the best-governed and most flour shing countries in the North. Arts and commerce have of late years been greatly encouraged; and, by a judicious management of the revenues of a country in itself neither rich nor generally fertile; such a steet and [D4]

army, are: fupported, as procure it a proper respect with the

neighbouring nations.

The present Monarch gives daily instances as well of his benevolence and munificence, as of his disposition to patronize the arts. He lately gave to the Academy of Painting, Sculpture, and Architecture at Copenhagen, letters patent, by which all the advantages that had been formerly granted are confirmed and secured to them in perpetuity. By this patent, the Academy have two annual sums, one of 5000, and the other of 6000 crowns, fecured to them for ever from the King's private treasury. The first of these liberal donations is appropriated to supply the neceffities of the artists; and the fecond to be bestowed, partly in pensions to those who shall distinguish themselves in the arts, and partly in annuities to their widows. The King also sent to the Society of Sciences a confiderable fum of money, to be divided into a certain number of prizes, and bestowed on such authors who thall furnish the best works, on certain proposed parts of Physick, Mathematicks, and History. The Kings of Denmark and Sweden have allotted gogo crowns each, besides the expence of proper instruments, to persons whom they have appointed to different flations, to make observations on the passage of Venus over the sun's disk, on the 3d of June 1769.

Several regulations respecting commerce have been lately made in Denmark, some of which may probably prove beneficial. Among others, the African trade, which was in the hands of an exclusive company, is now laid open; and

the importation of whale oil in the King's German dominions, except in ships fitted out by his own subjects, is forbidden. The King has ordered a general furvey of all the lands throughout the kingdom of Denmark; plans and maps are to be made of every particular diftrict, in order that the taxation may be more equal, and in proportion to the real value of each. This great work, which feems to promite much utility, is to be begun in the illand of Zealand; and the King is to bear the whole ex-

pence of the survey.

Some differences which had fubfifted between the King and the Empress of Russia, in relation to their respective territories in Holstein, in which the Empress acted as guardian to her fon, who is Duke of that dutchy, have been amicably adjusted to the mutual fatisfaction of both par- Feb. 19. ties; and the Empress 1768. ratified with great pleafure the treaty that had been concluded on that subject by her Minister at Copenhagen. The two courts have also concluded a treaty with the city of Hamburgh, by which the latter is acknowledged to be an imperial and free city, and has acquired feveral prerogatives in respect to its territories, as well as advantages in regard to trade.

The happy confequence of the marriage between the prefent King and the Princess Carolina of England has been Jan. 28, the birth of a Prince, to the univerfal joy of the court and people. This defirable event, besides its particular advantages, forms a fresh bond of that union and friendship between the two nations, which is

always

always fo much to be coveted by both. There is no doubt but the visit which his Majesty made this year, accompanied by feveral of his principal nobility, to the court of England, will contribute much to the same happy effect; the marks of respect and sincere regard, shewn him by all ranks of people, feeming to have been received by him with as much fatisfaction as they were paid with pleasure. In this tour his Majefly visited Holland and France, and was every where received with the greatest honours.

Monarchy, which once appeared with fo much fplendour in Sweden. feems now to fuffer an almost total eclipse. Very different is the state of things there from that in Denmark. The King of Sweden, who is little more than nominally fo, has been obliged to put up with indignities that feem utterly incompatible with every idea of royalty. Happy even fo, if the people had gained whatever the crown has lost; but of this a great deal of doubt may be well entertained. If a felfish oligarchy should be established, the change from absolute monarchy may not be fo great a bleffing to the Swedes. People of fpirit will not be imposed upon by a meer shew of liberty. Public asfemblies, though popular in name, when they degenerate, are capable of oppressions which may make despotism itself a fort of relief. Indeed the constitution of Sweden, which established so extensive a power in the Senate to the prejudice of the Monarchy, seemed ill calculated for permanence.

Whatever may be its merits, this is certain, that in confequence of the distractions of this country,

commerce has languished, while bankruptcies have multiplied to an aftonishing degree. Of this the present year affords an instance, which is not perhaps to be parallelled; that of a whole city becoming bankrupt. The magistrates and all the inhabitants, one merchant only excepted, of the city of Nicarleby in Finland, have declared themselves insolvent. In the country, the people are so opprest by the heaviness of the taxes, and the cruelty of the collectors, that the inhabitants of whole districts have threatened to quit the kingdom in bodies, with their wives and children; their cattle, corn, and effects having been feized upon, from their inability to pay them.

An ordinance which was this year published in Stockholm sufficiently shews the spirit of the administration of that country, and the little regard they pay to commerce in general, or to the liberties or fecurity of the people. This ordinance gives a power to the fiscals, to enter any house without distinction, upon information of contraband goods. All persons who use any violence to fecure or carry off fuch goods are to suffer death; and those who oppose the officers in their fearch are to be publicly whipt. All difputes that arife upon this subject are to be decided by the Board of Customs. Thus an inferior tribunal is fet up, at the fame time the accusers and sole judges, and that in a matter in which they are themselves concerned and deeply interested; and have it in their choice, whether to degrade the most eminent citizens by the most ignominious punishments, or sinally to take away their lives. The consequences were in part such as might have been expected; several merchants immediately shut up, and quitted business.

Such was the state of affairs in this country till very near the end of the year, at which time an unexpected and extraordinary exertion of vigour in the King put a temporary stop to all the functions of government, threw the ruling administration into the greatest and most visible disorder, and seems to have opened a door for some very great if not total change to take place in the government of

that country. The grievous complaints of the people, who were harrafied for taxes that they were unable to par, and whose miseries were increased by the infolence of the revenue officers, and the oppression of the military, had induced the King to make several applications to the Senate, to call an anticipated convocation of the four orders that compole the Diet of the kingdom, that they may enquire into the causes of those grievances, as well as into the state of the revenues which were in the greatest diforder. These applications were entirely fruitless, and the Senate absolutely refused to comply with a requisition, which the King infifted to be the only possible remedy for the public evils. In this fituation, some differences having arisen between the Senate and the Board of Treasury, the Senate refolved upon the establishment of a new and extraordinary tribunal to take cognizance of them. The King, having notice of this meafure, went to the fenate-house, and declared in the firongest terms his disapprobation of it, and at

the fame time again proposed the holding an affembly of the states. This not being complied with, his Majesty caused a writing to be entered in his presence in the registers of the Senate, at the end of which he declared, that, if the Senate continued to oppose the convocation of the states, he would abdicate the grown.

As foon as the King had retired, the Senate took into confideration his Majesty's declaration. At the close of their deliberations, two fenators went to court, and earneftly prayed the King that he would defit from his demand; his Majetty declared that he would not, and defired that the Senate might immediately give him a categorical answer. An hour after, fix other fenators came to intreat the King, that he would grant the Senate a delay of four days to consider of it. His Majesty told them with great firmness and spirit, that he looked upon this demand as a refusal; that from that instant, he renounced the government till the states should be assembled, forbid the Senate from issuing any thing in his name, and denred that the feals might be delivered to him.

The next day the King fent the Prince Royel to the feveral Colleges of flate (by colleges are understood what we call boards or offices), with directions to read to them the following declaration;— We order by these presents our dear son the Prince Royal, to make known to the Colleges of state, that judging it necessary to convoke the states of the kingdom, we had presumed that the Senate would have consented thereto this day, which not having done, we can consider this filence only as a refusal; con-

fequently.

fequently we find ourselves under the necessity of abdicating the regency, until the said states shall be convoked.

Done at Stockholm, Dec. 13, 1768.

Signed,
ADOLPHUS FREDERICK.'

The Prince went first to the College of the chancery, where he read with a loud voice the above order, and then demanded that the seals should be delivered up to him; but the Keeper being abfent, his Royal Highness's request could not be complied with. The Prince then signified to the members of the College, that, if they continued to make any use of them, they should be responsible to his Majesty and the states.

From the Chancery, the Prince went successively to the other Colleges, where he made the same notification. The streets were filled with crouds of people, impatient and anxious to learn the issue of a scene, so extraordinary,

and so critical.

In the mean time the Senate, thrown into the greatest perplexity by this bold and unexpected manœuvre, sent a third deputation to the King, earnestly to request that he would change his resolution; but this message proved as unsuccessful as the two former. They then sent two Secretaries of state to the Prince, to endeavour to dissuade him from proceeding in the tour he was making to the Colleges; this effort was also as inessectual as the rest.

Every thing was now at a stand; all the public offices suspended their functions, and the people looked at each other with dismay, dreading, and unable to guess, the confequences. The Senate, still more alarmed at this dreadful pause in all the functions of government, and apprehensive of the effects that might enfue from the King's great popularity, fent orders to the Generals Fersen and Ehrensward, and to the Vice Admiral, to double in all places the guards; they also, at the same time, ordered the College of state accounts to issue double pay to the troops of the garrison. It was only at this critical juncture, that the Senate first discovered that it had entirely lost its power. The Generals waited upon that affembly, and declared that they could not obey any orders that were not authorized by the King; that they had indeed doubled the night guards and reinforced the patrols; but that they had done both these acts of their own accord, to provide for the public fecurity, and not because the Senate had ordered it. The Office of state accounts also declared, that it was inconfistent with their instructions to comply with any extraordinary expences, unless jointly authorized by the King and the Senate; and that they could not confequently grant double pay to the garrison.

During there transactions, the court was more numerous and brilliant than ever. The different Colleges went in procession to the King with address upon the occasion, and to return his Majesty thanks for the notification he had fent them by the Prince Royal. Next-day all the Colleges went to the Senate, and made declarations in form, of their having suspended all the functions of their respective

depart-

departments; and at the same time recommending to them a compliance with the King's request.

In the mean time the apprehenfions of the public encreased hourly; accounts were fent to all parts of the kingdom of the throne's being vacant. The King had fent expresses to the Governors of the provinces, with instructions how to act to prevent tumults and diforders; as the nature of these infiructions were not known, it increased the anxiety, and many were afraid that the order of peafants, from the love and attachment they were known to bear to his Majetty, would have rifen and flruck some great blow.

At last the members of the magistracy of the city went in a body, with the Grand Governor at their head, to the Senate, and declared that, as all the Colleges of state had ceased to exercise the functions of their respective departments; as the whole public administration was in disorder, and as no letters patent were issued for convoking the diet, they (the magistrates), agreeable to the form of government, found themselves under a necessity of convoking the order of

This stroke was conclusive; the Senate was at length compelled to consent to the desired assembly of the states; and the King's concurrence was accordingly requested, to consirm the proclamation for that purpose; an assent which there was no doubt of obtaining.

burghers.

Dec. 21. As foon as the King had figned the letters

patent for the convocation of the states, he immediately resumed the reins of government, and business went on as usual at all the public offices. Upon his first appearance in the Senate, the King made the following speech:

· I appear again in this place, penetrated with the most lively acknowledgement at its having pleased the Divine Providence, who directs all things, that I should resume the government of my kingdom, and with the more fatisfaction, as the convocation of the states gives me hopes of being able to relieve our faithful subjects from their misery. I will not undertake to answer what the senators have alledged against my refolution, fince it is all buried in oblivion by the convocation of the states. I shall demonstrate to the states the utility and the necessity of my resolution, for the maintenance of the liberty and justice of the nation. My conscience does not in the least reproach me in all this; what has lately happened will perhaps be alone fufficient to evince the justice of my defigns. I am moreover fully persuaded, that all that I have done will be approved, not only at prefent, but in future."

The 19th of February was fixed upon for the opening of the diet; and the King in the mean time iffued orders for treating the peafants with lenity, and that their cattle should not be seized when it appeared they were unable to

pay the taxes.

CHAP. VII.

France. The King takes possession of the Pope's territories in Avignon and the Venaisin. Treaty with the Republic of Genoa, and a declaration in regard to Corfica. Extraordinary powers granted by the King to the Grand Council; debates in the Parliament of Paris, and remonstrances upon that subject. Great clamours and complaints in consequence of the scarcity of Remarkable remonstrance made by the Chamber of Vacations provisions. of the Parliament of Normandy. Regulations made by the King of Spain, to circumscribe the power of the Clergy in general, and of the Inquisition in particular; to reform the Clergy and Universities; and to enlarge the liberty of the Press. A company of French Merchants obtain a grant to work the Gold-mines in the province of Andalusia. An Edict against the importation of painted or printed linens or cottons, with a view to establish manufactures of that kind in Spain.

THE demands that were jointly made on the Pope, by the French, Spanish, and Neapolitan Ambassadors, to withdraw his brief against the Duke of Parma, and to make fatisfaction for the infult offered, not being complied with, the French King thought proper to reclaim the city and territories of Avignon and the Venaissin, as fiefs belonging to him. The Marquis de Rochecovart was fent at the head of the regiment of Dauphiny, attended by the Prefident and eight Counsellors of the Parliament of Provence, to execute this commisfion. The Marquis having fummoned the Vice Legate, and notified the King's commission to him, that Prelate made answer, that, as he had no troops to oppose him with, he could only make use of the arms of the church; and therefore he denounced against him the bull in cæna Domini, which contains the penalties incurred by those who seize upon effects belonging to the church.

These arms, though once formidable, were of no manner of use upon the present occasion; the Legate quitted the city, a detachment of dragoons June 11. morning. About thirty old Swifs foldiers, who flood with rufty partizans before the gates of the Pope's palace, were put like useless lumber out of the way, the gates kicked open by the dragoons jack boots, and possession taken with all the acclamations and joy of a compleat victory. Te Deum was then fung at the cathedral, and at night the city was illuminated; in the mean time all the religious houses were sealed up, those belonging to the Jesuits being first stript of every thing valuable. The Marquis having then received the homage and fubmiffion of the people, the King's arms were put up over the gates, and the Commissaries of the Parliament made the necessary regulations, and nominated proper persons for the

the administration of justice. Some French troops also took possession of the towns of Carpentras and Cavaillon in the Venaisin. In the mean time the Pope's fervants and foldiers retired to Antibes, from whence they embarked for Ita-

The diocese of Venaisin was ceded by Philip the Hardy of France to Pope Gregory the Xth in the Year 1273; the property of Avignon, which is an archbishoprick, was purchased in the year 1348, by Pope Clement the VIth from Jeanne Queen of Sicily, Countess of Provence. It was faid upon the present occasion, that the dominions of the French Kings being unalienable, they may at any time retake possession of any part that was alienated, unless secured by authentic treaties between Sovereigns, such as treaties of peace or

exchange.

About the same time that this re-affumption was made, a treaty between the court of France and the republic of Genoa was published; and preparations were made at Antibes and Toulon for the embarkation of a confiderable body of troops to take possession of the island of Corsica. This treaty our readers will fee in the State Papers of this volume. The principal stipulations, besides the cession of the island, are, that France is to maintain 16 battalions there; to put the republic in possession of the island of Capraia; and to protect her trade against the Corfican and Barbary cruizers. The republic is to have a right of refumption at any future time, upon paying the expences that France shall be at in supporting the island.

In some time after the French troops were landed in Corfica, a declaration was published by the King, explaining the motives of fending them there. In this manifesto the King declares, that he accepted the right of fovereignty in that kingdom the more willingly, as he hoped to exercise it merely for the good of his new subjects. Great promises are made of the advantages that will be granted to the Corficans, if they fubmit quietly to be his subjects; on which condition, the King fays, We will watch over the prosperity, the glory, and happiness of our dear people of Corfica in general, and of every individual in particular, with the fentiments of a paternal heart. The King however concludes with hoping. that they will not put him under a necessity of treating as rebels, those whom he has adopted with fuch complacency among the number of his subjects.

This is all which we have been able to collect with regard to the foreign politics of France. In their domestic affairs, they have not enjoyed the most perfect tran-

quillity.

An edict having been iffued by the King, by which fome new and extraordinary powers are supposed to be transferred to the Great Council, and a confiderable change made in its original constitution, this measure has been strenuously opposed by the Parliament of Paris; in which it was feconded by most of the others in the kingdom. In the remonstrance made May 19. to the King by the former is the following passage:

"Your Parliament, Sire, is not afraid on this head to remind

your Majesty of the ever-memorable words which the first President Harlay addressed to Henry III, in 1586. Sire, faid the magistrate, we have two forts of laws; one fort are the ordinances of our Kings, and these may be altered according to difference of times and circumstances: The other fort are the ordinances of the Kingdom, which are inviolable, and by which you ascend to the throne, and to the crown, which your predecessors preserved. Among these public laws, that is of the most facred, and has been nost religiously kept by your predeceffors, which orders, that no law or ordinance shall be published, but what is verified in this company: they thought a violation of this law, was a violation of that by which they were made Kings.

The King's answer to this remonstrance not being satisfactory, another meeting of the Parlia-July 4. ment was held; wherein it was proposed to draw up reprefentations to the King, to shew the evils that proceeded from the existence of the Grand Council in any form; and that the flates of the kingdom affembled at Orleans and at Blois had already requested its abo-The refolution passed in this affembly did not however anfwer the end proposed in meeting; and was only, to apply to the King to prescribe some limits to the jurisdiction of the Grand Council; and to fecure his Parliaments, by a clear and precise law, against the regulations of the letters patent which had been lately granted to This resolution was carried, after great debates, only by a majority of two voices, there being fixtyfix for it, against fixty-four, who were: for utterly abolishing this Council. All the Princes of the Blood were present at this Assembly. except the Count de Clermont who was ill. The debates continued many hours; and the first Menister. the Duke de Choifeul, was there one of the first, and continued to the last. A noble instance of spirit and independence, that, in the capital of an absolute Monarch, a Parliament composed only of Advocates, in no degree the representatives of the people, should afford fo fmall a majority to the court, on a question which seemed rather moderate and healing, than subverfive of any right, and which was supported in person by a powerful body of Princes, as well as by an over-grown Minister.

The Parliament of Toulouse were not so moderate as that of Paris, but issued an arret, by which all persons under its jurisdiction are sorbidden, under severe penalties, to conform to any judgement passed by the Great Council; and all solicitors and serjeants are forbid on pain of imprisonment to pay any regard to its acts. The affair seems at present to rest in this situation, and we do not hear of any thing farther being done on either side.

The badness of the late harvests had occasioned provisions of all forts to bear an immoderate price; and corn in particular was not only very dear, but in general very bad, and the bread consequently disagreeable and unwholesome. The distresses of the people were excessive, and their complaints and murmurings became universal. In such situations, all the world fancy themselves ingenious in finding out the causes of public calamities; and if any novelties have been introduced; they always come in for a great share of

popular odium. It was fo upon this occasion; and, without any regard to the influence of feafons, or to the will of heaven, the miferies of rhe people were attributed to the edicts which the King had passed some time ago, for the free importation and exportation of corn in all the ports, and an unlimited circulation of it through all the interior parts of the kingdom. It was in vain to shew, that an unlimited circulation of the corn trade, both within the kingdom and without, was the only means to encourage agriculture, to promote commerce, and to remove all future apprehensions of fearcity. The complaints were, notwithstanding, vehement; and the popular opinion was adopted by most of the Parliaments in the kingdom.

The remonstrance made upon this occasion, by the Chamber of Vacations of the Parliament of Normandy, to the King, may deferve notice; not only on account of the remarkable terms in which they are conveyed, and the expressive pictures they represent, but as a reproof to the exaggerated accounts that are frequently given here, of the flourishing state of that country. These gentlemen fay, . The courtier, who wallows in luxury, cannot figure to himself the horrors of indigence. Let him visit the country; let him furvey in our towns the various spectacles of human mifery; his delicacy will shudder at the objects that will appear on all fides: here a troop of hand craftsmen out of employment, or incapable of providing by their labour, for the urgent necesfities of their families, who are perishing with hunger, because they cannot reach the excessive price of provisions: On another fide, whole villages desolated by the epidemical diseases, occasioned by the bad quality of grain, which the poor inhabitants have been obliged to sub-fift on, for want of means to procure better.

The King, notwithstanding the general out-cry, would not repeal the Laws that had been passed in favour of the corn trade; but the Parliament of Paris, tired of waiting the tedious issue of remonstrances, boldly interdicted the exportation of corn, till it should appear that there was more in the country than the whole inhabitants could consume in twelve months. This the King for the present acquiesced in, and at the same time took every method to alleviate the distresses of the people.

The principal attention of the court of Spain, in respect to domestic matters, seems this year to have been directed to the following points; to the disposing of the effects of the Jesuits, and the entirely weeding that order out of every part of its dominions; the circumferibing the power of the clergy in general, and of the inquisition in particular; and to the reforming both the clergy and the universities.

To accomplish these purposes, a commission has been appointed by the King, at Madrid, to which five bishops are admitted; who are not only to consider of the manner in which the effects of the Jesuits are to be disposed of; but are also to take into consideration the reformation of the clergy, and the proper methods of remedying the abuses that are crept into the interior management of the monasteries. They are also to consider of the pro-

perel

perest means for regulating the universities of the kingdom, and putting

them on a better footing.

Some critical points have been proposed to the Bishops in general for their opinion: particularly as to a reform of the Secular and Regular Clergy; of the Ecclesiastical Courts; of the Universities; as to infringements on the Royal authority; a prohibition of appealing to Rome, except in extraordinary cases; of the Courts of Inquisition, and Briefs for raising money; and a restriction of Ecclesiastical privi-

leges.

These, with many more of a similar tendency, were proposed to the Bishops; and were sufficiently expressive of the temper and disposition of the Court. The King also iffued an ordinance, to regulate and restrain the proceedings of the Inquisition, in respect to the condemnation of books. . By this ordinance, before the prohibition of any book written by a Roman Catholic of known erudition, the author, if a native of Spain, is to be heard in his own defence; but a foreigner is to have a substitute appointed to defend his cause. The circulation of a book or paper is not to be stopped, under pretence of the necessity of a long examination; but the page and sentence, where any reprehensible expression occurs, is to be at once pointed out, and immediately corrected. Before any prohibition takes place, a minute of the proceedings is to be laid before the King, who is to return his opinion. And no brief or re-- script from the court of Rome, concerning the Inquifition, although in relation only to exceptionable books, is to be put in execution till the King and Council give their leave. Thus VOL. XI.

reformation has commenced in Spain. The authority of the Crown feems truly fovereign in ecclesiastical affairs; the clergy are brought into full subjection; and even the liberty of the press feems to have got the better of all church restraints; and to be limited only by the civil authority. No mean point obtained for the cause of science and of literature.

With respect to the Jesuits, such numbers of them were brought from the Spanish West Indies, that feveral ships seemed to have no other freight. Among these some hundreds were faid to be brought from Paraguay; and that the inhabitants who were to greatly attached to them made no opposition, though greatly concerned at their being carried away. If this account is to be depended on, and it has not yet been contradicted, there is an end of that boafted commonwealth of the Jesuits. Yet, if we consider the opposition these people made upon other occasions, when the Jesuits had some terms to keep with the crowns both of Spain and Portugal; and if we recollect the blind fubmission they paid to these Fathers; it would feem as if this account were to be received with some restriction. at least till some other particulars are given, that may ferve to explain

The proceedings against the Jefuits seem, however, not to be extremely popular; and an incident which happened this year, as it disconcerted the King greatly at the time, so it ended in the total disgrace of Cardinal de Cordove, the Archbishop of Toledo. The King celebrated, as usual, the sestival of St. Charles, it being his name-day, and, as is customary upon that occasion,

[*E] appearéd

appeared in the balcony at the front of the palace, to the people, who were affembled in prodigious crouds to fee him. It is also cultomary upon this occasion, for the King to grant any general request or petition, that is made to him by the people; but at this time, to the great furprize of the court, and to the utter confusion of his Majesty, they unanimously with one voice demanded the return of the Jesuits, and that they may have liberty to wear the habit of the Secular Clergy. It appears that the King has fince had information, that the Cardinal Archbishop, and his Grand Vicar, were at the bottom of this affair; accordingly they have both been difgraced, and banished the court.

The King has made a grant to a company of French merchants, to authorize them to work the gold mines in the province of Andalusia. This company has contracted to carry on the work at its own expence, to pay into the treasury six per cent, of the profits for the first two years, afterwards ten per cent, and, after a certain term, twenty. An engineer is already arrived, from France, to carry on the work; where it is said 1,400,000 livres have been fubfcribed to support it. Though that province was once defervedly famous for its gold mines; yet the fuccess of such an enterprize at present, is probably very doubtful.

The King has also issued an ordinance, to prohibit the importation of either printed or painted linens or cottons into any part of Spain. The defign of this prohibition is for the encouragement of manufacturies of printed cottons, that are to be established in the provinces of Catalonia and Arragon. Whether it is a country that mannfactures are likely to fucceed in, and whether they are fuitable to the genius and disposition of the people, may perhaps be thought as problematical, as the fuccess in working the gold mines. Every attempt of the former kind, is however very commendable in all governments, and may in that country particularly, without any extraordinary fuccels, be still highly useful, by tending to wear off in fome degree that habitual indolence. to which the people are so much dif-

CHAP., VIII.

Italy. Pragmatic Sanction published by the Duke of Parma. Pope's Brief issued against the Duke. Expulsion of the Jesuits from Parma; and a declaration published in answer to the Brief. Debates in Rome about the Jefuits. Benevento, and Corvo, taken by the King of Naples. Jesuits expelled from the Island of Malta. Unsuccessful applications made to the Pape by the allied Powers, for the revocation of the Brief against the Duke of Parma. King of Naples lays claim to Castro and Ronciglione. Duke of Modena loys claim to the Dutchy of Ferrara. Militia raifed in the Ecclesiastical state. Regulations made by the Republic of Venice. The banished Jesuits expelled from Corfica. Letter wrote by the Pontiff to the Empress Queen. Coercive measures pursued by the court of Naples, inregard to the clergy.

THE differences that have arisen extensive in their consequences, and between the Infant Duke of Parma and the Pope have been fo

productive of fuch extraordinary e-

vents, that they feem to have laid the foundation for a new æra in the political system of Italy. It appears that the Ecclesiastics of the Dutchy of Parma enjoyed the most exorbitant privileges: That not only their own possessions and effects were free from all taxes and imposts; but that even when fold or alienated, under whatever title, or whatever denomination they were, they had still the same exclusive exemption from contributing any thing to the exigences of the state. It is said that the consequences of this immunity became to general, that the public revenues were reduced to a, mere trifle, and the flate to the gréatest distress.

In this fituation, the government of the states of Parma have made feveral applications to the Pope within this year or two, to concur with them in fome measures, for diminishing and reducing within proper bounds those extraordinary privileges. These applications being entirely fruitless, the Infant Duke determined to make use of his fovereign authority, and to remove an evil fo detrimental to the state. He accordingly, in the beginning of the year, published the remarkable Pragmatic Sanction, which fully answered this purpose,

By this ordinance, no subject belonging to the Infant is to carry to Rome, or to any foreign Tribunal, any affair of contention that may arite in his dominions. All his subjects are forbidden to have recourse to foreign princes, governments, or tribunals, as well with respect to matters of interest, as for the procuring within his state any benefice, or other ecclefiastical fayour. All benefices, as well for the cure of fouls, as confistorial and

in commendam; pensions, abbies, dignities, or posts, which have any jurisdiction within the Infant's territories, are only to be possessed by his own subjects, and with his permisfion. And all writings, letter. fentences, decrees, bulls, briefs. &c. which shall come from Rome, or any foreign country, are declared

null and void.

This ordinance struck so directly at the foundations of the authority of the court of Rome, that it feemed reduced to the dilemnia, either to oppose the one, or to give up the other. The Pope accord- Jan. 30. fued a brief against the Duke of Parma; in which he declares, on the authority of the bull in cana Domini, and others of the same nature, that ecclefiaftics are not subject to any temporal power, or laic jurisdiction; and that, seeing he had been guilty of an infringement of the immunities of the church, he had incurred thereby the excommunication denounced in the faid bulls; that, unless he desisted from his rash enterprize, he now gave him warning, that he should be obliged to interdict his territories, excommunicate his person, his ministry, and all who should contribute to the execution of the ordinance in queftion.

In this brief, the Pope claimed the fovereignty of the Dutchy of Parma, and declared the Infant to be only his Feudatory. the more extraordinary, as any claims the See of Rome had upon that dutchy were given up by former treaties of many years standing. If the title had been clear, it might also have been thought ill policy in the Pope to have revived it at this juncture, when he had neither force

to support the claim, nor to protect himself from the consequences of it. It is possible that it might have been done, to bring the Duke of Parma, as Feudatory to the See of Rome, the more fully and comprehensively the renalties contained in those bulls, which we have already mentioned. Whatever the motive was, it feemed to fling the Princes of that family to the quick, and excited their indignation in the highest degree: nor did it seem well relished by any of the neighbouring Powers, who probably thought it too great an infult to Sovercignty. The same day that this brief was iffued, the Pope ordered the Bull in Cæna Domini to be fixed up in all the public places in Rome.

The Pope's brief had so little effect upon the conduct of the court of Parma, that, in a few days after Feb. 7. it was published, all the Jesuits in that government were feized upon at the same hour in the night, and expelled from the Duke's territories, without the smallest disturbance. The different parties who feized thefe fathers had a general place of rendezvous appointed, where they all met with their prisoners, from whence they marched in a body, and conducted them to the confines of the Ecclefiastical State, where they were discharged. An edict was iffued the next day, which declared the proscription of the order, and prohibited their ever returning again into the Duke's dominions, even though they fhould be absolved from their vows; nor are they allowed to travel or pass through any part of his territories, under any pretence of business or otherwise. The whole number expelled amounted to 150, of whom about 60 were

the Duke's subjects; to such of them as were priests he allowed 70 Roman crowns a year for their lives, and 40 to the lay brothers; they had fix zechins a piece given them, when the guard dismissed them on the road to Bologna. Directions were at the fame time given for regulating the places of public education, and new professors appointed to fill up the departments that had been occupied in them by the Jefuits.

The following fingular declaration was foon afterwards published at Parma, in confequence of the Pope's brief; 'A certain writing, in form of a bull from Rome, has come to our knowledge here; but as the expressions and maxims therein contained, could not proceed from a Pontiff fo holy, foenlightened, and so sagacious, as is the present reigning Pope, the Infant Duke hath ordered all his subjects to believe, that in effect this piece doth not come from his Holiness; enjoining them, at the fame time, not to fail in respect towards him; and forbidding them to molest, on that account, any of the subjects of the court of Rome.2

In the mean time disputes run high in Rome itself about the lefuits; and at a Congregation held expressly to confider of their affairs, at which the Pope and nine Cardinals affifted, there were very warm debates upon the question, Whether it was proper, in the prefent circumstances, entirely to abolish the Society of lesuits?! Cardinal Cavalchini, Dean of the Sacred College, is faid to have afferted, that all the fresh troubles which had befallen the Holy See. were to be attributed to the exceffive diffatisfaction which was ex-

preffed

prefled towards the courts of Verfailles and Madrid, at the extinction of the fociety in their dominions, and which he then forefaw, and, though ineffectually, warned against. He then set forth the inconveniencies of supporting a body, which fo many respectable powers in Europe had judged incapable of performing the duties of citizens; and concluded, that it was absolutely necessary to proceed to the entire abolition of the fociety. Cardinal Stoppani strongly backed this opinion, which was also supported by two other Cardinals; but the other five, amongst whom were the Cardinals Rezzonico and Torregiani, vigoroufly opposed it. The Pope, who feemed wavering, took at last the stronger side; and it was resolved, by a majority of votes, to support as much as possible the expiring fociety. It was at the fame time refolved, to write to all the Roman Catholic powers, to intercede for those persecuted fathers, and to intreat their compassion towards them.

The brief against the Duke of Parma was no fooner communicated to the courts that are peculiarly interested in the affairs of that Prince, than they shewed the highest resentment at it. The King of Naples, however, being the nearest, gave the first effectual proofs of it, by fending a body of 1800 of his troops, March 15. to take possession of Benevento and Ponte Corvo; both of which places, though lying in the kingdom of Naples, belonged to the Pope. In the mean time, the brief having been announced to the Parliament of Paris, that court, all the chambers being affembled, refolved, That it was illegal, and derogatory to the honour of all fovereign powers, and ought therefore to

be suppressed.

As misfortunes feldom come fingle, so it was now the fate of that court which had fo long domineered over the Western world, that almost every day produced fome new mortification to it. The profcription of the lefuits from the island of Malta, the expulsion of one religious order by another, was still reserved to crown the difgrace of that fdciety, and to add new vexation to the protector of it. The reafons given for this Apr. 22. measure by the Grand Master, in the edict published upon the occasion, are, that Malta, which formerly belonged to the island of Sicily, was bestowed upon their order by the Emperor Charles V; that, in imitation of their ancestors, the order would not omit any opportunity of shewing their gratitude to the King of Sicily; and that his present Majesty having signified that he had expelled the Jesuits from his dominions for very great crimes of flate, and also required them to banish them from their Mands, they were obliged in conformity to their constant practice and principles to comply therewith.

An application was jointly made, by the ministers of France, Spain, and Vienna, for the revocation of the brief against the Duke of Parma. The Pope however refused to grant them a joint audience, on pretence of the different ceremonials to be observed; according to which, one of them [*E 3]

being a Cardinal, must have leave to fit down; another, not having made his entry, must stand; and the third, having no character, must be upon his knees. To obviate there difficulties, they agreed among themselves, that the Spanish Minister should represent all, and deliver to his Holiness May 19. the memorials of their respective courts. The Pope, without giving him time to expatiate on the subject of these memorials, asked if they contained any thing more than a representation to him, to induce him to revoke the brief he had iffued relative to the Duke of Parma; the Ambaffador replied, that was the only subject of them. The Pontiss then said, 'That he was determined not to betray his conscience, in retracting a fage and just measure, which he could not have any longer delayed without violating the canons and ecclefiaftical rites, as well as the pastoral duty with which he was invested. The menace of invading our dominions with an armed force is unnecessary; for, even if we had troops fufficient to defend them, we would not make use of them. As the common father of the faithful, I would not go to war even with any Christian Princes, much less with the Catholicks. The Princes ought not on this account to fall upon my fubjects, who are not concerned in the affair; but if their aim is against my person, and they will even drive me away from Rome, we declare, that, after the example of our predecesfors, we will go into exile wherever they think proper, rather than betray the interest of religion and of the church.' To this his Holiness

added, that it was not the custom of the Holy See to revoke its judgements, which were never passed till after the most mature deliberation, and always with the assistance of the Holy Ghost. He had no soouer done speaking, than he gave the signal to open the door, and the Minister withdrew.

Upon the ill fuccess of this audience, the King of Naples laid claim to the dutchies of Castro and Ronciglione, and affembled his troops in great numbers upon the frontiers of the Ecclesiastical state. The court of Naples also issued an edict to proscribe the brief against the Duke of Parma, in which it is not only declared spurious, and the people are forbid to give any credit to it; but the bull in coena Domini is also fuppressed, and declared illegal. This edict declares, that the Pope is only the Premier among the Bishops; that he hath less authority than the Universal Council; and that he has no direct jurisdiction over the subjects of other Princes: When the King of Naples first took possession of Ponte Corvo, it was taken for granted, that, as it was only an act done in confequence of these differences. when they were terminated it would be delivered up again; but he now published an edict which overthrew that opinion; and in which he declared his resolution to annex that territory entirely to his dominions.

The King of Portugal now embarked openly in all the meafures taken by the Princes of the house of Bourbon, and fent a Minister accordingly to Rome, with orders to make theirs a common cause, and to consort with their Ministers upon every occafion. The republic of Venice also sent a memorial to the Pope, in which it was strongly solicited to revoke the brief against the Duke of Parma. This folicitation from that quarter affected the Pontiff greatly; and he faid in answer, that the brief had been greatly misinterpreted, and he saw with inexpressible grief, that, among the neutral powers, the republic of Venice was the first that took part in an affair that did not in the least concern her

The rage against the Jesuits did not cease with their own existence; it continued to persecute even their works; and most of the powers engaged in the present disputes, issued edicts to forbid the bookfellers from keeping or felling any book written by a Jefuit, even though confined to the mathematics, or any other scientiste subject. Almost all the powers in Italy were employed, either in restraining the ecclesiaffical authority, or in making strict and minute enquiries into the estates of the clergy, their titles, and the time and manner of coming by them. Many reffrictions were also laid upon the different orders, in respect to the manner of admitting noviciates, and the number of them they were allowed to take in.

The Duke of Modena thought this a good opportunity, not only to lessen the power of the clergy in his own dominions, but to lay claim to some of the papal territories to which he pretended July 11. right. He first began by publishing an edict in some degree similar to that issued

by the Duke of Parma, by which the estates of the clergy in his dominions were made subject to the fame imposts with those of his other subjects, The Duke foon after gave notice to the Augustines of Spilimberto, the Conventuals of Final, and the Friars of Nonantola, to quit his dominions in three days; and the inhibitants of fixteen other convents were threatened with the same The court of Rome having interfered upon the taking of these measures; the Duke revived an old claim upon the dutchy of Ferrara, which formerly belonged to the house of Este, of which he is a descendant; but which long posfession and several treaties had confirmed to the Popes. The Duke, to support his pretensions, began to levy forces and form magazines; and at the fame time applied to the court of Vienna, that it may use its interest to procure him the quiet possession of that dutchy, and thereby prevent the disagreeable consequences of a war with the Holy See.

Though the resolution of the Pontiff was proof against those trying events, yet they affected him fo fenfibly, that his health funk daily in the conflict, and his physicians became of opinion that he could not long withstand the shock. As all other means feemed now ineffectual, it was at length thought proper to put the Ecclefiastical state in fome posture of defence; especially on the fide of Modena, where, as the contest would be more equal, it may not be entirely useless. this purpose all the militia in the legation of Urbino, to the amount of 6000, were put under arms; and the garrison of Fort Urbin, on the [*E 4]frontiers

frontiers of Modena, was reinforced by the militia of Ravenna. An odd accident happened upon this occasion at Faenza, from whence the men were obliged to march to join the militia: The women being enraged at the lofs of their hufbands, and attributing their own private calamities as well as those of the public to the Jesuits, they affembled in great crowds, and, being armed with torches, marched in a body to fet fire to the convent befonging to that fociety, in which enterprize they were near succeeding, having already thrown feveral combustibles into the windows, when the Bishop of that city with great difficulty appealed their fury.

The French Ambassador delivered a memorial at Rome, wherein he required that Cardinal Torregiant and the Nuncio at Paris fliould defift from writing to each other, otherwise that their letters frould be flopt at the post-office. The 'Minister from the King of Sept. 3. Naples also declared to the Sacred College, That in two months the King his mafter would fend commissaries, fupported by troops, to retake possession of the dutchies of Castro and Ronciglione, which he confidered as illegally dismembered from his dominions. As these dutchies extend almost to the gates of Rome, nothing could embarrais that court equal to an attempt of this nature; but, unless the King of Naples effected a total conquest of the whole papal territories, it seems difficult to conceive how he could support troops in those dutchies, which lie in the center of - them!

The republic of Venice now began to take example by the neighbouring powers, and to make feveral new regulations in regard to the exercise of the ecclefiaftical jurifdiction in their dominions. The Pontiff, notwithflanding the troubles that feemed ready to overwhelm him, opposed those innovations with all the vigour of a young warrior, and his remonstrances were delivered in the highest tone of church authority. Neither the vigour exerted, nor the authority assumed, had any effect upon the conduct of the Senate, who steadily pursued the fystem they had proposed. The Bishop of Brescia was however to difgusted with these regulations, that he not only refused to obey the mandates issued by the Senate, but also quitted the country, and retired to Ferrara. This conduct was the more extraordinary, as his bishoprick was computed to be worth twenty thousand pounds flerling a year. The Senate immediately iffued an order to confiscate his effects; and decreed that, if he did not return within a limited time, and submit to their mandates, he should continue an exile for life, and his revenues be forfeited.

The second banishment of the Spanish Jesuits, who were now expelled by the French from the island of Corsica, added new affiction to the Pontist, and increased those difficulties which already seemed insurmountable. In the beginning of October, above two thousand of those miserable sugitives were landed within tendays in the territories of Genoa. The smallness of the vessels in which they were conveyed, the great number of them crowded on board who were obliged to lie one upon the other on the decks, and

the infulferable heat of the weather, which was then intolerable all over Italy; all these things, joined to their want of the most common necessaries, made them fuch living examples of human mifery as are feldom to be met with. In this condition they were driven through Italy, towards the borders of the Ecclefiastical state. When they arrived on the frontiers of the territories of Parma and Modena, those Princes, from an extreme refinement of politics, affected to be afraid that a fet of naked, unarmed, and exhaufted wretches should travel in bodies through their dominions; and they were accordingly conducted in fmall parties, and with great appearance of caution. Notwithstanding this state farce, their miferable plight and appearance, having fearcely any cloaths, and being deflitute of every thing, excited the compassion of these Princes, and they supplied them with carriages and lodging in their paffage. Thus at length did these unwelcome and hated guests arrive in the Ecclefiaftical state, in every part of which their banished brethren already swarmed, and where the people beheld them with horror, as the cause of all their calamities.

Negociations were carried on at Rome, between the ministers of the allied powers and the Cardinal Negroni the new Secretary of state, who succeeded Cardinal Torregiani, the great patron of the Jesuits, in that office. These negociations were without any effect, as those Powers insisted, that not only the revocation of the brief against the Duke of Parma, but also the total annihilation of the order of Jesuits,

must be laid down as the preliminary articles of any accommodation. The Pope wrote a most pathefic and humiliating letter to the Queen of Hungary; in which he begged, in the most supplicating terms, that the would use her mediation in regard to the differences that were arisen between him and the House of Bourbon. Among other remarkable expressions in this letter, the Pope makes use of the following: 'We respect the hands of those Sovereigns, by whom God now corrects, vifits, and humbles us; and, though it were in our power to repell force by force, we should nevertheless prefer humiliation to a triumph, being convinced that the piety of Monarchs is our firength, and that our best arms are tears and prayers. Our whole defence is in the hands of God, who foftens and moves the hearts of Princes? Such and so different is the language of a modern Bishop of Rome. from that held by the Popes his predecessors.

During these transactions, the most coercive measures were purfued in Naples, for entirely reducing the power and lessening the numbers of the clergy. An edict was iffued, by which the powers that were usually exercised by the Pope's Nuncio were entirely taken away, and his authority transferred to the Secular judges and magistrates. The estates of the Jesuits were declared escheated to the Royal treasury, as being acquired at the expence of many private persons, and their plate was fent to the mint; the frictest fearch was made both in Naples and Sicily for their effects, and a commission appointed specially for that

purpofes,

purpose. The court, being determined to lessen the number of monasteries, ordered a strict inquisition to be made into their estates and revenues; after which, all the lesser ones were suppressed, and it was forbid to make vows, or to take the habit, in any religious order whatsoever.

A printed petition which was delivered to the King, and afterwards published, may shew pretty clearly the views of the government. The design of this petition was to engage the King to re-unite to the crown the right of patronage over all the churches of the kingdom, which were possessed or royal sees or estates. Immediately after, an ample memorial was published, to justify the subjectmatter of the petition, and to prove the King's absolute right to make this resumption. The matter of the petition is to be laid before the junto of abuses; and it is probable that the King will find an opportunity to seize on most of the abbey-lands in the kingdom.

CHAP. IX.

Corfica. Conduct of the French previous to the invalion. Engagements, between Bestia and Fiorenzo. The communication opened between these places. Furiani and several other places taken. French invade Casinca; are obliged to repost the Golo with loss. M. De Grand Maison sacks Oletta; is attacked by the Corsicans at Murato; obliged to desert his campat night, and retire to Olata. French besteged in Borgo; M. De Chauvelin marches to their relief, is deseated by the Corsicans. Garrison of Borgo surrender prisoners of war. Inessectual attempts of the French, upon Pietra, and Isola Rosa.

SOME circumstances which attended the invafion of the illand of Corfica by the French feemed to add to the cruelty, if not the injustice, of that act. France had made herfelf a mediator to bring about a peace between the republic of Genea and the Corficans. After a confiderable time spent in negociation, the republic broke off, without agreeing to those conditions which it appeared the court of France at that time thought equitable. A new plan of accommodation was then proposed by that court; as the basis of which, the republic was to retain the title of King of Corfica; the Corficans were to pay homage for their territorics, in the fame manner that the King of the Sicilies does to the See of Rome for the kingdom of Naples; and the Genoefe were still to keep fome of the maritime places in their possession. As the Corficans paid great attention to the mediation of fo powerful and dangerous a neighbour, a general meeting of the whole nation was held, to confider of thefe articles. At this meeting the two first articles were unanimously agreed to; the third was objected to, because those places could be of no possible advantage to the Genoese as friends. and, as the keeping of them would be attended with a great expence. it could proceed from no other motive than a defign to make future attempts upon the liberties of

the

the islanders. The article was accordingly qualified in such a manner, that the republic should support its dignity without prejudice to its interest, and at the same time the safety of the Corsicans be secured. The court of France acknowledged the article in this state to be equitable to both parties, and proper to bring about the wished-for reconciliation.

In this train was the negociation, when the Spanish Jesuits were received by the Genoese in Corsica, at which France seemed to take umbrage, and withdrew its troops from the ports into which they had been admitted. The Corficans faw the advantage, and immediately prepared to make use of it. They had already taken the city of Ajaccio; the citadel was upon the point of falling into their hands, and the fortreffes of Calvi and Algagliola would foon have followed; when, upon the application of the court of France, the Corficans, in deference to that mediation, thought proper to forego their advantages. General Paoli received a letter from the French Minister, wrote by order of the King, in which it was defired that he would fuspend all hostilities against those places, and to consider them in a state of neutrality, as if still garrisoned by the French troops, until the expiration of the four years treaty concluded with Genoa, when they were to be entirely withdrawn from the island. The General was also asfured, that, if a peace was not at that time concluded, the Corficans should be left at full liberty to affert their rights.

The act of negociating a treaty of peace between the republic and the Corficans feems to be a tacit acknowledgement from France, that she then considered the latter as a distinct, and, in a great meafure, an independent people. No observation, as it must strike every mind, need be made on the unfair and inequitable conduct, by which, under the fanction of friendship and mediation, she prevented the Corficans from making a proper use of the opportunities that offered fo much in their favour, and then infidiously converted their condescension to her own advantage, and armed the effects of it against themselves.

As foon as the treaty between France and Genoa was published, and the invasion of the island remained no longer doubtful, a general meeting of the Corfican nation was held at Corte, where, after a spirited speech made by the Chief Paoli, it was determined to defend their liberties to the utmoff. At the same time it was concluded. not to act offensively against the French, but to wait their operations; and the inhabitants were forbid, on pain of death, to furnish any of the places they occupied with provisions.

In the mean time about twenty battalions of French troops, befides the Royal legion and fome miquelets, were landed on the island; and on the 24th of June they hoisted their standard on the walls of Bastia, as a figual of their taking possession of it; after which Te Deum was fung, the cannon on the ramparts discharged, the arms of the republic taken down, and those of the French King put up in their place. Two encampments were formed in the month of July. one at Bastia, where the Count De Marbeuf commanded, which con-

fifted

fifted of about 8000 foot, and a confiderable body of horfe; the other at San Fiorenzo, where Field Marshal De Grand Maison commanded, and confifted of 2500 French and Swifs foot. These two places lie on the opposite shores of the island; Bastia, which is the capital, being on the eastern, and S. Fiorenzo on the western fide. They are fituated at the entrance from the reft of the island into the peninsula, the greater part of which is known by the name of Cape Corfe, and are distant from each other about three leagues, being the whole breadth of the peninfula. The country between thefe two places is rocky, mountainous, and full of difficult passes and defiles. Here the Corficans had a number of fmall posts in very advantageous fituations, fo that there was no communication open by land between the two camps, except by their permission. There were also about 2500 French and German troops in Calvi, Ajaccio, and Algagliola; but, as they were a good deal our of the line of action, they had no great share in the succeeding events.

About a mile and a half from the camp at Fiorenzo, was an eminence which afforded great plenty of excellent water; this post was in possession of the Corsicans, who kept a small guard there; but, as no hossilities had as yet commenced, the French were allowed the nife of the water, and conveyed it to their camp as they wanted. They however thought proper in the latter end of July to attack this post, and an officer and 300 men beat away, not without a considerable opposition, about 20 Cor-

ficans who defended it. The French immediately fortified themfelves, and were threngthened by a reinforcement from the camp; but were notwithflanding furprized the following night by the neighbouring Corficans, who killed a confiderable number, took almost all their arms, and recovered the post.

The next day the Corfican posts

were attacked, as well on the fide of Bastia as that of S. Fiorenzo: and a successive course of engagements began, which continued for three days among the hills and defiles. Every foot of the ground was difputed with great obflinacy, and the French and Swifs on the fide of Fiorenzo were at first repulsed with a very considerable lofs. At length the advantages of horfe, artillery, and numbers, had their effect; and the Aug. 1. third day all the Corfican posts were forced, and the communication between the two places established.

In these different engagements the French took feven redoubts. and became masters of the villages of Patrimonio and Barbaggio, as well as of feveral other difficult and well-defended posts, which were only of importance upon this occasion. They lost a great number of men in these attacks; and the three regiments of Soissonois, Rovergue, and Languedoc, in particular, fuffered a prodigious loss both in men and officers. The Corficans also lost a great many men, among whom were fome of their most gallant officers. They gave upon this occasion several instances of the most determined resolution, and of a valour that rose even to desperation. An entrenchment, after being a long

time

time gallantly defended by only 4'2 men, was at length carried by affault, when the brave defendants discained to ask for quarter, and were all killed fighting. It is faid, the women flood by their husbands in several of the fastnesfes, and charged their arms for them as they fired, and encouraged them to fight to the last in defence

of their country.

Upon this fuccess the French extended their posts considerably, and foon afterwards took Erbalonga and Nonza, both in the peninfula; they also, after some time and a confiderable loss, took Furiani and Biguglia, in both of which the Corficans made a brave defence, and, when they were no longer tenable, quitted them without loss. A number of skirmishes happened, in which, from the nature of the country and the hardiness of their enemies, the French frequently had the worst, and lost a great number of men, Sickness and desertion were also very fatal to them, both of which, especially the last, prevailed to an exceeding degree.

The garrison of Calvi, to the amount of about a thousand men, having taken the field with four pieces of cannon, were attacked with fuch vigour, by the country people, that they were routed and drove back to the fortress in the greatest disorder, and would have lost their cannon if the retreat had not been by the fea fide, by which means they were taken up by two small French veilels that happened to be in fight. The French were also repulsed with great loss in an attempt which they made upon Oletta, where two pieces of brafs cannon were taken from them,

Two French men of war, faid to be of 60 guns each, attacked the forts of Fornali and Mortella, both fituated on the gulph of Fiorenzo; but were so warmly received by the forts, that they were obliged to retire with great loss, one of them being fo near finking that a great part of the crew quitted her, who were purfued by the Corficans, till they got under the cannon of Fiorenzo, and the Ship was towed of

by a xebeque.

In the mean time the Marquis De Chauvelin arrived in Corfica. as Commander in chief of the French forces. Upon his arrival. he published the French King's declaration, of which we have already taken notice, and fome other papers of the fame nature, containing great promises to the Corficans in case of submission, and threats and menaces if they eppos fed his government. These papers. as well as a Paris Gazette which had given a ridiculous gasconading account of the late transactions in the island, having been laid before an affembly of the Chiefs, who were fummoned by Paoli to meet at Oletta for that purpose, they tore the papers to pieces, and trampled them under foot with the greatest marks of rage and indignation; and as they came from the council cried out with great vehemence to the people, War!

The French had now made a confiderable progress in subduing feveral of the neighbouring diftricts, and fresh troops arrived to fill up the places of those that were lost, Col. Buttafuoco, a Corfican in the French fervice, had engaged feveral of the inhabitants of the province of Cafinca to fubmit to

their dominion, in consequence of which, about two thousand of their troops were fent across the Golo, who made themselves masters of feveral places, and threatened to fubdue the whole territory. Upon this intelligence, General Paoli, who was opposing the attempts of the French in the province of Nebbio, immediately marched to the relief of Cafinca. He found the enemy in possession of the principal places in the district, and immediately attacked a party of Sept. 11. them who were stationed at La Pente, which is looked upon as one of the strongest posts in the island. This the Corficans carried fword in hand, and made the greater part of the detachment prisoners. Several others of their posts were attacked about the fame time; and the French being at a confiderable distance from Bastia, and sensible of the vigour with which they were every where affaulted, called in their out-posts, and retreated towards the Golo. In this retreat they were closely pursued by the Corficans, who furprized and beat up their quarters almost every night; and at the passage of the Golo, they were attacked with great fury by Clement Paoli the General's brother, and a considerable slaughter was made on both fides. They however made their retreat good across the river, having lost in this expedition four pieces of artillery.

While Paoli was engaged in Cafinca, M. De Grand Maifon made a confiderable progress in the Nebbio, where, with a body of about 2400 men, he took and sacked Oletta, and some other places. He then fixed his head quarters at Murato, which he fortisted with some

pieces of cannon, and placed his hospital, part of his baggage, and the military cheft, in a convent near the town. The Corficans of the neighbouring districts, being greatly enraged at the facking of Oletta, assembled in a considerable body, and attacked the French on the 15th with fuch impetuofity, that they beat them successively from feveral of their best posts, and were on the point of forcing their camp, and would probably have destroyed the whole body, if the falling of a very heavy rain had not put an end to the engagement. The French General, finding his fituation not very eligible, withdrew with great filence in the night from his camp, and retired to Oletta, leaving many of his tents standing, and three pieces of cannon behind. He was obliged upon this occasion to abandon the sick and wounded, as well as a party of 50 men and fix officers who guarded them in the convent; befides which, the Corficans took there a great quantity of baggage. and a confiderable fum of money belonging to the military chest.

The French, who had repassed the Golo, not thinking the Corficans would make any attempts on their side of the river, lest about 600 men stationed at Borgo di Mariana, who threw up intrenchments, and fortified themselves in the town. This post being thought of importance, the Marquis De Chauvelin fent them, by the affiftance of the cavalry, a confiderable train of artillery, across the mountains that separate that place from Bastia. By this affiftance the detachment at Borgo thought themselves in perfect fecurity; especially as the country all round was continually

fcowered

seowered by the cavalry. The Corsi-Oct. 6. cans, who were attentive to these motions, affembled and furrounded the town, a little after dusk, and at the first attack made themselves masters of all the houses that were without the intrenchments; which they filled with their troops, and began instantly to form their lines of circumvallation. The French made a furious fire with their artillery, and took every measure to stop the progress of the affailants; but their ardour was not to be restrained: they not only finished their lines, but took fword in hand the spring which supplied the garrison with water.

M. De Chauvelin, being greatly alarmed at the danger of this detachment, came in person, attended by a strong party of horse, to reconnoitre the fituation of the enemy. He then assembled 3000 men, and fent to M. De Grand Maison to march with fuch forces as he could collect, which amounted to about 2000 more, and thereby put the Corficans between two fires, and make their destruction inevitable. This defign was well laid; but the ability of the Corfican General had fufficiently provided against its effects. A body of men were already flationed to watch the motions of M. De Grand Maison, who no fooner advanced among the hills than he found himself attacked on all fides, and foon became fenfible that it was more prudent to difengage himfelf by a timely retreat, than to make any further attempts towards the profecution of the defign.

M. De Chauvelin and the Count De Marbeuf, having arrived at Borgo, spent a whole day and night in continual skirmishes with the

Corficans, being still in eager expectation of the arrival of M. De Grand Maison. At length, grown impatient, and thinking the forces they had with them sufficient to diflodge the enemy, the Generals determined to engage them next morning without him. The French. accordingly, at the break of day attacked the Corficans with fuch fury, that in a little time they had entirely destroyed their line of circumvallation, and penetrated to the very edge of the town. Here, however, a stop was put to their progress, by a terrible and continual fire, which they received from the Corficans, who were posted in the houses of the suburbs, and who being equally supported by the firmness and constancy of their fellows in the field, the French were at last repulsed, and obliged to retire.

They made another attack about noon, in which they had as little fuccess. The Generals, unwilling to put up with this difgrace, again formed and encouraged their troops, and, about three hours before funfet, renewed the engagement with more fury than ever. The uncommon virtue and bravery of the islanders again prevailed. French were at length obliged to retire in great disorder from this well-fought field, having fuffered a very confiderable lofs, and being indebted for the fafety of their retreat to the protection of the Royal regiment of cavalry, who could not from the nature of the ground engage in the action.

The garrison of Borgo surrendered themselves prisoners of war the next morning, by which the Corsicans became masters of their whole baggage and ammunition,

as well as of twenty pieces of cannon, which had been fent there from Baftia. It was computed that the French lost upon this occasion, in killed, wounded, and prifoners, including the garrison of Borgo, above 1800 men; and that their whole loffes in the course of a month, exclusive of deferters, confiderably exceeded 4000. A great number of officers were killed and wounded, and among the latter some of high distinction, particularly the Count De Marbeuf, and the Colonels of the Rovergue and Saxon regiments. The conduct of the Corfican Chief upon this occasion would have done honour to the most experienced General, as the behaviour and firmness of the men whom he commanded would to the best and most veteran troops.

General Paoli preserved great temper and moderation upon these fuccesses, and behaved with great politeness and affability to the officers who were taken prisoners. This behaviour was the more praiseworthy, as the past conduct of the French did not demand it; for they had iffued proclamations, in which they declared, that they would treat all Corficans whom they found in arms, after a certain time, in the country, as rebels; and that such as they took at sea without French passports, should be hanged as pirates. It was alfo faid, that some of the officers whom they had taken in the first engagements had been thrown into irons, and treated like common

felons.

The generofity and difintereftedness shewn upon every occafion by Paoli secured him the affection of the people, as much as his magnanimity. The booty taken at Borgo, and at Murato, was all distributed among the foldiers; and he had all his own plate melted down and coined for the public use. In a speech which he made at an affembly of the Chiefs, he is faid to have used the following remarkable expressions, Livery nation, which, like our own, has been zealous for its liberty, has experienced vicifitudes which have immortalized its name. If to maintain liberty, nothing was to be done but to defire it, the whole world would certainly enjoy it. But this valuable jewel can only be acquired by a virtue and courage that is funerior to all obstacles. The conditions and prerogatives of a free people, as they are so considerable that no just idea of them can be conveyed, are the assonishment and envy of the greatest men. We are now at the most critical of epochas. If we do not withstand the danger that threatens us, our reputation and liberty are at an end.' It is faid, that there was in the hall, or place of meeting, a kind of throne, the fight of which displeased one of the Chiefs, who asked eagerly who it was destined for; to which Paoli, with great presence of mind, replied, That it was intended to place thereon the Statue of Liberty.

The losses of the French had been so considerable in this short campaign, that, notwithstanding the arrival of several fresh battalions from France, their attention seemed now principally directed to the preservation of their two new acquisitions of Furiani and Biguglia, which were both strong, and in their neighbourhood, and to the keeping of the communication

open between Bastia and St. Fiorenzo. They however, in the month of November, embarked a confiderable body of forces on board thirteen transports, which were supported by several men of war and armed veffels, in order to reduce some fortified islands belonging to the Corficans. Their first attempt was upon the little island of Pietra, where, though they made good their landing, they were notwithstanding strangely repulsed by a small garrison consisting of only two hundred and fifty men. From thence they failed to Isola Rosfa, which seems to have been the principal object of this expedition, as the Corficans, who depended on its fecurity, made it a place of arms, and kept their magazines there. Here every thing feemed at first to promise success. The French effected a landing, and drove the Corficans from feveral of their posts; but, when the first furprize was over, they returned bravely to the charge, and not only recovered the ground they had loft, but drove the enemy with great flaughter to their ships. It is faid, the French loft upon this occasion nine hundred men, in killed, wounded, and prisoners; and this naval enterprize was attended with as little honour or fuccess, as those which they had hitherto undertaken by land.

CHAP. X.

War in India. Hyder Aly and the Nizam defeated by Colonel Smith.

Peace concluded with the Nizam. A squadron fitted out at Bombay;
Mangalore taken, and Hyder Aly's ships seized. Great distatisfaction excited, by the new laws for imposing duties in the Colonies. Boston resolutions. Circular letters sent by the Assembly. Secretary of State appointed for the Colonies. A requisition made to the new Assembly. Answers to the Secretary of State's letter, and to the messages from the Governor. The Assembly dissolved. Disturbances caused by the seizure of a sloop. The Commissioners of the Customs retire to Castle William. Proceedings of the Town-meeting; of the Committee of Convention. Troops and ships of war arrive from Halifax and Ireland.

SUCH is the condition of affairs upon the continent. The war in Poland, from distance of situation and remoteness of interest, can have little immediate effect upon this country. Our minds are more strongly attracted by domestic concerns. The great and growing state of our Colonies in North America; the unhappy contention which has arisen between the mother country and the colonies; the vast extent of the empire ac-

quired in India, and the various discussions which have arisen upon that subject between the Oriental Powers and the East-India Company, and between that Company and the English Government, afford sufficient matter to engage all our care and prudence, without looking for further employment in foreign politicks than evident necessity shall exact. With regard to India, the breaking out of a new war in that quarter has made

[*8*]

no change in the flourishing state of the East-India Company. It feems now to have acquired fuch a fuperiority of power, as fully fecures its establishments in that part of the world; and the hoftile attempts of the neighbouring Princes appear rather to confirm, than weaken it. The Company has not, however, met with a contemptible enemy, in the author of the present war of the Decan; in a less settled state of their affairs, his abilities and enterprizing genius might have made him truly dangerous.

Hyder Alv, or Hyder Naig, is an adventurer, who, through one of the furprizing revolutions of fortune that so often take place in that country, has rifen from being a common feapoy, to become master of a considerable part of the Malabar coast, and to be one of the most confiderable and formidable Princes in the now shattered Empire of India. The knowlege which he acquired by a long fervice among the Europeans, he has applied to the forming and difciplining his own army upon their model, and has procured a number of renegadoes to affift in making his artillery ferviceable.

This bold adventurer, being fensible that the present power of the Company was an infurmountable bar to his ambition, worked upon the weakness of the Nizam of the Decan, and, partly by threats, partly by promises, gained him to renounce the alliance which was between the Company and him, and to join in a war against it. The Council at Madrass immediately sent a body of forces under the command of Col. Smith, to oppose this formidable alliance. The Colonel found the

allied Princes at the head of a very confiderable army, and, after feveral manœuvres on both fides. brought them to an en-gagement, at a place Sept. 26, called Errour near Tri- 1767. nomallee. The enemy made a very warm cannonade on our left; and as their batteries were covered by a morass in front, the Colonel judiciously took the advantage of some rising grounds, and turned their left, by which he brought them to a close engagement. A very fmart fire was supported for fome time; but our troops advanced with fuch impetuofity, that, notwithstanding the personal bravery of Hyder Aly, the effects of the boafted discipline which he had introduced, and the vast superiority of numbers, the allied armies were in a little time thrown into disorder, and totally deseated. Our army purfued the enemy for two days; they took near feventy pieces of cannon. Our lofs, confidering the greatness of the victory, and the formidable force they engaged, was very inconfiderable.

The Nizam, as foon as he got out of Hyder Aly's power, of which he was very apprehensive, concluded a peace with the Company, by which he ceded to it the Dewanny of the Balagar Carnatic, which includes the territories of Hyder Aly his late ally and some petty Princes. The war with Hyder Aly, which is productive of no advantage to the Company, still continues, and, being carried on at a great distance from our settlements, has occasioned a very confiderable expence. That Chief having transferred it to a mountainous country, has prevented our troops from doing any thing decifive:

decifive; and the great diffance to which he has drawn the war gives his cavalry, an opportunity to act fometimes with advantage in intercepting our fupplies, and interrupting our communications.

In the course of these operations some ships were sitted out at Bombay, which conveyed 400 European soldiers, and about 800 seapoys, to attack Mangalore, one of Hyder Aly's principal seaports, where all his ships lay. This enterprize succeeded; the forts were Feb. 25, loss, and they brought 1768. off nine vessels of considerable size, besides several smaller ones. Through some strange error, a

fmall garrison was left in the forts, who were immediately after made prisoners by Hyder Aly.

It is evident from the nature of this war in India that it cannot be speedily ended. The superiority of strength, wealth, courage, and skill, on the part of the English, can give Hyder Ali no prospect of considerable success; on the other hand, the country in which he has secured himself is such, as cannot be readily reduced by the English arms.

In America, the quiet which began to take place upon the repeal of the stamp act was again disturbed, and the affairs of that country again fell into consustion. The laws which had been passed last year, for the purpose of raising a revenue in the Colonies by the laying of duties on the importation of glass, paper, and some other commodities from England, and the consequent establishment of Custom-houses in their ports, have heen productive of very alarming disturbances in the Colonies, and

of confequences highly prejudical to the commercial interests of this country: It may appear unfortunate, that, after the recent example of the mischiefs that attended the stamp act, and the consequent repeal of it from a conviction of those evils, a measure of a similar tendency should be so suddenly adopted, before the ill humours that had arisen from the former had yet subfided. Much has been faid pro and con on this fubject, and most of the arguments already used on the repeal of the stamp act have been repeated; this discussion will properly appear in our next volume, when, from the confequences attending this meafure, it becomes an object of national and parliamentary confideration.

The first public instance of disgust shewn upon this occasion was at Boston, where, at a Oct. 27, meeting of the inhabitants, several resolutions were entered into, for the encous ragement of manufactures, the promoting of economy, and the leffening and restraining the use of foreign superfluities. These resolutions, all of which were highly prejudicial to the commerce of this country, contained a long lift of enumerated articles, which it was either determined not to use at all, or in the smallest possible quantities. A subscription was opened at the same time, and a committee appointed, for the encouragement of their own former manufactures, and the establishment of new ones. Among these, it was resolved to give particular encouragement to the making of paper, glass, and the other commodities that were liable to the [*e* 2] payment

importation. It was also resolved to restrain the expences of funerals, to reduce drefs to a degree of primitive fimplicity and plainness, were now so much to be wished. and in general not to purchase any commodities, from the mother had received from the Earl of Shelcountry, that could be procured in

any of the Colonies. These resolutions were adopted, or fimilar ones entered into, by all the old Colonies on the continent. In some time after, a cir-Feb. 11, cular letter was fent by the Assembly of Massachuset's Bay, signed by the Speaker, to all the other Affemblies in North America. The defign of this letter was to flew the evil tendency; fioned, and the observations that of the late Acts of Parliament, to represent them as unconstitutional, and to propose a common union between the Colonies, in the purfuit of all legal measures to prevent their effect, and a harmony in their applications to Government for a was appointed to wait on him, to repeal of them. It also expatiated · largely on their natural rights as letter, as well as of those which he men, and their constitutional ones as English subjects; all of which, it was pretended, were infringed by these laws.

It happened, unfortunately, that a continued course of altercation, and an almost total difference of opinion upon every subject, had prevailed for some years between the Assemblies of Massachuset's. Bay and the Governor of that Colony. This altercation was carried on with much asperity; and both indes, on some occasions, seemed more attentive to the keenness of their observations, and the tartness of their replies, than to the utility or propriety of the measures they were purfuing. The feverity of

payment of the new duties, upon these altercations left a bitterness behind, that was far from being favourable to that happy temper and conciliating disposition, which

A letter which the Governor burne, one of the principal Secretaries of State, and which contained very severe animadversions on the conduct of the Assembly. was, in pursuance of the Governor's order, and the intention of writing it, read to that body by the Secretary. This letter caused great heats in the Affembly; and it is faid, the firictest decency was not observed in the debates it occawere made upon it. In these debates it was faid, that the charges made in it must have been founded upon a misrepresentation of facts by the Governor, in his dispatches to the Ministry; and a Committee defire a copy of Lord Shelburne's had wrote himself relative to the Assembly, and to which the charges in that must refer. These copies being refused, the Assembly wrote a letter to the Secretary of State, in which they recite the circumstances of the transaction, and take great pains to vindicate their own conduct at the expence of the Governor, to whose misrepresentation they charge the Minister's ill opinion of it. They also wrote letters to the Lords of the Treasury. and most of the great Officers of State, in which, along with great professions of loyalty, they remonitrated strongly against the operations of the late Acts of Parliament; which they infinuated to be contrary to the Constitution, and totally subversive of their rights and liberties.

The Governor, finding that there was no hopes to mollify the refractory spirit which was so predominant in the Affembly, adjourned it. In the Speech which he delivered upon this occasion were many strictures on their conduct, particularly in regard to Lord Shelburne's letter; and he complained greatly of some turbulent factious members, who, under false pretences of patriotism, had unhappily acquired too great an influence, as well in the Assembly, as among the people; who facrificed their country to the gratification of their passions, and to the support of an importance which could have no existence but in times of trouble and confusion.

In the midst of these distractions in America, a new establishment was made at home, by which a Secretary of State was appointed to the department of the Colonies only. A great deal was hoped from this arrangement. Lord Hillsborough, who appeared first in that office, wrote a circular letter to the Governors of all the Colonies, who had before received the circular letters from the Assembly at Boston. By this letter his Majesty's dislike to that measure was expressed in the strongest terms. It was declared, that he confidered it, as of the most dangerous and factious tendency; calculated to inflame the minds of the people; to promote an unwarrantable combination; to excite an open opposition to, and denial of, the authority of Parliament; and to subvert the true principles of the

Constitution: And that his Majesty expected from the known affection of the respective Assemblies, that they would defeat this flagitious attempt to disturb the public peace, and treat it with the contempt it deserved, by taking no notice of it.

Another letter, of the April 22. Governor Bernard, in which the fame exceptions to the circular letter are repeated, which is faid to have been a measure carried through a thin house at the end of a fession, and in which the Affembly departed from that spirit of prudence, and respect to the Constitution, which seemed to have influenced a majority of its members, in a full house, and at the beginning of the fession; from whence his Majesty could not but consider it as a very unfair proceeding, and to have been carried by furprize through the House of Representatives. A requisition was then made, in his Majesty's name, That the new Assembly would rescind the resolution which gave birth to the circular letter, and declare their disapprobation of, and diffent to, so rash and hasty a proceeding: That, as his Majesty had the fullest reliance on the affections of his subjects in the Massachuset's Bay, he had the better ground to hope, that the attempts made by a desperate faction to disturb the public tranquillity would be discountenanced, and that the execution of the measure recommended would not meet with any difficulty.

This part of the letter June 21. Assembly by the Governor, with a message in which he earnestly re-

[*e* 3] quested

quested their compliance; but obferved, that, in case of a contrary conduct, he had received his Majefty's instructions in what manner to act, and must do his duty. This produced a message from the Asfembly, in which they defired a copy of the inftructions which the Governor alluded to, as well as of fome letters and papers which he had laid before the Council. The Governor Yent a copy of the remainder of Lord Hillsborough's letter, in which the instructions were contained, to the Assembly, by which he was directed, in case of their refusal to comply with his Majetty's reasonable expectation, to diffolye them immediately, and to transmit a copy of their proceedings upon it, to be laid before the Parliament.

The Affembly not having given any answer to the requisition for about a week, the Governor fent a message to urge them to it; in answer to which they applied for a recess, that they might have an opportunity to confult their conflituents upon the occasion. This being refused, the question was put for rescinding the resolution of the last house, which passed in the negative by a division of ninety-two to seventeen. A letter was then refolved on to Lord Hillsborough, and an answer to the messages from the Governor. In both these pieces great pains are taken to justify the conduct of the last Assembly, as well as of the present; the charges of surprize, and of a thin house, are absolutely denied; and, on the contrary, they fay, that the resolution for the circular letter was passed in a full session, and by a great majority. The legality of that measure was

defended, as it was the inherent right of the subjects to petition the King, either jointly or feverally, for a redress of grievances. In regard to rescinding the relolution it was observed; that, to speak in the language of the common law, it was not now executory, but to all intents and purpofes executed : That the circular letters had been fent, and many of them answered; that both have appeared in the public papers; and that they could now as well rescind the letters as the refolves on which they were founded, and that both would be equally fruitlefs. In the letter to the Secretary of State, they made feveral comments, with great freedom, on the nature of the requifition; and alledged that it was unconstitutional, and without a precedent, to command a free Affembly, on pain of its existence, to rescind any resolution, much less that of a former House. They complained greatly of the base and wicked milreprefentations that must have been made to his Ma-jesty, to cause him to consider a measure perfectly legal and conftitutional, and which only tended to lay the grievances of his fubjects before the Throne, as of an 'inflammatory nature, tending to create unwarrantable combinations. and to excite an opposition to the authority of Parliament,' which are the terms in which it is described in the letter. They conclude with professions of the greatest loyalty, and the strongest remonstrances against the late laws. They were in the mean time preparing a petition to the King for the removal of their Governor, in which they laid a number of charges against him, that were urged with great acrimony; but, before the finishing hand could be put to it, the Assembly was difsolved.

The circular letters, which the Secretary of State had wrote to the other Colonies, were attended with as little efficacy as that which was fent to Boston. The different Affemblies wrote answers to that of Maifachuser's Bay, which were received by the late Speaker, in which they expressed the highest approbation of their conduct, and a firm resolution to coincide in their measures. Some of them also returned addresses to the Secretary of State, in which they not only justified the measures taken by the Affembly at Boston; but animadverted, with great freedom, on feveral passages, as well as on the requisition, contained in his letter. In the mean time, most of them entered into resolutions, not to import or purchase any. English goods, except what were already ordered for the ensuing fall and fuch articles of necessity as they could not do without, until the late laws were repealed.

Previous to the dissolution of the Assembly, a great tu-June 10. mult happened at Boston, in consequence of a seizure made by the Board of Customs, of a sloop belonging to one of the principal merchants of that town. It appears that this floop was discharged of a cargo of wine, and in part reloaded with a quantity of oil, which was however done under pretence of converting her into a store, without any great attention having been paid to the new laws, or to the Custom-house regulations, Upon the seizure, the officers made a fignal to the Romney man of

war; and her boats were fent manned and armed, who cut away the floop's fafts, and conveyed her under the protection of that ship. The populace having affembled in great crowds upon this occasion, they pelted the Commissioners of the Customs with stones, broke one of their swords, and treated them in every respect with the greatest outrage; after which, they attacked their houses, broke the windows, and hauled the Collector's boat to the common, where they burnt it to ashes.

The Officers of the Customs, upon these extraordinary acts of outrage, found it necessary, for the fecurity of their lives, to retire aboard the man of war, from whence they removed to Castle William, a fortification on a small island in the harbour, where they refumed the functions of their office. In the mean time, Townmeetings were held, and a remonstrance presented to the Governor, in which the rights they claimed were supported in direct opposition to the Legislature, and an extraordinary requisition made, that he would iffue an order for the departure of his Majesty's ship the Romney out of the harbour.

The temper and conduct of the people became every day more licentious. That republican spirit to which this Colony owed its foundation, and the levelling principles in which the inhabitants were nursed, being now operated upon by measures which they regarded as totally subversive of their rights, and inslamed by the arts of some factious and designing men, who had great influence among them, they seemed equally incapable to prescribe due limits to their passers.

fions, and to preferve a proper decency in the manner in which they expressed them. Their public writers, as well as fpeakers, were generally very intemperate; and a certain stile and manner was introduced, which feemed peculiar to themselves, and too ridiculous for ferious composition. In some of these publications, while they feemed, on one hand, to forget their dependance as Colonies, and to assume the tone of distinct and original States; on the other, they eagerly claimed all the benefits of the English constitution and the highest rights of Englishmen, but did not recollect, that it was that dependance only, which could entitle them to any share of those rights and benefits. A light and irreverent language became the mode, in all matters which related to Government, or even to the Legislature: but when their Provincial Assemblies came to be mentioned, they were no longer known by that appellation, but were upon every occasion distinguished by the title of Parlia-

A report that their Petition to the King had not been delivered by the Secretary of State, contributed greatly to excite the ferment and ill blood among the people. It was faid that the Petition was refused to be received in London, upon an objection that was made, that the Colony Agent was not properly authorized to deliver it, as he had been appointed by the Assembly without the confent of the Governor. The dissolution of the General Affembly increased the disorder; and it may be supposed that a circumflance attending the floop

that was lately feized, which was the property of one of the Reprefentatives of the town of Boston, did not contribute to letfen it.

While things were in this unhappy fituation, two regiments were ordered from Ireland to fupport the Civil government, and feveral detachments from different parts of the continent rendezvouzed at Halifax for the same purpole. No account of a menace made by the most dangerous and cruel enemy could excite a greater alarm than this intelligence did at Boston, and it was treated in all the language of invalion and conquest. Upon the first rumour of it, a meeting of the inhabitants was immediately fummoned at Faneuil-hall, Sept. 12. their late popular Representatives as Moderator. A Committee was then appointed to wait on the Governor, to know what grounds he had for some intimations he had lately given, that fome regiments of his Majesty's forces were expected in that town; and at the same time to present a Petition, to desire he would issue precepts to convene a general Affembly with the greatest speed; to both which an immediate anfwer was required. The Governor answered, that his information about the arrival of the troops was of a private nature, and that he could do nothing as to the calling of another Assembly for this year, until he received his Majesty's instructions, under whose confideration it now was.

A Committee, which had been appointed to confider of the prefent state of their affairs, gave in their report a long declaration

and

and recital of their rights, and the supposed infractions of them, which had been lately made; and passed several hasty resolutions, particularly in regard to the legality of raising or keeping a standing army among them, without their own confent, which they founded on the Act of the first of King William, which declares it to be contrary to law. to keep an army in the kingdom in time of peace without the conient of Parliament. This report and the resolutions were unanimoully agreed to by the Assembly, and a general resolution passed, which was also founded on a clause in the same law, which recommends the frequent holding of Parliaments, by which a Convention was fummoned to meet at Boston. In pursuance of this resolution, the four Members who had represented the town in the. late Assembly were now appointed as a Committee to act for it in the Convention; and the Selectmen were ordered to write to all the other towns in the Province, to propose their appointing Committees for the same purpose.

The most extraordinary act of this Town-meeting, was a requisition to the inhabitants, that, as there was a prevailing apprehension in the minds of many of a war with France, they should be accordingly provided with arms, ammunition, and the necessary accourtements, so as to be properly prepared in case of sudden danger. A day of public prayer and fasting was then appointed, and the meet-

ing dissolved.

The circular letter which the Select-men fent to the other towns in the province, was wrote in the fame spirit as the acts and resolutions which it inclosed, and on which it was founded. In this time of general distemper, when ninety-fix, towns appointed committees to attend the convention. the town of Hatfield refused to concur in this measure; and the fpirited and judicious answer which the inhabitants returned to the Select-men at Boston, will be a lafting monument of the prudence and good sense that influenced their conduct, This letter. as well as the other original papers relative to this transaction, our readers will fee in the Appendix to the Chronicle:

The first act of the Sept. 22, fage to the Governor, in which they disclaimed all pretence to any authoritative or governmental acts: that they were chosen by the feveral towns, and came freely and voluntarily, at the earnest desire of the people, to confult and advise such measures as may promote peace and good order in the present alarming fituation. They then reiterate the present grievances, complain that they are grossly misrepresented in Great Britain, and press the Governor in the most urgent terms to convoke a General Affembly, as the only means to guard against those alarming dangers that threatened the total deftruction of the Colony. The Governor admonished them, as a friend to the Province, and a wellwisher to the individuals of it, to break up their affembly inffantly, and to separate before they did any business: That he was willing to believe that the gentlemen who issued the summons for this meeting were not aware of

the nature of the high offence they were committing; and that those who have obeyed them have not confidered the penalties they shall incur, if they persist in continuing their fession: At present, ignorance of law may excuse what is past; a step farther will take away that plea: That a meeting of the Deputies of the towns is an affembly of the Representatives of the people to all intents and purposes; and that the calling it a Committee of Convention will not alter the nature of the thing. He added, that if they did not regard this admonition, he must, as Governor, affert the prerogative of the Crown in a more public manner: That they may affure themselves, for he spoke from instruction, the King was determined to maintain his entire Sovereignty over that Province; and whoever should perfift in usurping any of the rights of it, would repent of his rashness.

This answer produced another message, wherein they justified their meeting as being only an affemblage of private persons, and defired explanations as to the criminality with which their proceedings were charged. The Governor refused to receive that or any other message from them, as it would be admiting them to be a legal Affembly, which he would not by any means allow. Convention then appointed a Committee, who drew up a report in terms of great moderation, which was approved of by the Assembly. In this they assign the causes of their meeting, disclaim all pre-

tence to any authority whatfoever. and advise and recommend it to the people to pay the greatest deference to Government, and to wait with patience for the refult of his Majesty's wisdom and clemency, for a redress of their grievances. They at the fame time declare for themselves, that they will in their feveral flations yield every possible assistance to the Civil magistrate, for the preservation of peace and order, and the suppresfion of riots and tumults. The Convention having then prepared a representation of their conduct, and a detail of many of the late transactions, to be transmitted to their Agent in London, Sept. 29. was broke up.

The day the Convention broke up, the fleet from Halifax, confifting of feveral frigates and floops of war, and some transports, with two regiments and a detachment of artillery on board, arrived in the harbour. Some difficulties arose at first about quartering the troops, which the Council refused to agree to, as the barracks of Castle William were sufficient to receive them; this was however got over by providing quarters, which were then to be confidered as barracks. and the Council upon that footing allowed them barrack provisions. General Gage arrived foon after. as did the two regiments from Ireland. A tolerable harmony has subsisted between the people and the troops; and the town and province have been in general very quiet.

CHAP. XI. Total 10 offer

State of the Ministry. The Parliament meets. The King in his Speech recommends a particular attention to the distresses of the people, occasioned by the high price of provisions. Petition from the City of London on that subject; proceedings and debates thereon. A new Bill for restraining East India dividends. Petition against it from the Company. Great debates on the subject; the Bill passes. Motion for bringing in the Nullum Tempus Bill. Transactions relative to that motion. Great debates thereon; the affair deserved to the next session. A Bill passed for limiting the duration of the Irish Parliaments. An end put to the session; Parliament dissolved, and writs issued for a general Election. New Parliament meets; address on the late disturbances; Provision Bills renewed; the Parliament adjourns.

THE death of Mr. Townshend, Chancellor of the Exchequer, which happened during the recess of Parliament, it was supposed would have been a great shock to a Ministry which was known not to be strong, and which it was believed was not firmly united. If Mr. T. had been in a very close and amicable connexion with his colleagues, his loss would to them have been irreparable; as his eloquence and his abilities were of the first magnitude. Although this was far from being the fact, it became necessary upon his death to look out for some addicion to the ministerial system, which might promise it to continue with permanency and to act with power.

Some time before this event, the confciousness of their weakness had induced the court to make propositions to the Marquis of R. The public for some time entertained hopes of the return of the popular Administration of 1766. This negotiation however came to nothing. Other projects were to be tried; and the Ministers, who perhaps secretly disliked

a return to their old connexion with the R-m party, though their necessity induced them for a while to counterfeit fuch a defign, opened a treaty with the Duke of Bedford and his friends. This union feemed the most improbable of any that could have taken place, as nothing could have been more opposite than the political principles of Lord Chatham, who was supposed to have been the founder of the present Administration, and those of the principal members of the accession. The fame opposition in political principles had subsisted in all the parts of the Ministry, and was in general the band of their union. both in and out of office. It now appeared that the Nobleman we have mentioned had totally lost all weight and influence in Administration, and that political differences in opinion are not always irreconcileable.

Without any general difarrangement, feveral changes took place in the great offices of State during the fession, in confequence of this coalition. Lord North was appointed Chancellor of the Exchequer, Mr. T. Townshend soint

Pay-master

Pay-master of the Forces, Earl Gower Lord President of the Council, Earl of Hillsborough and Lord Weymouth Secretaries of State, the former being a new department for the Colonies, and Mr. Rigby a Vice-treasurer of Ireland, besides several others of less importance.

Nov. 24, the fession, notice was taken in the Speech from the Throne, that the cause of the Parliament's being affembled so early, was to give sufficient time for their deliberations, without interfering with that which would be most suitable for the enfuing general Election. The principal point recommended to their attention, was the distresses of the people, occasioned by the high price of Corn, and which neither the late falutary laws nor the produce of the harvest had sufficiently reduced. It was also recommended to them, to persevere in their utmost endeavours to diminish the National debt.

As the great object of this Speech was to recommend an attention to the relief of the people, from the distresses occafioned by the high price of provisions, it was accordingly expected that some plan for the effecting of that purpose had been prepared by the Ministry. This however was not the case; and on the contrary, the Ministers in general feemed to be of opinion, that though the obtaining fuch relief was an object much to be coveted, at present it was not attainable. Some debates arose on the propriety of a public recommendation of a subject of so nice and ticklish a nature, when at the same time the impossibility

of a compliance with it was known and allowed. It was faid that the people would naturally infer, that their relief was practicable, or that the recommendation would not have been given; and that, false hopes being thereby inspired, their despair and impatience would become the greater, when they found that they were still left to languish in misery and want: That in this fituation all their rage must be directed against their Representatives, who, notwithstanding the earnest applications of the Crown, would take no measures for their relief; and that, in such a state of despair, it was no wonder if they should fet all law and order at defrance. and renew those tumults which had already been productive of fuch melancholy confequences.

A Petition from the City of London was received, complaining of the high price of Provisions. and containing feveral propofals for the confideration of the House, as well to contribute to lessen the present evils, as to prevent a renewal of them. Nothing was done upon this Petition; and though the distresses stated in it were but too real, the plans proposed for relief and prevention were of a very problematical nature. How-ever, all the Provision Bills of the last Session, both in regard to importation and exportation, were continued, and some of them amended. And a new Bill was brought in for the importation of Wheat and Flour from Africa.

The affairs of the East India Company were now become as much an object of annual confideration, as the raising of the supplies; and though the agreement they had entered into with the Go-

vernment

vernment was to continue another year, yet as the Act which reftrained their dividends to ten per Cent. was now expired, a Bill was brought in, to reftrain them in the fame manner for the enfuing year. The Company, greatly alarmed at the apparent perfeverance in a measure which they apprehended fo totally subversive of their rights,

Jan. 15, presented a strong Petition against it. In this they shewed the right they had by their Charter to declare their own Dividends; that the regulations already established by the Legislature will at all times be sufficient to prevent an improvident use being made of such powers; and assure the House, that they will make no increase of their Dividends, unless the situation of their affairs shall afford ample conviction, that in justice and prudence they will be warranted in

so doing.

This measure occasioned great debates in the House. The advocates for the Bill made use of the fame arguments which were used upon passing the former, and which we then took notice of; those who opposed it took some new ground, from the experience they had in the effects of that meafure. It was observed, that such an exertion of fupreme power was equally unnecessary and dangerous, after having had the most mortifying experience of the operation of a like restriction last year, which increafed the very mischief it was intended to remedy: That, as the circumstances of the Company are clear beyond a doubt, and their opulence verified beyond the most sanguine expectation, and no supposed misconduct of theirs calling for the interpolition of Parliament: this Bill can only be confidered as a mere act of power, without a colour of delinquency on the part of the Company, or of necessity on that of the public: That it appears altogether unaccountable, to pass in one year an Act for regulating the modes and conditions of declaring Dividends by the Company; and the very next year, to prohibit the exercise of those very powers so regulated: That this law, made on purpose to regulate the method of declaring Dividends, does of necessity imply the exercise of that right under the conditions therein prefcribed, which cannot be taken away from the Company, without the most fignal diffrace to the wildom and good-faith of the Legiflature, and the fubversion of every principle of legal govern-

It was also observed, that to restrain the subject in the disposition of his own property, without any other pretence than the mere postibility of abuse, is a principle unheard-of in any free country, and most alarming to all the monied and trading interests of this kingdom: That it goes to the subjecting to the fame restraint, on the fame loofe reasons, every great Company, as well as every public or private flock, which may become of magnitude sufficient to tempt in future times an impoverished Treasury and a rapacious Administration, since no degree of innocence can be a fecurity against fuch suspicion of a possible fraud; and fuch fuspicion may be made a ground for continuing an arbitrary restraint, until the subject shall consent to ransom his property on fuch terms as shall be prescribed to

These and many other reasons were urged with great force, but Jan. 22. to very little effect; and the restraining Bill was carried a second time by a very great majority. It met, as well as the former, with a great opposition in the House of Peers, and a Protest signed by several Lords was entered against it.

After this, the most remarkable event in this session was a motion made, towards the close of it, for leave to bring in a Bill for quieting the possession of the subject, and for amending and rendering more effectual an act of the 21st of James I. for the general quiet of the subject against all pretences of concealment whatsoever.

This proposition was so remarkable, not only for the importance of the interests that were to be affected by it, but by the events which preceded and probably gave rife to it, that it will not be amiss to take up the matter from the be-ginning. The Duke of Portland and his ancestors had been in posfession about seventy years of a very confiderable estate in the North of England, in consequence of a grant made by the late King William to the first Earl of the present family, of the Honour of Penrith in the county of Cumberland, and the appurtenances thereunto belonging. The forest of Inglewood, and the manor and castle of Carlisle, were considered as parts of this grant; and have been accordingly enjoyed by the family by the same tenure and in the same quiet possession as the reft. By what has lately appeared, it is probable that they are not particularly specified in this grant; but were supposed to be included as parts of the whole. It is also

possible that the King, who had fufficiently experienced the extreme jealousy of the Parliament and people, on every mark of attention which he shewed to his countrymen, did not chuse to excite fresh clamours by an ample specification of terms in a grant to his favourite.

Sir James Lowther, who is poffessed of a very great fortune in the fame county, and who feems to have been well informed of all the circumstances relative to this grant, presented a memo- July 9, rial to the Lords of the Treasury, in which he set forth, That he was informed that the forest of Inglewood, and the foccage of the caftle of Carlifle, had been long withheld from the Crown without its receiving any benefit from them; and therefore he prayed a lease of his Majesty's interest therein for three lives, upon such terms as should appear fitting to their Lordships.

This memorial was referred by the Board of Treasury to the Surveyor General of Crown Lands, for his opinion. The Surveyor, in his report in answer to Aug. 7. the Board, faid, that the premifes in question were not conveyed by the grant from King William to the Earl of Portland, but were still invested in the Crown; and recommended to their Lordships to grant the lease demanded, for three lives, at a certain fmall referved rent which he specified, viz. 50 l. per ann. for the soccage of Carlisle, and 158. 4d. for the forest, and a third part of the rent of fuch lands, &c. as shall be recovered from the Duke of Portland.

This report of the Surveyor, who is himself no lawyer, was re-

4

turned to the Board on a dubious and intricate question in law, without his taking the opinion of the Attorney or Solicitor General, or hearing the Duke of Portland's lawyers in defence of his title. The proceeding feemed the more extraordinary, as the memorial was delivered, the report made, and the affair in agitation, near two months before the Duke received any authentic in-Sept. 2. formation of it; and even then it was the effect of an enquiry, first founded on vague report and hearfay, rather than of a defigned or regular notice. The Board of Treasury having then also adjourned for above a month, it was out of the Duke's power during that time to make any representations on the subject; and as it was vacation time, when all the lawvers are out of town, it was an impediment to his preparing his title properly to lay before it.

As foon as the Board met, a memorial was presented by the Duke, praying to be heard by counsel in defence of his title, before it proceeded to any act in consequence of Sir James Lowther's application. In answer to this memorial he received a letter from the Secretary of the Treasury, in which it was defired, by order of the Lords, that the Duke would lay before the Board a state of his claim and title to the forest of Inglewood, which they would refer to the Surveyor General, and would at the fame time fend him back the report which he had made on Sir James Lowther's memorial, for his farther confideration. It was also promised, that no step should be taken towards the decision of

the matter in question, till the Duke's title had been stated, referred to, and reported on by the proper officer, and fully and maturely considered by the Board of

Treasury.

The Duke, in consequence of this affurance, employed his agents in inspecting and taking copies of feveral records and evidences in the different public offices, which were necessary for the stating and preparing of his title by the lawyers. This was a tedious and important work, as the point upon which the question hung was, whether the forest and manor in debate were appurtenances belonging to the Honour of Penrith. To enter into this disquisition, it was necesfary to confult a long train of precedents, grants, surveys, verdicts, and innumerable acts of ownership, for some hundreds of years back, from the time of Richard III. who, when Duke of Gloucester, was possessed of that Honour. In the course of this enquiry, the Duke's agents thought it proper to examine, whether the facts mentioned in the Surveyor's report were fairly and impartially stated. To this purpose, application was made at the Surveyor's office, for permission to inspect the furveys, court rolls, and monuments, on which he had founded his report. This application was however without effect; and the permission absolutely refused to be granted.

Upon the Duke's return Dec. 2. to town, he presented a memorial to the Board, in which he prayed, That, as all public records ought, and by all courts of judicature are directed, to he inspected for the benefit of the parties interested, an order may be issued to the

Surveyor's

Surveyor's office, for liberty to infpect fuch furveys, court rolls, &c. as related to the matter in queffion. The Board answered, by their Secretary, That an order for that purpose should be granted; not as a foundation of right, but as a matter of candour and civility.

However it was, though the Clerks received the fees for the drawing up of this order, it could never be procured. After various delays and evafions, it was at last faid to have been fent to the Surveyor's office; and upon enquiry there, the receipt of it was denied. It afterwards appeared, that an anfwer to it had been fent by the Surveyor, to the Treasury, two days before the time of denial, in which he remonstrated against the inspection of any papers by those who litigate the Rights of the Crown.

In this manner were the Duke's · agents trifled with till Christmas; and while they were thus busied in preparing his title under the instructions of the Board, the grants were made to Sir James Lowther of the possessions in question, and had passed through all the seals except that of the Exchequer. This was done without any previous notice or citation to the Duke; and before he or his agents were even apprized, that the infpection at the Surveyor's office would not be complied with. length the Duke received a letter in the country, from the Secretary of the Treasury, dated the 22d of December, in which he was informed that the grant was passed, and the leases already signed. Nothing now remained but to stop its progress in the Exchequer-office, where a caveat had before been entered for that purpose. But upon application to the Chancellor to with-hold the feal in confequence of the caveat, his Lordship made answer, that he was pressed to affix the feal instantaneously; and that, as Chancellor of the Exchequer, he could not resuse to comply with an order from the Board of Treasury to that purpose.

As this measure was founded upon, and again bringing into use, the antiquated law, and prerogative maxim, of 'Nullum tempus occurrit Regi,' by which no length of time or possession can be,a bar against the claims of the Crown; and as all the lands in the kingdom have at different times been in its possession, and many of them, from the loss of authentic deeds and papers, may be liable to the revival of claims of a fimilar nature; fo nothing could be more alarming to the landed property of the nation. Refumptions in most cases are disagreeable, and cautiously to be meddled with. In this, the particular circumstances that attended it, and the mode obferved in the whole conduct, feemed as difagreeable as the act itself. It accordingly excited, not only a popular clamour, but a very general dissatisfaction, and became a subject of great debate both in public and private.

On one fide the arbitrary spirit and dangerous tendency of the Nullum Tempus maxim, on which this grant was founded, was exposed with great ability. It was shewn that the exercise of any right supposed to be sounded upon it was practised only by our worst and most arbitrary Princes; and even by them with caution, as they were sensible of the general abhorrence which every act of the

kind

seind excited : That it had long been the opprobrium of Prerogative, and the difference of the Law; and that the ablest Writers in that profession, and the best Judges, had always cast an odium on it, as being fundamentally contrary to natural Equity, and all the maxims of a free Government: That even in the arbitrary reign of James the First, a law was passed, in some degree, to prevent its evil effects: That as the Constitution became then better established, the powers of its different parts defined, and the rights of the people delineated; this Law was only made retrospective, as it could not be supposed that a maxim would be revived in more enlightened ages, which was always fo odious in the darkest times: That the revival of it could be only to answer the most arbitrary purposes, to hang it up as a rod, to awe the subject, who was liable to be harraffed and ruined, by frivolous and vexatious fuits, whenever he became obnoxious to a Ministry.

It was faid, that, as the Duke's title was still under the protection of the laws, and there could be no doubt but he would defend it to the utmost, and the issue of such a fuit must be very distant and very uncertain, therefore the prefent grant must be founded on the most unconstitutional motive, that of obtaining to a party a temporary and undue influence in the enfuing general Election: That the avowed opposition of interests in the fame county between the parties, and the particular connexions of one of them, left no room to doubt that this was the fole object in view.

It was observed, that, when our Kings had little other revenue to support the Court and Civil

Lift than what arofe from their demesne lands, resumptions then. though cautiously practised, were necessary, when weak and prodigal Princes had too much impoverished the Crown by the making of profuse grants: That, in fuch cases, these resumptions were useful to the public, which must at any rate support the dignity of the Crown. However. refumption, if it should ever become necessary, was the proper act of the Legislature, and not of the Crown: That things were now entirely changed; the Crown had a great and permanent revenue fettled on it by the public, fully fufficient to answer these purposes, and in a great measure defigned to fecure the quiet of the people in their possessions, and to prevent the litigations that arose from the claims of the Crown, and the continual disputes that occured about the disposition of its lands: That the colour which the defenders of the measure pretended to give it, of its being defigned to lighten the burdens of the people, by finding a new fource of revenue for the Crown, was fo ridiculous as not to deferve a serious answer: That the Civil List establishment was fixed and permanent, and the paltry referved rent too contemptible to be mentioned: That it was evidently a continuance of that ungracious fystem which had been purfued for some years, of taking every opportunity to affront and diffrace those families who had the principal share in the Revolution, and fecuring the accession of the House of Hanover to the Throne: That the particular circumitances attending it fufficiently shewed, that the same hidden and undue influence, which [*f*]

was so obnoxious to the nation, and had so long directed its public councils, still presided in them, in the full plentitude of its power: And that the privacy, hurry, evasion, and duplicity, which attended the whole transaction, were a disgrace to Government itself.

On the other fide, the questions of law and right were chiefly infisted on. It was faid, that the premises in question were no part of the Honour of Penrith, and that they were neither specified nor understood in the grant: That, the right being certain, it was no more a fault in the Crown, than it would in a private person, to affert it: That it would be happy if many fuch refumptions were made, to ease the burdens of the people: That the Earl of Portland and his family were fufficiently compenfated for any fervices he had performed to the nation; and that, after 70 years possession of an estate to which they had no right, they may contentedly refign it to the true owner, when there was no demand made upon them for the past issues: That, supposing the charge of Favouritism, his present Majesty had as good a right to reward his favourites as King William had; and that the natural influence which the possession of the Crown-lands afford in elections was disposed of with more propriety in the hands of the friends to Administration, than in those who were in opposition to it.

The defenders of the measure did not enter much into the prudence and propriety of the grant, nor into a defence of the conduct by which it was carried into execution. It was only faid, that the Treasury was bound to follow the Surveyor-General's report, and had

given sufficient time to the Duke to prepare his title, and that the reason of his not doing it was because he had none to shew.

It is evident on the face of this defence, that it goes upon two principles, neither of which are tenable. First, that there is no equity in a prescriptive possession; contrary to the opinions of all writers of law in every country, and indeed to the common sense of mankind. The fecond is, that the Surveyor-General's report is conclusive, so far as to oblige the Treasury to make a grant to any informer to whom that report shall be favourable; a power in the Surveyor-General, which they did not attempt to support by any lawauthority whatsoever. Upon the whole, without entering into a discussion of the questions of law or right, it may not be easy to defend the propriety of a measure, in general so alarming, and so extremely unpopular. Nor does it feem confistent with good policy, to difgust and irritate, upon trifling or needless occasions, the great families of any country; more especially under fuch a form and eftablishment of Government as ours. Nor did the manner in which this transaction was conducted carry that face of clearness and equity, which is so necessary, and so defirable, in the administration of a great nation. Accordingly, as no one act tended fo much to the unpopularity of Administration, fo the fuccess that attended this meafure was in proportion to the odium; the effects counteracted the defign, and totally overthrew that interest in the North, which it was intended to establish and ex-

This motion was introduced en-

3

firely upon public grounds, and expressly guarded against the serving of any immediate or personal purpose, or the taking in any pendent or recent case. The purport of the law of James I. is, that a quiet and uninterrupted enjoyment, for 60 years before the paffing of the Act, of any estate originally derived from the Crown, shall bar the Crown from any right of fuit to recover fuch estate, under pretence of any flaw in the grant, or other defect of title. The amendment proposed by the motion was, To convert that fixed prescription of the Act of K. James into a moving limitation; and to make 60 years possession in all future times a bar against the claims of the Crown.

Notwithstanding the equitable ground on which this motion was founded, it met with a strong opposition from the Ministry, whose conduct fell under the heaviest censure upon the occafion; but the subject was of a nature fo interesting to all parties, and the arguments that must be used to oppose it so generally odious, that it was thought proper to change the mode of defence, and, under colour of the shortness of the semon, to put it off till the next meeting of Parliament. :: This manœuvre fucceeded, but upon fo close a division, that it afforded a majority of only twenty.

A very popular Bill, for limiting the duration of their Parliaments, paffed this winter in Ireland, and received the Royal affent here. Before this Law, the Irish Parliament was only determined by the King's life; but now they are to be chosen once in eight years; and as they only sit every second winter, they are to transact business but four fessions, so that in reality they are of a more limited duration than the English Parliaments. Nothing could have given greater joy, especially to the lower fort of voters of that kingdom, than the passing of this octennial Bill; and the Lord Lieutenant in confequence of it became extremely popular: In this fituation of things, it was thought a favourable opportunity, before the diffolution of the old Parliament, and before the disposition of the people should change, to propose an augmentation of the army upon that establishment. A message to that purpose was accordingly sent to the House by the Lord Lieutenant, which occasioned very warm debates, in the course of which great mismanagements, in the present military establishment of that country, were brought to light; and the question being at last put upon the requisition, it was carried in the negative.

The material business of the fupplies being fettled; and a number of public and private bills passed, an end was at March 10. once put to this fhort fession, and to the Parliament. Great acknowledgments were made in the Speech from the Throne, for the whole conduct of the Parliament, for the many fignal proofs they had given of their most affectionate attachment to his Majesty's person, family, and government; their most faithful attention to the public fervice; and their most earnest zeal for the preservation of the constitution.

The general election was carried on with much heat, and violent contests ensued in many parts of the kingdom. The disorders which

Were begun upon this occasion did not end with the elections. A general diffatisfaction unhappily prevailed among feveral of the lower orders of the people. This ill temper, which was partly occasioned by the high price of provifions, and partly proceeded from other causes, too frequently manifested itself in acts of tumult and riot, which were productive of the most melancholy consequences. Through some remissiness, the civil power feemed to lofe its force and energy, and upon too many occafions to make way for the dangerous interpolition of a military force in its support. The riots and tumultuous affemblies of the coalheavers and failors were a difgrace to the police, as well as alarming to the repose and security of the capital. The fatal confequences of the unhappy affair in St. George's Fields are too well known.

On the meeting of the May 10 new Parliament, they were informed by the Lords Commissioners who were appointed to open the session, that his Majesty did not call them together at that pincustomary season, to enter upon any matters of general buliness, but merely to dispatch certain parliamentary proceedings, which were necessary for the welfare and fecurity of his subjects. The particular matters alluded to in this speech, were the renewal of several of the provision bills, particularly the act against the exportation of corn, which were now near expiring. The day after the meeting of the Parliament, a proclamation was iffued by order of the Council, for suppressing of riots, tumults,

and unlawful affemblies. Both Houses, in their address, returned his Majetly thanks, for the gracious and paternal attention he had manifested for the prosperity of his people, which had induced him to interpose his own more immediate authority for putting an end to that dangerous disturbance of the public peace, and those outrageous acts of violence in defiance of the authority of the civil magiftrates, which had of late prevailed to fo alarming a degree, in and near the metropolis. It was hoped that the Royal proclamation would effectually prevent the continuance or repetition of such disorders for the future. But if the contrary should happen, both Houses declared that they would give their concurrence in every measure, that might enable his Majesty, most effectually, to maintain the public authority, and to carry the laws into due execution.

The thanks of the House of Commons were voted to the Lord Mayor of the City of London, for his vigilant and active conduct, in support of the laws, and for the prefervation of the public peace, during the late disturbances. And his Majesty was addressed, to order a compensation to be made to fome magistrates, who had suffered losses by the populace, in confequence of their conduct in the late riots in St. George's Fields, and fome other places. The provision bills being renewed, and thereby the business for which it was asfembled concluded, an end was put to this short session, May 21. which however, in regard to the temper of the times, was at first only by an adjournment.

JANUARY.

ith. O N Sunday night great disturbances happened in Spital-fields, in regard to the masters having lowered the price of work four pence per yard; but at length a dispute arose among the journeymen, dividing themselves into two parties, when breaking of particular houses windows became general, several of whom were taken into custody, to be dealt with according to law, among whom was a publican charged as a

ringleader in the fray.

Yesterday about noon, a party of guards was ordered to march from the Tower into Spital-fields, to preserve peace and good order in those parts, which so irritated a body of the weavers, that they foolishly opposed them, with old fwords, flicks, and bludgeons, and even struck some of the foldiery, who were obliged to return the fame in their own defence, by which several were slightly hurt on each fide, and fome of the offenders obliged to furrender at dif-· cretion, and were delivered over to the civil power.

Yesterday morning a watchman was found in St. George's-fields, almost frozen to death, when he was carried to a public house, and put before the fire, but soon expired. This is the third person, who, in all probability, hath lost his life by the above imprudent method.—The constant custom of the nor-

You. XI.

thern inhabitants of Europe is to rub the frozen and benumbed limbs for some time with snow, till a due circulation of the blood is effected.

Yesterday the navigation between London and Gravesend was intirely stopped; so that great quantities of heavy goods were sent down to Kent by land carriage.

Near 300 poor watermen, fishermen, &c. in the parish of Lambeth, were relieved with 5 s. 3 d. each, by his grace the archbishop of Can-

terbury.

On Monday the fum of 200 L was distributed among a great number of poor persons at Almack's tavern, in Pall Mall, being the amount of a collection made among the nobility and gentry who frequent that house.

The following are the particulars of the unhappy difturbance which happened last Sunday evening among the journeymen-weavers about Spital-fields, and which appeared, upon the examination of the parties before the fitting magisfrates last Monday at the Rotation-office in Whitechapel.

A large body of journeymen weavers well armed, having affembled on the Sunday night in Bishopsgate-street, they proceeded to the houses of many journeymen weavers, distinguished by the names of single-handed weavers, in referement, as they declared, for the

[E] katter

latter having been lately concerned in destroying the looms and works belonging to the engineloom weavers. At these houses feveral of the journeymen finglehand weavers were feized by their antagonists, and kept in custody most part of the night; but before morning they all made their efcape, except three men, who were on Monday carried before Sir Robert Darling, knt. and George Garret, esq; at the Angel and Crown in Whitechapel. In the course of a strict examination of the feveral parties, it appeared that the engine-loom weavers, who were the complainants, had acted in a very blameable manner, as they had not only affembled and taken people into custody without any legal warrant or authority, but that they had fired into feveral houses, and committed divers other illegal acts, to the great terror of many persons, and the disturbance of the public peace. fore, upon the conclusion of this examination, which lasted near fix hours (in which the magistrates, to their honour, acted with much difcretion and impartiality) the above three men, who were charged with having been concerned with many others in destroying some of the engine-loom weavers works, upon giving fufficient fecurity for their appearance, were admitted to bail, to answer the faid charge at the enfuing fessions of the peace for the county of Middlesex. The mob of journeymen weavers at both parties being the greatest almost ever known, during this long examination, obliged the magistrates to send for a party of guards to keep the peace; and at the conculion of the affair, the fingle-

handed weavers carried off the above three men in triumph. And we are also informed, that the magistrates were unanimous in opinion, that no adequate remedy can possibly be applied to put a stop to these outrageous disturbances between the different branches of journeymen weavers, which threatens destruction to this valuable manufactory, until the legislature shall have established by law the standard prices of labour between the workmen in all the said various branches of business.

The fevere frost, which set in on the 21st of last month, 9th, has continued with remarkable rigour, to the great calamity of the lower part of the people, who were already severely distressed by the exorbitant price of provisions.

This morning the river below bridge carried all the appearance of a general wreck; ships, hoats, and small craft, lying in a very confused manner, some on shore, and others sunk or overfet by the ice.

A fishing boat was discovered near Deptford creek, close choaked in with ice; the people were all frozen to death; the youngest of them, a youth about seventeen, was found sitting as erect almost as if alive.

Extract of a letter from Bath, of the

"The weather was extremely cold here last week, particularly on Thursday; the mercury in Fahrenheit's thermometer, even in the pump room, stood at 16 degrees below the freezing point, and in the open air sunk down to 24 degrees below freezing; yet so short was the duration of this intense degree of cold, that in less than 24 hours,

hours, the mercury rose from 24 degrees below freezing, and stood at 6 degrees, i. e. it was 18 degrees *minute and three quarters. The less in that space of time. Such an intense degree of cold, attended with fo quick a transition, has not appeared in these parts for 14 years past. The mercury in the barometer, in this great cold, flood at 29.60. and during the above variation funk down to 29.30. only, attended with a great fall of snow."

Letters from Strasbourg, dated Dec. 20, fay, "That an ordonnance of the magistrates of that city was lately published by found of trumpet in the most public parts. which forbids all persons, without distinction of age or fex, country or religion, to beg in that city, or within its jurisdiction, publicly or privately, on any pretence whatfoever, after the first of January. This ordonnance is the refult of a general regulation of police, the object of which is to put a stop to all begging, root and branch; in order to effect which, proper funds are established for the support of fuch unhappy objects, whose age and infirmities render them unable to get a livelihood; those who are able are to be fet to work, and to have a part of the profit of their labour by way of encouragement; and the children of beggars, and others unable to maintain them, are to be fent to the Foundling Hospital, and brought up as orphans in that house, where they shall be instructed in some business, which their having learned there shall entitle them to carry on gratis.

They write from Northampton, that on the third instant, between twelve and one in the morning, an earthquake was felt at Crick, in that county, which shook the houfes very much, and lasted about a same was also felt at Welford, Nafeby, and feveral other places.

They write from Paris, that on the 5th instant the cold by Reaumur's thermometer was 8 1 degrees below the freezing point. cold has been more fevere here than any that has happened fince the year 1709, exceeding that of 1740 by 4 1 degrees, and being but one degree short of that in 1709.

Letters from Vienna advise, that the count Corinini had the misfortune to lose his life by the late terrible hurricane and inundation in the Tyroleze; this nobleman, one of the most illustrious families, was wounded on the head by the fall of a stone, and died the day following. Two officers met also with the like

L. Chamberlain's office. His majesty hath been most graciously pleased to order, that the court mournings shall not. for the future, continue longer than one half of the time which hath been usually observed.

HERTFORD. An humble address, signed by the lord mayor, two aldermen, and a great number of confiderable manufacturers and traders of the cities of London and Westminster, and another figned by the bailiffs, wardens, affiftants, and commonalty of the art and mystery of weavers, were presented to his majesty, on account of public mournings being shortened, and most graciously received.

A great number of Spital-fields weavers, masters and journeymen, went in grand procession from Spital-fields through the city to St.

 $[E_2]$ James's, James's, in order to return their thanks to his majesty, for his declaration to shorten, for the future,

court mournings.

Monday lait three men were jammed in a boat between a large body of ice near the starlings at London-bridge, from about eight o'clock in the morning till past four in the afternoon; when, at the return of the tide, the men all happily got on there. A bottle of brandy, and some tobacco, were conveyed to these poor men, by means of a rope from the top of the balustrade at London-bridge.

The coach given by Mr. Alder, of Abingdon, to Mr. Blewett, the Abingdon stage coachman, is now making; the arms of the Coopers company are to be painted, and the supporters two bluecoat-boys; and the number 3379, the fortunate number of the 20.000 l. prize, is likewise to be put on the coach.

The fevere frost broke up, and was succeeded by a gentle thaw, when the navigation of the river Thames opened below bridge, and the snow vanished in the country as if by enchantment.

A few days ago, a poor woman in Paris, having only ten fols to purchase a loaf of four pounds which came to thirteen, requested ' feveral bakers to give her credit for the remainder, but they all refuled it; whereupon, finding no other resource, she came to the refolution to pilfer a loaf; in which the was detected, and carried before a commissary, to whom she declared that she had an insirm husband who had been fick a long time, and four infants who had not had a morfel of bread for two days. The commissary paid for the loaf, and told her he would enquire whether she had not imposed on him; she conducted him to her garret, where they found the door fast, and, on breaking it open, saw the unhappy husband hanging to a beam, and the children almost.

perishing for want. Letters from Constantinople of the ift ult. advise, that the grand vizir had discovered a few days before, a confiderable treasure. which the Aga Soliman (beheaded about twelve years ago) had locked up in feveral chefts, and depofited with a private man, who in gratitude affumed the name of Soliman. Upon this discovery, the grand vizir committed the man to prison; and the grand fignior, without any other form of process, had the chests taken out of the prifoner's house, and carried to his treasury.

Extract of a letter from Charles Town, South Carolina, Nov. 20.

"They write from West Florida, of the 20th past, that the whole number of Choctaws that mustered to go out against the Creeks were upwards of 800; but they all returned without seeing the enemy except the red captain, one of our fastest friends in that nation: he, with a party of 42 men, were fet upon near the Cahaba river by the Creeks, who killed him, his fon, and 24 others. The Choctaws blame a white man, a trader, for betraying them to the Creeks. Letters from the country of the Creeks fay, that they were 100 in number, that they killed 30 out of 40 Choctaws, and brought one prisoner home, whom they burnt: they declare the Chostaws behaved with great bravery, for when they had fought till all their ammunition was expended, they rushed rushed in among the thickest of their enemies, knocking them down with their tomahawks, and the butt ends of their muskets. The Creeks own the loss of 12 men, among whom were Molton. another good friend of ours, his fon, and the Oakfuskee king. The victors delivered the gorget, medal and commission of the red captain, who was a great-medal chief, to Mr. Hewitt, a trader, in order to be transmitted to the commissary, or the superintendant who appointed him."

A young man, only fon of 18th, a person of considerable property near Wimbledon in Surry, was tried at the quarter fessions at St. Margaret's hill, for violently affaulting his own father, and firing at him twice, but providentially missed him. The trial between father and fon was truly affecting; the father shewing all the tenderness imaginable towards the offender, who pleaded long himself from a brief he had, which in no wife tended to exculpate him; whereupon he was found guilty, and fent to the New gaol till he receives fentence; at which the father cried bitterly, and would not be comforted.

* The fessions ended at the Old Bailey; when feven prisoners received judgment of death, eighteen were fentenced to be transported for feven years, two branded in the hand, eight ordered to be privately whipped, two to be publicly whipped, and eight were difcharged by proclamation.

y At this fessions, capt. Smith was tried upon feven indictments, for publishing forged receipts in his account to his owners, and honourably acquitted, to setting

This day Daniel Afgood, a bargeman, who was capitally convicted on Saturday for the murder of William Ridley, a watchman in Water-lane, was executed at Tyburn, pursuant to his sentence. Extract of a letter from Paris, of the 2d inft.

"It is customary for the major. of this city to go daily to enquire concerning the health of the royal family, when any of those valuable personages are in danger. The etiquette is, to enter into the apartment, and fpeak to the august fick person for whom the city offer up their prayers. Since the queen has been in danger, the major has attended to his duty, but was not introduced to her majesty's chamber; he only received a written certificate. The provost of the merchants hath made representations thereupon at Versailles, in the name of the corporation, to which regard has been paid; and for some days past the major has been admitted anto the queen's chamber, and her majesty charged him to thank the gentlemen of the city, in her name, and hath herself given him an account of the flate of her health."

They write from the fame place, that the queen is afraid any longer to embrace her children. A few days ago, it feems, the expressed her uneafiness to her physician about the danger of communicating her distemper to them by her carefles, upon the general supposition that disorders of the breast or lungs are catching: and perhaps her majesty might also intend thereby to discover the true state of her diftemper, upon which she had hitherto been greatly flattered. Her physician was embarrassed, and -L[E-3] guig selvá saturi mado made reply, "Madam, to a tender and maternal mind like yours, the fuspicion alone may be enough in such a case."

The ball on Monday night at St. James's, in honour of her majesty's birth-day, was very folendid and numerous: their majesties came into the room a little before nine, when the ball was opened by his royal highness the duke of Gloucester and the princess Louisa Ann; minuets were danced alternately by the nobility till past eleven, when their majesties withdrew; country dances afterwards commenced, which continued till near one o'clock, when the rest of the royal family, nobility, &c. retired.

On Saturday the 16th instant Atcham bridge, built over the river within three miles of Shrewfbury, was broke down by the shoals of ice floating through, attended with a very remarkable circumstance, viz. Two broad-wheel waggons, drawn each by four horses, and loaded with coals, came up; when one of the waggons went fafe over; but when the fore horse of the hind waggon came to the bridge, he turned afide, and notwithstanding the driver made use of his whip, he could not make him go forward; and in lefs than three minutes the bridge fell in.

The following uncommon incident, which lately happened at Eccles in Norfolk, is given as an abfolute fact:—An old well at that place, which had not been used for a great number of years, on account of the badness of the water, was some time ago converted into a necessary, by building a small house thereon; in which condition it has remained ever since: a man servant belonging to the fa-

mily, stepping into the place a few nights ago, was furprized with a strange rumbling noise, and being frightened, ran to inform his fellow-fervants, who immediately concluding that a young greyhound, which had been missing a day or two, had by some accident fallen in, they went with a lanthorn and long pole, to be fatisfied as to the truth of it : one of the men put the lanthorn down one hole, while his companion looked down the other; who, observing a blue flame that was hovering over the furface, difturbed the furface with the pole, when instantly a ball of fire sprung up, which instantly struck him on the breast, and beat him against the wall: it then flew out at the door. and burst in the air, with a noise refembling that of a cannon, leaving a sulphureous stench behind it. The man's throat was very much burnt, but he otherwise received little hurt; and a boy, who flood by the door, had his eye-brows

We hear that one of the largest fire-engines hitherto in use on Wednesday last began to work at Tynemouth-moor colliery, in the presence of several gentlemen and artifans: the engine, in the opinion of those who are skilled in mechanic powers, will draw upwards of a thousand hogsheads of water in an hour, at the depth of 70 feet, and is computed to drain and win at the same depth upwards of one million Newcastle chaldrons of coals, Long-benton feam, in the above colliery. The vaft quantity of water expected in this new winning, induced the leffees to erect fo extraordinary an engine, befides which there are two other fire engines of a pretty large fize, Working

11.

working on the rife-part of this colliery.

On Saturday evening the judges met at lord Manffeld's chambers in Serjeants Inn, Chancery-lane, when the case of Mr. Gibson (convicted of forgery above two years ago), on a special verdict, was taken into further confideration; he was found guilty, and is to receive sentence at the Old Bailey next sessions.

His majesty having signified his pleasure to the lords commissioners of the admiralty, that the lappels and custs of the military uniform frocks, appointed to be worn by the lieutenants of his majesty's steet, be for the future white instead of blue cloth; and that the waistcoats be plain white cloth, with gilt buttons of the pattern now worn, without any lace; the lieutenants of his majesty's steet are directed to conform strictly thereto.

After an hearing of three days, a grand cause was determined before the right hon, the lord high chancellor, in the court of chancery in Westminster-hall, wherein fir Robert Barker, bart. and other officers, were plaintiffs, and admiral Cornish and others were defendants, relative to the Manilla ransom, and other prize money; when a decree was given for the former.

They write from Madrid, that the day of the conception of the virgin Mary, a magnificent fun of gold, ornamented with diamonds and other precious flones, to the value of 2,400,000 florins, was placed in the chapel of the palace, being a gift from his majefty.

At a late meeting of the society of agriculture established at Flo-

rence, one of the members produced several samples of beech oil, and read a memorial concerning the method of extracting it, and the utility it might be of to the duchy of Tuscany, by making it serve the purpose of olive oil. [A scheme of this nature, and with great probability of success, was some time ago proposed in England by the late ingenious Mr. Aaron Hill.

On the 30th of September was tried, in the supreme court of judicature at Montreal, an action, in which capt. Difney, late townmajor of Montreal, was plaintiff, and Thomas Walker, efq; late a justice of the peace for the district of Montreal, was defendant. The action was brought for having malicioufly, and without any probable cause, procured the plaintiff to be imprisoned and detained in prifon 112 days, upon a charge of having been concerned in the felonious affault committed upon the defendant in December, 1764, and having maliciously, and without any probable cause; procured the plaintiff to be indicted and tried for the faid felony, at the last feffions of the supreme court holden. at Montreal, in February and March last, and giving evidence against the plaintiff in support of the faid indictment: and the damages were laid at 2000 l. of lawful money of this province. The defendant stated, at a long special plea, the grounds upon which he had carried on the profecution an gainst the plaintiff, which amounted to a very strong probable cause The trial lasted about five hours and the jury, after withdrawing for about five minutes, gave a verdict for the defendant.

[E 4]

Extract

Extract of a letter from Man-

"On the tff inftant, the elector our fovereign, being defirous to celebrate and immortalise that day, as being the 25th anniversary of his reign, instituted a new order of knighthood, entitled the order of the Palatine-lion. His electoral highness that day honoured 16 of the principal noblemen of his court with the enligns of this ofder. The number of knights is never to exceed 25, and no person can be admitted till he has been in the fervice of the electoral Palatine family 25 years. His electoral highness has likewise ordained that no person shall be admitted to the order of St. Hubert, till he has previously been honoured with that of the Palatinelion partity of a mountage in the season

About ten at night the 28th. queen of Denmark was fafely delivered of a prince, to the inexpressible happiness of her royal confort, and the whole court. Her majesty and the new-born prince are both as well as can be expected. This very important and much defired event happened but an hour of two before the anniversary of the king of Denmark's own birth-day, which was celebrated at Copenhagen with double festivity. The birth of an heir male to the crown, has compleatly fulfilled the ardent wishes and prayers of the publick, and confequently foread a real joy through all ranks of people. mediately after it was made known, the foreign ministers, and all the nobility, waited upon the king, who was pleased to receive their compliments of congratulation, and to express the latisfaction received from their attention on this interesting event. The king of Denmark bestowed several marks of favour on this happy occasion.

His majesty went to the 29th, house of peers, and gave the royal affent to the following bills:

The bill to continue and amend an act for allowing the free importation of falted beef, pork, bacon, and butter, from Ireland, for a limited time; and for allowing the free importation of falted beef, pork, butter, and bacon, from the British dominions in America, for a limited time.

The bill to enable his majesty to license a playhouse in the city of

Bath.

And to fuch other private bills as

were ready.

Yesterday was held a general court of the East-India company, when many important affairs were communicated to them by the court of directors, particularly in relation to the bill for restraining the company from making . any further dividends than 10 per cent. per ann. for a limited time; and the court came to a refolution to petition the house of lords, that the faid bill may not pafs into a law. They likewife came to a resolution to add five gentlemen in the direction to the chairman, or deputy-chairman, whenever public bufiness might require fuch affiftance.

The republic of Venice has just iffued a degree, forbidding all the religious orders of mendicants, and also the Jesuits, from receiving any noviciate for twenty years to come. The said republic has also resolved to suppress the large pension which they used to grant

to fuch of its citizens as obtained

the cardinalinip.

Mr. Montagu, his Polish majesty's agent, presented to the Royal Society a large gold medal, ftruck at Warfaw, and transmitted as a specimen of the progress of the arts in Poland. On one fide is a very strong likeness of the king in alt relief: on the reverle, three different wreaths of oak, laurel, and myrtle, encircling the word MERENTIBVS.

A most horrid murder was committed at Wooton-Underidge, in Gloucestershire, by one Wallington, a fhearman, who, about ten in the morning left his work, and in a cruel manner murdered his own father. It has fince appeared that the murderer was out of his mind: for upon his examination he faid he had feen a vision, and that the devil had commanded him to do the murder exactly at to o'clock; and it was observed that he went out feveral times to look at the clock, and that he kept his time precifely. He then went to a neighbour, and with feeming fatisfaction told him "he had done it :" and being asked what, his anfwer was, he had killed his father.

On the representations of the ambassador from Great Britain, a thip of that nation, which was detained in the arfenal at Constantinople, has been released. The dragoman of the French conful at Cairo, named Roboli, arrived lately in that capital; and is now in prison at Bagne. Some serious confequences are apprehended from this affair. Other advices from Caiao fay, that Ali Beg had collected an army together, and had taken possession of the Nile above

and below the town, fo as to prevent any provisions passing; which had occasioned the greatest consternation. And from Alexandria of a later date, the 23d of October, that seven begs of the town had collected an army, and divided it; the one that attacked above the town was entirely routed, and the other in the greatest confusion; so that it is apprehended that Ali Beg will foon be master of both cities.

The cause so long depending between the late Mr. Barnes and the post-master of Bath, concerning the demand of halfpence for delivering letters at the houses of the persons to whom directed, was moved in the king's bench; when opinion was given, that the demand of any money over and above the usual rates of postage, for delivering letters at the houses to which they are directed, was illegal; and judgment was ordered to be enter-

ed accordingly.

They write from Berlin, that the lord marshal, brother to the late field marshal Keith, and governor of Neufchatel, a principality upon the confines of Switzerland, has defired and obtained the king's leave to relign, and his majetty likewise continues to him his appointments. He is succeeded by lieutenant general Lentulus. The fieur Michel, who was many years charged with the affairs of this court at London, and was fince sub-governor of the above principality, has also obtained leave to refign, and the king has granted him a pension of 1000 crowns.

The following observations on the late fevere cold, were made by a gentleman of Glasgow College, and communicated by a letter of

the 5th instant:

"In our climate the air is commonly reckoned warm, when the mercury in Fahrenheit's thermometer is at 64 degrees. Water freezes when it is at 32 degrees; and 0 is the beginning of the fcale.

In the year 1731, the cold funk the thermometer in Pennfylvania to 5 degrees. In 1706 and 1709, at Paris, to 8 degrees. In 1729, in Leyden, to 5 degrees; and at Utrecht, to 4 degrees. In 1700 and 1731, in London, to o; and at Copenhagen, it was the fame. In 1732, at Upfal, it was at 1 degree below o. At Torneo in Sweden, latitude 65 deg. 51 min. it was at 33 degrees below o, which was a degree of cold as much below the cold of freezing water, as that is below the ordinary heat of the human body.

In the year 1740, at St. Andrew's, it was 11 degrees at ten o'clock before noon. In some other parts of Scotland at 9 degrees; and in a certain place in Airshire, it is said to have been at 6 degrees; which is the lowest in that year of which we have any

account.

Sunday last, at ten o'clock before noon, the thermometer, when hung upon a pole near the obfervatory, and in the shade, was degrees: upon observing this degree of cold at this time of the day, a fuspicion arose, that it must have been much colder early in the morning; upon which the thermometer was placed about half an inch under the furface of the fnow, and in the shade; and after a few minutes it funk to 2 degrees below o. At 2 o'clock in the afternoon, when hung upon the pole, it was 11 degrees, though there was a serene sky and fine sunshine, At 6 o'clock it fell to half a de gree above o. From 9 o'clock to 11, it was at 2 degrees below o. After 11, it gradually rose; so that before 5 on Monday morning it was at 12 degrees. When it was at 2 degrees below o at the observatory, it was at 4 degrees in the back yard of a college house, though near a low room, in which there was a constant and great fire; at 2 degrees, when hung upon the side of a window in the first story; and at 1 degree, when hung at a distance from the house.

That no missakes might happen in the above experiments upon the cold at the observatory, there were made use of upon this occasion three standard thermometers, two of them mercurial, and the other a spirit one, all exactly graduated by

Fahrenheit's scale."

A letter from Paris, dated Jan. 22, fays, "the faculty of medicine having affembled last week, the part they should take with respect to inoculation came under consideration; there were 32 voices against 23 for tolerating it, and eight on ten doctors declined giving their opinion; from whence it is concluded, that a more numerous assembly will be convoked, to determine this important question."

The states general have appointed Wednesday the 17th of this month, to be observed as a day of fasting, prayer, and thanksgiving, throughout the United Provinces.

A letter from Prague, dated Jan. 4, fays, "feveral persons skilled in commerce are arrived here and in Moravia, to inspect the manufactures carrying on in this country, and to make a report thereof to the council by whom they are commissioned. A number of people

have

have subscribed at Vienna, for est a blishing a fund and society of commerce in linen cloth to trade to the ports of Spain, by the way of Genoa.

They write from Lisbon, that Don Emanuel de Susa, governor of the isle of St. Catharine, had sent five jesuits home, on board a Portuguese frigate of war, in irons, accused of dangerous practices against the state.

The empress of Russia has affigued the sum of 4000 roubles, and named thirty marine officers, to observe, in eight different places, the passage of Venus over the sun's disk, on the third of June, 1769.

The kings of Denmark and Sweden have affigned 9000 crowns

each for the same purpose:

There is now living at a village, called Hayford, in Oxfordshire, three men and two women, whose ages put together amount to 503 years, and some few months.

Died lately, in the isle of Sky in Scotland, Mr. Donald M'Gregor, a farmer there, in the 117th year

of his age.

In Italy, father Joseph-Marie Valeschi de Firizano, at the age of 108 years, in the convent of Augustines at Galeata, where he had been Prior 70 years. He was alwas extremely sober; but ever since he was 28 years of age he had accustomed himself to breakfast every day upon a crust of bread steeped in a glass of strong wine, which he took the morning of the day on which he died.

Bartholomew Galet, of St. Thernay, near Clement, died there on the 7th instant, aged 101. He had been thrice married, and has left a

thild of eleven months old:

topest a

At Trie in Gascony, Philip Laroque, butcher, aged 102 years; he cut four large teeth since his 92d year; he got drunk regularly twice a week; and worked at the most laborious part of his business till his 100th year.

At his house near Banstead, Surrey, aged 102, Mr. Humphry Woolston, a wealthy farmer and grazier, and formerly a contractor for serving the navy with oxen.

A few days ago, at Rathcoffy, in the county of Kildare in Ireland, aged 102, Mrs. Alice Dunn, a widow gentlewoman, who retained

her fenses to the last.

Last week died, at Burythorpe, near Malton, in Yorkshire, Francis Consit, aged 150 years. He was maintained by the parish above fixty years, and retained his senses to the very last.

FEBRUARY, proclaim

Twenty-fix prisoners, whose 1st. debts amounted from 40 s. to 61. each, were discharged from the Poultry Compter, by some generous benefactor; each prisoner, at his discharge, received the surplus money, amounting to about 30 s. each: and next day several prisoners were likewise discharged from Wood-street Compter, by the same benefactor.

The new-born fon of his excellency the lord lieutenant of Ireland was christened at the castle of Dublin, by the name of Frederick. His majesty by proxy and the duke of Leinster were god-fathers, and the counters of Moyra was god-mother. The ceremony was performed by the lord primate. The dutches of Graston, in 1723, was the

the last lieutenant's lady brought to

bed in that kingdom.

A male elk was carried to Richmond, as a prefent to his majesty. It is a very curious and uncommon beaft, is of a mouse colour, its head and ears like a mule, its neck fo remarkably short that it kneels to feed; its legs like a deer; is about twelve hands and a half high, and being but ten months old will probably be much higher. It is very quiet, and very much admired.

The wife of a foldier in the guards, having purchased a bed of a broker in Drury-lane, in carrying it home upon her head, thought the felt fomething hard in it. Upon opening the feam to fee what it was, found 42 guineas and two queen Anne's crown pieces.

Friday last William Evans, a journeyman weaver, charged with cutting and destroying works out of the loom of another journeyman weaver, was re-examined at the Public office in Bow-street, before fir John Fielding, knt William Kelynge, Joseph Girdler, Paul Vaillant, and 'Thomas Kynaston, efgrs. when the evidence appearing clear and positive, Evans was committed to Newgate, and the parties bound over to profecute. This examination was attended by a great number of the most respectable manufacturers from Spitalfields, who expressed their readiness to give to that useful body of men, their journeymen, the wages they themselves had requested: indeed it did not appear, either from Evans the prisoner, or any other person, that there was the least disfatisfaction fubfifting at present amongst the journeymen weavers, relative to their wages; and among

other instances of candour expressed by the masters that day, was the following remarkable one, namely, that, though they were now poffessed of such lights as might be the means of bringing many of these unhappy wretches to justice, fome of whom have doubtless been milled by the wickedness of a few, yet they would with to profecute fuch only as may ferve to firike at the root of their most unwarrantable proceedings, and fuch as the common justice due to the publick may necessarily require; and in these fentiments the magistrates concurred. no

The act for limiting the duration of parliaments in Ireland, which pailed the commons in that kingdom, having received, his majesty's royal approbation, was returned by express to Dublings. By this act the parliament in Ireland is limited to eight years; for as is fits but every other year, a feptennial bill would have comprehended only three fession's.

Whitehall, Feb. 2. The king has been pleased to issue his commission under the great seal, authorizing and empowering Richard Sutton, William Blair, and William Frazer, esqrs. or any two of them; to execute the office of keeper of his majesty's privy seal, for andduring the space and term of fix weeks; and also to grant, during his majesty's pleasure, determinable nevertheless at his majesty's pleafure, to the right hon. William: earl of Chatham, the faid office of keeper of his majerty's privy feal, from and after the faid term of fix weeks, or other fooner determination of the faid commission.

A fire broke out at the house of Mr.Butler, leather-cutter, on Snow-

hill

hill, which entirely confumed the fame, together with the house of Mr. Cooper, a hatter adjoining, and likewise that of Messrs. Jarvis, Sterry, and Newman, leather-cutters and curriers: the flames raged for a great while with incredible fury, and destroyed several workshops and outhouses backwards, and had spread to a timber yard adjoining before they could be extinguished, which was in a great measure accomplished by the activity of the paviours of the New River company, who, by digging up the ground, and boring holes through the pipes, supplied the engines with water, which before could not be procured. Happily no lives were loft.

Friday morning a melancholy accident happened at Dover, in faluting the French ambassador on his landing at Dover: two men, who were re-loading a cannon at Moat-bulwark, were killed in a

most shocking manner.

Extract of a letter from Cambridge. "The late Dr. Smith, master of Trinity, was the last of fir Isaac Newton's philosophical set of friends. He has left 3000 l, to the university. The interest of one half to enlarge the Plumian professorship of astronomy, which he formerly enjoyed himself; the interest of the other to the two batchelors of arts, who shall appear to have made the greatest progress in the philosophical and mathematical studies. These prizes are to be determined after they have taken their degrees by a felect body of our fenior members."

The king of Sweden has lately. issued an ordinance, forbidding the poor to beg publicly, either in this capital or its neighbourhood. Di-

vers arrangements were taken at the same time, by which a subsistence is provided for the indigent, who are unable to procure them-

felves a livelihood.

His majesty's ship Fame, of 74 guns, which was driven on the rocks in Plymouth Sound, and bulged, was weighed and buoyed off at high water, by confiderable quantities of casks, supplied from the victualling-office there, and fome fmall vessels being lashed to her. She is now in the dock, to undergo a repair, and which will make her as good a ship as at first. Had she remained on the rocks till the late stormy weather, it is faid. the must unavoidably have been beaten to pieces.

We hear that a master, mate, and feven feamen, remained on board the Fame during all the time of her distress, a good part of which time her hold and lower-gun deck were full of water; and that for their good, behaviour they will be rewarded with promotion.

By a letter from Bruton, near Wells, in Somersetshire, we have an account, that upwards of thirty persons lost their lives in the late great, inows: a gentleman on horseback was dug out of the snow on the road near Mendip hills, the man and horse being froze to death; upwards of fifty guineas, and fome notes of value, were found in the gentleman's cloakbag.

Extract of a letter from Philadel-

phia. " From Alexandria, in Virginia, we learn, that a number of negroes there had lately conspired to poifon their overfeers, and that feveral persons have lost their lives in consequence thereof; that some of the negroes have been taken up, four of whom were executed about three weeks ago, after which their heads were cut off, and fixed on the chimnies of the court-house; and it was expected that four more would soon meet with the same fate.

The grand fignior has given his eldest daughter, a princess of seven years old, to the nizanji-bashi; and yesterday the grand vizir cloathed him with the pellice, and declared him son-in-law to the sultan. This young princess is the widow of the late vizir, who was beheaded three years ago at Meteline.

8th. This day his excellency the count de Chatelet, ambassador from France, was at court for the first time, and made a very splendid appearance; his coach was very elegant, made in London, drawn by six black horses, the harness was made of red leather, stitched with white, and his servants were dressed in rich liveries,

green and gold.

The late fir Robert Rich, bart. is faid to have died with large poffessions, the bulk of which, amounting to more than 100,000l. comes to his son, general Rich, who succeeds him also in the title.—Sir Robert has, in particular, left sool, a year to lady Lyttelton, and 500l. a year in reversion to Sir Francis Blake Delaval, Knight of the Bath.

Two of the nine convicts under fentence of death in Newgate, were this day executed at Tyburn. The other feven are reprieved.

They write from New York, that on the 21st of December, the Society for promoting arts, &c.

held a meeting, when a premium of 101. was adjudged to Thomas Young, of Oyster-Bay, for the largest nursery of apple-trees, being 27,123.

The proposal for setting up the business of silk-throwing was read, but judged improper, at least at

present, for this colony.

Certificate from Joshua Clark, and Francis Furnier, of Suffolk county, that from the year 1762, to the 1st of April 1767, the first had set 3,200 vines, and the other 1551 vines, was referred to two of the members, to give their assistance in procuring them the premium from the London society.

Philip P. Schuyler, Efq; being prefent at the meeting, informed them, that he had erected a flax-mill at Saratoga in the year 1767, and delivered to the fociety a calculation of the difference of the work done by the mill and by the hand in the fame time; whereupon they adjudged a medal to Mr. Schuyler, and returned him their thanks for executing so useful a design in the province.

Lord Baltimore voluntarily furrendered himfelf in the court of king's bench, upon the charge that had been exhibited against him before fir John Fielding, by Sarah Woodcock, for a rape, and was admitted to bail. At the same time Mrs. Griffenburgh, who had voluntarily furrendered herself to Sir John Fielding, and was by him committed to prison, for aiding and assisting his lordship, was, in like manner brought before that honourable court and admitted to bail. As was also Mrs. Hervey, who about feven weeks ago had been committed to Newgate by the justice

for the fame offence. His lordship's bait, was himself in 4000 l. and four fureties of 1000 l. each: and the two women, themselves in 400 L each, and four sureties in rool, each.

The great duchess of Tuscany was brought to bed this morning, between four and five o'clock, of a prince, and both are as well as can be expected. This happy event was announced at break of day to the publick by the discharge of an hundred cannon from the fortress that is the most distant from the palace. Her royal highness was at public ball in mask last night at the theatre, where she fupped, and retired from thence as usual about twelve. The christening is to be performed this evening in the great hall of the palace: the emperor is godfather, and is to be represented by count Rosenberg. To-morrow the gerat duke will receive the compliments of the foreign ministers, and his subjects kifs his hand on this occasion; after which his royal highness will dine in publick, as is his custom on any great folemnity, and a great gala is to be continued for four days.

There having been a continued fall of snow and rain for four and twenty hours at Leeds, in Yorkshire, which began on the 9th in the morning, their river role the day following, overflowed its banks, fwept away all before it that was moveable, and laid the whole neighbourhood under water; but in the afternoon of that day, the flood abated, and many who had left their houses through fear returned; but, before they were well fettled, a fecond swell of the river drove them out again the same

night, and they were obliged to remove to the higher parts of the town to fave their lives; but this rife, which happened fuddenly, as fuddenly fubfided; and before daylight, on Thursday morning, the houses that had been abandoned over-night were again habitable. But in a few hours the rain began to fall more heavily than ever; and on the Friday morning the flood rose higher by several inches than at any time before, and continued at near an equal height almost the whole day; infomuch, that the consternation of the inhabitants became inexpressible. — Leeds, however, is not the only place in the north that was alarmed by this inundation; the river Calder rose still higher than the other, and was attended with more distressful circumstances.

Wednesday, after a trial of several hours before the lord chief justice Wilmot, the will of the late fir Thomas Clarke, master of the rolls, was confirmed; but his copyhold estate, being some inclosed grounds on Hampstead-heath, was adjudged to belong to the heir at law, who clearly made out his affinity.

The write from Arnheim, that the dikes in that country are in fuch danger of breaking every moment, by the inundations which have followed the last frost, that three thousand men have been perpetually employed ever fince the 20th past, in strengthening the dikenear Nimeguen, which is so weakened, that they are obliged to keep working on it night and day.

The French ambassador has given orders, to have enquiry made into the fituation of the families of the two poor men, who were killed in loading the guns to falute him on his landing in England: his excellency having very humanely declared, that he will provide for them in such a manner, as to more than amply recompence every pecuniary loss the families of these unfortunate men may sustain from their deaths.

17th. The North mail, which generally arrives on Monday morning, was not arrived yesterday

morning at eleven o'clock.

Wednesday last there was the greatest flood ever known at Hereford: the water came into Wyebridge-street as high as the Royal Oak; and on Thursday all the slat country near Ross was overslowed. The causeway between Ross and Wilton was so much under water, that several people in returning from Ross market missed the causeway, and must have been drowned if some boats had not fortunately come to their assistance.

Letters from Carmarthenshire mention, that all the vale was entirely overflowed, and that most of the bridges had been born down by the rapidity of the torrent.

On Tuesday the flood was so tiolent at Basseleg, that Tredegarpark wasoverslowed, and many deer carried down by the current, but most of them were taken up by boats.

There was a very heavy fnow in

Shropshire on Tuesday last.

They write from Oxford, that the right hon, the earl of Lichfield, chancellor of that university, has established two annual prizes of the value of 201, each; the one for a copy of English verses, the other for a Latin differtation: and the following are the subjects proposed for the present year, viz. For the English verses,
The Conquest of Quebec.
For the Latin differtation.

ARTES PROSUNT REIPUBLICA. The first prize is intended for fuch gentlemen of the university as have not exceeded four years from the time of their matriculation; and the other for fuch as have not completed feven years.-The exercises are to be fent, under a sealed cover, to the register of the university, before next Ascension-day. The author is required to conceal his name, and to distinguish his composition by whatever motto he pleases; sending at the same time his name and motto fealed up under another cover.—The exercises to which the prizes are adjudged are to be repeated (after a previous rehearfal) in the theatre upon the commemoration day, immediately before the orator or poetry professor's Crewian oration,

Extract of a letter from a gentleman at Thorpe in Yorkshire, to his friend in London, dated Feb.

II.

"However incredible the following particulars may appear, you may be affured of the veracity of them: about a year fince, an old man of this place, aged 04 years, was married to a woman of 83, by whom he had a child born on the 29th of last month, which is likely to live, as the mother went her full time."

Last night died in Great Russelstreet, Bloomsbury, the right hon. Arthur Onslow, edg; one of his majesty's most konourable privy council, and speaker of the house of commons for upwards of 33 years: he was the third of his family who had been nominated to that high office.

This day his majetty gave the royal affent to the fol-

lowing bills:

The bill for further regulating the proceedings of the united company of merchants trading to the East-Indies, with respect to making of dividends.

The bill for the better regulation of his majesty's marine forces

while on shore.

The bill for the more speedy and effectual transportation of selons.

The bill for granting an aid to his majesty for disbanding the army, and other necessary occasions, as relate to the number of troops kept upon the Irish establishment.

The bill for providing proper accommodation for his majesty's justices of the great sessions in Wales, during the time of holding

fuch fessions.

The bill for rebuilding and enlarging the common gaol of the city and county of Coventry; and for appointing a place for the cuftudy of prisoners in the mean time.

The bill for more effectually supplying the town of Halifax with

water, &c.

The bill for making and building a convenient exchange in the city of Glasgow, for enlarging St. Andrew's church-yard, and for building a bridge over the river

Clyde, &c.

The bill for enlightening, paving, cleanfing the fireets, and for better regulating the nightly watch and beadles, and for regulating the poor, of the parish of St. Mary le Bone in the county of Middle-fex.

The bill for making and maintaining a navigable cut or canal

Vol. XI.

from Birmingham to Bilfton, and for making collateral cuts and waggon ways from feveral coalmines, and for continuing the faid canal to Authorly, there to communicate with the canal now making between the rivers Trent and Severn.

And to fuch road and inclosure

bills as were then ready.

Four causes were tried at Guildhall, London, by special juries, before the right hon, fir Eardley Wilmot, knt. chief justice of the court of common pleas, wherein feveral merchants were plaintiffs, and the hon. James Murray, efq; late governor of Quebec, was defendant, for recovering divers fums of money levied by way of duties upon spirits imported: when, after a full hearing which lasted several hours, verdicts were given for the feveral plaintiffs for all such duties as had been imposed by the defendant over and above the French duties, together with damages and costs of fuit.

They write from Newcastle, that on the 10th instant, the river Tees overflowed fo much, that the miller of Wycliffe-mill in Yorkshire, near Barnard-castle, was obliged to stand three hours upon the coal-heap adjoining to the dwelling-house; his servant-man coming home with a horfe, rode to him, and carried him into the mill-close, where they remained two hours, when the water abated. A fow got into a horse-trough which stood before the mill-door, to fave herfelf; and a cock and three hens fat upon her back all the time of the flood.

Extract of a letter from Paris.

"The new year commences with an account of a very tragical [F] affair,

affair, that has just happened to our ambassador at the court of Naples; the fact is this: The vifcount de Choiseul, our said ambaffador, unhappily casting his tender regard towards a young lady of that place, of a good family, before engaged to the count de Conitz, the emperor's ambassador, and taking advantage of the count's absence, pressed this fair Italian lady with the most ardent professions of love, and, to forward his fuit, overwhelmed her with presents-but all in vain, she still proving inexorable. One day, in a fit of rage and despair, he drew his fword, and plunged it three times in her body; some fay she died on the spot; others, that fhe is not yet dead, but mortally wounded: however, the king of Naples, informed of this shocking scene, dispatched a courier hither, and our king immediately ordered his faid ambaffador home, and he is fince fent to the Bastile. This melancholy transaction has so affected the duke de Pladin (the viscount's father), that he has been at the point of death with grief on this fad occasion, and is still unable to attend to any business; nor has been at court fince the beginning of the new year.

They write from Rome, that the king of the Two Sicilies, as heir of the house of Farnese, has laid claim to the church and convent of Jesus, occupied by the jesuits in that city. The palace, with the church belonging to it, is one of the most superb buildings in Rome, and is always the residence of the

general of the order.

A very curious experiment was exhibited at Berlin on the 30th pall, by M. Formey, secretary to

the royal academy of fciences there, relative to the artificial production of dates, by the application of the dust of the male palmtree to the flowers of the female. The dust had been fent that gentleman so long ago as the last year, from Carelfruhe; and it is the third time the experiment has fucceeded under the hands of that able botanist.

Some letters from Cadiz mention advice having been received there from the Havannah, that the town of Puerto Peblo, in South America, was lately reduced to ashes, having been set fire to by a body of Musketo Indians, who also massacred a great number of the inhabitants, in revenge for fome of their countrymen being made flaves of by the Spaniards.

We learn from Aenhouys in Jutland, that old Drachen- 25th. berg, fo famous on account of his great age, is still living in that country. On the 6th of November last, he celebrated the 142d anniversary-day of his birth, and was at that time in good health, being fensible of no other infirmity than a little weakness of fight. He had walked that day two Danish miles, and when these advices came away he was on his journey on foot to Copenhagen.

Was tried before the right hon. lord chief justice Wil- 26th. mot, at Guildhall, an action brought by one of the deputy land coal-meters for the city of London, against two coal merchants of the fame city, for felling five chaldron of coals, for pool-measure, without delivering the full quantity. It appeared in evidence. that thirteen facks each had been fent in five: carts to the buyer's,

and

and yet, for want of properly filling the facks, five bushel of coals were left behind. After a full hearing, the jury, without going out of court, gave the plaintiff a verdict for 100 l. by which he is intitled to double costs of suit:

An earthquake was felt at Vienna, which threw the city into great consternation. It was more violent in the neighbourhood.

In the night between the 7th and 8th instant, all the jesuits in the territories of Parma were expelled at the fame hour, without any disturbance. The old hospital of St. Lazarus, near that city, was the place where they were brought together, except one party which took another road, but fell in with the rest in their way to Bologna, which was appointed for their general rendezvous. A magistrate was deputed to go to each of the houses belonging to the jefuits, to fignify the infant's commands; and the next morning a pragmatic fanction was isfued, declaring the profcription of the order. At the same time an ordonnance was iffued concerning the public places of learning, wherein new professors are appointed to fucceed in fuch departments were occupied by the jesuits. Extract of a letter from N. York.

His excellency fir Henry Moore, our governor, has published a proclamation, offering a reward of 50 l. to any person, and a pardon to any accomplice, who shall discover the author of the following feditious paper, fundry of which have lately been secretly dispersed in this city; viz.

"Whereas a glorious stand for liberty did appear in the refentment shewn to a set of miscreants

under the name of stamp-masters in the year 1765; and it is now feared that a fet of gentry, called commissioners (I do not mean those lately arrived at Boston), whose odious business is of a similar nature, may foon make their appearance amongst us, in order to execute their detestable office: it is therefore hoped every votary of that celestial goddess liberty will hold themselves in readiness to give them a proper welcome: rouse, my countrymen, rouse! Pro patria."

About four in the after-

noon, a fellow went into the London affurance office in Birchin lane, where there was only one clerk telling up his cash; the man asked him if the office hours were over; the clerk faid, No, not till five; upon which the villain pulled out a pistol, knocked the clerk down with the butt end of it, and carried off near 250 guineas.

A letter from Bologna, dated Jan. 5, fays, "The whole number of jesuits expelled from Naples is 1500. The departure of those from Sicily was fuspended a short time, on account of the fenate having supplicated the king to permit fuch among them as were natives of that island to pass the remainder of their days there; but his majesty did not think proper to grant their request."

Letters from Rome, dated Jan. 2, fay, " we are informed that the king of Sardinia hath expressed to the Portuguese minister the esteem and respect which he entertains for his most faithful majesty; but that he cannot, however, confent to the distributing in his states the new work against the jesuits, printed

lately at Lifbon."

The expelled jesuits from Naples, who had embarked at San Stefano, have had orders to retire immediately into the ecclesiastical state. Those from the Pouille, it is faid, have been shipwrecked on the islands of Tremiti.

They write from Paris, that the king has confented to let the exiled members of the parliament of Britany return home, and resume their functions, as well as Mess. de la Chalotais, and the other dis-

graced magistrates.

The king of Prussia, a few days ago, generously made a gift of 300.000 crowns to the inhabitants of Silesia. This money is to be divided among those persons who by any unfortunate event have been under the necessity of contracting debts and mortgaging their estates.

There is now living in lady Dacre's alms-houses, Westminster, one Mrs. Windimore, whose maiden name was Hyde; she was grand-daughter of Dr. Hyde, bishop of Salisbury, brother of the great lord chancellor Hyde, earl of Clarendon, and lost her fortune in the South-fea year, 1720: she is also a distant cousin of their late majesties queen Mary and queen Anne, whose mother was lady Anne Hyde, dutchess of York, whose royal confort was afterwards king James II. A lively instance of the mutability of all worldly things, that a person related to two crowned heads should, by a strange caprice of fortune, be reduced to live in an alms-house! She retains her fenses in a tolerable degree; and her principal complaint is, that she has outlived all her friends, being now upwards of an hundred years of age.

Letters from Laubach, dated Jana 20, fay, "the fociety of argiculture and oeconomy, established by order of the empress queen in the duchy of Carniola, have proposed, with her majesty's consent, the following questions for the prize of the year 1768, as tending to the general good and to the advantage of every individual:

"Whether the commons of this country are hurtful or advantageous? in what manner can they, if the former, be most easily and speedily abolished? if the latter, how can they be rendered more advantageous, as well for the country in general, as for the inhabitants who have a right thereto?"

Letters from Vienna of the 19th ult. mention, that count Bathiani hath caused public notice to be given, that all beggars or other perfons in want of business, who are willing to work, shall, on application to him, be employed in the manufactures which he hath esta-

blished in Hungary.

The very great fearcity that has prevailed for these three years pass in the dominions of the infant duke of Parma, has induced the government to cause a treatise written in French by the sieur Mustel, upon the cultivation and use of potatoes, and the method of mixing them with wheat slour to make bread, to be translated into Italian. The first bread of this kind, made by way of trial, was presented to the infant, and greatly approved of.

They write from Worcester, that a few days since one William Bullock, a blacksmith, of the parish of Martley, 90 years of age, was married to Elizabeth Murrell,

aged about 15.

Died on Thursday the 11th in-

stant,

stant, at Mr. Swift's, her fon-inlaw's house at Worcester, Mrs. Martha Whiteway, in the 78th year of her age: she was a lady of great natural, as well as improved abilities: her conversation, which abounded with eloquence, was unaffected and polite: she was a warm, firm, fincere friend, and at the fame time not an implacable enemy: was a great despiser of money, and always liberal to the distressed. Mrs. Whiteway was the cousin-german, as well as the intimate friend, of the great doctor Swift.

At Dingley, near Market Harborough, Northamptonshire, major Ball, aged 84, who commanded marshal Wade's regiment of horse at the taking the Highland deserters in Lady Wood, near Oundle, Northamptonshire, in May, 1743, and was the officer who went into the wood to them, and persuaded them to surrender: he was fixty years in the service, and was in Spain under lord Peterborough.

On the 16th, aged near 80, Gillingham Cooper, efq. banker in the Strand. He is faid to have died worth upwards of 200.000 l. It is somewhat remarkable of this gentleman, that he became possense of a considerable sum of money by the death of Mr. Blandy, who was poisoned by his daughter, at Henly, and by the death of Mr. Jefferies, who was murdered by his niece, Miss Jefferies, and Swan, at Walthamstow; being lord of the manor at both places.

Last week, near Ellesmere in Shropshire, Jane Holt, in the 108th year of her age; she survived her husband near ten years, who died in the 90th year of his age.

A woman, commonly called La Pilligrina, but whose real name was Elizabeth Masi, has lately died at Florence, aged ninety years. The remarkable circumstance attending her was, that she had been married to seven husbands, the last of whom espoused her at seventy years of age. She ordered by her will, that she should be buried next her fifth husband.

A few days days fince, within a day of each other, at Tooting in Surry, Dr. Thomas Pearfon, and Mr. John Jackson, aged 97 each, the two oldest inhabitants of that parish.

At Cockermouth, the rev. Mr. Jefferson, aged 93, who had been rector of that place near 70 years.

In Tothill fields, Mr. Winter, aged 97, formerly a haberdasher in the Strand.

At Tunbridge, in Kent, Sarah Pinfon, widow, in the 106th year of her age.

At Berwick-upon-Tweed, Mr. Robert Anderson, malster, of that place, upwards of 100 years of age.

MARCH.

The fessions ended at the Old Bailey, when one hundred prisoners were tried, of whom sifty-two were sentenced to be transported, fix received sentence of death, among whom was Mr. Gibson, attorney, convicted for forgery in January 1766, when the verdict was found special.

Being St. David's day, the flewards of the fociety of Ancient Britons went in procession to St. James's, where they were admitted to see his royal highness the prince

[F 3] of

of Wales, to whom they prefented an addrefs: and his royal highnefs was pleafed to prefent the charity with a purfe of 100 guineas.

They write from Petersburgh, that "the empress having been informed that many persons of her court had complained that their fwords embarrafied them, her imperial majesty hath declared that The shall not be offended if persons attached to her fervice appear at court without fwords, and all others who defire it. In consequence of which, the chamberlains, gentlemen of the chamber, and other persons of distinction, have availed themselves of the empress's permission, as well as the ministers of Prussia and Denmark."

Extract of a letter from Madrid.

"The marquis Lucini, the pope's nuncio, was attacked with a violent pain in the arm on the 19th inflant; the diforder having fallen, in half an hour after, on his breaft, rendered refpiration extremely difficult. Of three phyficians who were called in, two advifed copious bleeding, which was performed, though the third was of opinion that phlebotomy would be dangerous; in short, the patient died immediately after being bled.

2d. Between five and fix in the morning, a fire was discovered in the library of the right honourable Henry Seymour Conway, in Warwick-street, which confumed a great number of books and writings, and greatly damaged the apartment. On examining the drawers in the writing table, bank notes to the value of 925 l. were missing, one of which for 500 l, was the same morning received at the bank; this circum-

stance left no room to doubt but that the library was wilfully fet on fire; the general himself went therefore to the bank to see, if from the hand writing on the note received, any difcovery could be made; and by a peculiar character in the assumed name (for the real name he did not write) the general was led to suspect a young fellow, who had married a fervant of his lady's, on whom he had lately conferred a very genteel place. This young fellow had been at first recommended to the general by the duke of Richmond. He therefore waited upon his grace, and defired that the clerks of the bank who were concerned in paying the money would attend him there. They did so; and the young man, being fent for, came, and on his first appearance was known and positively charged with being the person who changed the note; on which he confessed the fact, with all its circumstances.

A girl of the town, about 18, was brought before the lord mayor, and committed to prifon; his lordship had taken a great deal of pains about this unhappy creature, having wrote to her father in Northamptonshire, and received a very tender letter, that he should be glad to receive her; but she absolutely refused the offer, and chose rather to be sent to Bridewell.

At a formal fession of the 5th. Polish dyet, held this day by 5th. adjournment, every thing that the commissioners had agreed upon among themselves, and in conjunction with the Russian ambassador, was consirmed, and an end put to the dyet in persect tranquillity; in consequence of which, the Russian troops are to evacuate Poland, and

to return to their own country with

all expedition.

We learn from Moscow, that when M. Pfarfky, refident of the king of Prussia, presented to her imperial majesty lately a memorial foliciting the enlargement of the four prisoners of state, the empress replied, That as she had not caused them to be arrested but upon folid representations, and only for the welfare of the republic, the very · fame reasons obliged her to detain them; whereby there will be more fafety for the dyet, and greater hope of re-establishing the peace of the nation; instead of which, if the should consent to fet them at liberty, it would rather be abandoning the state to them, than re-

floring them to it.

This day the king of Poland put an end to the deliberations of the dyet, with the usual ceremony; when the confederacies of the states of the dissidents were dissolved, by mutual confent. At the same time the treaty, which the grand commission had concluded with the ambassador from Russia, was registered, and declared to have the force of a law; and to remain as a fundamental and perpetual con-But, notwithstanding stitution. these conciliating measures at Warfaw, fresh animosities have fince been discovered in Podolia, where the grandees have been endeayouring to spirit up the people to an infurrection, by fetting up flandards on which are painted a wounded eagle, with this inscription; Conquer or Die. It is, however, wished for the peace of Europe, that this infurrection may soon be suppressed.

Dispatches from the French court for the pope have been late-

ly forwarded to Rome, importing that, if his holiness's bull against the court of Parma is not forthwith withdrawn, and his highness's secretary released, the ambassador of France will have orders to leave Rome immediately.

This day, by virtue of a 8th. commission from his majesty, the following bills received the

royal affent, viz.

The bill for granting to his majefty a certain fum out of the finking fund, and for applying certain fums remaining therein for the fervice of the prefent year.

The bill to raise a certain sum by loans on exchequer bills for the

fervice of the present year.

The bill to raise 1,900,000 l. by annuities and lottery, for the service of the present year.

The bill for redeeming the remainder of the joint flock of annuities, established in the third year of his majesty's reign.

The bill to apply the fum granted for the pay and cloathing of the militia for the fervice of the

present year.

The bill for the better paving, cleanfing, and enlightening the city of London, and the liberties thereof.

The bill for converting Gresham college, and the grounds thereunto belonging, into an excise office.

The bill for licencing a playhouse in the city of Norwich.

The bill to amend an act for better regulating journeymen taylors within the weekly bills of mortality.

The bill to amend, and render more effectual, in his majesty's dominions in America, an act of this fession, for punishing mutiny and desertion.

[F 4]

The

The bill to continue several acts for better encouraging the whale

fishery.

The bill for more easy and effectual recovery of the penalties and forfeitures inflicted by acts relating to the trade and revenue of the British colonies in America.

The bill to explain and amend the laws, touching the elections of knights of the shires in England, fo far as relates to clerks appointed

to take the polls.

The bill for making a navigable cut or canal from the river Firth, at or near the mouth of the river Carron, in the county of Stirling, to the river Clyde, to a place called Dalmair Burnfoot, in the county of Dunbarton, and a collateral cut to Glasgow.

The bill for better fupplying the town of Dunbar with fresh water.

The bill to permit the exportation of certain quantities of malt, now lying in his majesty's warehouses.

And also to several road, in-

closure, and private bills.

This day his majesty went 10th. to the house of peers, and gave the royal affent to the following bills:

The bill for naturalizing Law-

rence Laforest.

The bill for dissolving the marriage of Charles Daly, esq; with Ann Statia Daly, his now wife; and to feveral bills relating to citates, &c.

After which his majesty was pleased to make a most gracious speech; and the lord chancellor, by his majesty's command, prorogued the parliament to the 31st initant. In the course of this seffions, 112 public and private bills received the royal affent. What

an accumulation of the statute laws of this kingdom!

Yesterday the report was made to his majesty of the convicts under sentence of death in Newgate; when James Gibson for forgery; Benj. Payne, cast upon two indictments for highway-robberies; and Ann Robinson, concerned with Sophia Reavell in stealing 261. the property of Dorothy Faulks, were ordered for execution on Wednesday next. John Tapping and Sophia Reavell were respited during his majesty's pleasure.

Friday last came on, before the bench of justices at Hicks's-hall. the trial of George Daphney and Thomas Hobbs, two fishermen of Chiswick, for violently assaulting the water-bailiff's deputies on the river Thames, near Mill-bank, Westminster; when they were found guilty, and sentenced to pay a fine of three shillings and eight pence each, to be confined in the gaol of Newgate for the space of two years, and to find fecurity for their good behaviour, in the penalty of one hundred pounds each, for the term of feven years.

By a letter from Lancaster, the violences committed on account of the ensuing election at that town and at Preston exceed belief; murdering, maining, pulling down of houses, destroying places of public worship, and breaking the furniture and burning the effects of each other, are among the acts

of the inflamed mob.

Thursday last two pots of young oaks were presented to the royal fociety from Mr. William Aiton, botanic gardener to her royal highness the princess dowager of Wales at Kew. They were raised from acorns of the year 1766, which had

been preferved in wax from the 22d of February, 1767, to the beginning of December, 1767, when they were committed to his care, by defire of the royal fociety, to try if they would vegetate, and there are already 25 young oaks come up out of the 34 acrons which were fown. At the fame time, the manner of preferving them was communicated to the earl of Morton, president of the royal fociety, in a letter from I. Ellis, efq. of Gray's-inn, F. R. S. wherein Mr. Ellis has thewn how to avoid the scalding heat of the wax, which is apt to destroy the germ of most feeds inclosed in it. By this method the most valuable feeds may be brought from the remotest part of the earth in a growing state, which may in time be of confiderable use to the trade of our American colonies.

They write from Cambridge, that the two gold medals, given annually by his grace the duke of Newcastle, chancellor of the university, for the encouragement of classical learning, were judged to Mr. Hey, of Magdalen, and Mr. Ferror, of Queen's college, bach-

elors of arts.

The parliament was this day dissolved by his majesty's proclamation, and writs for electing a new parliament were sent to the returning officers. The writs bear teste this day, returnable the 10th of May. The election of peers of Scotland is ordered the 26th of April. The writs for electing the new members for the convocations of Canterbury and York bear teste the 14th instrumable the 13th of May.

The great and less councils of Geneva presented a plan of recon-

ciliation to the general council, which was accepted, 1204 voices to 23; fo that the troubles which have almost ruined that ancient republic are now in a fair way of being terminated.

Six students of Edmund-ha!!, Oxford, were expelled the university, for holding methodistical tenets, and taking upon them to pray, read, and expound the scriptures, and sing hymns in a private

nouse.

Extract of a letter from Turin.

" His Britannic majesty having been graciously pleased to appoint the earl of Carlisle, now at this court in the progress of his travels, to be one of the knights of the most ancient and most noble order of the thiftle; and having defired the king of Sardinia to represent his majesty in creating his Iordship a knight, and investing him with the enfigns of that order; his Sardinian majesty very readily agreed thereto, and accompanied his confent with many expressions of affection and good-will towards the king of Great Britain. And accordingly the ceremony was performed this day, when, after many previous formalities, the gentleman usher presented to his majesty the ribbon, with the infignia of the order, which the king put. over the knight's left shoulder, delivering to him also the original patent of creation: and then his lordship arose and withdrew.

Being returned into the great drawing-room, his lordship subscribed the oath prescribed by the statutes, in the presence of Mr. Potter, M. de Montsort, and the marquis of Kildare, who also signed their names as witnesses."

es well amount while,

Paris, March 10. On account of the inconveniency that would arise from foreigners coming into France and not going to Paris, being detained for want of a proper passport from hence, explanatory orders have been sent to the frontiers; in consequence of which, such foreigners as do not come to Paris will have no occasion for a passport from hence, but from the principal officers of the place where they shall happen to be.

[London Gazette, 16th. Came on at Guild-hall, the election for four representatives of this city in parliament, when the right honourable Mr. Harley, lord mayor, fir Robert Ladbroke, William Beckford, efq. John Wilkes, efq. Sir Richard Glynn, Barlow Trecothick, efq. and John Paterson, esq. offered themselves as candidates, and the sour first were declared to have the greatest shew of hands; but a poll was demanded.

19th. Yesterday, at four o'clock in the afternoon, died the reverend Mr. Stern, author of Tristram Shandy, some volumes of fermons, and the Sentimental journey.

Alas, poor Yorick! I knew him well, a fellow of infinite jest, most

excellent fancy, &c.

The lord chancellor de-21st. livered the privy feal to earl Chatham, the temporary com-

mission being expired.

The populace, on Mr. Wilkes's return from Guildhall, to shew their zeal, took the horses from his carriage, and drew it themselves; other extravagances of the like kind have been practised, but this will suffice to shew the spirit of the multitude.

We are informed from Abbey Landercost in Cumberland, that a woman, called Jane Forester, who lives in that parish, is now in the 138th year of her age. When Cromwell belieged the city of Carlifle, in the year 1646, she can remember that a horse's head sold for 2 s. 6 d. before the garrison surrendered. At the martyrdom of king Charles I, she was 10 years of age. At Brampton, about fix years ago, she made oath before the commisfioners in a chancery fuit, to have known the estate, the right of which was then disputed, to have been enjoyed by the ancestors of the present heir 101 years. She hath an only daughter living, aged 103. And we are further informed, that there are fix women now living in the fame parish where she refides, the youngest of whom is 99 years of age.

Sunday the following printed paper was fluck up on the doors and walls of feveral churches of this city, viz. "The prayers of this congregation are earnefly defired for the refloration of liberty, depending on the election of Mr.

Wilkes."

At the close of the poll, at Guildhall, the numbers flood, as follow:

The lord mayor,
Sir Robert Ladbroke, 3678
William Beckford, efq. 3402
Barlow Trecothick, efq. 2957
Sir Richard Glyn, 2823
John Paterson, efq. 1269
John Wilkes, efq. 1247
Mr. Wilkes made the following

fpeech to the livery:
"Gentlemen and fellow-citi-

zens,

"The poll being now finished, I return my fincerest thanks to

thole

those difinterested and independent friends, who have so generously and fleadily flood forth in my favour. The want of success, out of your power to command, has not in the least abated my zeal for your fervice. You cannot be unacquainted with the various circumstances which have contributed to it. My friends were of opinion that I should wait a dissolution of the last parliament, while the other candidates had been for many months Ministefoliciting your interest. rial influence, affifted by private malice, has been exerted in the most arbitrary and unconstitutional manner, and by means of the basest chicanery and oppression.

"But, though disappointed, I am not in the least dispirited: on the contrary, I resect with pride and gratitude on the many instances of regard and affection I have received from the livery of London.

"I beg leave to make my best acknowledgments to the sheriss, who have shewn the utmost candour and impartiality during the election, accompanied with a dignity of character becoming their station in this great metropolis.

"And now, gentlemen, permit me to address you as friends to liberty, and freeholders of the county of Middlesex; declaring my intention of appearing as a candidate to represent you in parliament, and still hoping, by your means, to have the honour of being useful to you in the British senate.

"Gentlemen of the livery, I recommend it to you in the firongest manner, to exert yourselves to preserve the peace and quiet of this great city."

The contest, during this election, was very warm; and papers and addresses to the public were every day published, as usual, for and against the several candidates. Mr. Wilkes seemed to be the darling of the mob, and some indecencies were committed by those gentry in and about the hall. A subscription was set on foot, successfully, for paying that gentleman's debts; and there appeared the following copy of a letter from him, to Messrs. Nuthall and Francis, solicitor and deputy solicitor of the treasury.

"London, March 22, 1768.

SIR,

I take the liberty of acquainting you, that in the beginning of the enfuing term I shall present myself to the court of king's bench. I pledge my honour as a gentleman, that on the very first day I will there make my personal appearance. I am, fir,

Your most humble servant; JOHN WILKES."

James Gibson, attorney at law for forgery, and Benjamin Payne, a footpad, were executed at Tyburn. 'Gibson was carried to execution in a mourning coach, and desired his sellow sufferer might be permitted to accompany him, but his request was not granted.

At fix this evening the ballot was declared at the 25th. India-house on the question for declaring the next dividend, when it was carried for 5 per cent. 247 to 4. The question for dropping all prosecutions, and for dropping all offences committed by commanders and officers of ships in the company's fervice, passed likewise in the affirmative 217 to 80.

The

The following is handed about as ; the letter from Mr. WILKES to a great personage.

" SIRE,

I beg thus to throw myself at your m---'s feet, and supplicate the mercy and clemency which thine with fuch luftre among your

princely virtues.

" Some former ministers, whom your m-, in condescension to the wishes of your people, thought proper to remove, employed every wicked and deceitful art to oppress your subject; and to avenge their own personal cause on him, whom they imagined to be the principal author of bringing to public view, their ignorance, infufficiency, and treachery to your m- and the

"I have been the innocent and unhappy victim of revenge. I was forced by their injustice and violence into exile, which I have never ceased to consider, for many years, as the most cruel oppression; because I could not longer be under the benign influence of your m---,

in this land of liberty.

"With a heart full of zeal for the fervice of your m- and my country, I implore, Sire, your clemency. My only hopes of pardon are founded in the great goodness and benevolence of your m-; and every day of freedom you may be graciously pleased to permit me the enjoyment of, in my dear native land, shall give proofs of my zeal and attachment to your fervice.

J. WILKES."

A letter from St. Petersburgh, fays, "on Saturday last count Czernichew, her majesty's ambaffador to the British court, invited the whole British factory establish-

ed in this place, to a masked ball, and a most splendid supper, at his own palace, at which were present many of the Russian nobility, and all the foreign ministers. Nothing could exceed the magnificence and elegance of the entertainment, except the politeness with which it was conducted, and the attention which the count and countefs were pleased to shew to every person of the British nation. His excellency will probably fet out in May, as foon as the countefs's health will permit after her lying-in, which is shortly expected.

They write from Thorn, that in the night between the 8th and 9th, the ice of the Vistula broke up with a terrible noise; at the same time it blew a storm, which drove feveral ships from their anchors. The waters rose so high, that the bridge over the river, called the German bridge, had 11 arches de-

stroyed.

Letters from Florence fay, " his royal highness, whose utmost endeavours are directed to the protecting and encouraging of the manufactories established in this capital, has just granted a considerable fum of money to fieur Francis Vacaro, a Genoese, in consideration of the expences he hath been at in establishing a new fabrick of woollen cloths and camblets; and animate him still more, his highness hath granted him a house large enough for extending his manufacture, by employing more workmen.25

Last Saturday the right honourable the lord Baltimore was tried at the affizes holden for the county of Surry, before the honourable Mr. baron Smythe, for a rape upon Sarah Weodcock, and honourably - acquitted.

acquitted. The trial began about feven o'clock in the morning, and continued till near three o'clock the next morning.

Extract of a letter from Dublin.

"His majefty hath been pleased to give directions, that three more packet-boats shall be added to the three now in use between Holyhead and Dublin; by which means we shall have fix mails every week from England, and the same number will be sent from hence to Wales."

They write from Dresden, that on the 27th ult. a slight shock of an earthquake was selt at Bischoffswerder, on the confines of Lusatia, and in the neighbourhood of Freyberg; likewise on the day above-mentioned several new openings and large rents were discovered towards the declivities and about the seet of those mountains, without however any previous sensible motion of the earth.

And from Vienna they give the following account; the earthquake which we had here on the 27th of last month, was not so sensibly felt at Presburgh as in this city; but as it was much stronger at Newstadt, about three posts from hence, in the road to Italy, it is imagined it came to us from that part of the world. There is scarce a house at Newstadt that has not suffered more or less; and the royal military academy there has been fo much damaged, that it is computed the repairs will amount to 30.000 flo-There is no account rins at least. of any lives having been loft.

Extract of a letter from the Hague.

"The inhabitants of the village of Petten upon this coast, not far from Texel, having been guilty of great excesses with regard to the erew and lading of the ship Eli-

zabeth Dorothea, belonging to the Dutch East India company, and which was cast away off that place in the end of November last, a great number of them were apprehended; and this morning twenty-three of them were put upon the scaffold here, nine of whom were whipped, and the whole band are to be banished by sentence of the court of Holland.

His ferene highness the prince of Weilbourg and his children are perfectly recovered of the smallpox, under the care of the English inoculators, who have been called to Rotterdam by several of the

principal inhabitants.

This morning Sir William Beauchamp Proctor 28th. and Mr. Wilkes, two of the candidates for the county of Middlefex, fet out for Brentford, where the election came on that morning for knights of the shire for the said county. Mr. Cooke, the other candidate, was confined with the gout. Mr. Wilkes went in a coach drawn by fix long-tailed horses, and was attended by an amazing number of people to the place of election, which was held in the middle of Brentford Butts, a temporary booth being erected there for that purpose. jority of hands appeared in favour of Sir William Beauchamp Proctor and Mr. Wilkes, who were accordingly returned; but a poll being demanded in behalf of Mr. Cooke, the fame came on immediately; and at five in the afternoon, Mr. Wilkes had polled fix to one more than that gentleman. At nine o'clock the poll finally closed, when the numbers stood thus:

For John Wilkes, esq. 1292 Sir W. B. Proctor, George Cooke, esq. 827 Accordingly George Cooke, esq. and Mr. Wilkes were declared

duly elected. The mob behaved in a very outrageous manner at Hyde-parkcorner, where they pelted Mr. Cooke, fon of the city marshal, and knocked him from his horse, took off the wheels of one of the carriages, cut the harness, and broke the glasses to pieces; several other carriages were greatly damaged. The reason assigned for these proceedings is, that a flag was carried before the procession of Mr. Wilkes's antagonists, on which was painted, "No Blasphemer." There has not been so great a defection of inhabitants from London and Westminster to ten miles distance, in one day, fince the lifeguardman's prophecy of the earthquake, which was to destroy both those cities in the year 1750.

In going there, feveral irregularities were committed. Befides the affault made upon Mr. Cooke, fon to the city marshal, fome other gentlemen, and more particularly the two old members, were affronted by the populace.

At night likewise the rabble were very tumultuous; fome perfons, who had voted in favour of Mr. Wilkes, having put out lights, the mob paraded the whole town from east to west, obliging every body to illuminate, and breaking the windows of fuch as did not do The windows of it immediately. the mansion-house, in particular, were demolished all to pieces, together with a large chandelier and fome pier glasses, to the amount of many hundred pounds. They de-

molished also the windows of lord Bute, lord Egmont, fir Sampson Gideon, fir William Mayne, and many other gentlemen and tradefmen in most of the public streets of both cities, London and Westminster. At one of the abovementioned gentlemens houses, the mob were in a great measure irritated to it, by the imprudence of a fervant, who fired a pistol among them. At Charing-cross, at the duke of Northumberland's, the mob also broke a few panes; but his grace had the address to get rid of them, by ordering up lights immediately into his windows, and opening the Ship ale-house, which foon drew them off to that fide. The following is the copy of a

hand-bill distributed by Mr.

Wilkes's friends.

"It is the humble request of Mr. Wilkes to his friends of all denominations, that they would not, by any means, disturb the peace, or moleft any person, or prevent the voters coming to the place of polling, to give their free votes for whatever candidate they think proper, that no exception may be taken to his conduct, or that of his friends, for the transaction of the day."

Orders were given to the guards on duty at St. James's, to be in readiness at the beat of drum, to march to suppress any

riot that might happen.

At a court of commoncouncil called on purpose to 30th. confider of the most proper and effectual means to prevent for the future, as well as to punish, all fuch as shall be found to have been guilty of the late riots and difturbances in this city; that court came to a refolution to profecute with

with the utmost vicour all and every person who shall be convicted of having been active in the riots, and to offer by advertisement a reward of hfty pounds for the discovery of every offender, to be paid on their conviction; and ordered the same to be inserted in every daily and evening paper, and a large number of the faid refolution to be printed and posted up in the most public places of this city, and the liberties thereof. They also directed, that such profecutions as should arise from their resolution should be referred to the committee appointed to direct their law proceedings. It was referred to the manfion-house committee to order the immediate reparation of all fuch damages as the faid house may have fustained by the late riots and tumults.

His ferene highness the prince of Monaco, at whose palace his royal highness the duke of York died, was introduced to his majesty, and graciously received. He is faid to have come to England, in consequence of an invitation from a great personage, to spend

the fummer.

A new code of laws composed by the empress of Russia, having been sent to the king of Prussia for his revisal, his majesty concludes his letter in return to this effect:

I have read with admiration your work. The ancient Greeks, who were admirers of all merit, but assigned the first seat of glory to legislators, would have placed your imperial majesty between Lyourgus and Solon."

The jefuits established in the island of Malta have all been arrested in one night by order of the grand master, and ordered to de-

part the island.

In the duke of Parma's edict for banishing the jesuits, there is a prohibition never to return, nor even pass through his dominions, though absolved from their vow. They were conducted to Reggio in carriages appointed for that purpose, and dismissed to Bologna belonging to the pope.

The treaty between the courts of Denmark and Russia, by which all differences about the country of Holstein are amicably adjusted, hath lately been ratisfied to mutual

fatisfaction.

The Germans in general are introducing the use of toassed rye instead of coffee; and their physicians tell them; the latter is most wholesome.

A premium of fifty guineas has lately been ordered by the fociety for the encouragements of arts in London, to Mr. Evers, of Swillington, for his invention of a machine for threshing and grinding of corn, both at the same time, or

each separately.

A brass chest has lately been discovered under an high hill in the dutchy of Mecklenburg-Strelitz, in which was inclosed thirty golden idols, with urns and instruments for facrisce. On the back of one of the idols the words RADEGRAST RAETRA were very legible. They weighed about half a pound each.

The pope has excommunicated the regency of Parma; but the infant duke has treated his bull with all imaginable contempt. "It could not, fays his highness, proceed from a pontiff fo holy, fo infpired, and fo full of wisdom, as the prefent reigning pope;" and therefore commands his subjects to treat it as spurious; but at the same time

time enjoins them not to fail in their reverence towards their holy father, or in respect to his sub-

jects.

At Alexandria, in Virginia, a number of negroes lately conspired to poison their overseers, and several have lost their lives in consequence. Some, however, of the negroes have been taken up, four of whom have since been executed, their heads cut off, and fixed on the chimnies of the court house.

Was held a general court of the East-India company, when many affairs relating to the company were discussed, and a motion was made for making an addition to the falary of the chairmain, so that it might be five hundred pounds per ann. that of the deputy-chairman four hundred pounds per ann. and those of the directors three hundred pounds per ann. each; but it was not a-

greed to.

We are forry that the following letters from Philadelphia and South Carolina add a new proof to what we had too many fatal instances of before, the little order or government that is supported in some of our back settlements in America, and the diabolical spirit which seems to have taken an entire possession of the minds of many of the fettlers. If any thing can add to the indignation we feel, at fuch horrid, wanton, and barbarous murders. which are equally difgraceful to human nature and to christianity, it must be, to see the monsters who commit them able to fly in the face of justice, to defy the laws, and to evade that punishment, which, however fevere,

would fill be mild when compared with their crimes. The moderation which was shewn by the Indian chief upon this occasion, is a tacit reproach to our boasted civilization, and to the religion which such miscreants dishonour by a profession of it.

Philadelphia, Feb. 1. On the 10th of last month, four Indian men and two women went to the house of Frederick Stump, near the mouth of Middle-creek, where Stump, after making them drunk, most inhumahely murdered them, and hid their bodies under the ice in the creek. The next day, he went with a fervant lad to an Indian cabbin, about fourteen miles up the creek, and there barbarously put to death an Indian woman, two girls, and a young child, then fet fire to the cabbin, and burnt the bodies to ashes. After committing these horrid murders, he confessed the whole to Mr. William Blyth, whose deposition, we hear, has been taken before the chief justice. The only reasons assigned by him for these attrocious violences were, that he was afraid the fix Indians intended to do him a mischief, and that he murdered the other four left they should inform the other Indians of the death of the fix. Upon the whole, he feemed to be under no apprehenfions of punishment, and behaved as if he had done a meritorious action; but captain Paterson, lately in the provincial service, made prisoners Stump and the servant who affifted him, and after a defperate refisfance committed them to Carlisle goal, from whence a number of armed men, about 80. it is faid, rescued them, notwithstanding standing the opposition and perfuafions of the magistrates and o-

thers to the contrary.

Previous to this outrage, however, captain Paterson had fent a talk to the great island, to difclaim the murders, and to pacify the Indians. His message was conceived in these terms:

Juniata, Jan. 22, 1768.

"Brothers of the fix nations, Delawares, and other inhabitants of the West Branch of Susquehanna, hear what I have to fay to you. With a heart fwelled with grief hear what I have to inform you, that Frederick Stump and John Ironcutter have unadvisedly murdered ten of our friendly Indians near Fort Augusta. The inhabitants of the province of Pennfylvania do disapprove of the said Stump and Ironcutter's conduct; and, as proof thereof, I have taken them prisoners, and will deliver them into the custody of officers that will keep them ironed in prifon for trial; and I make no doubt as many of them as are guilty will be condemned and die for the of-

" Brothers, I being truly fenfible of the injury done you, I only add these few words, with my heart's wish, that you may not rashly let go the fast hold of our chain of friendship, for the ill conduct of one of our bad men. lieve me, brothers, we Englishmen continue the same love for you that hath usually subfissed between our grandfathers; and I defire you to call at Fort Augusta, to trade with our people there, for the necessaries you stand in need of. I pledge you my word, that no white man there shall molest any of you, while you behave as VOL. XI.

friends. I shall not rest, by night or day, till I receive your answer. Your friend and brother,

W PATERSON." To this talk captain Paterson received the following answer, from an Indian chief.

" Loving brother;

"I am glad to hear from you. I understood that you are very much grieved, and that the tears run from your eyes. With both my hands I now wipe away those tears; and, as I do not doubt but your heart is disturbed, I remove all forrow from it, and make it eafy as it was before. I will now fit down and fmoke my pipe. I have taken fast hold of the chain of friendship; and when I give it a pull, if I find my brothers, the English, have let it go, it will then be time for me to let it go too, and take care of my family. There are four of my relations murdered by Stump; and all I defire is, that he may fuffer for his wicked action; I shall then think that your people have the same goodness in their hearts as formerly, and intend to keep it there. As it was the evil spirit who caused Stump to commit this bad action, I blame none of my brothers, the English, but him.

"I defire that the people of Juniata may fit still on their places, and not put themselves to any hardships, by leaving their habitations; whenever danger is coming, they shall know it before it

comes on them.

I am your loving brother, SHAWANA BEN."

This answer being returned before the rescue of the murderers was known, it is much doubted whether a reconciliation will take

[G] place, place. Indeed this horrid barbarity, being added to other aggravations which the Indians complain of, gives room to suspect that these savages will suddenly rise and take their revenge, when such a stroke is least expected.

Charles-town, South Carolina,

March 4.

The legislature of Pennsylvania: hath, on the representations of the hon. John Stuart, efq. fuperintendant of the fouthern district, resolved to provide a sum of money to be offered to the relations of the ten Cherokee Indians, who were affaffinated in that province, and the affaffins afterwards rescued from justice. This compensation, which it is hoped will be accepted, is at the rate of 500 lb. wt. of Indian leather for each person killed, to be fent in goods (rated agreeable to the tariff established by the superintendant) to Mr. commissary Cameron, with proper talks from the governor of Pennsylvania, assuring the Cherokees that it was impossible to bring the murderers to justice.

Wednesday sevennight the wife of Mr. John Carruthers, innkeeper in Walton near Brampton, Cumberland, was delivered of sour female children, all alive. Three of them were baptized, but died foon after. The woman is in a hopeful way of recovery. It is only sour years since this couple married, and they have had seven

children.

From Aldford in Cheshire we learn, that one Edward Parker and his wife are now living in a cottage near that place, whose ages make 218 years, the man being 112, and the woman 106 years old.

Died near Lumley castle, Mr. Thomas Holme, aged 107 years.

At her house in Greek-street, Soho, aged 84, Mrs. Jane Lipf-comb, a lady possessed of a plentiful fortune. Her sister, Mrs. Elizabeth Lipscomb, died a few days since, aged 90. They were both maiden ladies.

Thomas Yorke, esq. aged 80, at his house in Great Russell-street,

Bloomsbury.

At his house in Piccadilly, aged 83, Mr. Joshua Marks, a great dealer in horses, and a contractor in the late war for furnishing horses to draw the royal artillery.

In Upper Brook-street, Henry Winfield, esq. in the 83d year of

his age.

At Corff Cassle, in the island of Purbeck, Mrs. Mary Symonds, in the 107th year of her age.

APRIL.

They write from Bruffels, that a number of idle riotous people affembled themselves together, and by force carried away every thing that was brought into the public markets, declaring that they would rather be hanged than starved; but, upon the guards being called, and a gallows immediately erected upon the great place, they soon dispersed: every thing is now in persect quietness, and the government is taking every precaution to prevent the like disturbances for the future.

A letter from Antwerp, dated March 28, fays, "the dearness of provisions, which prevails throughout the greatest part of Europe, has occasioned much murmuring amongst the people, and complaints of the multitude of taxes. At

length,

ces, and discharged out of

For the middle batchelofs:

"Utrum focietates nuper institutæ ad promovendas artes et commercia magnos artifices et commercia effectrint?"

The exercises are to be delivered in by the 10th of June next, in the usual manner.

"The destruction of Nineveh for its immeality—from the prophecies"—is appointed for the subject of the poem for Mr. Seaton's prize, this present year.

At the quarter sessions 11th. lords of the manor of Terbury, as trustees of the tolls of that manor, were convicted upon an indictment [G 2]

for not using in the public market a brass Winchester bushel, and paid the penalty of the act in that case provided.

Extract of a letter from Newcastle,

April 8.

"Last Saturday a body of failors, to the number of 400 or 500, affembled at North Shields, near this place, and proceeded from thence to Sunderland, with colours flying before them, and at the cross there read a paper, setting forth their grievances, and a demand of immediate redress. After this they went on board the feveral ships in that harbour, and firuck (lowered down) their yards, in order to prevent them from proceeding to fea. On their return to shore, they were joined by the failors of that place, with loud huzzas, who, together, paraded the streets, with drums beating, colours flying, &c. &c. In the afternoon they separated, and the former returned again to Shields, where they committed great outrages, particularly on the butchers and bakers, who fuffered the loss of all that lay in their way. The ships in Shields likewise underwent the fame fate of those in Sunderland. On Sunday all was quiet; but on Monday about 1500 affembled again in Sunderland, broke a great number of windows, destroyed the lights and inner works of the affembly room, and broke to pieces the two figures over the gate-way at the entrance thereof (representing a mendicant failor and charity), which were supposed by the tars to be erected in contempt of the fons of the waves and their ladies, - A number of them also that day advanced very near this town, where they halted, and a detach-

ment was fent from the body, to reconnoitre the town; but having daringly advanced too far, they were furrounded by the foldiers quartered here, who were then under arms to prevent any outrages in the place, when four or five of them were taken into custody, and the others suffered to make a quiet An unlucky accident however happened, by one of the foldiers musket's going off at the time of priming, which shot his companion in the rank through the groin, of which he died almost immediately.

"The owners and masters of ships, its said, have since agreed to their demands; but the tumult has not yet totally subsided.

"The beginning of this week the keelmen at Sunderland made a Rick, refusing to work any longer without their masters augmenting their wages; and they have carried their cause to such a height that every one there is obliged to comply with their demands as soon as asked. And their having ever been injured in the place (no matter how many years ago) but the injurer is visited, and obliged to restore to the injured whatever he alledges is his right."

Was a remarkable low tide in the river Thames. 13th. The fand banks, on both fides the bridge, were dry; and an oar might be grounded in the bed of

the river.

At the anniversary meeting of the London hospital, 14th. held at Merchant Taylors hall, his royal highness the duke of Gloucester attended as president, accompanied by the marquis of Granby, and many other persons

of

of distinction; when the collection amounted to 2002 l. 9s. and

one penny.

Sutton and Bond, inoculators, having opened a house near Peterborough, the mob rose, to prevent, as they said, the spreading the infection, by introducing a dissemper that was not then in that neighbourhood, and threatened to pull down the house, which they effected next day, after an obstinate resistance, in which several were wounded, and the undertakers obliged to decamp,

The fessions ended at the 15th. Old Bailey. At this session four prisoners received sentence of death; forty seven sentenced to be transported for seven years; one branded in the hand; four were ordered to be privately whipped; and seventeen were discharg-

ed upon proclamation.

The fentence of death upon Margaret Watts was respited; a jury of matrons having on their inquisition found her to be quick with child.

A desperate fray happened at Wapping among several gangs of coalheavers; many persons were wounded, and three or sour houses

almost destroyed.

An elegant entertainment was given at the manfion house to the prince of Monaco; at which were present the
dukes of Northumberland and
Grafton, the earls Sandwich and
Harcourt, the marquis of Granby,
and others of the nobility, most
of the aldermen, and many persons
of distinction. And in the evening their royal highnesses the
dukes of Gloucester and Cumberland honoured the lord mayor with

their prefence, the latter opened the ball with the lady mayorefs.

Extract of a letter from C. Maw-hood, efq. dieutenant-colonel of the 19th regiment, to Sir John Fielding.

"Gibraltar, March 6, 1768.

A private foldier of the 19th regiment, under my command here, has confessed himself a murderer; inclosed I have taken the liberty to transmit to you a copy of his confession, viz.

"I Nathaniel Jones, foldier in the roth regiment, in Chapel Norton's company, do confefs, that about the month of August, 1765, I murdered a woman dressed in a stampt cotton jacket, and a check apron (the colour of the petticoat I forgot), near Yeovil, in Somerfetshire, in the cross country road leading from Beaminster to Yeovil; and then, having taken what money I could find upon her, threw her into a marl pit near thereto.

Signed, NATHANIEL JONES."

Witnesses figned,
J. Mackgill, lieutenant.
R. Arnold, serjeant.
J. Richards, corporal.

Mr. Wilkes appeared before the court of king's 20th. bench, and declared his furrender in the following speech:

" My Lords.

"According to the voluntary promife I made to the public, I now appear before this fovereign court of justice, to submit myself in every thing to the laws of my country.

"Two verdicts have been found against me. One is for the republication of the North Briton, No 45, the other for the publica-

tion of a ludicrous poem.

[G 3] ** | **** | ** A

" As to the re-publication of the number of the North Briton, I cannot yet fee that there is the smallest degree of guilt. I have often read and examined that famous paper. I know that it is in every part founded on the frongeft evidence of facts. I find it full of duty and respect to the person of the king, although it arraigns, in the severest manner, the conduct of his majesty's then ministers, and brings very heavy charges home to them. I am persuaded that they were well grounded, because every one of those ministers has fince been removed. No one instance of falshood has yet been pointed out in that pretended libel, nor was the word "falfe" in the information before this court. I am therefore perfectly eafy under every imputation respecting a paper, in which truth has guided the pen of the writer, whoever he was, in every fingle line; and it is this circumstance which has drawn on me, as the supposed author, all the cruelties of ministerial vengeance.

" As to the other charge against me, for the publication of a poem which has given just offence, I will affert that fuch an idea never entered my mind. I blush again at the recollection that it has been at any time, and in any way, brought to the public eye, and drawn from the obscurity in which it remained under my roof. Twelve copies of a small part of it had been printed in my house, at my own private press. I had carefully locked them up, and I never gave one to the most intimate friend. Go—t, after the affair of the North Briton, bribed one of my fervants to rob me of the copy, which was produced in the house of peers, and afterwards before

this honourable court. The nation was justly offended, but not with me, for it was evident that I had not been guilty of the least offence to the public. I pray God to forgive, as I do, the jury, who have found me guilty of publishing a poem I concealed with care, and which is not even yet published, if any precise meaning can be affixed to any word in our language.

"But, my lords, neither of the

two verdicts could have been found

against me, if the records had not

been materially altered without my consent, and, as I am informed, contrary to 1-. On the evening only before the two trials, --- caused the records to be altered at his own house, against the confent of my folicitor, and without my knowledge; for a dangerous illness, ariting from an affair of honour, detained me at that time abroad. The alterations were of the utmost importance; and I was in confequence tried the very next day on two new charges, of which I could know nothing: I will venture to declare this proceeding un-nal. I am advised that it is i--!, and that it renders

"I have flood forth, my lords, in support of the laws against the arbitrary act of ministers. This court of justice, in a solemn appeal respecting general warrants, shewed their sense of my conduct. shall continue to reverence the wife and mild fystem of English laws, and this excellent constitution. I have been much mifreprefented; but, under every species of perfecution, I will remain firm and friendly to the monarchy, dutiful and affectionate to the illustrious prince who wears the crown, and to the whole Brunswick line,

both the verdicts absolutely void.

of law, I am fenfible how narrow and circumferibed my ideas are; but I have experienced the deep knowledge and great abilities of my council. With them I rest the legal part of my defence, submitting every point to the judgment of this honourable court, and to

the laws of England."

When Mr. Wilkes had finished this speech. Mr. attorney general moved for his immediate commitment, on the outlawry. He was answered by Mr. Serjeant Glyn, Mr. Recorder of London, Mr. Mansfield, and Mr. Davenport, fuccessively; who all moved the court for a writ of error, which Mr. attorney general, on being applied to on Saturday fe'nnight, had refused to grant. They specified feveral particulars in which the process of the outlawry was erroneous, as fufficient ground for the motion, and offered to give any bail for Mr. Wilkes's appearance. The court then proceeded to give their opinions feriatim. Lord M. spoke long and forcibly on the impropriety of the procedure on both fides; observing, that the attorney general could not, with the least appearance of reason or of law, move for the commitment of a person who was not legally in court; nor had the council for the defendant any better plea for their motion in favour of a man who appeared gratis before them: he added, that had Mr. Wilkes been brought thither by a writ of capias utlagatum, the motion might then have been made with propriety, and the court might have exerted, had they pleased, their discretionary power in accepting or refusing his bail,

His lordship further expressed himfelf as very happy in having an opportunity of explaining his fentiments publicly, before fo large an audience, with regard to the charge brought against him by Mr. Wilkes, of granting an order for the amendment in the information against him, in substituting the word tener instead of purport; declaring, repeatedly, that he thought himfelf bound in duty to grant it; that he conceived it to be the uniform practice of all the judges to grant fuch amendments; that he had himself frequently repeated the fame practice in other causes, without the least objection being ever offered against it. The rest of the judges agreed with the chief justice in opinion, that, as Mr. Wilkes was not legally before the court, no proceedings could be had upon his case: Mr. justice W. particularly remarking, "That the officers of the crown had no right to throw upon that court the business of committing Mr. Wilkes upon his gratis appearance, out of the common course of law, when they might have brought him before it legally by a writ of catias utlagatum, which it would have been very easy to have executed, fince he had notoriously appeared in publick for several weeks past; and in that case the attorney general might have made his motion with propriety."

About two o'clock Mr. Wilkes left the court, and though there was a very great crowd, not the least disturbance happened. Information indeed had been given to the lord mayor, that some persons at a public house in Duke's place were preparing to raise a mob; and his lordship ordered the

[G 4] proper

proper officers to enquire into the truth of that information, who found a blue flag with No. 45. upon it, a hanger and hatchet lying by it, and two men as a guard to defend it, whom the officers apprehended, and his lordship committed them to the Compter.

Westminster-hall was very full on the occasion, as well as both the Palace-yards; but not the leaft disturbance happened, every thing being very quiet, except huzzaing Mr. Wilkes when he came to the window of Waghorn's coffeehouse, where he retired after he

quitted the court.

The magistrates of Westminster divided themselves in the several liberties, and the constables attended at call in every part; two battalions of the guards lay on their arms in St. James's-park, others were in St. George's-fields, also those at St. James's, the Savoy, and the Tower, were all kept in readiness to march at a minute's warning; as were also several troops of horse, in case of any disturbance. Proper precautions were likewise taken in the city, by the constables being ordered to be in readiness; all of whom, both in Westminster and the city, together with the military, were ordered to be in waiting till two o'clock this morning.

There was another great difturbance in Wapping amongst the coalheavers and others in that branch, when great numbers befet the house of Mr. Green, a publican, who defended the fame all night; and a great many shot were fired on both fides, wherein three of the affailants were killed, and deveral dangerously wounded. The

guards were fent for, and Mr. Green and one Giblathorp, being charged before justice Hodgson' with killing William Week and two others, were by the faid guard

conducted to Newgate.

They write from Galathiels, that on Wednesday last a quey, the property of a gentleman in that neighbourhood, was purchased by a butcher at twenty guineas, and when killed was in a few hours fold off at fix-pence per pound; to univerfal fatisfaction, the being exceeding fine meat. What was very remarkable in this quey is, fhe was a twin calf with a bull; fhe was feven years old, and never had a calf, yet gave milk for four years, fummer and winter, and at the same time grew so very fat and large, that people from all quarters came to fee her. She fed in common with the other cows. When opened, it was observed, that she had no calf-bed.

Yesterday a half-penny loaf, ad. orned with mourning crape, was hung up at feveral parts of the Royal Exchange, with an inscription thereon, containing some reflexions, touching the high price of bread and other previsions; which, having been shifted to several different flations, was at length nailed up at the north fide of the aforesaid building, and there left for the inspection of the

public.

Lent Circuit.

At Aylesbury assizes, three were capitally convicted. John Inns, for bigamy, was burnt in the hand.

At Bedford affizes, none were

capitally covicted.

At Chelmsford affizes, nine were capitally convicted.

At Hertford assizes, nine were capitally convicted; of whom six

were reprieved.

At Reading affizes, fix were capitally convered. There was fo much bufiness that the judge could not leave the town, and Mr. ferjeant Eyres went to Oxford to open the commission there. foldier was tried for an attempt to abuse two girls, one about eight years old, the other five; and was fentenced to fuffer three months imprisonment, and to stand twice in the pillory at Windfor. One Taylor was tried for a robbery, and fentenced to be transported. This man had for feveral years practifed informing against carriers who had more horses in their waggons than allowed by act of parliament.

At Oxford, the affizes proved a maiden one; and the judges, council, &c. were presented with white gloves, as customary on such an

occasion.

At Salisbury, seven convicts received sentence of death, among whom was Curtis, for murdering the Jew. He was executed on a gibbet erected on purpose on Herman hills, and afterwards hung in chains. He denied the fact to the last, though carried round the pit where the dead body was found.

At Worcester assizes, three were capitally convicted. At these assizes, a remarkable cause was tried, wherein a young woman of Elmley-lovett was plaintist, and a gentleman of the same place defendant: the action was brought by the plaintist for a promise of marriage made to her by the defendant when she was but at the age of seventeen years, and it being accompanied with some ag-

gravating circumstances; the jury, after a trial of thirteen hours, withdrew, and staying out about a quarter of an hour, returned into court, and found a verdict for 4001, damages, besides costs of suit.

At the affizes at Taunton, four persons received sentence of death: amongst them E. Philpot, for the murder of his father, who was ordered for execution on Saturday last.

At Gloucester affizes, eight were capitally convicted; but only two were ordered for execution. Samuel Wallington, for the murder of his father, was acquitted, as infane.

At Monmouth affizes, four were capitally convicted; but were all

reprieved.

At York affizes, fix were capitally convicted; of whom five were reprieved.

At Lincoln affizes, eight were

capitally convicted.

At Lancaster assizes, one was capitally convicted for forgery, but reprieved.

At Stafford affizes, eleven were capitally convicted; of whom feven were reprieved.

At Shrewsbury assizes, five were

capitally convicted.

At Derby affizes, the remarkable Charles Pleasants, for a forgery, was capitally convicted.

At Warwick affizes, four were

capitally convicted.

At the affizes at Bury St. Edmond's, seven were capitally convicted.

At Maidstone assizes, five were

capitally convicted.

At Kingston affizes, fix were capitally convicted; of whom three were reprieved.

At Winchester affizes, four were capitally convicted.

At the affizes at Launceston, five were capitally convicted; but

were all reprieved.

The following shocking affair happened at Bow, near Mile-end. Mr. Sayer, an eminent malt diftiller at Bow, went early in the morning into his garden, and looking into the necessary house saw a man there, whom he questioned, asking what business he had there, and who he was? The man, who proved afterwards to be a lunatic. not making a fatisfactory reply, Mr. Sayer thought proper to fecure him, which, with the affiftance of his fervants, he effected, and carried him before a magistrate, who committed him for the present to the parish workhouse, till he could be more fafely taken care of. In this place he continued all day, and behaving to appearance in a reasonable manner, about ten at night he prevailed on the beadle, and another person who were ordered to fit up with him, to take off his handcuffs, which, being made for a woman, hurt his wrifts and caused them to swell. then asked what it was o'clock, and on being told near eleven, replied, "Tis very well: at that time I shall begin my work." Accordingly, when the clock struck eleven, he took up a chair, with which he endeavoured to knock down the two perfons who were appointed to take care of him: one of whom however (the beadle) luckily got out, on which the madman immediately bolted the door, and with a cleaver, which happened unfortunately to be left in the room, he fevered the man's head from his body. He then opened

the door, and went up to the ward where the poor lay, and cut and mangled in a dreadful manner the helpless wretches as they lay in bed; and with the cleaver had split the door of the room where the master of the workhouse lay, when luckily assistance came, and by means of fire-arms subdued him; but his arm was first shattered to pieces with a bullet, one of his hands almost cut off, and his skull fractured; so that it was thought he could not live.

Extract of a letter from Cockermouth.

This day the high sheriff 23d. of Cumberland made his return of members for the county. In the course of the poll 273 of the freeholders, who tendered their votes for Mr. Curwen and Mr. Fletcher, and 57 of the friends of Sir James Lowther and Mr. Senhouse, were rejected by the returning officer. After two or three days taken for deliberation, the fheriff proceeded this morning to further rejections, and struck out of the poll-book upwards of 50 of the votes for Mr. Curwen and Mr. Fletcher, and about one fourth part of that number from Sir James Lowther's and Mr. Senhouse's list. On the refult of the whole, the high sheriff found that the numbers were, for

Henry Curwen, efq. 2139 Sir James Lowther 1977 Henry Fletcher, efq. 1975 Major Senhouse 1801

and he thereupon returned Mr. Curwen and Sir James Lowther. The greatest part of those who were rejected in prejudice of Mr. Curwen and Mr. Fletcher were neighbours to the former of these gentlemen, and lived within his

manors.

manors. The objection taken to them was, that the land-tax affeffments were not duly figned and fealed by the commissioners, though the voters were rated in the duplicate, and actually paid, and had for years paid, the land-tax; and it is very observable, that the estate Mr. Curwen gave in as his qualification for knight of the shire, was not sufficient, in the judgment of the sheriss, to intitle him to vote as a forty shillings a year free-holder, on account of the informality of the affessment.

A large body of coal-25th. heavers affembled in a riotous manner in Wapping, went on board the colliers, and obliged the men who were at work to leave off; so that the business of delivering ships, in the river, is wholly at a stand. These men complain of their masters, the undertakers; that they oppress them in various shapes, that they curtail their wages; pay them not in money, but in liquor and goods of a bad quality; and that these undertakers get fortunes, while the poor mens families who do the work are starving. This riot was attended with much bloodshed; the riotres, having met with oppofition, fought desperately, and several lives were loft.

Extract of a letter from Edinburgh.

"A number of apprentice boys, amounting to several hundreds, affembled here, and carried on their shoulders a figure which they called Mr. Wilkes. After parading the streets, and shouting Wilkes and Liberty, they carried him to the Grass market, where they chaired the mock hero on the stone where the common gallows is usually

fixed at executions: after making a fire, they committed the effigy to the flames, and feattered the afhes in the air, and then quickly difperfed to their respective homes."

A letter from Dublin, dated April 16, fays, "Yesterday, at a quarter assembly of the lord-mayor, aldermen, &c. it was agreed that his excellency lord viscount Townshend be applied to, to honour the city of Dublin to fit for his picture, to be painted by a native of this kingdom, at the city expense, in honour of his excellency's great fervices to this kingdom, and particularly for obtaining the octennial bill."

Letters from Stockholm advife, that the lady of the resident from the empress of Russia was lately insulted in her coach by three carmen of that city, who broke the glasses of the coach, and beat the coachman, &c. by which fright she miscarried, and the carmen were all arrested, and condemned to death; but the resident interceding for them, they were

only whipped.

This morning Mr. Wilkes's attorney acquainted the attorney general, that Mr. Wilkes was in custody by a writ of capias utlagatum, and prayed that the writ of error might be granted; but the attorney general not thinking that information sufficient (though he doubted not that gentleman's veracity) for him to grant it, the under-sheriff waited on him in confequence, and acquainted him. that Mr. Wilkes was in custody, and would appear in court by his Habeas; whereupon the attorney general admitted the writ of error; and, about three o'clock in the afternoon, Mr. Wilkes was in-

troduced

troduced in a legal manner into the court of king's bench: when his council moved, as the writ of error was granted, that Mr. Wilkes might be admitted to bail; but the court were of opinion that neither he nor any person could be admitted to bail after conviction, and accordingly ordered Mr. Wilkes into custody, and to be committed to the king's bench prison for the prefent; and thereupon he was taken into custody by the proper officers of the court; but, as he was going thither, in a hackney coach, attended by Mess. Stichall and Holloway, tipstaffs to lord Mansfield, the mob stopped the coach on Westminster-bridge, took out the horses, and drew it along the Strand, Fleet-street, &c. to Spital-fields. When they came to Spital-square, they obliged the two tipstaffs to get out, and let them go very quietly away; they then drew Mr. Wilkes to the Three Tuns tavern in Spital-fields; where, from a one pair of frairs window, he earnestly entreated them to retire, which they did accordingly. After which he went in a private manner, and furrendered himself to the marshal of the king's bench prison. Many justices of the peace, and a prodigious number of constables, attended in and near Westminster-hall; but not the least noise or riot was made there.

The next day he was visited by many of his friends, and the prison was furrounded by a numerous concourse of people, who it was expected would have offered some outrage, but all remained quiet till night; when they pulled up the rails, which enclosed the footway, with which they made a

bonfire, and obliged the inhabitants of the Borough to illuminate their houses, but a captain's guard of 100 men arriving, about twelve, they all quietly dispersed.

Came on in the court of king's hench, Westminster, before the right honourable lord chief justice Mansfield, the grand cause between the college of physicians and the licentiates, when, after a long hearing which lasted till near three o'clock, a verdict was given in favour of the former.

They write from Tobago, that a human skeleton was lately dug up on Somerville's plantation, with gold bracelets on the arms, suppoted to have been deposited there before the island was known to Europeans. 1976 will uit be

Extract of a letter from Hereford,

April 17 418 : 8 11. "Velters Cornwall, elgo was brought to this place to be interred, by his own fon, in our cathedrah. There has not been fuch a burial in Hereford in the memory of any one. The procession was as follows; first, four mutes on! horseback; then the hearse with the efcutcheons, a mourning coach, &c. next the mayor and twenty-four aldermen; with hatbands, scarfs, gloves, and rings; wenty-four chief constables, hatbands and gloves; eight gentlemen, hatbands, scarfs, gloves, and rings; eight tradesmen and gentlemens fervants, with hatbands and gloves; two physicians and clergymen, hatbands, fcarfs, gloves, and rings. He was met at the west door of the church by the twelve vicars, with hathands, fcarfs, gloves, and rings, all the chorifters who fung him into the choir; then a funeral fermon was

preached

preached by Mr. Felton. This was all his own defire; all the choriflers are to have guineas or half guineas each. One part of the proceffion I had like to have forgot was, the two women, that used to carry the apple boughs before him, followed the corpse with the apples covered with crape; the most moving scene I ever saw, it drew tears from the eyes of most of the spectators. All the mayor's officers had hatbands and gloves. He was 72 years of age."

Extract of a letter from Fort St. George, in the East Indies, da-

ted October 8, 1767.

"We have received from our camp the following account of the defeat of the joint forces of Nizam Ally and Hyder Ally, near Trinomallee, on the 26th of September last, by the company's forces, under the command of colonel Smith:

From the field of battle at Errour, near Trinomallee, Sept. 27,

1767.

Yesterday evening, after several manoeuvres on both fides, we brought the enemy to an action, and have effectually routed them. They endeavoured at first to turn a warm cannonade upon our left: and as we could not well come at their guns, on account of à morals in front, we were ordered to endeavour to turn their left round fome hills which lay in our front. We did so, and presently brought them to an action, which after a very fmart fire ended in their defeat. Our loss is small; the rapidity with which our troops advanced upon them allowing them to do us little harm, every thing confidered. We lay on the field all last night, and, as soon as we

could diffinguish objects, we marched this morning in pursuit of them: they made a faint shew of resistance; but are gone entirely off, as it is thought, through the Changama Pass into the Baharah-

Haul country.

We followed them till the strength and spirits of our army was quite exhausted, and obliged us to halt on the spot we are now encamped, which is about eight miles on the road to Changama from Trinomallee. Last night we feized nine of their guns, and are now in possession of about fifty pieces of their cannon, which they could not carry off in their precipitate retreat. Both our officers and men behaved with the greatest resolution. The enemy's loss must be great, but cannot be afcertained, as the moment a man is killed or wounded, his companions carry him off. The prisoners inform us, that our cannon made great havock among them.

We learn fince, that fourteen more pieces of the enemy's cannon have been found among the

bushes."

They write from Conflantinople, of the 16th past, that they have not had, within the memory of man, so severe a winter as the present. It continues still to hail and snow very much, which is very extraordinary in this advanced season.

A great number of the foremen of the coalheavers 29th, attended alderman Beckford, and other justices of the peace, and heard the act of parliament for their regulation read and explained, and had the price of their labour fettled; when they all agreed

to register their gangs, and go to work.

Yesterday, being the anniversary meeting of the governors of the fmall-pox hospital, a fermon was preached at St. Bride's Fleet-street, by the reverend Dr. Halifax, rector of Chadlington, Bucks, and vicar of Ewell in Surry, After which, an elegant entertainment was provided for them at Drapershall, Throgmorton-street. The collection at the church and hall amounted to 7221. and upwards. Extract of a letter from Florence,

March 26th. "The great duke having been indisposed for some days last week, the celebration of the emperor's name-day, and the ceremonies appointed to be performed on that occasion, were postponed till the 21st, when his royal highness, affifted by count Rosenburg, and baron Neny, secretary of the order of the golden fleece, invested the young prince his fon with the enfigns of that order. The great duke was seated on a throne; and both he and count Rosenberg wore the collar of that order, but not the habit; though, in every thing elfe, the ceremony was the same as is performed at Vienna on the like occasion. After this, the great duke preceded the great duchess to the chapel of the court, to which her royal highness, with the young prince on her lap, was carried in a rich fedan, and was attended by the grande maitreffe and the ladies of honour. On her return from thence, the and the great duke received the compliments of the foreign ministers, and permitted their subjects to kiss their hands, which is a ceremony that is repeated on all public occasions. They

afterwards dined in publick, and in the evening there was a great drawing room."

The government of Naples has iffued an order, that no book, written by a jefuit, shall be fold or kept in any booksellers shops. No books are excepted, not even those which relate to the mathema-

Extract of a letter from Vienna:

"At length we have a good prospect of the general introduction of inoculation into this country, where it has not been practifed hitherto, except near three years ago, on the daughter of the English ambassador, lord Stormont. Your countryman, Dr. Houlston, with a practitioner of this city, Dr. Collins, have already succesfully inoculated feveral, both in the hospital of the latter, and elsewhere. I believe the practice will foon become general, as these gentlemen meet with the greatest encouragement here: if it succeeds, we shall have considerable obligations to England, from whence it has been brought to us, and confequently to the physicians who have introduced it in this city."

A commission this day passed the great seal, authorizing his royal highness the duke of Cumberland, Thomas lord archbishop of Canterbury, and other lords, to open and hold the new parliament on the 10th day of May, being the day of the return of the writs of summons.

A fire broke out at a baker's in Whitechapel-road, occasioned by laying wet faw-duft on the oven to dry, which taking fire, foon fet the neighbourhood on fire, and a coachmaker's adjoining spread the flames to rapidly that fix houses

were

were presently consumed, without giving time to the inhabitants to fave any of their effects.

The village of Bracly, near Amiens, in France, was destroyed by fire, two houses only excepted.

A fine whole length picture of his majesty, painted by Ramsay, was presented by his excellency the lord lieutenant of Ireland to

the university of Dublin.

They write from Paris, that a very curious fowling piece of a new invention, and weighing only feven pounds, had been presented, on the 24th past, to the king at Choify. This piece discharges itfelf twenty-four times in two minutes, only by laying hold of the barrel, after the first shot, and then permitting it to make of itself a femi-circle from left to right, and afterwards from right to left. By this fimple operation, it re-loads and is ready again.

An aloe, of the kind entitled by botanists " Aloe Americana Sobolifera," and fprung from a feed brought by M. De la Condamine from the banks of the river Amazons, we are told, is now in bloom in the royal garden of the Schonbrun at Vienna. It is seven feet high, and is ornamented with upwards of forty-five flower-stalks. But the most remarkable circumstance attending this plant is, that it was raifed from a feed brought from so very great a distance; a circumstance which cannot but facilitate the furnishing our gardens and hot-houses with exoticks, though it were to be wished, perhaps for this end, that M. De la Condamine, or some other ingenious person, had pointed out the best method of bringing over plants in grain.

In the same garden, we are told, likewise is, at present, a "Palma Japonica," with the fruit. These fruits, which are more than five hundred in number, are of a beautiful red colour, and about the bigness of a date.

They write from Bar fur Seine, in Champagne, that on the 26th last, a fire broke out at the village of Virey near that town, which reduced to ashes twenty-two houses and eighteen barns, the latter all full of corn. A child and fome cattle likewise perished in the flames.

Extract of a letter from Koningsberg, March 31.

"On the 18th, at five in the evening, a violent florm began at this place, and lasted till the next morning. The wind role from the fouth and fouth-weil, and was accompanied with thunder, lightning, and a very deep fnow. Most of the houses were untiled, and the chimnies were blown down. At the village of Brandenberg, three miles from this place, a steeple, which was fet on fire by the lightning, burnt for hours; and the flames were at last extinguished by fnow, which was an ell and a half deep."

Letters from Rome, dated the 27th ult. inform, that his holiness, having been informed that the margrave of Baden Dourlach hath permitted the exercise of the catholic religion in his capital, and the construction of a church for that purpose, hath returned the margrave his thanks for fuch permission, and hath sent some superb ornaments and other necessary

things for the church.

The king of Portugal has grants ed a patent for fifteen years, to a

person

person who is settled at the bay of All Saints, for an exclusive privilege of manufacturing fail-cloth, and cloth for package, together with cordage for ships; the materials of which are to be surnished from two species of plants, which grow wild and in great abundance in the forests about that part of Brazil.

They write from Madrid, that the count de Fuentes, formerly ambaffador extraordinary from his catholic majefty to the court of Great Britain, is made prefident of the council of orders, with a penfion of two thousand pistoles.

They write from Sweden of the 18th ult. that a copper mine at Fahlum had taken fire, and had been burning for three weeks. The mine being very deep, no perfon could venture to go down, fo that the working of it was entirely

stopped:

They write from Copenhagen, that a very terrible eruption of fire had lately happened at mount Hecla, in Iceland, that the ships decks, several miles distant in the road, had been covered with ashes, and that the effects of the volcano fell all over the island.

There is now living at Newcastle, one James Palmer, who is now in the 105th year of his age, by profession a fisherman, in which employment he regularly attends, and never remembers to have had an hour's illness.

Died at Ayr, James Donald, late merchant in Mauchline, ageed

100 years.

At her house at Stanwell, Mrs. Whitcomb, a widow lady, aged

02.

At his house at Hampton, aged 85, Robert Hyatt, esq. who had

been an officer of the houshold to

king George the fecond.

At Baghurs, in the county of Hants, Mr. Buller, a wealthy mealman, and one of the people called Quakers. He was reckoned the strongest man in this kingdom.

At Hampton, aged near 90, Frederick Hermis, esq. who had been an equerry of horse to their late majesties king George the first and king George the second.

Edward Pawlet, of Cecil-street, in the Strand, esq. fellow of the

royal fociety, aged 85.

At his house at East Greenwich, aged 89, Joseph Jubb, esq. many years a commander in the royal navy.

Lately at Dublin, aged 107,

Mr. Connolly.

Near Ennis, Joan M'Donough, aged 138 years.

MAY.

Alarge French ship, having met with bad weather, put into Portsmouth harbour to resit; and an officer in the dock-yard, two master rope-makers, and several other persons, having gone on board to offer their affistance, were all obliged to continue on board to perform quarantine, the ship having been found to come from an infected place. She has since been discharged, and the people released.

They write from Paris, that a French nobleman, in the neighbourhood of that city, having met a poor beggar-woman on the road, took her home, locked her up in a private room, bound her, and with his penknife made feveral incifions in her body, into which he poured a balfam, which, he faid,

would

would instantly cure her wounds. In this fituation he left the poor creature, and walked out, till, as he faid, the experiment should take effect. But in the mean time, the woman found means to disengage herself, and made her escape from the house by a window. On which the populace took the alarm, and the experiment would have proved fatal to the life of the count, had not his friends timely interposed, and declared he was mad with chemistry, and by that declaration appeared their rage. The count has fince been ordered to be confined for life.

Came on to be heard before his honour the mailer of the rolls, a cause wherein the proprietors of the celebrated opera of Love in a Villagewere plaintiffs, and a printer, who had printed and published a pirated edition of the said opera, was defendant; when his honour was pleased to make a decree in favour of the plaintiffs, by granting a perpetual injunction, and obliging the defendant to account with the plaintiffs for the profits of the whole number printed, published, and fold by the defendant, although the opera was not, till after the printing of the pirated edition, entered at Stationer's Hall.

At the rehearfal of the mufic for the feast of the fons of the clergy at St. Paul's, the collection amounted to 1751, only, which is 37 l. less than last year.

The fnow Rodney, with the last cargo of convicts for Maryland, having met with stormy weather on the American coast, was forced to bear away for Antigua. When

VOL. XI.

the poor wretches arrived at that island, they were in the most deplorable condition, full of fores, almost starved, and covered with vermine, eleven had perished for want, and those that remained had eaten their shoes, &c. to fustain life; add to this, that the ship being leaky, they had actually lain in water a part of the voyage.

A travelling tinker, a boy about fix, and a girl about feven years old, were all poisoned, by eating bread fopped in a dripping pan, into which the liquor from a toad, thrown into the fire and burnt, had issued as the meat was roasting at a public-house at Hough, near Rotherham in Yorkshire. children died about fix the fame evening, and the tinker about nine.

A very numerous body of failors have for three days past detained all outward-bound ships now lying in the river Thames; and yefterday morning affembled, to the amount of many thousands, in Stepney-fields, where certain articles relating to an encrease of wages, and a petition intended to be presented to parliament, were read: after which, a numerous party of them paraded to the Royal Exchange, and joined in repeated huzzas, &c. but on remonstrances from a gentleman there to one of their chieftains, they were immediately drawn off, and a deputation appointed to attend fome merchants, affembled at the King'sarms tavern in Cornhill, in order that their complaints might be

It was computed that upwards of two thousand failors went yesterday to Wimbledon-common,

taken into confideration.

[H] , the f is the f is

in order to present a petition to his majesty, who was then review-

ing the light horse.

Yesterday morning some sailors began to unrig the ships that were got down as far as Blackwall since Saturday, and dragged all the men into their boats, whom they carried off with them: They have stuck up bills all along the water side, to inform every body that they shall not work till their wages are raised.

Was held the anniversary 5th meeting of the fons of the clergy, at which were present the lord mayor, the archbishop of York, twelve bishops, and many persons of distinction. The collection at St. Paul's amounted to 1861. 14s. 4d. and at the hall to 544l. 17s. 3d. which, with the collection at the rehearfal, made up the fum of 9031, 198, 1d. A benefaction of ten guineas was afterwards paid to the treasurer, to be added to the above fum; but it is remarkable, that ever fince the death of Mr. Gideon, who always gave tool, to that charity, the collection has been declining.

A maid fervant at Paddington was accidentally shot by a watch-gun, which was usually set by the family, as a desence against rogues; but the girl being but lately come to her place was not sufficiently apprized of the danger, and treading upon the wire that was sastened to the trigger, the gun went off, and killed her on the spot.

The prince of Monaco visited Portsmouth, and very attentively viewed the dock-yard, and went on board all the king's ships in the harbour. He was attended by the commissioners and military in their uniforms, and had all the ho-

nours that could be paid a prince who had shewn so much kindness to our late lamented duke of York.

Two Indian chiefs just arrived at Edinburgh have been feized with the small-pox, one of whom

died this day.

A great body of failors affembled at Deptford, forcibly went on board feveral ships, unreefed their top-fails, and vowed no ships should fail out of the Thames till the merchants had consented to

raife their wages.

The report of the malefactors under fentence of death was made to his majesty, when James Sampfon, for robbing and setting fire to the library of the right hon. Henry Seymour Conway, esq. was ordered for execution; the rest were re-

fpited.

Came on at Westminsterhall, before all the judges of 7th. the court of king's-bench, a hearing respecting the errors of Mr. Wilkes's outlawry. The cafe was opened by Mr. ferjeant Glyn, in favour of Mr. Wilkes, who was answered by Mr. Thurloe, and a reply made by Mr. Glyn; on which the judges were pleafed to observe, that both the gentlemen had made use of very learned arguments, and quoted many precedents and cases which had at various times altered their opinions; and as they were defirous of maturely confidering the feveral arguments made use of by the two learned counfel, their lordships thought proper to appoint a further hearing the beginning of next

This day the failors affembled in a body in St. George's fields, and went to St. James's, with colours flying, drums beating, and fifes playing, and prefented a petition to his majeffy, fetting forth their grievances, and praying relief. Mr Wilkas's address to the gen-

tlemen, clergy, and freeholders of the county of Middlefex.

Gentlemen,

In support of the liberties of this country against the arbitrary rule of ministers, I was before committed to the Tower, and am now fentenced to this Prison. Steadiness, with, I hope, strength of mind, do not however leave me; for the same consolation sollows me here, the confciousness of innocence, of having done my duty, and exerted all my poor abilities, not unfuccessfully, for this nation. I can submit even to far greater fufferings with chearfulness, because I see that my countrymen reap the happy fruits of my labours and perfecutions, by the repeated decisions of our sovereign courts of justice in favour of liberty. I therefore bear up with fortitude, and even glory that I am called to suffer in this cause, because I continue to find the nobleft reward, the applause of my native country, of this great, free, and spirited people.

I chiefly regret, gentlemen, that this confinement deprives me of the honour of thanking you in person, according to my promise; and at present takes from me, in a great degree, the power of being useful to you. The will, however, to do every service to my constituents remains in its full force; and when my sufferings have a period, the first day I regain my liberty shall restore a life of zeal in the cause and interests of the county of Middle-

fex.

In this prison, in any other, in every place, my ruling passion will be the love of England and our free conflitution. To those objects I will make every facrifice Under all the oppressions which ministerial rage and revenge can invent, my steady purpose is, to concert with you, and other true friends of this country, the most probable means of rooting out the remains of arbitrary power and star chamber inquisition, and of improving as well as fecuring the generous plans of freedom, which were the boast of our ancestors, and I trust will remain the noblest inheritance of our posterity, the only genuine characteristic of Englishmen.

I have the honour to be, with affection and regard, gentlemen, Your obliged and faithful humble fervant,

King's-bench prison,

Thursday, May 5, J. WILKES.

1768.

A numerous body of watermen affembled before the manfion-house, and laid their complaint before the lord-mayor, who advised them to appoint proper persons to draw up a petition to parliament, which his lordship promised them he would present; upon which they gave him three huzzas, and went quietly home.

The fame night a large mob of another kind affembled before the mansion-house, carrying a gallows with a boot hanging to it, and a red cap; but on some of the ringleaders being secured by the peace-officers, the rest dispersed.

This day the hatters ftruck, and refused to work till their wages are raised.

[H 2] This

OST ANNUAL REGISTER

This day died at his house in Orchard-street, Westminster, Bonnell Thornton, efq .- All who have conceived a love and efteem for the two celebrated authors of the Connoisseur, will be sensibly affected by the loss of one in whose company they have spent so many agreeable hours. Those who have conversed with him as a scholar, who have admired his fine tafte and found judgement, whom his wit and humour have delighted, who have been happy with him in the focial hours, must feel a bitter pang; but what must they seel whose more intimate connexion shewed them a noble benevolence of mind, a generous warmth of heart, an exquisite sensibility, and how much he used to feel when he had loft a friend!

Letters from Copenhagen, dated the 9th ult. fay, "A few days was exposed to public view the mausoleum of the late king Christian VI. This monument, executed in the antique talle by the fieur Wicdewelt, is made of white Italian marble, and ornamented with several figures in relievo, also with two statues as large as life, one of which represents Denmark in tears, and the other Fame publishing the glory of the monarch. The infcription of the mausoleum is: CHRIS-TIANVS VI. REX DAN. NORW. &c. PIETATE IN DEVM, BENE-FACTIS IN POPVEVM, CONSTAN-TIA IN FOEDERIBVS, SEVERI-TATE IN SOLVM SEIPSVM, SEM-PER ET, VBIQUE SAECVLI DE-

This day the new parliament met; and his majefty's commission, impowering Thomas archbishop of Canterbury, Charles lord Camden, chancellor of Great

Britain, Charles earl of Gower, prefident of his majefty's council, and feveral lords therein named, to open and hold the faid parliament, was read in the prefence of both houses. And the commons were directed to chuse their speaker, and to prefent him to-morrow at twelve o'clock at noon, to the lords commissioners.

This day in the forenoon, a great body of people affembled about the king's-bench prifon, in expectation, as it is faid, that Mr. Wilkes was to go from thence to the parliament-house, and designing to convey him thither. They demanded him at the prison, and grew very tumultuous; whereugon the riot-act was begun to be read, but they threw stones and brickbats while it was reading, when William Allen, fon of Mr. Allen, master of the Horse-shoe inn and livery stables in Blackman-street, Southwark, being fingled out, was purfued by one of the foldiers, and thot dead on the spot. Soon after this, the crowd increasing, an additional number of the guards was fent for, who marched thither, and also a party of horse-grenadiers; when, the riot continuing, the mob were fired upon by the foldiers, and five or fix were killed on the spot, and about 15 wounded. Two women were among the wounded; one of whom fince died in St. Thomas's-hospital.

A large body of fawyers affembled, and pulled down the faw-mill lately erected by Mr. Dingley, at Limehouse, on pretence that it deprived many workmen of employment.

The coal-heavers affembled again this day, and rendezvoused in Stepney-fields, where their num-

bers

bers confiderably increased; and then they repaired, with a flag flying, drums beating, and two violins playing before them, to Palacevard, where they were met by fir John Fielding, who perfuaded them to part with their flag, to filence their drums, and to discharge their fidlers; and then talking with their leaders, prevailed upon them to meet fome of their masters at his office in the afternoon, and accommodate their differences.

The drying-pan, which weighed near 1600 lb. weight, belonging to Ewell powder mills, was, by an explosion, carried upwards of 100 yards from the mills; the boughs and branches of large trees, a mile distant from the mills, were torn off, fo that some trees were left a mere trunk: the damage sustained is computed at upwards of 8000 l.

This day the two houses met again; and the commons, having re-chose sir John Cust, for their speaker, presented him to the lords commissioners for their approbation, who were pleased in his majesty's name to approve their choice; after which, the lord chancellor opened the session with a speech, which, together with the addresses, our readers will see in the state papers.

The bill for an augmentation of the army in Ireland, was rejected by the house of commons in that

kingdom.

Upon the report of the committee of enquiry into the application of the money granted for the payment of the army, it appeared, that 17 regiments are now kept upon the Irish establishment more than in 1700; though the number of effective men at each period are exactly the fame. It is faid that feveral military officers voted against the intended augmentation.

Mr. Callen, a matter butcher in Ormond-market, was most barbarously murdered by a set of villains in Smock-alley, Dublin: Mr. Preston, another butcher in the same market, was stabbed and most dreadfully wounded by the same affassins. In consequence of these murders, the populace assembled, and committed the most violent outrages ever known in that kingdom; insomuch that the insurrection, which at first seemed to threaten destruction to the murderers and their abetters, became formidable to the whole city.

This morning James Sampson was executed at Tyburn, pursuant to his sentence, for robbing the library of the right honourable Henry Seymour Conway, esq. of bank notes to the value of 900 l. and afterwards setting it on fire, by piling up a number of papers round a lighted candle, which he placed on a table near the chim-

new.

An inquisition was taken by the coroner for Surry, on the body of William Allen, who was shot near St. George's fields by a party of the foot-guards; when the verdict was given by the jury, that Donald Maclane was guilty of wilful murder, and Donald Maclaury, and Alexander Murray, the commanding officer, were aiding and abetting therein.

The above inquest was held at the house of Mr. Allen; and it appeared on the examination, that the deceased was only a spectator, and, on seeing some persons run, he ran also, but was unhappily mistaken, and sollowed by the soldiers 500 yards into a cow-house,

[H 3] where

where he was shot. Donald Maclane was committed to prison for the above murder, but his affociates were admitted to bail.

A proclamation was iffued, by order of the council, for suppreffing riots, tumults, and unlawful

assemblies.

The following warrant is issued by the coroner for the apprehension of Alexander Murray, esq. one of the commanding officers of the soldiers posted at the king's bench, during the late riots:

SURRY,
to wit.

To the consables of the parish of St.
Mary Newington, in the said county; and to all officers of peace whom it shall or may concern.

WHEREAS Alexander Murray, efq. of the third regiment of foot guards, flands accused before me, upon an inquisition this day taken at the parish of St. Mary Newington, in the said county, with the wilful murder of William

Allen the younger:

These are therefore, in his majesty's name, to apprehend and bring before me, or some of his majesty's justices of the peace for the said county, the body of the said Alexander Murray, to answer the premises, and be surther dealt with according to law; and for so doing, this shall be your sufficient warrant.

Given under my hand and feal this 11th day of May, in the year of our lord 1768.

HENRY ACTON, coroner.
One of the foldiers on Tuefday
before the king's bench cried out,
We are all ready to fire on our
enemies the French and Spaniards,

but never will on our own coun-

trymen."

Last night the mob affembled again before the Mansion house, broke a great number of the windows, and did other mischief; a strong party of the guards was then fent for, and posted in and about the Mansion-house, to protect it from further insult.

The following is a copy of a letter directed to John Durand, efq. and the fame to Anthony Bacon, efq. figned by 34 of the

electors of Aylesbury.

SIR,

Fully perfuaded that the clemency of the best of princes will, if necessary, be at length exerted, in favour of Mr. Wilkes, we hope that, should an attempt be made to deprive him of his feat in parliament, you will, from your connexion with us, who are fincere in our friendship for him, prefer lenity, and, from regard to the public, justice to his constituents, before rigour and feverity, and use your utmost endeavours to prevent the fuccess of such a measure. Aylesbury, We are, SIR, April 30, ... Your most

1768. humble fervants, &c. &c. &c.

The mob affembled before the house of Edward Russell, esq. distiller in the Borough, broke open the door, staved some casks of liquor, drank immoderately, and began pulling down the house; but the military interposing, sour of the drunkest of them were seized, and the rest made their escape. At the same time the front of the house of Richard Capel, esq. in Bermondsey was demolished, and Mr. Capel himself wounded.

The

The activity of these two gentlemen, being magistrates, in suppressing the tumults, occasioned

these outrages.

The coal-heavers rendezvoused again in Stepney-fields, and proceeded from thence to all the coal wharfs from Shadwell to Essexfiairs, carrying with them awriting, which they presented to the masters of the wharfs to sign, signifying their consent to raise their wages; which having accomplished, they next day waited on the lord-mayor at the Mansson-house, to obtain a consirmation of this agreement; but his lordship very prudently declined intermeddling with their affairs.

A great body of failors passed through the city (some say 5000, fome 15000), to petition the parliament for an augmentation of their wages. When they were in Palace-yard, they were addressed by two gentlemen, mounted on the roof of a hackney-coach, and were told, that they could receive no immediate answer to their petition; but that it would be confidered in due time, on which they gave three cheers, and dispersed. Their chiefs have fince waited upon a committee of merchants, and matters feem to be accommodated.

On Tuesday night their majesties came unexpectedly from Richmond to the queen's palace, where they continued yesterday, and lay

there last night.

Yesterday there was a levee at St. James's, and afterwards a privy council, at which all the great officers of state affisted, said to be on account of the present riots and disturbances, which did not break up till past four o'clock.

The following very extraordinary letter is faid to have been received by the field officer of the foot guards in waiting this day: ORDERS.

PAROLE is Wandsworth.
Office, May 11, 1768.

IR,

Having this day had the honour of mentioning to the --- the behaviour of the detachments from the feveral battalions of foot guards, which have been lately employed in affifting the civil magistrates, and preferving the public peace, I have great pleafure in informing you, that his -- highly approves of the conduct of both the officers and men, and means that his - approbation should be communicated to them through you. Employing the troops on fo difagreeable a fervice always gives me pain; but the circumstance of the times makes it necesfary. I am persuaded they see that necessity, and will continue, as they have done, to perform their duty with alacrity. I beg you will be pleased to assure them, that every possible regard shall be shewn to them; their zeal and good behaviour upon this occafion deferve it; and in case any disagreeable circumstance should happen in the execution of their duty, they shall have every defence and protection that the law can authorize, and this office can give.

I have the honour to be, fir, Your most obedient, and most humble fervant,

To the field officer in staff waiting for the three regiments of foot guards.

[H 4] Officers

ANNUAL REGISTER

Officers for guard on Saturday next.

Lieutenant colonel Groyn,

This morning died much 13th. la lented, after a long and painful illner, that most amiable princess her royal highness Louisa Anne, daughter of her royal highness the princess dowager of Wales, and second sifter to his present majesty. Her royal highness was born March 29, 1748 9. On this occasion, plays and public diversions were forbidden; and orders for a general mourning, for six weeks, were issued from the lord chamberlain's office.

Two inquisitions were taken in the Borough, on persons killed by the foldiers in quelling the riot in St. George's-fields on Tuefday; one on the body of Mary Jeffs, who, having a basket with oranges to fell, was thot dead in removing them; the other on William Bridgeman, who was shot on the top of a hay-cart, as he was looking at the fray at a diffance: on both these inquisitions the jury brought in their verdict chance medley. It appeared by the evidence, that, on the justices taking down a paper that had been fixed against a wall of the prison, the mob grew riotous, and cried out, "Give us the paper;" which the justices not regarding, itones began to be thrown; and the cry, "Give us the paper," grew louder; the drums beat to arms; the proclamation was read; the justices were pelted who read it; great pains were taken to perfuade the people to disperse; the horse-guards were fent for, and it was not till the last extremity that the foldiers received orders to fire. But what was

remarkable, not one concerned in the riot was hurt by the firing, in the open fields.

When the prifoners concerned in the murder of Mr Allen were going to the new gaol on Wednefday night, it was with the greatest difficulty imaginable the populace were prevented from tearing them to pieces, vowing, with great vehemence, that they would immediately hang them out of the way, and not wait for any point of evalion or deceit whatever,

Monday his royal highness the duke of Gloucester sent a set of sine state horses to his serene highness the prince of Monaco, to carry him and his servants to see the review at Wimbledon. After the review was over, his highness dined with several of the nobility, and other persons of distinction, at the seat of the honourable Horace Walpole, at Strawberry-hill in Middlesex.

As a pilot boat belonging to North Yarmouth, which brought up mackarel to the London market, was returning home, it was met by captain Flynn, of the Pelegrin, in Blackwall reach, who was going in a pair of oars to Gravefend, in order to proceed to his ship in Stangate-creek; but, finding there was too much wind and fea for his wherry, having eight people in her, he agreed with the pilot boat to carry him and his company to Gravesend: but he was not on board much more than half an hour, before the boat, through the obstinacy of the boat's crew, overfet in Bugsby-hole, between Blackwall and Woolwich, by which feven people were drowned, viz. captain James Markham, of Lower Queen-

ftreet,

fireet, Rotherhithe; and fix others.

Capt. Flynn was faved.

The two foldiers, charged 16th. with the murder of Allen, the youth that was that in St. George's fields, were brought by Habeas to the king's bench to be bailed; when the person who actually shot the lad was remanded to bail. Alexander Murray, esq; the officer charged by the coroner's inquest, was likewise bailed.

The glass-grinders affembled in a body, to petition parliament for an augmentation of their wages.

The journeymen taylors affem-

bled for the fame purpose.

A number of fellows, pretending to be coal-heavers, extorted money from gentlemen in the neighbourhood of London, under pretence of being in a flarving condition for want of employment.

A most audacious treasonable paper was stuck up on the walls of St. James's palace; and at night a letter was found on the back-stairs to

the same purport.

A cause came on to be tried before lord Manssield, at Guildhall; wherein the proprietors of the Watford coach were defendants. The action was brought against them to recover the sum of 90l, which the plaintiff had sent by the coach in October last from Watford to London, packed up in a small box; but it appearing, on the examination of the plaintiff's evidence, that when the box was delivered in charge it was not said to contain cash, the plaintiff was non-suited.

Yesterday morning a number of armed tenders and government cutters came up the river, and lay off Deptford, to be in readiness to quell any disturbances; but none

have happened.

The fame day feveral inflammatory papers were fluck up about Westminster-bridge, and other parts, for which a person is now in custody of a messenger.

A fire broke out in a taryard at Dock-head, by the tar-copper boiling over, by which upwards of 2000 barrels were confumed, and near 30 houses burnt to

the ground.

The general affembly of the church of Scotland met at Edinburgh, when his majefty's high commissioner, the earl of Glasgow, made a very grand appearance. The rev. Dr. Gilbert Hamilton, minister of Crammon, was chosen moderator.

The Sherborne waggon was stopped by the populace, and about a thousand weight of butter taken a-

way, defigned for London.

The fessions ended at the Old Baily. At this fession four convicts received judgment of death, twenty-sive were ordered to be transported for seven years, and one for fourteen years; one to be publicly whipped; and seventeen were discharged by proclamation.

Mary Hyndes was convicted of the wilful murder of the child of Joseph Smith (a servant to the right hon, the counters of Thanet), a fine boy, about a year and half old; she, by being an intimate acquaintance of its parents, used sometimes to take him out with her, and the last time most unaccountably, without any cause of resentment to the parents or child, otherwise than that she could never make it be fond of her, threw it into a canal or bason of water in Hyde-park. Immediately after the trial, Mr. Recorder

passed sentence for her execution as this morning; but, on her prayer to be indulged a short time, for her better preparation, the court were pleased to respite the same till the 14th of June. This unhappy woman was tried about fix years and a half since, for a crime of the like fort; but it appeared the child by accident sprung from her arms into the water, and was lost.

The lords, authorized by his majefly's commission, gave the royal assent to an act for further continuing the laws now in force, relating to the exportation and importation of corn, &c. till after the next session of parliament. By this act, wheat, wheat-flour, barley, barley-meal, and pusse, may be imported, duty-free, from any part of Europe.

At Tenterden, in Kent, a paper was pasted on the church-door, threatening the farmers, if they refused to sell their wheat at 101. a load, and the millers if they gave more; and exciting all the poor to assemble and raise a mob, with threats that those who resused should have their right arms broke. They appointed for meeting the 30th instant.

At Hallings, in Suffex, the mob have already rifen, and committed outrages upon the farmers in that neighbourhood, and have threatened the life of a justice there, who attempted to commit the ringleader to goal.

Last night, about ten c'clock, the corpse of her late royal highness the princess Louis-Anne, after lying in state that day in the prince's chamber, was privately interred in the royal vault in King Henry the Seventh's chapel.

The procession began between

nine and ten from the prince's chamber to the abbey, where the body was received by the dean, who performed the funeral fervice; her grace the duchefs of Manchester was chief mourner, and the pall was supported by lady Scarborough, lady Boston, lady Masham, and lady Litchfield.

The minute guns at the Tower began firing about nine at night; and St. Paul's bell and those of most of the churches in London and Westminster tolled every minute, and continued till her royal highness's

body was interred.

A terrible fray happened between the coal-heavers and the failors belonging to the colliers in the river, in which many were killed. The failors, having been long detained in the river by the coal-heavers refusing to work, had begun to deliver their ships themselves; upon which a body of coal-heavers fell upon some of the failors by surprize, and killed two or three. The failors took the alarm, the quarrel became general, and the consequences, the loss of many lives already, though still undetermined.

They write from Newcastle, that on Sunday afternoon the 15th inft. a little after four o'clock, two flight shocks of an earthquake, at about half a minute's distance of time from each other, were fenfibly telt in that town: and we have accounts of their being felt, at the fame time, in different parts of the country, particularly at Kendal, where they had one shock which lasted near two seconds, and happened during the time of divine fervice, which greatly terrified the people in church; and immediately prior to its being felt there, a rumbling noise was heard, like that of a

heavy

heavy carriage passing over a rough pavement; its direction seemed to be from east to west, and the river was very much agitated. At Middleton, near Lanchester, it was also felt at the same time, where the walls which surrounded a field adjoining to the place were observed very sensibly to move, from whence it seemed to pass in a direct line across the street, and through a house, wherein the chairs, dresser, pewter, and other furniture, were greatly shook, and the slags of the sloor observed to heave.

From Darlington we have also an account of a slight shock being felt

there at the fame time.

This morning a courier arrived express from the court of Brunswick at Carlton-house, and afterwards went to Richmond to their majesties, who brought the agreeable news of her royal highness the princess of Brunswick being safely delivered of another daughter; on hearing of which, her royal highness the princess dowager of Wales (who was at Kew) came to town to Carleton-house, for the first time since the death of her late royal highness

His majesty came from Richmond to St. James's, where there was a levee, and afterwards a privy-council, when the right hon. Thomas Harley, lord-mayor of London, was sworn a member, and took his place at the board accordingly.

princess Louisa Anne.

Monday upwards of 20,000 small arms were lodged in the Tower, part belonging to the East-India company, deposited there for better fecurity.

It is faid, that the work of every journeyman gunfmith, out of the Tower, done or undone, is called in

for fear it should fall into desperate hands.

The right hon, the lord mayor went to one of the secretaries of state, and acquainted him with the unhappy fituation of the masters of colliers, deputy coalmeters, &c. upon which he wrote to justice Pell and justice Hudson, &c. informing them, that, if any disturbance should happen on account of working the coal-ships by the failors, they might fend to the Tower, and the guards should immediately march to their protection. Yesterday several of the coal-meters. &c. acquainted his lordship, that the work was at present carried on without any obstruction; but a number of failors boarded the outward-bound ships at Deptford, and unrigged them to prevent their failing, the mafters and owners not having complied with their de-

A confirmation is received of the blowing up the Defiance, an East-India ship; and that the accident happened on the 27th of December last, in her passage from Bombay to Bassora, by the carelessiness of the gunner's steward, in drawing some arrack: she had above three hundred men on board, including seamen, all blacks, except some European officers and serjeants; and only thirty-five men were saved.

It appears by the custom-house books, that upwards of one million sterling hath been paid for corn entered in the port of London, in the year 1767.

Florence, April 30. The great duke, who set out a few days ago, to meet his fister the queen of Naples at Bologna, arrived here at two o'clock in the morning.

The great ducheis, attended by

her great mistress, and the ladies of honour, went to receive her majesty at the head of the stairs, and conducted her to the apartment deflined for her, the antichambers of which were filled with the nobility of both fexes: nobody was admitted the next morning; but they dined at a table of about thirty people, and in the evening went to the theatre, which was illuminated on this occafion. Yesterday morning the queen gave audience to the foreign minifters and the gentlemen of the country: the table; as the day before, was very numerous. Lord Stormont, lord Cowper, and fir Horace Mann, had the honour to dine there; and, besides the other foreign ministers who reside at Flonence, there were count D'Aquillar, the Spanish ambassador, and the duke de St. Elizabeth, the Neapolitan ambaffador at the court of Vienna. In the afternoon there was a horse-race through the principal -fireets, and in the evening a great drawing-room in the queen's apartment, before which she admitted all the ladies of the country to kiss her hand. This evening count Rosenberg entertains the court at his country-house, where, on their arrival; a fire-work is to be played off, after which a cantata in music is to be performed in the gardens, from whence they will proceed to a ball, which is to be followed by a supper for a very numerous company; and on Sunday evening there will be a public ball, in mask, in the great hall of the old palace, which is one of the largest in Europe, On Monday there will be audiences of leave; and on Tuesday morning the queen, with the great duke and duchefs, will fet out towards Naples:

Florence, May 7. Every thing

has passed here according to the plan fixed for the reception and amusement of the queen of Naplesduring her stay here; and though the weather disconcerted, in some points, the entertainment which count Rosenberg had prepared at his villa, it succeeded beyond expectation.

The day before the queen left Florence, a great number of very rich presents were distributed, in the names of both the emperor and empress, to the principal officers of the great duke's court, confisting of fnuff-boxes, watches, and other prefents, in proportion to the rank of each person; the sauff-box, with the emperor's picture adorned with diamonds, given to count Rosenberg, is faid to be worth 2000 zeckins; the queen's own picture, given to the duke of St. Elizabeth, was large, and very richly adorned with diamonds. An excuse was made to count D'Aquillar, the Spanish ambaffador, that her majesty had nothing worthy of him. Besides the above mentioned prefents, 1000 zeckins are to be distributed among the lower officers of the houshold, and the livery fervants.

[London Gazette. They write from Verona, that on the 13th ult. at eight o'clock in the morning, the gunpowder magazine at the town of Crema, in which were 200 barrels full of powder, and a great quantity of faltpetre, took fire. The fun was darkened by the smoke which arose. All the windows were broken, and every perfon fled terrified from the town, which would have been entirely destroyed, if the flames had communicated to the little tower, where 1000 barrels more were deposited. The fire was hapof the second in the second of the pily

pily extinguished at ten o'clock at night. Ten persons were found dead at the market-place, many more were wounded, twelve were grievously burnt, and much cattle perished in the waters, into which they ran with irrefiftible precipitation. A man on horseback, passing by the magazine, was blown up into the air, and could not afterwards be found. His horse only was difcovered dead 200 paces from the magazine.

Letters from Naples affure, that the extraordinary expences occafioned by his Sicilian majesty's marriage, through a truly paternal tenderness for the people, will not be levied upon the state, but defrayed out of the favings of the spare-

cheft.

At Laval, in France, on the 8th inft. the weather being warm and calm, and the night dark, a luminous bar appeared to the north-west of that town, with a long tail somewhat crooked, which terminated towards the north. Next morning, at fix o'clock, the fun breaking thro' the clouds, shone out as hot as in the dog days. At eight it began to lighten, and from 11 minutes to 20, the fky appeared of a fea-green colour, and fo dark that one could fearce fee to read. The thunder was loud and dreadful; and there fell fo great a quantity of hail, and of fo large a fize, that it did infinite damage to the fruits of the earth, and even destroyed trees and killed cattle. In some places the hail was found three or four feet deep, 24 hours after it fell; and many of the hail-stones were nearly as large as a The damage done by hen's egg. this storm is almost incredible: several mills were carried away by the violence of the floods, the gardens are totally destroyed, and when the hail melted, it carried off even the furface of the ground, and left fuch a fmell as even the very beafts themfelves could not bear. In short, nothing like it ever happened before in this part of the world.

A fire broke out at Lansperg in Germany, which in 31st. three hours burnt down 255 houses.

" An odd wedding was celebrated last week in a village in Berkshire: the bridegroom was 85 years of age, the bride 83, the father or, and the two women who officiated as bride-maids each above 70; neither of these women had been ever married, though both of them had been mothers. Six grand-daughters of the bridegroom ftrewed flowers before the company in their way to and from church, and after dinner four grandsons of the bride sung a kind of epithalamium, which the clerk of the parish had written on the oc-

They write from Dublin, that there is now living, near Crumlin, one John Ryder, a Palatine, aged about 120; he ferved under the duke of Wittemberg when Vienna was befreged by the Turks in 1683, and retains all his fenses. Benefactions are collecting in that city for his support.

Died.] Thursday, at his house in Jermyn-street, count Delinsky, a

Polish gentleman.

In Old-street, in the 106th year of his age, Solomon Humphries, formerly a gardener, but, having been blind upwards of ten years, was supported by the benevolence of the public.

In Ireland, a few days ago, near Drumcondra, Either Duggan, aged IIQ.

At 'his house near Riegate, Mr. James, James Crane, a wealthy farmer and grazier, who had left an effate to his brother, faid to be worth near 7001. a year, befides a large fum in the flocks. The brother has worked feveral years about town as a paviour's labourer.

At her lodgings at Hampstead, in the 92d year of her age, Mrs. Elizabeth Whitehead, a maiden lady.

At Nether-Shuckburgh, in Warwickshire, Elizabeth Wilcocks, an old maid; who for many years past has almost denied herself the common necessaries of life, so as to eat nothing but horse-beans or a few curlings, no drink, and had hardly any cloaths or sheets to lie in, although there have been fince found in the house 12 pair of sheets, with a large quantity of other linen. a pickle-pot, in the clock-case, were found 801. in gold, and 51. in filver, and in a hole under the stairs, a teacanister full of gold; in an old rattrap a quantity of gold and filver; and in feveral other places were found fecretly hid large quantities of gold, friver, and half-pence, to a very great amount. This miserable wretch was possessed of a large estate in houses and land, and has left all to a very distant relation.

At Bruffels, Col. Macnamara, a native of Ireland, aged 102.

On Tuesday, in Long-Acre, one Mr. Philip M'Guire, aged 105.

Saturday, aged 95, at his house at Camherwell, Robert Blackshaw, Eso.

The 15th inft. at Kilraick, near Nairn, in the 83d year of his age, Dr. John Rofe, formerly of Derry and of Dublin.

At the village of Chickley, in Berkshire, one Elizabeth Stoneham, a poor woman, in the 113th year of her age.

JUNE.

Came on before the right hon. lord Mansfield, at Guildhall, London, a cause wherein a young lady was plaintiff, and the proprietors of the Worcester stage-coach defendants, for the recovery of a trunk, containing goods to the value of 25l. lost two years ago out of the said coach; when a verdict was given for the plaintiff, with whole damages and costs of soit.

Near 200 persons assembled, with clubs and other offensive weapons, at Boston, in Lincolnshire, and institled that butchers meat should be sold at three pence a pound, which, for the sake of peace, was complied with, and they all dispersed quietly.

New-York, April 18. Mr. Daniel Jaqueri, who left Montreal the 25th of laft month, informs us, that enligh Schlosher, who, it was supposed, had murdered his servant, was himself, with his servant, killed by a Panise Indian slave (whose dog Mr. Schlosher had shot some time before), who confessed the horrid deed, and discovered the place where he had hid Mr. Schlosher's body, which was taken up, carried to Montreal, and there interred near lieutenant De Mestral, who died suddenly a few days before.

Letters from Bagdad, dated the 15th of January, advice, that the English squadron, which has been two years in the Tigris, in order to oblige the Arabian scheick Soliman to make restitution of the value of two rich English ships which he had taken, not being able to succeed, set fail towards Bombay; and that the largest ship belonging to that squadron blew up off Bender-Abassy, and every soal on board perished.

Her

450 men, befides passengers.

Extract of a letter from Stockholm. " It is known that Descartes died at Stockholm in the reign of Christina; he was interred in the church of St. Oloff, and the grave was covered only with a stone, containing his name, the day of his birth, and that of his death. His body was fome years afterwards carried into France: but the stone, and former place of burial, have ever fince been objects of curiofity to foreigners. A retolution having been taken to rebuild the church, the king laid the first stone of the new edifice on Tuesday last; and the same day the prince-royal fignified his pleafure, that an elegant monument should be erected, at his royal highness's own expence, to the memory of the above-mentioned philosopher."

Both houses of parliament 2d. met at Westminster, and were further adjourned to Tuesday fort-

night, zift inflant.

About ten o'clock in the morning, Mr. Oldham, of Higham, near Sheffield (a promifing young gen-tleman of 24 years of age), was found most barbarously murdered, having his throat cut from ear to ear, in a wood adjoining to Mr. Nightingale's, near Matlock. went from home the Friday before on business, taking with him 2001. in cash, which the perpetrators of this inhuman murder, who have not fince been heard of, are supposed to have carried off with them.

This morning, about five o'clock, two captains of colliers came on shore at King James's stairs, Wapping, in order to procure boiled beef, &c. for their thips crews; but, as foon as they landed, they were attacked by forty or fifty coal-

Her crew, it is said, consisted of heavers, who beat them so cruelly that their lives are despaired of. These fellows have a guard at every landing-place on the river, to prevent the coal-ships from having any supplies of provisions, swearing they will starve those on board, and if they offer to come on shore, will murder every man of them they can catch. The inhabitants in the neighbourhood are under the most dreadful apprehensions of being murdered, or of having their houses set on fire.

Extract of a letter from Montreal. April 16.

" I must inform you of the melancholy accident that happened here the 11th inflant in the evening. A fire broke out in the stable of one of the sufferers in the late conflagation, in the upper town, and it being pretty cold, and the wind at N. W. the flames foon reached the adjoining houses, and raged with incredible fury over that part of the town, till five the next morning; at which time it had confumed ninety houses, two churches, and a large charityfchool. The fire was fo violent, that the poor people lost almost all their effects; and what little was faved, was partly stolen from them. The number of poor is really great, the most part of the sufferers are tradesmen, and people that have been already burnt out in the last fire. Some people imagine that this misfortune is owing to the malice and carelessness of an Indian fervant-girl."

Yesterday was paid into the hands of William Blunt, efq. treafurer of the city of London lyingin hospital for married women in Alderigate-street, two thousand pounds, being a legacy of the late

Mr. William Robinson, of Friday-freet.

The North-Briton Extra, 4th. No. 4, was read in West-minster-hall, introduced by the attorney-general; with an affidavit annexed, that it was bought publicly, when, among other things, it was pronounced to be the stand-

ard of rebellion, &c.

Fine large mackarel were fold in London at three-half-pence each. A premium fet on foot by fir S. T. Jansten, chamberlain of London, for encouraging the mackarel-boats to bring their fish to market, has greatly contributed to reduce the price; and that reduction has had an effect upon the price of meat, which is likewise fallen a penny in the pound.

His majesty's ship Superb arrived at Spithead from Gibraltar, but last from Corke, where she had landed general Irwin's regiment, that had been absent 12

years.

The coal-heavers and failors had a terrible battle, when many were wounded on both fides. The coal-heavers are grown a terror to the whole neighbourhood of Stepney and Wapping, and commit the most shocking outrages.

This day his majesty enters into the thirty-first year of his age; but, on account of the present mourning, his majesty's birth-day will not be observed till Thursday the

23d instant.

The right hon. lord viscount Falmouth has presented his majesty with a set of fine long-tailed iron-greys, bred by his lordship in his park near Truro in Cornwall.

Tuesday the prince of Monaco embarked at Dover for Calais; and on Wednesday the duchess of Northumberland landed at the fame place from France.

The death of Mrs. Howard, wife of the hon. Charles Howard, heir, after the death of his father, to the dukedom of Norfolk, is peculiarly affecting. She was fo far gone with child as to reckon the very day she died; she was in perfect health (her fituation confidered) till that very day, and was never known to have a fit previous to the fatal one which instantly deprived her of every fense, and presently after of life also. Dr. Hunter, fir Richard Manningham, and other physicians were fent for, but to no purpose; nor was she opened, the infant having been, in the opinion of the faculty, dead before the mother was taken ill; and to that cause they attributed the death of this truly amiable young lady. What adds to the pungency of the forrow on this melancholy occasion is, Mrs. Coppinger, Mrs. Howard's mother, was on the road from Ireland on a vifit, and arrived just to find her ill-fated daughter in her shroud.

Yesterday the captain's guard in St. George's fields, which for some time past has consisted first of soo men, then of 50, was, by orders then issued out, reduced to 25 men; all things remaining very

quiet.

The princess Maria Christina Josepha Ferdinanda, fourth of the duke of Savoy, died at Turin, of a putrid fever, in the night between the 19th and 20th of last month, at the age of seven years and a half, her royal highness being born the 21st of November, 1760. The king of Sardinia has ordered three months mourning.

They

They write from Sweden, that on the 23d of April, about nine in the morning, part of a mine fell in near Askersund; by which accident, out of 16 people who were present, 12 were killed, and two were dangerously wounded.

At a court of aldermen 7th. held this day, fir James Langham, baronet, attended, and agreed to the payment of 6000 l. on his having a proper discharge, which was given; and the faid fix thoufand pounds were accordingly paid into the chamber of London, in conformity to the will of fir John Langham, baronet, deceased, who gives it in trust to the lord mayor and aldermen of the city of London, towards raising a fund for the relief of poor distressed foldiers and feamen, and their families.

In the morning another great fray happened in Stepney-fields, between the coalheavers and failors, wherein feveral of the latter loft their lives. The coal-heavers marched off in triumph, with colours flying, drums beating, &c. offering five guineas for a failor's head. The ships below bridge are obliged to keep constant watch, day and night, crying "all is well."

8th. o'clock, Mr. Wilkes was brought from the prison of the king's bench to the court. The judges came about nine. It had been mentioned the last term, that a new argument was desired, and that new ground might be taken for the reversal of the outlawry. At the opening of the court, Mr. Wilkes made a short speech, that he was perfectly satisfied with the state of the argument, as it was left Vol. XI.

by ferjeant Glynn; that he did not mean to quit the firm and folid ground on which it rested, and was persuaded, from the justice of the court, that his outlawry must be The attorney general then in support of the outlawry entered upon a very long argument, to which no one of Mr. Wilkes's counsel replied. The judges afterwards delivered their opinions very fully, and were unanimous, that the outlawry was illegal, and must be reversed. Their lordships differed as to their reafons; but all concurred in the reversal, and the irregularity of the proceedings.

Lord Mansfield made a very long and elegant speech on the subject of Mr. Wilkes's outlawry, and justification of his own conduct, which had been the cause of much popular abuse being thrown out against his lordship.

The attorney general then demanded judgement on the two verdicts. Mr. Wilkes defired to avail himself of several points in arrest of judgement. He faid, that when he had the honour of appearing before that court on the 20th of April, he had stated the case of the records at lord Mansfield's own house; that his lordship had replied; but that, however, his lordship had delivered only his own opinion; and the opinion of one judge, however distinguished 🤄 for great ability, he apprehended, was not the judgement of the court; which he defired, and fubmitted to, and begged that his counfel might argue that and some other points of importance. .. Several things were afterwards mentioned by the attorney general, and by Mr. Wilkes's counsel. At last the [I]COURT

court fixed next Tuesday to debate, whether both verdicts ought not to be set aside on the objections as to the records having been altered, and that the informations were not filed by the proper officers, but by the folicitor general; so that it is possible, that Mr. Wilkes may be discharged, or receive judgement, on Tuesday next.

The court of king's bench ordered the rules to be made absolute against the original publisher of the North Briton Extraordinary, No. 4; and against another bookfeller for having fold that paper. The rule against the original publisher of the North Briton, No. 50, was likewife ordered to be made absolute; and a new rule was made, for his shewing cause why an attachment should not iffue against him for the publication of No. 51 of the faid paper, which made its appearance on Wednesday.

The prince and princes of Orange went on Saturday last from Amsterdam to Utrecht by water, and from thence to Soesdyck, where their highnesses were in good health by the last accounts; and from thence they are to go to Loo, where the king of Prussa is

to be on Monday next. 164

Warfaw, May 21. On the 13th inflant a courier arrived with advice, that a large body of the confederates had been defeated near Conflantinow, with the loss of eight hundred men, killed, wound-

ed, or taken.

The Ruffians, who have been cantoned in the neighbourhood of this capital, are now marching towards Halicz, in order, it is faid, to attack count Potoccki, whose division confits of 18,000 effec-

tive men, besides 9000 regular troops. The grenadiers, who formed the guard at prince Repnin's, have also lest that station, and are replaced by a detachment of chaiseurs.

Extract of a letter from a gentleman of Toulouse, dated April 20, to his friend at Galway in

Ireland.

"The most remarkable occurrence here, is the extraordinary case of a criminal under sentence of death, and who was to have been broke on the wheel the 2d current. The day before he was to have been executed, he fell into a profound fleep, and has lived fince without any nourishment whatfoever. Several means have been used to awake him, even blisters, but to no purpose: he breathes easy and freely, and his limbs, especially from the middle upwards, are perfectly pliable. About four days ago he awoke, and continued fo for an hour, or fomewhat better; he walked a few steps, and the physicians ordered him some light nourishment; but before it could be got ready, he relapfed, and continues in the fame flate of infenfibility. The physicians call it a cataleptic ailment, incurred through fear and horror of the execution he was to undergo, which however is only deferred till he discovers the sense of feeling."

The ship's company of the Dolphin man of war went to the queen's palace, in order to deliver a petition to his majesty to have their wages doubled, the same as was granted to the said ship's crew on their return from their sirst voyage round the world; but his majesty being gone to Richmond,

they

they were obliged to postpone the delivery of it till another opportunity.

- Was tried before the right 11th. hon, ford Mansfield, at Guildhall, the maffer of a late lock-uphouse in Chancery-lane, on an indictment, for a conspiracy with a Middlefex juffice (fince deceased) to enveigle, kidnap, and carry out of this kingdom, feveral persons. In the course of the evidence it appeared, that great cruelties had been committed on a man unjustly confined there, by beating him with the thick end of a horsewhip, &c. and afterwards carrying him away, with many others, in the dead of the night, under a ftrong guard, on board a ship ly? ing below Gravefend; and on the clearest evidence he was found guilty. The whole of this iniquitous and illegal proceeding was first brought to light by the accident of one of those poor unhappy wretches endeavouring to escape out of a garret window, and falling to the ground one evening, just as Mr. Gines was passing by; who with great public fpirit has very laudably taken much pains to bring this affair to light, which was a fcandal to humanity in a Christian country.

In the morning, about half an hour past one, there broke out a terrible fire in an empty house, late inhabited by William Jones, upholsterer, deceased, near Broadbridge, in Shadwell High-street, which burnt furiously, destroyed seven houses, damaged several more, and threatened destruction to the whole neighbourhood, the street, and set size to Dr. Martyn's, and two houses adjoining eastward, which were sav-

ed by a great power of water, fupplied chiefly by the Shadwell water-works, which, on this occasion, fent down 2500 tons of water, as appears by the measure of the fall of water in their refervoir.

We are told from Vienna, that the emperor is greatly diffatisfied with the condition wherein he has found the works and fortifications of most of the places in Hungary, notwithstanding greatfums have been lately appropriated for the reparation of them. Several persons who were charged with the direction of those works it feems, are put under arrest.

The queen of Naples, contrary to expectation, did stop at Rome: on her journey, which is suppose. ed to have been occasioned by a brief fent by the pope to the grand. duke of Tuscany, wherein the pontiff exhorted him, "to engage her Sicilian majesty not to give the enemies of the holy fee fuch triumph, as that the daughter. and fifter of a catholic emperor. passed near the capital of Christendom without entering vit, and without fulfilling the duty of vifiting the holy places, and particularly the church of St. Peter, the metropolitan church of the whole catholic world. White and

There came on lately to be heard, before the right hon, the lords of the privy-council, two appeals from Quebec, wherein lieut, col. Christie was appellant, and Francis-Noble Knipe and John Le-Quesne, of Quebec, were respondents, in suits which had been brought by the respondents against the appellant, for impressing labourers and artificers into his majesty's Tervice during the

[I 2] war

war with France and the Indians; when the judgements that had been given at Quebec against the appellant were reverfed, and both actions dismissed.

13th. On Thursday last, No. 51 of the North-Briton was read by Mr. Barlow, clerk of the crown-office, in the court of king'sbench; when Mr. De Grey, his majesty's attorney-general, moved the court for a rule, to shew cause why an attachment should not iffue against Mr. Bingley, for publishing the faid paper; which was allowed. On Friday the rule granted against him for the publication of No. 50 was made abfolute; and on Saturday the rule against No. 51 was also made abfolute; and the attachment iffued accordingly. It having been confidently reported, on Friday and Saturday morning, that Mr. Bingley had abfconded - to shew the public the contrary, as foon as he was informed the fecond rule was made absolute, he sent to Mr. Francis, folicitor of the treasury, and to several of the sheriffs officers, to come and ferve it upon him, which was done about fix o'clock on Saturday evening. was conveyed in a coach to Mr. Phillips's lock-up-house, the Py'd Bull, in Gray's-inn-lane, wherehe remained that night; and Sunday in the evening was removed to Newgate, having refused to put in bail on the proceedings by attachment.

The infolencies of the coalheavers arrived to fuch a height, that the military was called in to the affiftance of the civil power, and an engagement enfued, wherein several were hurt on both sides; 20 of the desperadoes however

have been apprehended, and purfuit made after many more. The gaols are full of those fellows, who would neither work nor let others work, fo that the business on the river has been greatly obstructed: Extract of a letter from Dominica. dated April 19,-1768

"I am forry to inform you of a very difagreeable event which lately happened here Walter Pringle, efq. who was the prefident of the island, Mr. Robinson the fecretary, the collector of the island, colonel Perry, capt. Stuart, and captain-lieutenant Pigot, of the 82d regiment, and some more English gentlemen, having been to dine, on Saturday, April the 9th, in the country, with a French family, in company with captain Hollwell, of his majesty's ship Phoenix, went on board the Phoenix: very late in the afternoon, in the captain's barge, and were to return in the custom-house-boat. Having staid but a short time on board, they were returning in the boat, when some of the gentlemen observing she made much water, enquired of the failors whether there was any danger, and were answered, the boat would carry them very safe ashore. The water, however, came into the boat fo very fast, that they were obliged to throw it out with their hats; but as the water came in fuch abundance, they found they could not empty the boat; this therefore induced most of the gentlemen who could fwim to quit the boat. and endeavour to get on shore. though they were a confiderable distance off. Colonel Perry, as he could not fwim, determined to continue in the boat, when the water was almost up to his arm-

pits. Capt. Holwell fent out his little boat after them, which got up to them at the very inflant they were perishing, and afforded a kind relief to them all, except to Mr. Pringle, Mr. Robinson, and a white failor, who were drowned. Had the night not been fo dark, all of them would have been probably faved. Capt. Stuart, we believe, was swimming in the water for three-quarters of an hour, and having all his cloaths on, was almost spent when he was taken up. We are very happy with our narrow escape, but lament the loss of our friends on this occasion."

... About half past eight 15th. o'clock in the morning Mr. Wilkes arrived at the court of king's - bench. Westminster-hall. and about half an hour after that time the judges came into court; when the arguments on the arrest of judgement were entered on, by Mr. Attorney-general, Mr. Thurloe, and fir Fletcher Norton, on behalf of the crown; and by Mr. ferjeant Glynn, Mr. Recorder of London, and Mr. Davenport, on the part of the defendant. Mr. ferjeant Glynn entered further than he had before done on the impropriety of the information being filed by the folicitor-general; but the court were to clearly of opinion, the business of the attorneygeneral (in case of there being a vacancy in that office) must necesfarily devolve on the folicitorgeneral, that it was judged needless to say more on that head. The whole that Mr. Wilkes then had to avail himfelf of was, the alteration of the record; which having been very learnedly and elaborately canvassed, the court declared themselves fully of opi-

nion, that the alteration of the record at the judge's chambers was what they had an indispensable right to in the course of practice. After this, the informations against Mr. Wilkes were read; and lord -Mansfield flated to the court the evidence as it flood on the former trial; when Mr. Attorney general and fir Fletcher Norton gave their opinions in aggravation of the case, and Mr. serjeant Glynn answered in extenuation. Mr. Wilkes then defired that judgement might be passed; but was told, that the court having heard the opinion of counsel on both fides, and some material objections having been offered, it was necessary to take these into consideration; but was assured that, though no day could then be fixed for that purpose, no time should be delayed to bring it to an iffue.

Among other proceedings, Mr. ferjeant Glynn took notice, that as a "writ of error" was intended to be brought before a higher court of justice, before the house of lords, he defired that the cafe of the " alteration of the records," under such peculiar circumstances, might be stated on the back of the record, to be transmitted to the lords; otherwise that important point could not come before the house. This was absolutely refused by the court. He concluded, by intreating their lordships, for the fake of the fafety of every fubject of this nation, to fix fome limits to the discretionary power of altering records; that counsel may know for the future when they can be certain of the cause they are to plead; and that the $[I_3]$

subject may not be liable to ruin at the discretion of a judge. Extract of a letter from Liver-

pool, dated June 10.

"On Saturday morning last four people were found dead, viz. an elderly woman, two young women, and a boy about 16 or 17 years of age, in a cellar in Stanleythreet in this town; a cat and dog were in the fame place; the cat was dead, but the dog on being brought out into the ffreet recovered. The circumstances of this shocking affair, as appeared to the jury on the coroner's inquest, were as follows: the cellar is fituated to the front of the fireet, about four feet below it; has no opening but to the street; adjoining to it is, another cellar, used by the inhabitants of the house above as a beer cellar; this has an opening on the back fide of the house to the yard: in this yard is a lime-kiln, about a dezen yards from the house, which was then burning. It was believed by the jury that the fulphur from the lime kiln had been driven by the wind into the beer-cellar, and from thence through the spaces between the joiffs at top of the partition wall into that where these unfortunate people lay, which was the cccafion of their death."

By letters from different parts, it appears, that the thunder and hail storms of last week were felt, incre or less, throughout the kingdom; and that great damages have been fustained from them. They also reached the continent, and the island of Guernsey, where considerable damage was done.

They write from Warfaw, that an officer of Houlans, who commanded an hundred men in quarters at Kakroczim, has been grievoully insulted by a Russian officer, who, arriving there with a detachment of 300 men, infifted on the Houlans yielding up their lodgings to them. The injured officer, in revenge, made his men mount their horses, exhorted them to fecond him, and they all, fword in hand, fell upon the Russians, and cut them to pieces. Upwards of twenty waggons, laden with the wounded, have been brought hither; amongst them is the officer who commanded them. Houlans, who were in the king's pay, have been disbanded.

In the affair which happened lately at Lublin in Poland, more than 100 houses were set on fire, and consumed by the cannon of

the Russians.

A letter from Paris fays, "There is no doubt of the king's having resolved to take possession of the city of Avignon and its dependencies; and it is the marquis de Rochechouart who is to have the charge of this expedition, with a corps of troops which he is going immediately to put himself at the head of in Provence."

Letters from Rome fay, that, upon the pope's refufal to withdraw the brief against the duke of Parma, the ministers of Prance and Spain said, "Your holiness must not then be surprized, if you should hear the news of Avignon and Roneigsione being taken."

Letters from Tobago, dated in March last, take notice of a difcovery made there of the nutmeg tree, which grows in abundance in many parts of that island. The trees were loaded with fruit when those letters were written; but

they

they had not yet come to maturity: however, in examining fome of them, there could be no doubt but they were a fpecies of, if not the real, nutmeg. These letters speak also highly in praise of the foil of that illand, and of its flourishing state, for the short time since the fettlement began, and say that there are already near forty plantations in great forwardness.

The lord chancellor, af-17th. fifted by the mafter of the rolls and the chief justice of the court of common pleas, gave judgement in the court of chancery on the will of Sir George Downing, and unanimously confirmed the fame in favour of founding a new college in the university of Cambridge, by the name of Downing college, for which purpose he left an estate of 4000 l. per annum.

In the morning, about a 18th. quarter before nine, Mr. Wilkes came into the court of king's bench; and foon after, the court being fat, Mr. justice Yates, after enlarging on the malignant nature and dangerous tendency of the two publications of which Mr. Wilkes had been convicted, proceeded to pronounce the judgment of the court: That, for the republication of the North Briton, No 45, in volumes (of which two thoufand copies had been printed for public fale), he should pay a fine of five hundred pounds, and be imprisoned ten calendar months: and for publishing the Essay on woman (of which only twelve copies were printed for the private use of so many particular friends, that he should pay likewise a fine of five hundred pounds, and be imprisoned twelve calendar months,

to be computed from the expira tion of the term of the former im prisonment: and that he afterwards find fecurity for his good behaviour for feven years, himfelf to be bound in the fum of a thoufand pounds, and two furcties in five hundred pounds each. - A writ of error returnable before the house of lords was afterwards moved for, in order to reverse the judgement, on account of the alteration of the record; and the court recommended to the attorney general to grant it on the first application.

In an address to the freeholders of Middlesex published since the reversal of the outlawry, Mr. Wilkes makes this remarkable declaration. "In the whole progress of ministerial vengeance against me for several years, I have shewn to the conviction of all mankind, that my enemies have trampled on the laws, and been actuated by the spirit of tyranny and arbitrary power. The general warrant, under which I was first apprehended, has been judged illegal. The feizure of my papers was con-demned judicially. The outlawry, fo long the topic of virulent abuse, is at last declared to have been contrary to law; and, on the ground first taken by my learned counsel, Mr. serjeant Glynn, is formally reversed." This it is thought necessary to infert, as it has been faid in all the papers, that the error on which the outlawry was reversed was discovered by Mr. Wilkes's enemies.

By his majefty's ship Dolphin, newly arrived from a voyage round the world, we hear that they have discovered a new island in the South seas, large, fertile, and ex-

[14] tremel

tremely populous. The Dolphin came to an anchor in a safe, spacious, and commodious harbour, where the lay about fix weeks. From the behaviour of the inhabitants, they had reason to believe the was the first and only ship they had ever feen.

The first day they came along fide with a number of canoes, in order to take possession of her; there were two divisions, one filled with men, and the other with women; these last endeavoured to engage the attention of our failors, by exposing their beauties to their view, whilst the men from the canoes threw great quantities of stones, by which feveral feamen were hurt; however, as they had no kind of weapons, they were ' foon beat off, and a few vollies of fmall arms obliged them to retire

in great confusion.

The day following, a party well armed was fent on shore with the watering casks, and our people at the top mast head discovered, by the help of their glasses, prodigious numbers of the natives flocking from all parts towards the watering place, in order to furround the party; upon which a figual was made for them to come on board and leave the watering casks. This was no fooner done, than the Dolphin was attacked by greater numbers than the day preceding, which obliged them to have recourse to the disagreeable necessity of firing some of their great guns at them, charged with grape-shot; and some guns with ball were also fired up the country, which knocked down fome of their houses, felled several trees, &c. and ftruck them with fuch awe that they now looked on

our people as more than human. fince their houses could not shelter them, nor distance take them out of the reach of our shot.

They immediately shewed the greatest defire of being at peace with us, and did not feem to refent the killing a number of their people, as they now appeared to be fenfible that we had only made use of those dreadful engines against them, when their rashness

had forced us to it:

We took possession of the island in his majesty's name, and called it King George's island. It lies in about twenty degrees fouthern latitude. During the remainder of our flay, we continued to trade with the natives in the most amicable manner; giving them nails, buttons, beads, and trinkers, in exchange for fresh provisions, which we were greatly in want

The natives are in general taller and flouter made than our people, and are mottly of a copper colour, with black hair; others are fairer, especially the women; some of whom were observed to be redhaired .- It does not appear that they know the use of any one metal whatever.-When the grape shot came among them, they dived after it, and brought up the pieces of lead. They fwim like fish, and can remain a long time under water.—They were cloathed with a kind of stuff made of the bark of trees, fome red, fome yellow; its texture resembles that of coarse thick paper, and cannot refift wet. Besides the large island there are feveral leffer ones, which have been named Charlotte Gloucester island, Boscawen island, Keppel island, Wallace island, &c.

The

The method made use of by the inhabitants for dreffing their animal food, is by digging a hole in the ground, into which they put fuch a quantity of stones as will cover the bottom; upon these stones they kindle a fire, which they extinguish as foon as they imagine the stones are sufficiently heated. After sweeping away the ashes, they place the meat, of whatever kind, whether pork, fowls, or fish, thereon (which are all the species they have) on which they very carefully place fome broad leaves, and thereon the earth which they dug out of the hole. They are faid to be excellent cooks, and very cleanly; and that this method of dreffing their food proved very palatable and agreeable to our countrymen; and we are affured, that they fometimes dreffed the whole carcafe of a hog in this manner.

We are further informed, that captain Wallace tried to perfuade fome of the natives to come along with him, but that they refused to leave their friends and country. They were very forry to lose the company of our people; and when the ship set fail, they tried to stop her course with their canoes.

That this island is about fifteen hundred leagues to the westward and to leeward of the coast of Peru, and about five and thirty leagues in circumference; that its principal and almost sole national advantage is, its situation for exploring the terra incognita of the southern hemisphere.

20th. week, John Duggan, Hugh Henley, Thomas Kearnon, and Thomas Davis, coalheavers, were committed to Newgate by fir John

Fielding, for being concerned in the wilful murder of John Beattie. a mariner, belonging to the Freelove, of Whithy; John Grainger, Richard Cornwall, and David Clary, coalheavers, for wilfully and maliciously shooting at John Green, in his dwelling house at Shadwell; Matthew Burn and Patrick Lynch, for being concerned with divers others, in riotoutly and tumultuoufly affembling with cutlasses, &c. and beginning to demolish and pull down the dwelling house of James Marsden, victualler, at Ratcliffe-highway: fome others have been committed for mixing in these riots, and going about armed; and a great number of others who have been taken up have been discharged. There has been no other information of murder at fir John Fielding's office, but that of the aforefaid John Beattie; fo that the account of numbers of foldiers, and other persons, being murdered, is ... without the least foundation. And Friday last a number of the principal coalheavers, who have been employed in that business from thirty years down to twelve, came to fir John Fielding, and flated the grievances they had suffered on account of the undertakers, and agreed to go to work on reafonable terms; when a worthy merchant, concerned in the shipping that brings coals to London. obligingly undertook to speak to the masters of the ships to relieve them from these their grievances, by causing their money to be immediately paid them for their labour without deductions; which he has in part accomplished, many gangs having already been to work; but some prejudices still **fublishing**

fubfifting between the feamen and the Irish coalheavers (which it is to be hoped will subside in a few days) prevents, for the present, perfect peace amongst them: but it will be difficult to find men so adapted, from strength, &c. to execute this laborious task of coalheaving, as the Irish are; and as they now see the danger of even going armed, it is to be hoped that peace and industry will supply the place of tumult, resentment, and mischief.

The court of common pleas was moved, that as Mr. Wilkes's outlawry was now reversed; he might be at liberty to withdraw his demurrer to lord Hallifax's plea and reply; but the court were of opinion, that it was proper to give a term's notice of this motion, and Mr. Wilkes's attorney has given notice accordingly. The fame day Mr. ferjeant Nares moved for an attachment against the printer of a daily paper, for publishing Mr. Wilkes's address to the gentlemen, clergy, and freeholders of the county of Middlefex, as he apprehended that the same tended to inflame the jury of the county, before whom the The court cause was to be tried. asked him, whether he made that motion on behalf of the attorney general? which he averring, the address was read, but the court refused the attachment.

The following extraordinary affair happened at Dover: a high-wayman, who had robbed a gentleman near Waldeshare, was apprehended the next day at the Silver lion in that town; he was feized on suddenly by four perfons, who pretended to drink and converse with him, and an unloaded and one loaded pistol were

found in his coat packets; he was immediately stripped, and a poinard was found concealed in his breast, under his shirt, with which he intended to have destroyed some of his guards. The money, &c, that he had taken from Mr. Harriotson was in his waistcoat pocket, with three bank notes of 201. each, forty guineas in cash, and several trinkets; and in a pocket-book was sound a letter directed to a person in London, on some affair of business.

Being carried before a justice of the peace, he made a ready confession of several robberies which he had committed from the month of December last, acknowledged his name to be James Frederick Hellick, a native of Frankfort in Germany, and appeared to

be very penitent.

The justice committed him to the castle, till a convenient opportunity offered of conveying him to the county gaol at Maidstone; and five constables were dispatched with him; he conversed very calmly and fenfibly as they afcended the hill, remarked the immense height of the cliff, and begged permission to examine the famphire gatherers a few moments; these men had actually lest work, and their ropes remained firmly fixed to posts at the top of the cliff, and reached the shore; on a fudden, he pretended to see a surprizing appearance at the opposite fide of the hill; the constables turned their heads at his exclamation to the fide pointed at, and at that instant he grasped a rope, and descended with ease to the shore before they faw him; as they could not possibly return to town, and commence their pursuit 112. in less than an hour, the robber has not been seen since. Descriptions of his person, as before, are affixed at Deal, Sandwich, &c. and a confiderable reward is offered for apprehending him.

Extract of a letter from Antigua,

dated April 22.

The island of Montserrat has been in the utmost consternation, having been threatened with a very dangerous infurrection of the negroes, which was, however, happily prevented by the hand of Providence; and, it is hoped, is now entirely crushed. Upon the first nofice of it, admiral Pye fent down two of his majesty's ships, and the prefident of St. Christopher's ordered a detachment of 50 men from

the 68th regiment.

"The plot was to have been carried into execution upon St. Patrick's day, which the principal white inhabitants, chiefly Irish, usually affembled together to commemorate. Those negroes that attended within doors were to have fecured the fwords of the gentlemen, and, upon a fignal given, those that were without were to fire into the room, and put every man to death, as he endeavoured to make his escape. The favages had cast lots for the ladies, whom they intended to carry to Porto Rico, in the ships which then lay in the harbour; and they were to have been fecured upon the fame fignal. The conspiracy was discovered but a few days before it was to have been carried into execution, by a woman who overheard two of the conspirators disputing about the disposition of their arms. Five of these wretches have been already executed; and many more must suffer the same fate."

Extract of a letter from Warfaw.

"On the 2d instant, as the baggage of general Soltikow was returning to Russia, a party of Polish pealants met it at Radzomin, about eight miles from hence, beat the efcorte, and feized the baggage. As they were celebrating the feast of the holy facrament there that day. and the Poles were moreover greatly pleafed with their plunder, they got fo much liquor, that the Russians. who were not above a league off. hearing the disorder they were in. returned, bound them hands and feet, and recovered the baggage they had loft."

They write from Genoa, the 28th ult. that a courier arrived that day from Paris, with the ratification of the treaty concluded between France and that republic.

The republic of Genoa has fent three deputies to Bastia, to deliver the city, and whatever else the Genoese posses in Corsica, into the hands of the French commandant.

Stockholm, June 3. The king of Sweden was in danger of being . killed by a fall, last Tuesday. His majesty, driving the queen and the princess Sophia Albertina; in a fourwheeled chaife, a fudden jolt threw him out of the box; and not being able to disengage himself entirely, he was dragged about twenty yards before the fervant behind could get forward to flop the horses. His majesty received some bruises; but being blooded immediately, there is reason to hope this accident will have no ill confequences.

Last night, about ten o'clock, her most christian majesty departed this life. The king went immediately to Marli. It is expected the court will foon go

to Compeigne for the summer sea-

fon.

Maria Leszinki, late queen of France, and only daughter to the late king Stanislaus of Poland, and duke of Lorrain, was born June 23, 1703, and married Sept. 5, 1725, to Lewis XV. the present king of France, by whom she had issue, 1. Louis, late dauphin of France, born Sept. 4, 1729; 2. Mary Adelaide, madame of France, born March 23, 1732; 3. Victoria Louisa Maria Therefa, born May 11, 1733; 4. Sophia Philippina Elizabeth Juitina, born July 27, 1734; and 5. Louisa Maria, born July 15, 1737. The late queen of France's character,

from the Paris Gazette:

"The most eminent virtue, a constant and solid piety, directed all the actions of her life; her attachment and respect for the king; her tenderness to her children; her kindness to all who had the honour to ferve or approach her; her zeal for religion; her inexhaustible charity; all concur to render her loss for ever fenfible, and her memory ever dear, to the king, the royal family, the whole nation! Poland, who faw her birth, will participate the lively and just regret of France, where she reigned a long fuccession of years. The refignation she shewed to the decrees of Providence, during the course of a long illness under which she fell, continued to the last moment of her life."

The queen has defired, in her will, that the funeral may be performed with as little ceremony as possible; and that her heart may be carried to the burying place of the king and queen of Poland, her fa-

ther and mother.

Lisbon, June 11. The 6th inft.

being his most Faithful majesty's birth-day, who then completed the 54th year of his age, was celebrated with all demonstrations of joy. The court was very numerous and brilliant at the palace of Ajuda on that occasion; and don Lewis da Cunha, secretary of state, gave a very splendid entertainment to many of the nobility, and to the ministers of the foreign princes residing here.

On the 9th, near half an hour past two o'clock in the afternoon, a very smart shock of an earthquake was felt in this city, which created such an alarm, that many people ran out of their houses into the streets; but

it has done no damage.

They write from Cambridge, that on Tuesday last an elegant Latin letter, drawn up by the orator, was fent, by order of the fenate, to the hon. Mr. Charles Yorke, to thank him for his great important fervices to the university; particularly in having formerly pleaded our cause fo fuccessfully, as to establish our privilege of printing books in law, and all other faculties; and having just now proved an effectual advocate for us in the great Downing cause, whereby an estate of 4000l. a year is secured to the university, for building and endowing a new college; and for the many other fignal proofs he has frequently given of his zeal and attachment to the interest of that university.

Mary Hindes, for the wilful murder of a child of three years old, by drowning it in St. James's park, was executed at T burn.

During the course of the present month, considerable damage has been done by thunder and lightning, in different parts of the king-

dom

dom. The fruits of the earth have fuffered prodigiously, both in the field and in gardens: the hops, in many places, have been blafted; the apple-trees damaged; and even ness the duke of Cumberland went the clover-grass blighted. The rains have likewise swelled the rivers in many places; the meadows have been overflowed, and the grass fpoiled; but, what is still of worse consequence, the forward wheat, it is feared, has fuffered confiderably, not only by being laid, but by the fatal misfortune that has attended it for two years past, by washing of the flower, or what the naturalists call the farina, by which it is impregnated, and without which the ear, though fair to the eye, is only an empty hufk. What is remarkable, the cherries on the trees, that were advanced to plumpness, instead of ripening, have become fickly and withered off; in thort, the feafon feems critical, and the shew for plenty not yet to be relied upon.

Letters from Amberg, in Bavaria, dated June 3, mention, that on the 21st of the preceding month, a girl of thirteen years of age was beheaded for the murder of two children, one four, the other fix years of age, and for committing divers thefts. electoral council of Munich enjoined, that all the children from the schools at Amberg should be conducted near to the place of execution, to take warning by this ex-

ample of feverity.

A letter from Naples, dated the 31st of May, says, " Every body praises the affability of the queen; and the ladies of honour, especially, do not fall short in the encomiums on her majesty's condescension, who, far from subjecting them, according to custom, to stand in her presence,

permits them to fit down, and difpenses them from the trouble of dressing her with their own hands."

On Saturday last, his royal highto Woolwich, in his uniform, as midshipman, and was entered on board the Venus frigate of thirtyfix guns. His royal highness was attended by captain Barrington, who commands the Venus; and we hear fhe is destined for the Mediterranean. from whence the will return about Christmas next.

A few days ago, a young clergyman, who had miffed of the preferment that he expected in the church, enlisted as a foldier in one of the re-

giments of foot-guards.

They write from Rome, that 24 persons crossing the Tiber there, in order to wait the arrival of the queen of Naple», the boat, in which they were, funk, and eighteen of them were drowned.

There is now living in the Golden Vale, near Kilkenny, in Ireland, one Mr. Butler, related to the Ormond family, aged 132, who walks well, and mounts his horse with great agility. He has a fon now living, who was born when his father was

exactly 72 years of age.

They write from Cork, that a poor woman, wife of one Daly, a comber and weaver, was brought to bed of a fon, yesterday of another, and this day of a daughter; who, with the mother, are likely to do well. It is remarkable, that this woman was last year delivered of the fame number; and within three years has had eight children.

On Wednesday last, the widow Harris, of Hill farm, in Berkshire, who is near 90, and has been blind these ten years, was married to her

plough-

ploughman, a flout young fellow of

twenty.

Died.] At her lodgings on Tower-hill, Mrs. Esther Claridge, a maiden lady, who had never been out of her chamber for thirty years. A disappointment in love was the first occasion of her recluse life.

At his lodgings at Islington, aged upwards of 90, Jonathan Weatherley, Esq; formerly a merchant of

this city.

At his lodgings in Bedford-row,

aged 95, Paul Lampre, Efq.

In the 78th year of his age, Richard Ashby, Esq; timber-merchant in Oxford-road, who has left a great fortune behind him.

Mr. Richard Wallace, aged 84. many years a hat-manufacturer in

Southwark.

Aged 90, at his house near Dulwich, Henry Marshall, Esq; late a

dry-falter, in the Borough.

Of a canine madness, Mr. Jacob: Parrot, glass polisher in Holbourn. About 18 months ago, he was bit by a dog, in Chelsea fields; but, though advised, took little care of the wound; and a few days ago he was feized with the hydrophobia, which foon carried him off in great agonies.

At his house, near Hatfield, aged 82, William Selwin, Efg; who was formerly a candidate for the place of chamberlain of the city of London, in competition with fir John Bofworth; but the latter being chosen by a very small majority, Mr. Selwin was foon after appointed receiver of the land-tax for this city.

At Westbury-green, in Essex, farmer John Pearce, in the 103d

year of his age.

Lately, in the ifle of Wight, aged 95, Joseph Lowndes, Esq; many years a contractor to ferve the navy with pork.

At Hoxton, aged go, the rev. Mr. Samuel Fancourt, a diffenting minister.

Near Tuam, in Ireland, Catharine Noon, otherwise Mooney, aged 136 years. Her hufband, who died but a few years fince, had lived to the age of 128 years, leaving a nu-

TUL YELL P. TAN TAN

The lightning, for many miles round London, was 1st, very dreadful; but the thunder was not fo loud or terrible as it hath frequently been heard on occasions less awful. One or two persons, on the roads leading to London, were flruck dead : but the effects, in general, were much less fatal than from the appearance there was reason to ex-

pect.

An order of council was this day published, forbidding the governor of Nova Scotia from paffing any grants for lands in his majesty's island of St. John, unless his majesty's order of council, directing the fame, shall be produced to him, on or before the 1st day of May, 1769. A number of noblemen and gentlemen are to have townships in this island, there being the greatest probability of its becoming a flourishing settle-

Thursday came on, before lord chief-justice Wilmot, in the court of common pleas, at Guild-hall, a trial, wherein a baker was plaintiff, and a pawnbroker defendant. The action was brought for defamatory words, the defendant telling the plaintiff feveral times, at a public house, that he was an old f-e. The jury,

without going out of court, brought in a verdict for the plaintiff, with rool, damages.

In the great florm, last night, a leaden statue, in the garden of a gentleman at Camberwell, was melted by lightning; and reduced to a heap of drofs, ...

The water of the river Thames was fo much driven out of its usual channel, above bridge, as is not remembered by the oldest man living; one half of the bed of the river remaining uncovered with water two tides.

The king of Denmark arrived at Utrecht, in the night between Monday and Tuesday last. His majesty declined the honours offered him, and the deputation of the states of that province, which waited on him on Tuesday morning; but was pleased to receive the gentlemen who composed it on the footing of a private vifit, and to admit them to the honour of dining with him. His majesty went on Wednesday to Amsterdam, by water; and has fignified his intention of going to the Hague on the 4th instant. Baron de Choustes has notified to the ministers of the States, his majesty's earnest defire to remain incognito, and to be treated as a private gentleman.

At the fessions of the peace, at Guildhall, a woman was tried for affaulting Mr. Emmerton, constable of St. Bride's parish, He had taken her into custody for bawling "Wilkes and Liberry," when, for his folly, the faid the would take the liberty to break his head; which she accordingly did. The jury found her guilty, and the court fined her one shilling.

The ministers of Vienna, France, Spain, Naples, and Lifbon, at the court of Rome, having complained to the pope of the brief lately iffued out against the infant duke of Parma, and even enforced their complaints with threats, if a revocation of that brief was not complied with: his holiness replied, that what he had done was in discharge of a good conscience, and in conformity to the oath he had taken ro defend the rights of the holy church; that, as he was upon the verge of life, he hoped to appear before the Almighty's tribunal, not as a perjured, but a righteous fovereign; that no earthly confiderations, not even the shedding of his blood, should pervert him from his duty; and that he had taken his resolution, and was prepared against the worst. To put the firmness of his holiness, however, to the trial, the French have taken possession of Avignon, on one side, and the court of Naples of Benevento, on the other; and, to accommodate the difference between the contending parties, his Sardinian majesty has offered his mediation.

Last Wednesday, a noble lady sent 1000l. to Draper's-hall, by an atderman of this city, for the benefit of

the Magdalen charity.

They write from the frontiers of Poland, that the Russian troops seem at length to carry all before them. The confederates have lost near 4000 men by the taking of Bar. Upwards of 2000 have undergone the fame fate, by attempting to relieve the town of Brzedeyckzew. Sixtynine cannons, 10 mortars, and fix standards, are the trophies of the victors.

Extract of a letter from Gibraltar, dated June 6: 170

Our friends the Moors are fully determined to enhance the duties on all provisions exported for this garrison, and are getting ready all their cruizers to watch the coast where they apprehend any trade has been carried on; and have assured the governor that they will seize upon all such vessels and people as may be met with on the coast, eastward of Tetuan, as far as the Algerine dominions."

The grand jury of the county of Middlefex found a bill for wilful murder against Samuel Gillam, Efq; one of the justices who gave order to the third regiment of guards to fire on the rioters, on the 10th of May, in St. George's Fields.

The ballot ended at the East-India-house, on the following question, "That orders be forthwith fent to the spovernor and council of Bengal, for the immediate payment, out of the revenues of Bengal, Bahar, and Orixa, of what remains unpaid of the restitution-money of Meer Jafrafier, to the feveral persons to whom rit is due, according to their claims, as admitted by the committee formerly appointed for that purpose, whether such claims are found to arife from loss in trade, of falt, beetle-nut, or tobacco; or not." When the numbers were: for the question 115; against it, 223.

Orders were iffned for a courtmourning for the late queen of France, to commence on the 10th

They write from Dublin, that it

and end on the 21ft.

is computed that the expences of electing members for the enfuing parliament will amount to more than five hundred thousand pounds.

Seven prisoners were capitally convicted at the Old Bailey, viz. John Grainger, Daniel Clarke, alias Clarie, Richard Cornwall, Patrick Lynch, Thomas Mur-

ray, Peter Flaharty, and Nicholas

M'Cabe, feven of the coal-heavers, on an indictment for feloniously, wilfully, and maliciously shooting at Mr. Green, the master of the Rround-about-tavern, in Shadwell.

The trial lasted from nine in the morning till past four in the afternoon.

The corporation of Aylesbury have erected a flag upon the town-hall, with an inscription of "Wilkes and liberty" in gold letters.

The prince and princess of Orange went on Saturday last from Amsterdam to Utrecht by water, and from thence to Soesdyck, where their highnesses were in good health by the last accounts; and from thence they are to go to Loo, where the king of Prussia is to be on Monday next.

The States-general have fent a deputation, which fet out this morning, to compliment his Prussian ma-

jesty at Wesel.

The late queen of France was posfessed of a real estate of 170,000 livres a year, besides annuities to the amount of 200,000. Her majesty has expressly named in her will all the persons belonging to her household, to whom the has left legacies: and among other bequests has given an annuity of 3000 livres to M. de la Sone, her physician. She has also left a pension of two thousand crowns to her confessor; and has afligned a part of her annuity, which the king permitted her to dispose of, for finishing the edifice destined for the Carmelites of Compeigne, who, agreeably to her intention, are to be removed to Versailles.

On shutting up the playhouse in Covent-Garden at the 9th, end of the season, admission into the theatre having been denied to Mess. H— and R— through any other

passage

passage but Mr. Powell's house, those gentlemen, at the head of a · large posse on the 17th of last month; made a forcible entry, by breaking open a window near the play-house door in Hart-street; after which they expelled by violence; Mr. Sargeant, the house-keeper, all his family, and others; but the acting managers, not being inclined to submit to the arbitrary proceedings of their colleagues, immediately applied for redrefs, where redrefs was effectually to be had, and this day they were formally expelled by virtue of a warrant from under the hand and feal of the high sheriffs of London and Middlesex; and the old house-keeper, Mr. Serjeant, restored to his office and truft, to the great mortification of one of the champions, who had been heard to fay, * That he had now got possession, and d-n him if he would not keep it while he had a drop of blood in his body, and while there was one brick upon another belonging to the house."

This morning began at the Old : Bailey, the trial of James Murphy, on an indictment against him for fe--loniously assaulting John Beatie, a waterman's apprentice (in the attack of the coal-heavers upon the failors at Shadwell), and wounding him with a cutlais, of which he languished for about ten days; and then died; and against James Doggan, John Costello, Thomas Kearnon, alias Kearns, James Hammond, Thomas Davis, Thomas Farmer, Hugh Henly, and Malachi Doyle, for being present, aiding, abetting, and conforting the faid James Murphy in the faid murder; when Murphy and Duggan were convicted, the rest were acquitted. The trial VOL. XI,

lasted from nine in the morning till almost seven in the evening.

This morning the two coalheavers were executed at Tyburn according to their fentence, and their bodies delivered to the furgeous to be anatomized.

Came on at the Old Baily the trial of Samuel Gillam, efg. charged with the murder of William Redburn, who was shot in St. George'sfields by the foldiers at the riot at the king's bench on the 10th of May, he having given the order to the foldiers to fire. He was acquitted without going into his defence, and the court granted him a copy of his indictment. The court was uncommonly full upon this occasion. Mr. Gillam was dressed in black full-trimmed, and wore a tyewig; a chair was ordered for him close to the council, and during the course of his trial he once fainted away. -Sir Fletcher Norton; the attorney and folicitor-general, on the part of Mr. Gillam; and Mr. ferjeant Glynn, and Mr. Lucas, on the part of the profecution.

The feffions at the Old Bailey, which began on Wednefday the 6th, ended, when twelve criminals, including the two coalheavers already mentioned, received fentence of death; among whom was Philip Blake, for fhooting Phillis Ewen with a pittol in the neck with intent to kill, the having fome time before profecuted him at the Old Bailey for marrying her, his first wife being still living.

Twenty convicts appeared at the bar, to plead his majerty's pardon, on condition, fome of transportation for life, some for 14 years, and some for 7 only.

n 7 omy.

At this fession, nineteen were fentenced to be transported for seven years; four were branded in the hand; four ordered to be publicly, and two privately whipped; and nine were delivered on proclamation.

It is remarkable, that in the late profecution carried on in the name of the crown against Samuel Gillam, esq. for giving orders for firing at the late massacre in St. George's-fields, the attorney and folicitor general, and fir Fletcher Norton, as well as the solicitor of the treasury and his deputy, appeared for Mr. Gillam.

The city of London never had a chief magistrate in the privy council since the time of fir William Walworth, who, in the reign of Richard the second, killed the famous Wat Tyler, then at the head of a numerous force in opposition

to the government.

A dreadful fire burnt down London house, formerly the residence of the bishops of London, in Aldersgate-street, now occupied by Mr. Seddon, one of the most eminent cabinet-markers in London. The damage is computed at 20,000 l.

A woman was buried in St. George's, Hanover-square, who had been dead 19 years. The reason of her being solong unburied was, some years ago a near relation of hers died, who left her 25 l. per ann. as long as she remained upon earth, as expressed in the will: her surviving husband rented a little room over a stable near South Audleystreet for 5 l. per ann. and there she has remained in a very decent cossin all that time. The husband being dead, the landlord of the room wanted to make an alteration,

upon which the coffin was discovered. Thus the husband had 20 l. per ann. for keeping a dead and quiet wife upon earth.

Was held a court at Christ's hospital, when the president declared that a benefaction of 200 l. had been received from Richard Crop, esq. and a benefaction of 200 guineas from Thomas Hanbey, esq. whereupon the thanks of the court were ordered to be given, and staffs to be sent, to those gentlemen.

Accounts received by yesterday's Flanders mail mention, that the practice of inoculation for the small-pox has been lately introduced at Rome, where the prince de Braciano has undergone the operation with great success.

Letters from Germany inform, that the princes William Augustus and Frederick-Lewis, of Holstein, in Gottorp, have been inoculated

by Dr. Haller.

They write from Petersburgh, that the small-pox was very rife and fatal there, which had occafioned the empress, and the grand duke her son, to stop at CzarskoZelo, instead of proceeding directly to that city. The countess Schremetoff was carried off by that distemper, a few days before she was to have been married to the count de Panin, grand master of the court.

They write from Paris, that the king has declared that the persons who were in the service of the late queen, shall continue to enjoy their salaries and other emoluments during their lives.

Was held the quarterly general court of the governors of the British lying-in-hospital for married women, in Brownlow-

street.

street, Long-acre, at which it appeared, that from the 7th of December, 1749, the time of the first admitting women, to the day of holding the said court, 8266 women had received orders of admission into this hospital, great part of which number were the wives of soldiers and sailors, the rest the wives of reduced tradesmen, poor mechanics, labourers, &c.

A woman, aged 70, who had not been married above a month to a young man, aged 25, hanged herfelf in a fit of jealoufy, near

Hungerford-market.

Naples, June 24. On Sunday last count Kaunnitz, by order of the empress queen, gave a most magnificent ball, after having diftributed to the populace 40,000 filver coins of her Sicilian majesty, about the fize of shillings and fixpences. The great duke of Tufcany was present at this donation, and the money was thrown by count Kaunitz and her royal highness's attendants. The duchefs, having been flightly indisposed, was not at count Kaunitz's entertainment. On Wednesday count Kaunitz likewise, by order of the empress, gives a masked ball; and, on Sunday next, M. Clements, the Spanish minister, by order of his catholic majesty, will give a concert and ball to the nobility, and a cucagna to the populace.

26th. It having been represented to the king, that, notwith-flanding the well-adapted plan, which the most principal of the manufacturers in Spitalfields are at this time pursuing, with the utmost vigour, for the benefit and satisfaction of their journeymen in every branch of the trade, yet a

great number of evil-disposed perfons, armed with pistols, cutlasses, and other offenfive weapons, and in difguife, affembled themselves together about the hour of twelve, in the night of the 26th day of the last month, and broke open and entered the dwelling-houses and shops of several journeymen weavers in and near Spitalfields aforefaid, and, after putting them in corporal fear and danger of their lives, cut to pieces and destroyed the filk works then manufacturing in nine different looms there, belonging to Mr. John Baptist Hebert, of Steward-street, Spitalfields, the damage whereof is very confiderable: his majesty's most gracious pardon, and a reward of two hundred pounds, are offered for the discovery of the offenders.

This morning the feven coalheavers, capitally convicted for shooting at Mr. Green, were conveyed from Newgate, in three carts, to the Sun-tavern-fields, Shadwell, and there executed purfuant to their fentence. One being a protestant, went in the first cart, attended by a gentleman of Mr. Wesley's persuasion, and appeared quite refigned: the other fix in the two following carts, who read with feemingly great fervency and devotion. They were all remarkably flout well-made men, and much excited the pity of an incredible number of spectators, who were affembled in the streets, as well as at all the windows, &c. in the places through which they paffed. They were preceded by the two sheriffs, attended by the under-sheriffs, and a prodigious number of peace officers. A guard of three hundred foldiers did duty about Wapping, Shadwell, &c. [K 2]

but there was no need of their affiftance, not being the leaft attempt to rescue the malesactors. At the place of execution M'Cabe declared he never fired off mus-

quet or pistol in his life.

Friday last the most noble the marquis of Titchfield, the newborn son and heir of his grace the duke of Portland, was baptized at his grace's house in Charles-street, Berkley-square, by the name of William. The sponsors were, his grace the duke of Newcastle in person, his grace the duke of Devonshire by proxy, her grace the dutches dowager of Portland, and her grace the dutches dowager of Devonshire.

27th. Philip Blake, for shooting at Phillis Ewen, was executed at Tyburn. He was a grave looking old man, about 60 years of age, and was by trade a gardner. Ewen, after his condemnation, is faid to have used every possible endeavour to save his life, and not succeeding is gone out of her mind, though she was the only prosecutrix, as well for bigamy as for shooting at her with intent to kill.

 Letters from Ratisbonne bring an account of the death of the celebrated Abbe Winckelman, in the following tragical manner. Being at Trieste, on his return to Rome from Vienna, where he had been at the invitation of their imperial majesties, from whom he had received the greatest favours, a ftranger who lodged with him in the same inn, and had taken great pains to infinuate himfelf into his acquaintance, defired one morning to fee three medals of gold, which had been presented to the abbe by the emperor. While - 3

the good old man was opening a chest in order to shew them tohim, the thranger endeavoured, from behind, to throw a cord with a flip-knot about his neck; but the cord fastening on his chin, the villain then drew a dagger, and stabbed the poor abbe in feven places, five of which proved mortal. His valet ran in at the noise: but the fellow knocked him down and made his escape, and is not yet discovered. The abbe was not only the greatest antiquarian in Europe, but as much distinguished also for his knowledge in all other parts of learning, and no less esteemed for his amiable temper. ...

The villain, who committed this inhuman murder, was fince taken up on the frontiers of Carniola, as a deferter, and immediately confessed himself the author of that horrid act. He was born at Pistoya in Tuscany, his name Francis Archangeli; and was executed on the 20th of July before the house where he committed the murder; for further particulars

see the appendix.

Extract of a letter from Boston, in New England, dated June 20th.

"A few days ago a shalop laden with wine arrived in this. port; it was never properly entered at the cultom-house, but, as usual, a tide-waiter went on board. The captain in vain tampered with the tide-waiter to betray his trust; he therefore had recourse to violent methods, and forcing the tidewaiter into the cabbin, locked him up. In the mean time he unloaded the shallop without opposition. The captain, over-heating himfelf in the exploit, died in a few hours. Afterwards, without any proper notice

notice being given at the customhouse, oil was put on board. The vessel was therefore seized by Mr. Harrison the collector, and Mr. Holwell the comptroller; and, for her better fecurity, was put alongfide the Romney man of war, lying in this harbour, till the affair could be determined by a court of admiralty. But in the mean time a mob affembled, beat Mr. Harrison and his fon, and Mr. Holwell, fo that they narrowly escaped with their lives. Mr. Irwin, the infpector of exports and imports, was likewife affaulted. and had his fword broke. But it adid not end here; the mob feized a very fine pleasure-boat of Mr. Harrison's, dragged it through the streets, and at last burnt it before Mr. Hancock's door. They likewise did considerable damage to the house of Mr. Williams, the inspector-general. In this situation, the commissioners and others belonging to the office, for their own fecurity, went on board the man of war, and are, for the conveniency of carrying on their bufiness, going to Castle William, a fortified place, on a small island facing the town, till they are properly protected by a military force, which it is imagined will foon arrive from Halifax or New York. The inhabitants have had feveral meetings, and the generality of them are determined to oppose the imposed duties. They have actually declared, that the commissioners shall never again come ashore. In short, we seem to be on the eve of a general infurrection; all owing to the turbulent spirit of popularity in some principal men in the town, who lead on the implicit mob, bawling liberty, who

at the same time cannot see that they are forming their own fetters. What approbation these proceedings will meet with on your side the water, I am at a loss to say; but, unless something be speedily done to enforce law, universal anarchy and confusion must ensue."

We hear from Montferrat, that three of the negroes concerned in the late intended infurrection had fuffered the rack, two were burned, one gibbeted, and one hanged, befides others that destroyed themfelves; that feveral more were tried, and found guilty, but fentence was not passed; and that 70 or 80 still remained on board the vessels in the harbour in order for trial,

On Sunday the 10th instant was buried at Egton, near Whitby, Mr. William Keld, farmer and grazier, who, from a very small fortune, acquired an estate worth near 30.000 l. which he generously distributed amongst his poor relations and dependents. At his funeral were expended 110 dozen of penny loaves, 8 large hams, 8 legs of yeal, 20 stone of beef [14 lb. to the stone], 16 stone of mutton, 15 stone of Cheshire cheese, and 30 ankers of ale, befides what was distributed to about 1000 poor people, who had fixpence each in money given them.

The following melancholy accident happened lately at Howgill, near Wigton, in Cumberland:—One George Cape, attending a lime-kiln, having occasion to step upon the top of it, the lime-stones gave way, and he was let in above his waist, in such a manner, that though he had an iron crow in his hand, he could render himself

 $[K \ 3]$

no affiftance: foon after, feveral people attempted to release him; but the more they endeavoured to raise him, the stones acting as wedges, he became the faster, insomuch that he was obliged to remain in that deplorable fituation, growing every moment more fenfible of his approaching disfolution, while numbers were crowding round him. At last he asked for a little water, which being brought, he drank it, when immediately his mouth contracted, and he foon after expired. The next day no remains were to be found but his skull.

A gentleman at Aberdeen has found out the following method of making yeaft: He took a green oak, seven feet long, and about two inches diameter at the root; after stripping off the bark, he caused it to be twisted till the fibres separated like threads: he then coiled it up, put it into a vessel, pouring in as much fresh yeast as covered it, and left it to foak for two days: he then took it out, and hung it up in an airy garret to dry for about three months; after which he took it down, put it into a covered vessel, and poured in a few pints of wort, lukewarm; in eight hours the wort began to ferment, and in fixteen hours thereafter he found the vessel full of fine fresh barm fit for immediate use. The coil must be hung up again to dry, after using it as above, and it will retain its virtue many years.

There has been lately fent over from Quebec fome curious specimens of white iron ore discovered in that country.—This kind of mineral very much attracts the attention of the curious, as iron ore is very feldom, or ever, found of that colour.

They write from Charles-town, that on Sunday, May 1st, the Catawba Indians had notice that a party of the Shawanefe, who have been long their enemies, had been feen near their town, on which they immediately raised a party to go out against the enemy, with whom they came up next morning, and found them to be feven in number, and all afleep; the Catawbas immediately fired, and killed three on the spot, and took three prisoners; one escaped wounded, but has fince been found dead in the woods. Among the prifoners is the Indian who killed king Haggler; they were all delivered to the families who have had their relations killed by the Shawanese, who put them to death in the inhuman barbarous manner common to the Indian nations. One of the prisoners was very young, and pleaded hard for his life, begging them to confider his tender age, affuring them he was brought up by his brother against his own inclinations, and that he had never killed or hurt any body; but nothing could prevail.

A letter from Philadelphia, dated June 2, informs, that John Allen and Joseph Shippen, junior, esqrs. commissioners from that province, at the conferences lately held at Pitsburgh, with the Western Indians, under the direction of George Croghan, esq. deputy agent for Indian affairs, are returned to Philadelphia; and confirms the account lately mentioned of a treaty of peace having been amicably settled there with a very numerous body of Indians of different nations; and adds farther,

that

that at the conclusion of the treaty the commissioners delivered considerable presents of goods to the several tribes, on behalf of the province of Pennsylvania; to which Mr. Croghan made an addition on the part of the crown. The whole ended to the entire fatisfaction of all the Indians, who parted with the commissioners in so friendly a disposition, as promises the fairest prospect of a last-

ing peace.

One of the Paris news-papers gives an account of an extraordinary cure, effected by the gall of a barbel, in a case of blindness, in fubstance as follows: A journéyman watchmaker named Cenfier, having heard that the gall of a barbel was the remedy which Tobias employed to cure his father's blindness, resolved to try its effects on the widow Germain his motherin-law, whose eyes had for fix months been afflicted with ulcers. and covered with a film, which rendered her totally blind: Cenfier, having obtained the gall of that fish, squeezed the liquor out of it into a vial, and in the evening he rubbed it with the end of a feather into his mother's eyes. It gave her great pain for about half an hour, which abated by degrees, and her eyes watered very much: next morning the could not open them, the water, as it were, gluing her eyes up; he bathed them with pure water, and she began to see with the eye which had received the most liquor. He used the gall again in the evening: the inflammation dispersed, the white of her eyes became red, their colour returned by degrees, and her fight became strong. He repeated it a third time, with all the defired fuccess. In short, she recovered her fight without any other . remedy. The widow Germain is in her fifty-third year. She had been pronounced blind by the furgeons of the Hotel Dieu; and her blindness and cure have been attested by order of the lieutenant general of police; the fees ftronger and clearer now than before the accident. The gall of the barbel has fince been put on the eyes of a dog and a cat; they appeared immediately to feel acute pain, and their eyes were inflamed for three days; but afterwards returned to their natural state. Bibliotheque des sciences.

His majesty's yacht the Mary, captain Campbell, 28th. failed on Tuesday morning from Deptsord for Calais, to bring over the prince of Travandahl to England; she is to be at Calais by the 3d of next month, and it is expected the prince will embark

the next day.

Amongst the late rejoicings at Naples, the public were entertained with the representation of a fortres, whose ramparts were formed of combustibles, and exhibited the most curious fireworks; many living animals were shut up in it; and the fosses, full of water, contained a great quantity of live fish. After having been seen by their majesties, and their royal highnesses, &c. and exposed to public view for some time, the whole was abandoned to the populace.

Letters from Rome advise, that the pope had just iffued a brief, declaring void the election which the chapter of Utrecht lately made

of a new archbishop.

[K4] His

His excellency the Russian ambassador has engaged Dr. Dimsdale, physician at Hertford, to go over and inoculate the empress

and the great duke.

They write from Paris, that the fieur Somme, a gold-smith of that city, was fentenced to be hanged by the court of affeffors, as being convicted of having in his polfession two false marks for stamping gold and filver, imitating the mark of the affay-mailer of the farmers-general, and throwing them down the necessary of his house when the proper persons were sent to feize them. An appeal from this fentence being carried to the court of aides, counsellor Danigrant took upon him the defence of the fieur Somme, and drew up a memorial, wherein he pointed out the contradictions of the witnesses against him, witnesses unworthy of the least credit, spies of the police, wretches who fought the ruin of an honest citizen; and further, re-called to mind the horrors which have been fo often occasioned by the persons employed by the farmers-general, in lodging falt, tobacco, and other contraband merchandizes, in private houses where they wanted to prove a trespass. In a word, this affair, which has been depending ever fince the year 1763, being now brought to a true point of view, the court of aides have just issued an arret, annulling the fentence of the court of affeffors, discharging the fieur Somme from the accufation, and condemning the farmers-general in 6000 livres damages, befides all cofts.

Letters from Russia bring advice of the disgrace of the count de Panin, who, besides being governor to the grand duke, held one of the first posts in that empire.

On the 17th of last May came on to be tried, before lord chief justice Wilmot, in the court of common-pleas, Westminster, a cause, wherein it appeared that the plaintiff had become furety for the two defendants debts, previous to an act of bankruptcy, for which the defendants had undertaken to indemnify him; but having, fince that undertaking, become bankrupts, and obtained their certificate, the defendants then refused to do it: but, as all the damages fustained by the plaintiff were fubfequent to the defendants act of bankruptcy, he brought the prefent action to recover a fatisfaction for the same; and though the defendants pleaded their certificate in bar to this action, yet the jury found a verdict for the plaintiff, and gave him 3081. 10s. damages : but his lordship having some doubts of the law in point, directed a special case to be made, and figned by the counfel on both fides, for the opinion of the court the following term; which being complied with, the case came on, and was learnedly argued the 10th day of June last, by counsel on both fides; when the court, after taking feveral days to confider of the same, were pleased to deliver their opinions in favour of the plain. tiff, and unanimously affirmed the verdict found by the jury.

Hague, July 21. This day the prince of Travendahl want from hence on board a yacht to Rotterdam, where he was to dine with the burgomaster De Groot. From thence he will go by Antwerp to Brussels, where the palace of the prince De la Tour and Taxis is prepared for

his reception.

Copenhagen

Copenhagen, July 12. The expence of the king's journey was computed at 80,000 rix-dollars per month; but, as this fum is not sufficient, the treasury has received orders to remit to Hamburgh 20,000 rix dollars more from the month of July to that of November inclusive. This sum does not comprehend the presents which his majesty makes at the several places through which he passes, for which 17000 rix-dollars have already been paid to two merchants at Hamburgh.

Riga, June 27. The day before yesterday, about two in the afternoon, a fire broke out in this city, and continued till ten at night, at which time 370 houses were reduced to ashes. Combustible materials were found in several parts of the town, which give us reason to sear that this melancholy event was not

accidental.

On the fecond of June, polacre Elizabeth, commanded by captain Francis Xavier Breen, a Frenchman by nation, cast anchor off Leghorn, She failed from Tripoli, in Barbary, the 23d of April last, with letters, which fignified that that city and its environs were attacked with many unufual diforders; and we further learnt, by the report of the captain, that out of four of his mariners, who had been ill during the passage, two died of pains in their head and stomach. These reasons were inducements to take the most rigid precautions in regard to the vessel.

The physician of health at Leghorn, after visiting the crew and passengers, among whom were two persons on their recovery, did not perceive any mark of a contagious illness; and when he had renewed his visit three days after, without discovering any vessige of such disorder, the Tripoline ambassador, who is intended for Holland, and eleven persons in his retinue, were permitted to disembark, and go to the second lazaret of St. James's, where a detached quarter was affigned them, with the greatest precautions.

While the goods on board the polacre were airing, a Moor, belonging to the ambaflador's train, died almost suddenly, on the 9th, at the Lazaret, of the colic only (as it was thought), and not of a contagious illnefs. On the 11th, in the morning, a French mariner was found dead on board the vessel, with a bubo on the left parotid, which gave reason to think that the Moor just spoken of was likewise

attacked with the plague.

The precautions as to the ship were then redoubled; that is to say, a well-armed tartan was added to the small boats that guarded her; and it was resolved, that the ambassador should be carried again on board with all his train, and some effects which he had with him for his own use: thereupon this minister was re-conducted thither, by his own mariners, in a boat belonging to the polacre, and accompanied by an officer of the board of health, in another small vessel.

The quarter which had been occupied, for a little more than two days, by this minister and his people, after being cleansed by the quarantino guards, was shut up in every part except the windows; and the same guards are still doing duty on the spot, with the greatest vigilance. As to the goods, they have been all along kept in the hold.

During the morning of the 13th, the captain's brother died of a bubo

at the anus, which shewed he had had the plague. In order therefore yet more to prevent the communication of so terrible an evil, the ship's guard was augmented with another armed tartan, having troops on board, under the command of an officer, who was charged with the severest instructions.

All these precautions being taken, the ambassador, the captain, and all who were interested in the ship's lading, defired they might be permitted to go to the port of Marfeilles, there to perform quarantine, and clear themselves of all contagion; which was granted them. Of this circumflance therefore we cannot avoid informing you, with this addition, that, in order the better to preserve the public health, we have given orders that the polacre should be navigated by a pilot and fome Tufcan failors, and by two ships armed with great guns and with troops, who are to keep in fight, and to confign her to the lazarets of Marseilles.

Advice has been received at Leghorn, that the above-mentioned polacre is arrived at Marfeilles, where there is no doubt she will perform a proper quarantine, as that city cannot have forgotten its own sufferings in the year 1722.

The following address to the right hon. lord Edward Bentinck and George Musgrave, esq; representatives in parliament for the city of Carlisle, has been sent up to them from the freemen of the said city:

" Gentlemen,

"WE the freemen of the city of Carlifle, and your conflituents, not fatisfied with the proofs we gave you of our regard and confidence on the day of election, with pleafure again thank you for that exemplary spirit and perseverance, which you exert-

ed in support of our liberties and privileges. The daring, though ineffectual attempts, made to exclude many of us from giving you that fupport we tendered; and a daily reflection on how much we owe you, and how much we ought to deteft the corrupt and infamous proceedings practifed against you, will be a happy cement of union amongst us. Nothing, we trust, will ever cause one of our number to swerve from that path, which has fo lately led us to victory. In your hands our liberties, our lives and properties, are fecure; whilst we with pleasure look forward to future opportunities of demonstrating that regard, which your whole conduct towards us has merited, and which we unfeignedly have for you. The duty we owe to ourselves and the public calls upon us to demand your attention to fome things, which probably may, and we trust will, speedily become the subject-matter of your deliberation in' parliament. Every person in this part of the kingdom is but too fully convinced of the necessity of a law for quieting the possessions of the subject against the dormant claims of the crown; claims which, at a very remote period, may possibly be heldforth by bad men, as terrors to influence the freedom of our elections, and stifle, if possible, the ardent spirit of British liberty. We expect from you to promote with your utmost zeal and abilities the obtaining of fuch a law; as, till that is procured, we esteem every man's property extremely hazardous, and a bait for infamous informers. There is another matter also, of the most important concern, to which we bespeak your serious and constant attention, as our representatives. In case any instance of misbehaviour in returning

returning officers should occur, we call upon you to exert yourselves to the utmost in detecting, and punishing with feverity, criminals of that fort; for if the franchises of freemen and freeholders are to be trifled with and explained away, the independance of British parliaments, and all that is dear to us as Britons, will not long furvive; we may continue freemen in name, but not in fact. Whatever be the fate of individuals, let not an ill-judged clemency draw you aside; but endeavour to hand down the rights of your country to your posterity, and contribute as far as in you lies to render the liberties

Letters from Boston, in New-England, of June 2, mention the arrival there of the rev. Mr. Samuel Occum, an Indian preacher, from this kingdom, who came hither some time ago, accompanied by the rev. Mr. Whitaker, to solicit benefactions for propagating the gospel among the Indian tribes; and that they obtained in their travels through England, Scotland, and Ireland, the sum

of 11000l. sterling.

They write from Naples, that the queen having generously declined the accepting of the free gift of 20,000 ducats, which the city of Naples has been accustomed to offer to every new queen, that fum has been laid out in marriage portions for two hundred young women, who were yesterday admitted to kiss their majesties hands. When they went to the palace they were divided into feveral companies, each of which had its peculiar uniform; and there were twelve chariots or cars in the procession, representing the four feafons, the four elements, and the four principal liberal arts.

Vienna, June 29. Yesterday an express arrived from Naples, with advice that the grand duchess had miscarried there, but was in a fair

way to do well again.

Francfort, July 4. We have received advice, that a cloud burst the day before yesterday near Mentz, which did great damage in that neighbourhood, and occasioned the waters to rise so fuddenly, that they carried away almost all the houses in the village of Herxheim, and destroyed some of the bridges of communication belonging to the fortisfications.

A letter from Hull, dated the 14th inft. fays, "I have the pleafure to inform you, that we were honoured the last week with the company of our high steward the marquis of Rockingham, Sir George Savile, and Mr. Weddell, our representative. This distinguished compliment has been received by all the principal inhabitants with every possible mark of respect; they have been happy in the opportunity of testifying their warmest fentiments of effeem for those fincere friends of their country, who have, on all occasions, so eminently exerted themselves, by a strict attention to the rights of individuals, and the true and real interests of these kingdoms. They were publicly entertained by the corporation, at the Guildhall and the Trinity-house; and the whole town appeared remarkably zealous in rendering all that honour and regard justly due to fuch respectable personages."

The fociety formed at Amflerdam for endeavouring to fave drowned persons, having had the satisfaction to see their views not only approved of, but also savoured by many

towns.

towns, and even by some provinces of their country, have given public notice, that, fince the month of August last, they have distributed eight premiums, a like number of drowned persons having been re-called to life by the means mentioned in the public notice, viz. five at Amsterdam, one at Groninguen, one at Breda, and one near Leyden; which fuccesses give room to hope for still greater, when the thing shall become more generally known. The fociety p:omifes to publish very soon a detail concerning not only the abovementioned cases, but also the meafures they have taken to accomplish their ends, and the various encouragements they have met with.

There is now living, at Hartley in Essex, one Arthur Jackson, a ploughman, aged 107, and his wife, aged 103. They have been married 81 years, and never had a

child.

There is now living, at Shaw-farm, near Horton, in Hampshire, two brothers and a fister, the youngest of whom is 97, and the eldest 105 years of age.

Married.] At Formby, Mr. Norris, sen. aged 96, to a lady of 16,

with a genteel fortune.

At St. Lawrence's church, Reading, Mrs. Mathews, widow, in the 74th year of her age, to Mr. Allen,

aged 23.

Died.] At Issington, aged 84, Mr. Walter Bevis, formerly a saleiman in Holborn, said to have left behind him upwards of thirty thousand pounds.

At Belston, Hants, Matthew Henshaw, esq; aged 95, formerly

high sheriff of that county.

In the 82d year of his age, the rev. John Clarke, M. A. near 52 years mafter of the Charter house, near Kingston upon Hull.

Aged 104, at his house in Banbury-street, St. Giles's, Mr. Martin Riley, who was barber to king James II. in the year 1688, when at St. Germain en Laye in France.

AUGUST.

Came on, before the high court of justiciary at Edinburgh, the trial of George Dempster, esq; for the alledged crime of bribery and corruption; when the judges unanimously found the libel vague and indefinite, and dismissed the action and the pannel from the bar.

The thunder rolled fo terrible, and the lightning flashed in such terrifying streams, in the neighbourhood of London, that several houses were set on fire with it, and one man was struck dead upon his coach-box, on the Kentstreet road. What was remarkable, his watch was found shivered in his pocket in a thousand pieces, a small hole in the crown of his hat, and a kind of seam down his breast.

They write from France, that the price of grain is confiderably fallen in that kingdom, owing, as is conjectured, to an edict lately published by his Christian majesty, permitting the unlimited exportation and importation of that commodity throughout all the ports of his dominions.

Letters from Rome inform us, that the pope has written with his own hand to the kings of France, Spain, and Sicily, on the subject of the present disputes between his holiness and the house of Bourbon; but that each of those courts has refused even to receive his letters, till such time as the brief issued against the duke of Parma shall be servoked.

The

The duke of Modena has fent a circumstantial detail to Vienna, of his right to the duchy of Ferrara; and intreats their Imperial majesties good offices with the pope, that he may obtain possession of the same quietly, and without being obliged to have recourse to arms.

We are told from Corfica, that more than a thousand jesuits have arrived there lately from the Spanish fettlements in America; but, for want of convenient room to lodge them, they will probably pass over to the ecclefiaftical state. Several Greek families also, originally from Turkey, but who had been fettled for fixty years past in Corsica, are preparing, on account of the prefent troubles there, to remove to Spain, his Catholic majesty having undertaken to defray the charges of their voyage, for which purpose he has already made them confiderable advances.

Died, this afternoon, about 3d. five o'clock, at his palace at Lambeth, aged 75, the most reverend Thomas Secker, LL.D. lord archbishop of Canterbury, primate of all England, and metropolitan, president of the corporation of the sons of the clergy, and of the society for propagation of the gospel in foreign parts, a governor of the Charter-house, a trustee of the British Muser-house, a trustee of the British Muser-house, a trustee of the British Muser-hospital, and one of the lords of his majesty's most honourable privy council.

Edinburgh, July 26. From Selkirk we have the following account of the storm on Sunday last:

"About twelve o'clock at noon, the horizon was entirely over-cast, and the darkness was so great that tho public service was stops, and the congregation thrown into the great-

est consternation; candles were lighted in all the private houses, and the thunder rolled perpetually, fo as to aftonish every one; the lightning flashed along the streets, and the hail fell fo thick and fo fast, that it beat down both man and beaft. The flock farmers have greatly fuffered, as the lambs were much hurt. Two men were struck down at the end of the bridge with the lightning, and a thunder-bolt was feen to plow up the ground, and afterwards entered into it, making a deep hole, big enough to bury the main-mast of a first-rate man of war. At Farnahe, a gentleman's house in the neighbourhood, the lightning threw up the windows, and greatly alarmed the family, but luckily did no further damage. The Tweed was greatly swelled, and swept off all the hay that was on the haughs. The impetuofity of the current was fo great, that Hones of many tons were rolled down the fiream. and carts and cart-wheels were floating down like the shavings of timber. The whole country was alarmed, and verily imagined that the day of judgement was come. God prevent fuch fevere vifitations of the divine wrath! The damage done is very great, and the fright we were put in still greatly affects us."

Extract of a letter from James Fort, in Senegal, dated May, 19,1768.

"I take this opportunity, by a ship bound to the West-Indies, to inform you, on my arrival at Senegal, the hon governor O'Hara ordered me with a detachment to relieve James Fort, in the river Gambia; and at my arrival there, sound the lieutenant governor, and the garrison, in the greatest distress, being then sive days without any

water,

water, as no water is to be had on this ifland, it being all fupplied from the main continent; and now being at war with the king of Baragh, and that whole country, this garrifon is greatly distressed, having all the veffels that supplied us taken, and numbers of our people made prisoners. The lieutenant governor ordered me, and the troops under my command, on the following expedition: to attack a principal town belonging to the enemy; and having landed them before day-light in the morning, on the 23d of April, being St. George's day, every man having a St. George's cross in his hat, we furrounded the town, but was rather too foon, being discovered by the out-guards and the barking of dogs: but, to complete my defign, and my orders, immediately began the attack, when a fmart engagement, and a warm fire, enfued. In less than an hour I was master of the place, burnt the town to ashes, destroyed every thing that I could in that time come at, killed a number; made many prisoners, and embarked the troops and prifoners with little or no loss. The prisoners are all here, among whom is the queen of Baragh, who had been upon a visit in this place, it being like Bath in England, where the better fort of people come for the benefit of their health. majesty was so unfortunate as to have three of her fingers tore off by one of our hand grenades: I have taken all the care in my power of her, also the governor; and she is now attended by our furgeons."

Constantinople, June 16. The kislar-aga, or grand master of the ceremonies, took on the 6th of this month a purgative powder, and died suddenly the next day. His highness being informed of it, and imagining that it was the fault of the doctor and the apothecary, ordered them to be imprisoned, and the shop of the latter, as also those of several other apothecaries, have been shut up, in order to have the drugs in spected.

Mr. Bank, Dr. Solander, 6th. and Mr. Green, the aftronomer, fet out for Deal, to embark on board the Endeavour, captain Cook, for the South Seas, under the direction of the royal fociety, to observe the transit of Venus next summer, and to make disco-

veries.

A fire broke out in the King'sarms-inn-yard, near Holbornbridge, which was attended with the most melancholy consequences: Mr. Green, at whose house it broke out, faved his life by jumping out of a window; but his wife, his child, and fifter perished in the flames; his neighbour jumped out of a window feemingly unhurt, but died in less than ten minutes; a porter belonging to the inn, having lost his wife and child, died raving mad; a clerk to a merchant in Bread-street, after faving his wife and child, returned for a box in which was money and writings belonging to his master, but not being able to reach it, only faid, "Lord have mercy upon me," and expired. Of those who endeavoured to escape by jumping out of windows, three were killed upon the spot; the shrieks of those who were burnt were piercing; in fhort, a more horrible fcene was never beheld.

Lisbon, July 12. The king has just published a bull which pope Benoit XIV granted to his majesty in 1756, authorizing him to raise the third part of all the ecclefiaftical revenues in this city during the term of fifteen years, the amount of which is to be applied towards the rebuilding, repairing, and decorating the churches in Lisbon.

Berlin, July 12. The king has published an ordinance, by which his majesty prohibits the importa-tion of all manufactures of copper, iron, and tin, and also of iron nails, under a penalty of 100 rixdollars per quintal, unless furnished with a passport from the depart-

ment of the mines.

We hear from Killarney, in the county of Kerry, that four young ladies, who lay in one room in a house near that town, and went to bed one night last week in perfect health, were all found dead next morning: and we learn that Dr. Thadee Cronin, an eminent phyfician of that town, has given it as his opinion, that they were fuffocated by a quantity of smoke confined in the flue of a chimney, which descended in the night, and filled the room in which they

The grand jury for the 8th. county of Surry fat at Guildford from nine in the morning till ten at night, on the bill for the murder of young Allen, in St. George's-fields; after which they returned a true bill against Donald Maclane, and no true bill against Alexander Murray, the officer, and Donald M'Laury, one of the other foldiers who were ordered upon the pursuit of one of the rioters. On this occasion nineteen witnesses were examined, among whom were Mr. Wilkes, and the rev. Mr. Horne; the grand jury differed in opinion

in feveral particulars, and fome warm altercations passed among the members .- Mr. Wilkes was treated with very little ceremony, all possible precautions having been taken to prevent any extravagant adulations on the part of the people.—Previously to this bufinefs, two rioters were tried, one for breaking down the lobby door of the king's-bench prison, the other for carrying away and deftroying spirituous liquors, at the house of Edward Russel, esq. in Southwark; the first was sentenced to be imprisoned one year, to find fureties for three years, and to pay a fine of three shillings and four-pence; the other fifteen months imprisonment, to pay a fine of 13 s. 4 d. and to find fureties for his behaviour for three

His royal highness the duke of Cumberland embarked on board the Venus, as an officer; the Venus is destined for the Mediterranean service, and it is thought will continue there fome months.

The directors of the fun fireoffice have generously given Mr. Seddon (who was burnt out at London-house in Aldersgate-street) 500 l. as a present, he having forgot to renew his infurance.

A gift of the king was rowed for, before his majesty at Kew, by fix young watermen: the first boat, to have five guineas, the second three, and other four half a guinea, each: Roger Delap, of Westminster, came in first with great ease.

Charles-town, South-Carolina, June 20. The falary of his excellency general Woodley, as governor of his majesty's Leeward Caribbeislands, is 1200 l. sterling per ann. In his first speech to the council and affembly of Antigua, he tells them he has it in charge to recommend the passing an act of fettlement, which he hopes will be the first thing they take into their consideration: accordingly the affembly of that island (conforming to his majesty's 86th instruction to him) have voted a fettlement of 1000 l. currency per annum, in addition to his former falary of 1200 l. per annum, during his government, to be paid him quarterly; and also a house to be provided for him at the public expence.

At eight in the morning, the trial of Donald M'Lane came on at Guildford, when, after a hearing of nine hours, he was acquitted; the jury having been out somewhat above half an hour. The counsel for the prosecution were, Mr. serjeant Leigh, Mr. Lucas, Mr. Lade, and Mr. Baker; those for the prisoner were, Mr. Hervey, Mr. Cox, Mr. Bishop,

and Mr. Robinson.

St. James's, August 12. On Wednesday night last, about eleven o'clock, the king of Denmark, under the title of the prince of Travendahl, landed at Dover, from on board the Mary yacht. His Danish majesty was saluted by the cannon of the castle, forts, and vessels in the harbour, and was received with every possible mark of distinction and respect.

On Thursday morning, about nine o'clock, his Danish majesty set out from thence, and arrived at the apartments prepared for him a quarter before seven in the evening, attended by his excellency comte de Bernstorff, his principal secretary of state; baron de Schimmelmann, treasurer, comte

de Moltke, grand marshal; comté de Holcke, grand masser of the wardrobe; baron de Bulow, one of the lords of the bed-chamber; M. Schumacker, conseiller des conferences, and private secretary; baron de During, aid de camp; messers. Temler and Sturz, counfellors of embassy of the office of foreign affairs; doctor Struensee, physician; and several officers and servants of his Danish majesty's houshold.

The professors of Gresham college are to read the lectures, in term time, over the Royal Exchange, till a proper place is built; and we hear 50 l. per ann. are added to their falaries in lieu of a habitation.

Last week a harvest-man went into the Cock and bell at Rumford, in Essex, to refresh himself; but before he had drank his pint of ale, his throat was swelled in a most violent manner, and in about two hours the poor man expired in great torture. Upon opening his windpipe they found a wasp, which he had swallowed, and was the occasion of his death.

His Danish majesty's retinue consisted of four post-chaises, and sisteen servants on horseback. The coaches of the houshold, which had been sent to Dover to escort his majesty, were all lest behind; his majesty chusing to travel in post-chaises for the sake of expedition, and to avoid ceremony. He was immediately waited upon by the earl of Hertford and lord Falmouth, who complimented him on his arrival. His majesty is not yet twenty, being born June 2, 1740.

The court of directors of the East-India company, at a meeting

held

held on the 29th ult. came to the

following resolution, viz.

Resolved, As the most effectual method to prevent the fale of the command of thips in the company's fervice, that from and after the 25th of March next, upon the death of a commander of any ship employed, or to be employed in the company's fervice, or whenever there shall be a vacancy of a commander, by refignation, incapacity, or otherwise, another commander shall be chosen by the court of directors, to supply such vacancy, out of persons who have commanded a ship in the company's fervice, or who have performed at least one voyage in the capacity of chief or fecond mate, to the East-Indies; and that fuch choice or appointment shall be made by the ballot.

And that from and after the faid 25th of March next, no ship be tendered for the company's fervice, but subject to the said re-

· gulation.

Refolved, That from and after the 25th of March next, no ship shall be built in the room of any ship worn out or lost in the company's service, without the leave of the court of directors first had and obtained.

By advices from Corfica we learn, than an envoy from the bey of Tunis was arrived there on board of a Ragusan vessel, with presents for general Paoli, as an acknowledgement of the service he had rendered to the regency, by sending back to them a Tunifian galliot with twenty-six men, which, being chased by a Genoese ship, had taken shelter in one of the ports of the island. These presents consist of a Moorish slave, Vol. XI.

a fine horse richly caparisoned, a tygres, two chests lined with lead and scaled up, two offriches, and a lion that died in the passage; but the vessel is to perform quarantine at Baltia by order of general Paoli.

An order of council was this day iffued, to prevent the importation of the hides, hoofs, or horns of horned cattle, from Denmark or Sweden, the dutchies of Holdein, Mecklenberg or Cleeves, the neighbourhood of Hamburg, or the frontiers of the Low countries, in all which places the distemper among the horned cattle rages to a violent degree.

Summer circuit.

At Aylesbury assizes, one was

capitally convicted,

At Abingdon affizes, four verdicts were obtained for bribery in the late election for the borough of Reading; and it is faid that divers other profecutions upon the fame flatute are depending in that borough. None were capitally convicted.

At Bedford affizes, one was ca-

pitally convicted.

At Hertford affizes, three were capitally convicted; two of whom

are reprieved.

The high-sheriff received the judges with uncommon ceremony; he doubled the number of javelin-men in livery, who attended them from the frontiers of the county, and waited for them himself a mile further on the read than usual. On Tuesday he fent a turtle for their table, with burgundy instead of the common present of claret, and gave for a reason, that in these licentious times, when so many people had attempted to trample on the laws, [L]

he could not treat his majesty's chief ministers of justice with too much respect.

At Chelmsford affizes, eight were capitally convicted; four of

whom were reprieved.

Seventeen special jury causes were tried, nine of which were actions brought upon the statute of bribery and corruption by the partizans of Mr. Fordyce, against those of Mess. Grey and Rebow, at the Colchetter election, and fix quo warranto causes upon the fame account, of which Mr. Fordyce's party gained only five, viz. one for bribery, and four upon the quo warranto's.

At Guildford affizes, eight were capitally convicted; five of whom

were reprieved.

At Maidstone assizes, none were

capitally convicted.

Mr. Powell, mafter of the Granby-head at Dartford, was tried on suspicion of robbing a postchaife driver on Shooter's-hill, in the night of the 3d of June last, of a filver watch, and a few shillings; when Mr. Powell's witnesses proving a plain alibi, he was honourably acquitted, and the jury granted him a copy of his indictment: the accomplice to the person who really committed the robbery is now in custody.

At Oxford affizes, none were

capitally convicted.

Esther the wife of William Ward, charged upon her own confession with murdering her daughter, was acquitted of the murder, she appearing infane.

At Winchester assizes, seven

were capitally convicted.

robbing Samuel Lewis, on the highway, to be hanged in chains at Portsea.

At the affizes for Wilts, at Warminster, none were capitally convicted.

At Gloucester assizes, five were capitally convicted; but were all

reprieved.

At this affize, the cause depending between the dean and chapter, and Mr. Pitt, was decided in favour of the latter. This is the fecond verdict obtained by Mr. Pitt against the dean and chap-

At Worcester assizes, three were capitally convicted; but were all

reprieved.

At Salisbury affizes, three were capitally convicted; of whom two

were reprieved.

At Bridgewater affizes, one was capitally convicted; a cause came on to be tried, brought by Mr. Carpenter, of Beckington in Somersetshire, in order to recover of the inhabitants of the hundred of Frome, the damages he sustained by the rioters damaging a dwelling house and flour-mills of his, for which he obtained a ver-

At Hereford affizes, two were capitally convicted.

At Monmouth affizes, one was capitally convicted.

At Exeter affizes, two were capitally convicted.

At Bodmyn affizes, none were

capitally convicted.

At Cowbridge, in South Wales, a man convicted of stealing coals, was ordered for transportation. After fentence was passed, the prisoner told the court, that it was a malicious prosecution; but that he thought he was even with James Williams, for killing and the profecutor, having been intimate with his wife for above two years paft.

At

At Shrewfbury affizes, two were capitally convicted, one of whom was reprieved.

At Stafford affizes, two were

capitally convicted.

At Lancaster assizes, one was capitally convicted.

At York affizes, twelve were capitally convicted, nine of whom

were reprieved.

Thomas Lee, convicted of the murder of Mr. Petty in the year 1766, received fentence of death, and was executed at Tyburn yesterday. He is to be hung in chains near the place where the murder was committed.

At these affizes came on, before the honourable fir Henry Gould, knight, and a special jury, a cause wherein a young lady, aged 25, of New Malton, in that county, was plaintiss, and an eminent attorney, aged 70, of the same place, defendant, for non-performance of a promise of marriage; when the prosecutor proving her case to the satisfaction of the court, and the defendant having no desence to make, a verdict was given for the plaintiss with 600 l. damages.

At the same affizes came on, before Mr. justice Yates, and a special jury, an information against William Wittron, and others, for a riot at the election of members to serve in parliament for Ponte-fract, whereby the freedom of the said election was violated and interrupted; when, after a hearing of 13 hours, the riot was so fully and clearly proved, that the defendants did not think proper to examine any witnesses, and the jury found them guilty of all the facts charged upon them in the

information.

The Swaledale lead-mine cause, between Dorothy Harker, and others, plaintists, and Richard Lonsdale, and others, defendants, was tried; and, after a hearing of ten hours, a verdict was given for the plaintists.

At Durham affizes, three were

capitally convicted.

At the affizes at Carlifle, a cause was heard betwixt the earl of Egremont and Henry Ellison, of Whitehaven, esq. The earl, as lord of the manor, sued for some land that Mr. How and Mr. Ellison had, by sences, taken off the sea-mark, when a verdict was given in favour of Mr. Ellison.

At Lincoln affize came on, before lord chief baron Parker, the important cause wherein Robert Vyner, junior, esq. was plaintiff, and Philip Bullen, efq. alderman of that city, defendant, in order to prove bribery in the election of Thomas Scrope, efq. the present representative; when a verdict was found for the defendant, to the great joy of Mr. Scrope's friends. Fifteen hogsheads of ale were given to the populace; and a ball was given by Mr. Scrope in the affembly-room below Hill in the evening. None were capitally convicted.

At Huntingdon affizes, none were capitally convicted.

At Cambridge affizes, one was capitally convicted; but reprieved.

At Norwich affizes, three were capitally convicted; of whom two were reprieved.

At Northampton affizes, two were capitally convicted; but reprieved.

At the affizes at Bury, two were capitally convicted; one of whom was reprieved.

[L 2] Dorchester,

Dorchester, Derby, Leicester, and Berwick, were maiden assizes.

The king of Denmark, 19th, attended by the marquis of Granby, general Conway, and other persons of distinction, went through the city to the tower, and viewed the armoury, regalia, &c. there. The barge belonging to the tower was brought up to the wharf, expecting his majesty would go to Greenwich, &c. but he returned through the city in the coach he came in. On his majesty's coming out of the tower, a great concourse of people assembled to see him, to whom he complaifantly bowed; and on the carriage fetting off they gave loud huzzas, &c. The king afterwards dined at St. James's in private.

This evening his Danish majesty; his royal highness the duke of Gloucester, their serene highnesses the two princes of Saxe Gotha, a great number of the nobility and foreign ministers, were entertained by her royal highness princess Amelia, at Gunnersbury-house, with a grand supper, after which there was a ball. A party of the foot-guards were ordered to attend during his majesty's stay there.

The entertainment was extremely magnificent. Invitations were given to upwards of 300 of the nobility. The fupper confifted of 120 difhes; a grand firework was played off; and the ball, which was very splendid, ended about three o'clock on Saturday morning.

Yesterday were married, in the parish church of Hendon, in the county of Middlesex, by the reverend Mr. Aldrich, ten young couple belonging to the said parish. To each of the brides was given a wedding ring of ten shil-

lings value; to each couple ten shillings more for their wedding dinner; for the purchase of some useful necessaries towards housekeeping, forty shillings; and the expences of the marriage fees defrayed for them: and in order to promote and encourage population, to each couple, at the expiration of two years, upon producing a healthy child, twelve months old, will be given the further fum of two guineas; and at the end of three years, upon producing a fecond healthy child, they will receive three guineas more. each couple was given (being a donation from another hand) a tract called the Whole Duty of Man; and every other couple that shall be married by banns in the faid church, will be entitled to the faid donation, fecured by will for ever.

Mr. Bingley, late a prisoner in Newgate, for publishing the North-Briton, numbers 50 and 51, was removed from that gaol to lord Mansfield's house in Bloomsburysquare, by virtue of a writ of habeas corpus granted by his lordship, in order to admit the faid prisoner to bail, which was accordingly done, Mr. Bingley being bound in twice three hundred pounds, and four fureties in 150 l. each, for his appearance before the court of king's bench at Westminster on the first day of next term. clerk to the attorney, in waiting on his lordship to know the time of Mr. Bingley's being brought up, was thrown from his horse, and broke his arm.

On Saturday all the great officers of flate, the foreign ministers, &c. dined with his Danish majesty at St. James's.

The

The fide-board of plate made use of for his Danish majesty's table, is the original plate of king Henry the eighth, being always deposited in the jewel office in the tower, and never made use of (such occasion as this being excepted) but at a coronation.

A riot began in the Marshalsea prison, occasioned, as it is said, by the partiality of the prisoners in favour of the turnkey. The deputy keeper, piqued at this preference, had arrested the turnkey for a small debt; and in return, the prisoners had broke the deputy-keeper's windows. This happened on the Friday. But next night the two fons of the deputy-keeper, having furnished themselves with fire arms in the absence of their father, renewed the fray, and wounded eight of the prisoners, one of whom received a shot in the belly, which it is thought will prove mortal. Three of the principal actors in this tragedy have fince been committed to the county gaol.

The Spittle-fields weal-20th. vers rose in a body, and forcibly entered the house of Nathaniel Farr, in Pratt's alley, and cut to pieces and destroyed the . filk-work manufactory in two different looms there; and afterwards forcibly entered the house of Elizabeth Pratt, in the same alley, and murdered one Edward Fitchett, a . lad of about 17, by shooting him through his head with a pistol loaded with flugs. A reward is offered for apprehending the rioters, and his majesty's pardon to . him who discovers the murderer.

The foundation of a large flack of chimnies gave way in the centre of the buildings of his majefty's prison of the Fleet, by which ten apartments were entirely defiroyed, in which near 40 persons were lodged, most of whom lost their all; some were greatly hurt, and one gentleman is in danger of his life. The prison has been since visited by the surveyor from the treasury, and assistance promified the sufferers. The whole building is in a ruinous condition.

They write from Rome, of the 20th of July, that, according to letters from Modena, the duke is making preparations for war; and it is thought that he has a defign to feize upon the duchy of Ferrara, though the court of Rome has been in possession of it for half a century past, which possession has been confirmed by different treaties. On the other hand, the prince pretends to have a right to it, as it was formerly the property of the house of Est, from which his highness is descended.

Rome, July 16. The princess Doria Pamphili was delivered the day before yesterday of a prince, to whom the emperor is to stand sponsor. The prince went yesterday to the Quirinal, to signify this event to the pope; and couriers have been also dispatched to the courts of Vienna, Madrid, Turin, and Naples.

Thursday night his Danish majesty and her grace the dutchess of Ancaster opened the ball, at the assembly in the Haymarket.

His Danish majesty has fent a present of ten guineas to the vergers of St. Paul's, by the hands of Francis Crosby, esq.

Thursday arrived in town from Poland, the prince and princess Czartorinski, and also the empress of Russia's ambassador.

[L 3] 23d.

A body of failors, to the number of 5 or 600, riotously assembled at Limehouse, and boarded feveral outward bound ships, and forcibly carried away feveral of their men, under pretence of not suffering the ships to fail till the feamens wages were increased; but a party of the guards being fent for, the rioters immediately dispersed.

The furveyor of the navy, attended by the proper officers, took a furvey of Portsmouth-dock, with the ships building and repairing there; and at the fame examined a new constructed pump, the invention of Mr. Cole, erected on board the Seaford man of war, which appeared to be less cumberfome than the chain pump, and

more efficacious.

The experiments were as follow: The new pump, wrought by four men, threw out a ton of water in 42 feconds.—The old pump, wrought by feven men, threw out a ton of water in 76 feconds.

The new pump, when wrought with two men, threw out a tun of water in 47 feconds. - The old pump with two men would not

move.

The chain of the new pump, broken by defign, and dropped into the well, was recovered.

The new pump, when choaked with shingle ballast, was cleared in four minutes.—The old pump could not be cleared till the water was pumped out of the hold.

The remains of the queen of France were to be interred at St. Dennis the 11th of this month. The dauphin, his two brothers, and the mesdames, were to be present at the funeral. Kitchens and other buildings have been

erected at St. Dennis, at the king's expence, for accommodating 2000 people, the parliament and univer-

fity having been invited.

The expences of the queen's obsequies amount to 800.000 livres; and the whole charges occasioned by the death of her majesty are computed at

1.500.000 livres.

Hague, July the 9th. Prince Henry of Pruffia arrived late on Saturday evening at the house in the wood, accompanied by the prince of Orange, who had gone beyond Leyden to meet him; his royal highness received company the next day, and was westerday at the public entertainment which the prince of Orange gave at the old court in this town, to celebrate the birth-day of the princess of Orange; at which all the foreign ministers were present, as well as a very numerous company, and the ball lasted till this morning.

On Sunday about noon the king of Denmark, attended by several of the nobility, went through the city to the Danish chapel, in Wellclose-square, built by her late majesty queen Anne, in honour to her royal confort. He returned to St. James's about two, and afterwards went to dine with the imperial ambassador at his house in St. James's square, where he foon found himself slightly indisposed; and, after making an apology to the ambassador on the occasion, his majesty returned to St. James's,

where he dined.

His Danish majesty signified his intention of being present at York races; great preparations were made upon the road, for the accommodation of his majesty and his attendants; but

a fud-

a fudden indifposition having prevented his majesty's gracious intentions, he has ordered every thing to be paid for at the same rate as if they had actually been called for; with this particular injunction, that the provisions should be every where distributed amongst the poor.

They write from Robertoun in Scotland: that " on Tuefday the 2d instant, about four in the afternoon, a very uncommon phænomenon appeared in this neighbourhood: a water-spout, or large body of water, fuddenly fell upon Dungavel-hill, opposite to Tintock, about fix miles fouth of Lanock, and forced its way into the ground, till it came to the rock, making an opening about 24 yards broad, and about three feet deep: it then rushed down the North fide of the hill, with the greatest impetuofity, hurling the largest stones, and great quantities of earth before it, making an opening of the same dimensions all the way down the hill. It had a very alarming appearance, and threatened the country with a fevere fecond deluge."

His majesty the king of 30th. Denmark arrived at Cambridge, and was waited on by the vice-chancellor of the university, heads of colleges, and doctors in their scarlet robes, who attended his majesty to the senate-house, where the whole university, and a brilliant company of ladies in the galleries, were affembled, who, upon the entrance of his majesty, testified their joy by every possible mark of respect. He was conducted to a chair of state, where he received the compliments of the heads of the respective colleges, and, after a short slay, was conducted in procession to the library, and to all the principal buildings in the university, where having seen every thing that was rare and curious, his majesty was graciously pleased to express the highest satisfaction, and to invite the vice-chancellor to supper. Early next morning he proceeded on his journey to York.

A curious boat from India was rowed to Richmond, being a prefent to his majefly from governor Vanfittart. The king and queen came to the water-fide to view it, where they continued above an hour, and were graciously pleased to declare, that the grandeur and elegance of its construction and furniture exceeded every thing of that kind they had ever seen.

A noble benefaction from the German Lutheran chapel in the Savoy, was distributed among the numerous prisoners in the Fleet; the sum divided was upwards of 2001.

Extract of a letter from Chelmsford.

"A very uncommon phænomenon appeared on Thursday the 18th instant, at Good Easter, in this county. It was first observed between eleven and twelve at noon. by Mrs. Dowfett, who, standing at the door of her house, which has a view up to Bedford's, another farm-house, at the distance of three fields, fuddenly heard a great noise resembling thunder. At the same time she saw a great thick smoke arise out of the pasture fields between her house and Bedford's, and prefently heard two cracks, as though the trees were pluckt up by the roots. She heard a violent wind iffue immediately " from [L 4]

"from under the fmoke," (and "out of the ground," as she thought) which twifted the fmoke up to some height, and went off violently to the house and barns at Bedford's. She foon faw the thatch of the largest barn twisted up into the air, and concluded the house and out-houses were destroyed .- Mrs. Burton, who lives at Bedford's, was at the same time fitting in the kitchen, and obferving the house and floor shake violently, and all the pewter tumble off the shelves, imagined the house was falling; her husband, who had laid himself down upon a bed, was awaked from his fleep by the terrible shaking of the house and bed. The wind entire-Iv fiript the thatch from the Southfide of the largest barn, destroyed part of the cow-house, just touched the ridge of another barn, and went off due North. At about 300 yards from the house it passed between two large oak trees, whose arms nearly met, and twisting off their inner arms and branches, carried some of them across an adjoining meadow. These trees plainly discovered the breadth of the column of air, which was about 21 yards. At the distance of 200 yards farther, it met with some tall elms, and tore off many of their branches; but its force feemed to be confiderably abated there. Some of the thatch was carried almost to Pleshy, which is about two measured miles from

Friburg in Brifgau, July 30. We have received the melancholy news that the famous abby of Saint Blaife, belonging to the Benedictines, fituate in the black forest, nine leagues from hence,

was burnt down the 24th inflant, together with the church, castle, and other buildings, belonging to it. This fine building has not been erected above 30 years; and from some circumstances, it is supposed to have been set on fire by incendiaries.

The royal hospital of Greenwich, in Jamaica, suddenly took fire on the 12th of last month, supposed by lightning, and in a few hours was reduced to a heap of ruins, bassling the utmost efforts of his majesty's seamen, encouraged by the presence of the admiral, to save it.

Extract of a letter from Corte,

"On the 21st of this month an English frigate arrived in the harbour of ifle Rouge: she came from Portsmouth, and made the voyage in 20 days. As foon as the cast anchor, the captain and two other officers landed, and without flopping a moment, repaired to general Paoli. It is thought that they are charged with fome very important commission. As foon as the French knew of the arrival of this ship, they fent a xebeque to enquire what errand she was come upon; but we do not yet know what anfwer they received."

A letter from Petersburgh, dated July 29, fays, "the empress is going to erect an equestrian statue in honour of the emperor Peter the Great. The sieur Betzki is to have the direction of it; and all architects and other intelligent persons are invited, with a promise of rewards proportioned to their merit, to give the academy their advice with regard to decorations, inscriptions, &c. applica-

ble to the subject."

Extract of a letter from Moira, in Ireland, Aug 10.

"A melancholy accident happened at Balenderry last Wednesday; Mr. Thomas Higginson, with his brother and a carpenter, were all suffocated in a well at his father's. Something went wrong in the pump, and they opened a hole at the top to get down a ladder: Mr. Thomas Higginson went down first, and had not been many feet in till he gave a shout, and fell into the water; his brother ran to his affiftance, and fell likewife; then the carpenter, who was to have mended the pump, and he met the same fate. Old Mr. Higginson then attempted to go down, but was pulled up by his hair, or he would have perished likewise. They then tied a rope about another person, and let him down, who also fell; but being immediately pulled up, he recovered, though feeming dead for half an hour."

Extract of a letter from Paris,

July 25.

" The bishop of Avranches being resolved to make a general vifitation throughout his diocese, he published a mandate, by which he gave notice thereof to all parish priests, and other ecclesiastics, ordering them at the fame to make out lists of the number of inhabitants in every parish of the diocese; and also to give him information under hand concerning fuch persons, whether churchmen or laymen, as lead a scandalous life, neglect their Christian duty, are involved in law-fuits, bear malice against their neighbours, and, in short, whose conduct is censureable. We are perfuaded that the prelate's intention is to introduce

a reformation of manners, and confequently very laudable; but as such a novelty might give rise to prosecutions, furnish the parish priests with an opportunity to avenge their private quarrels, lock up the secrets of families in the bishop's office, and therefore would look like an inquisition, the parliament of Rouen has thought proper to suppress this mandate, by an arret issued the 11th of this month."

Extract of a letter from Portsmouth, August 25.

" On Wednesday evening her royal highness the princess dowager of Wales, and the two princes of Saxe-Gotha, arrived at commissioner Hayes's in the dockyard in perfect health. Her royal highness has been aboard his majesty's ship Achilles in the harbour, and was faluted on going on board, and at coming off, and likewise faluted from the guardships in the harbour, in a little tour round most of them in a twelve-oar'd barge. Her royal highness and the two princes will fet out from hence, we are informed, for Kew, on Saturday morning. Her royal highness has not as yet been in the garrifon."

On the 24th of last month, the French hoisied their standard on the walls of Bastia, as a signal of having taken possession of that capital for his most Christian majesty.—General Paoli, on this event, declared, that he would dress himself like the meanest soldier, and to preserve the freedom and independency of his country.

dependency of his country.

The parliament of Tholouse in France issued an arret, by which

all persons under its jurisdiction

are forbidden to conform to any judgements passed by the great council, under severe penalties. This is, probably, an effort to clude the sentence of the great council in the affair of the Calas samily, by which the infamous proceedings of the parliament of Tholouse are severely censured.

During the course of the last and present month, the storms of lightning, thunder and rain, have been so fatal in many parts of this island, that no man living can remember the like. Among a thoufand others, the following can

only be recorded.

At Leyland in Lancashire, on the 26th of July, the thunder rolled incessantly for four hours, and the rain that accompanied it fwelled the Malding brook fo rapidly, that it bore down the bridge, carried away four houses, and in one the inhabitants, and with them such a quantity of hay and corn as must ruin many families; at Arle, in Gloucestershire, a slash of lightning fet fire to a large barn, and burnt it with every thing in it to the ground; the fudden inundations that followed the thunder in Herefordshire and Monmouthshire half ruined the country; and the torrents that poured from the mountains of Glamorganshire swept away men, women, and cattle, ruined the crops upon the ground, and laid under water the little town of Neath; in Caermarthenshire, five days incessant rains caused such an inundation, that the fine vales through which the river Tivey winds its course, were almost wholly overflowed, the country rendered impassable, and the devastation incredible; the fine crops that promifed plenty are destroyed, and

the hopes of the poor in that fruitful county frustrated; in Somerfetshire, the lightning and thunder was more dreadful, but the rains less destructive, some oxen were killed in the fields, and fome barns fet on fire; in Wiltshire. fome houses were set on fire, and burnt to the ground, and one woman struck dead under a tree; at Tottenham High Cross, a child was struck dead by the lightning in its mother's lap in a stagecoach; in the isle of Man, the lightning fell on a clergyman's house, and struck his wife dead in her bed, the thunder was dreadful beyond description; in Cheshire, the floods changed the face of the country, having borne down hedges, fences, bridges, and every earthly thing; in Scotland, befides what has been already related, the country from Inverness to Perth has been flooded in an uncommon manner; at Norwich, the lightning fell on one of the city towers, killed a boy, and threw down part of the battlements; in Hertfordshire, the inundations have been very alarming, and attended with incredible damage to the corn and hay; at Liverpool, the most dreadful thunder, lightning and rains that ever was remembered.

There is now living at Noke in Oxfordshire one Thomas King, formerly a thresher, but who at present subsists on charity, and is of the very great age of 129.

SEPTEMBER.

The heaviest rain fell at 1st. London and the country round it that has been known in the memory of man. It began in the evening, and in a few hours the waters poured down Highgate Hill with incredible violence; the common shores in several parts of the town not being able to carry off the torrent, the adjacent houses were filled almost to the first floors: immense damage was done, and as it happened in the night, many were awakened from fleep in the greatest consternation. pentine river in Hyde-park rose so high, that it forced down a part of the wall, and poured with fuch violence upon Knightsbridge, that the inhabitants expected the whole town to be overflowed; the canal in St. James's park rose higher than ever was known; in short, no man living remembers fo much rain to fall in fo short a time. About Bagnigge Wells the waters rose eight feet perpendicular height, though the rain did not continue to fall

with violence more than eight hours.

Several people in Cold Bath fields, Mutton-lane, Peter-fireet, and those parts, suffained great damage; some publicans had several butts of beer carried out of their cellars; three oxen and several hogs were carried away by the drain, and drowned; and in Mutton-lane, and the lower part of Hockley in the Hole, the inhabitants were obliged to quit their ground-floors, and go up stairs, for fear of being drowned.

Many butts of beer were carried

Many butts of beer were carried away from the cellar at the Cheshire Cheese at Mount Pleasant, and conveyed quite to Fleetditch, where

they were taken out.

The heavy rain fwelled the water in the canal in St. James'spark fo high, that it flowed up to the garden-wall belonging to the treasury, and was so deep that foot passengers could not pass that way; the lower parts of some gentlemen's houses near the treasury were overflowed, as was the wilderness; the centinel placed near the little gate leading into Dukeffreet was obliged to quit his box; the cellars in several parts of Westminster were filled with water, and confiderable damage was done.

The offices under the earl of Suffolk's house had four feet water in them; all that fide of St. James's-park, the Birdcage-walk, &c. were overflowed.

Upwards of forty finall craft, on the river below bridge, were funk, drove on fhore, or bulged, by the violence of the florm; and a collier in Long-reach was drove from her anchors, and beat her keel off: feveral ships also received damage by running foul of each other among the teers at the fwinging chains.

The late duke of Cumberland's fine water-works, in Windforforest, were intirely destroyed; feveral persons were drowned in different places, as well as horses,

oxen, and hogs.

The storm was so violent at Bruton, Wilts, that it swelled the river three seet perpendicular within five minutes; several people had great part of the houshold goods, which were below stairs, carried away with the torrent; many walls are thrown down, as is part of the town bridge, and the bridge at West-end is blown up, so that there is no passing.

His Danish majetty, with 120 persons in his retinue, arrived at York, where the lord mayor and corporation had prepared to receive and entertain him in a splendid manner; but his majesty politely declined all formality, vifited the minster, and other public buildings, and next day fet out on his return to London: in his way to which he visited Manchester, where he was particularly gratified by viewing the stupendous works of the duke of Bridgewater, at which he expressed both astonishment and pleasure.

At the anniversary meeting of the sons of the clergy-held at Newcasse, the collection amounted to

322 l. and fome shillings.

There is a windmill near Sir Charles Peers's, at Bromley in Kent, which being in a disagreeable situation, Sir Charles is now moving the whole building together, by means of capsterns. It is to be removed 400 yards, and proceeds at the rate of four yards a day.

Yesterday, at a numerous extraordinary meeting of the royal society, his Danish majesty was by ballot unanimousty elected a fellow of the same.

On Monday last Mr. Richards, of Hedgeland in Berkshire, opened a fow that died suddenly, when 38 pigs were found in the body, one of which had fix legs.

Tuesday was held at Bristol the annual meeting of the clergy, and sons of the clergy, when the collection at the cathedral, and the taylors-hall, amounted to 207 l.

This night, about half an hour past nine o'clock, his 4th. Danish majesty arrived at St. James's from his tour in the North, but last from Derby. His majesty travelled, in the course of seven days, near 600 miles.

They write from Copenhagen, that the equestrian statue of the late king, which the India company have been at the expence of, was placed on its pedestal the 15th instant. Count Moltke had the honour of entertaining the reigning and dowager queens upon this occasion; their majesties having been pleased to see the ceremony of removing and placing the statue, from the hotel of that nobleman, opposite to which the statue is fixed.

We hear that the damage done by the late heavy rain to the inhabitants about Windfor great park is, upon a proper furvey, estimated at 9000 l. and that it will cost 3000 l. to repair the damage done within the said park.

The guards were removed from the king's-bench prison, 9th. after having been quartered there ever fince the latter end of April last. On

On Saturday, after the opera, the king of Denmark, attended by the principal noblemen who compose his fuite, went to take a view of Mrs. Cornelys's house in Sohofquare. Several of the foreign ministers, other foreigners of distinction, and of the English nobility, were also present, to meet his majesty on the occasion. Mrs. Cornelys had put the apartments in all the possible order that a few hours notice would admit of, and the whole were fplendidly illuminated with upwards of 2000 wax lights. The moment the king entered the grand room, the music (consisting of French horns, clarinets, bassoons, &c.) began playing, and his majesty seemed very much pleased at the agreeable manner of his reception. Dancing was proposed; the king opened the ball with the ducheis of Ancaster, and named the fecond minuet with the countefs of Harrington: the minuets were fucceeded by English country-dances, and those by the French cotillons. The company then withdrew to tea, &c. Amongst the persons of high rank, who were present on this occafion, were the prince and princess of Masserano; the princess Barbarigo; their excellencies the Prussian, Danish, Swedish, and Venetian minifters; their graces the duke and duchefs of Ancaster, and their son, the marquis of Lindsay; the countels of Harrington, and her daughters, lady Bell and lady Harriet Stanhope; lady Grosvenor; lady Sondes; lady Jane Scott; the earl of Huntingdon; earl of March; the Russian general Filosofow, &c.

A most magnificent enter-12th. tainment was given to the king of Denmark, at Sion-house, by the duke and duchess of Northumberland. An inexpressible variety of emblematical devices were illuminated with more than 15,000 lamps; and the temple erected in the inner court was ornamented with transparent paintings, that had a very happy effect. Their royal highnesses the princess Amelia, the dukes of Gloafafter and Cumberland, with more than 200 of the principal nobility, were present upon this occasion, who vied with each other in shewing their respect to the royal guest.

This day the fessions ended at the Old Baily; at this fession nine have been capitally convicted; thirty-four were ordered to be transported for seven years, and one for fourteen years; fix were branded in the hand; nine privately whipped, and one to be publicly whipped in Tower-street: twentyfeven were discharged for want of

profecution.

Among the prisoners capitally convicted, were Richard Holt, for publishing a bill of exchange for the payment of 101, directed to Henton Brown and co. bankers, with intent to defraud mess. Town and Burdank, haberdashers, in Cannonftreet: and Richard Slocombe, for personating Richard Slocombe his father, and transferring 50l. of the new South-sea annuities, his father's property.

The father of this unhappy young man had no hand in the profecution. nor did he appear at the trial. He was detected by chance, by one of the clerk's, who had been acquainted with the father. The circumstances were such as greatly excited compassion; he said at the trial, that the gool flock, entered in the books in his father's name, was a legacy left to himfelf by an aunt; and that

he thought he was transferring his own property; that, if he intended a frand, he might as well have transferred the whole 500l.

At a meeting of the three choirs at Hereford, the collection for the widows and orphans of the clergy exceeded 450l, the largest collection

ever made.

A very grand entertain-19th. ment was given by their maiesties to the king of Denmark, at the queen's palace, at which the princess dowager of Wales, the duke of Gloucester, and a great number of the nobility were present. There were 170 covers in the entertainment; afterwards there was a ball. His Danish majesty went to the queen's palace at half an hour past feven o'clock. The ball was opened about nine o'clock, by the king of Denmark and the queen; after which his British majesty danced a minuet with the duchess of Ancaster. Country-dances then commenced; and about eleven their majesties and the nobility withdrew to partake of the elegant entertainment provided: foon after twelve, country-dances recommenced, and were continued till half an hour past four o'clock; when the king of Denmark withdrew, as did their majesties and the nobility.

Col. Brudenell was master of the ceremonies at the above grand ball

and entertainment.

On Friday morning, at half an hour after five, a fire broke out at Mr. Wright's, hatter, in Catharine-fireet in the Strand, which intirely confumed that house, with the Fountain tavern; also burned the infide of the White-hart alchouse, and of the Black swan alchouse in Exeter-fireet, and destroyed a back-house. The house of Mr. Crocket, peruke-

maker, in Catharine-street, and Mr. Smith's, a cooper, in Exeter-street, were damaged. The fire was discovered by a fervant-maid at the Fountain tavern, and she had just time to alarm the family, to prevent their perishing in the flames. The mistress of the Fountain with difficulty faved her children; the servants lost all their apparel. Mr. Wright's furniture and stock in trade were confumed, as was most of that of the Fountain tavern. A party of foldiers was fent from the Savoy, to prevent the mob from plundering the sufferers.

By letters from Great Marlow, in the county of Bucks, by Monday's post, we are informed of great losses sustained by the inhabitants, from the overflowing of the river Thames by the late heavy rains, and that the navigation of the river is stopped, the Thames being then above a mile

over by the stood.

The banks of the river are at prefent so much overflowed in Berkshire, that the West-country barges cannot come to London.

A few days ago farmer Haskins, of Highworth, in Wiltshire, fold four rams to a gentleman of Ireland, so remarkably large and sine as to

produce him 70 guineas.

On the 29th of last month, the king of Denmark visited, en passant, the university of Cambridge, in his riding dress and boots, being received by the officers in their scarlet robes; after which the vice-chancellor supped with the king at his inn. From thence he went to Tadcaster, Wentworth-castle, York, Leeds, Grimsthorpe, Burleigh, Newark, Derby, Chatsworth, Liverpool, Manchester, the cuke of Bridgewater's canal, Leicester, Harborough, &c. and arrived in London on the

5th. He fince fet out on another tour, and on the 17th arrived at Oxford, about twelve o'clock; and was infantly waited upon by the rev. Dr. Durell, the vice-chancellor, with the compliments of the univerfity, and to know his majesty's pleasure: soon after which the vicechancellor returned to St. Mary's church, where the heads of colleges, doctors, professors, and other members of the university, in their proper habits, were affembled; upon which it was made known that the king had fignified his intention of accepting a degree from the univerfity. From St. Mary's the vicechancellor, heads of houses, &c. went in procession, attended by the beadles and other officers of the university, and conducted the king and his retinue to Queen's college, All-Souls, Radcliffe library, public fchools, picture gallery, and Bodleian library; afterwards to Wadham, St. John's, and Trinity college; from thence, through the printing-house, to the divinity school, when his majesty and his nobles were habited, and proceeded to the theatre, where, in full convocation, the king had the honorary degree of doctor in civil law conferred upon him, to which he was presented by Dr. Vansittart, the regius professor of law : his Danish majesty being then placed in the chancellor's feat, his nobles were presented with the like degree by the same gentleman, who having been conducted to their feats, the phyfician of his majesty's houshold had the honorary degree of doctor in physic conferred upon him, to which he was presented by the regius professor in physic.

His majetty entered the theatre amidst the acclamations of a nu-

merous and genteel company, and appeared highly pleased with the reception, very politely bowing as he advanced. After leaving the theatre, his majesty was conducted to Christ Church, and the rest of the colleges on the fouth side of the city, and appeared to be greatly struck with the elegance of the buildings, statues, pictures, &c. &c. expressing the highest satisfaction.

From Oxford he vifited Ditchley-park, Blenheim, Woodflock, Buckingham, and lord Temple's at Stow. He has fince vifited Hampton-court palace, and Windfor cafile; but his journeyings are fo rapid, and his flay at places fo fhort, that, if he is not a youth of more than common talents, he must have a very confused idea of what he sees. His person and behaviour, however, have so many charms, that the people, every-where, high and low, seem captivated with him to a very high

degree.

His Danish majesty having previously condescended 23d. to dine with the lord-mayor, Sir Robert Ladbroke, knt. locum tenens (the right hon, the lord-mayor being indisposed), together with the aldermen and sheriffs, attended by the city-officers, fet out from Guildhall for the Three Cranes, the locum tenens being in the state-coach, accompanied by deputy John Paterfon, esq; (who was defired to act as interpreter on this occasion), and the aldermen and sheriffs in their respective carriages. At eleven o'clock, they embarked on board the city state barge, the streamers Hying, a felect band of water music playing in the stern, the principal livery companies attending in their respective barges. At the flairs leading to

New-

New-palace-yard, a detachment of grenadiers of the hon. artillery company attended, to receive the locum tenens, aldermen, and sheriffs, who, upon notice of his Danish majesty's approach, immediately landed to receive and conduct him on board. As soon as his Danish majesty entered the barge he was faluted by several pieces of cannon, and the joyful acclamations of the several livery companies, and a vast sur-

rounding multitude.

The locum tenens, in order to give his majesty a more compleat view of the cities of London and Westminster, and of the river and the feveral bridges thereon (which as well as the river itself, and the shore on both fides, were crouded with innumerable spectators), ordered the state barge to take a circuit as far as Lambeth, from whence she was steered down as far as to the steelyard, through the center arch of Westminster-bridge, and thence up to Temple-stairs, his majesty being faluted at the new bridge, both at his going and returning through the great arch, by fifes and drums, and the shouts of the several workmen above, and French horns underneath.

During the course of this grand procession on the water, his majesty frequently expressed himself highly pleased, and his admiration of the several great and beautiful objects round him; and sometimes condescended to come forward in order to gratify the curiofity of the people, who eagerly sought to get a fight of his royal person, though at the hazard of their lives.

At the Temple, his majefty (being landed on a platform creeted and matted on purpose, and under an awning covered with blue cloth) was

there received by some of the benchers of both societies, and conducted to the Middle-Temple hall, where an elegant collation had been provided for him.

His majesty, after taking some refreshment, and thanking the two focieties for their polite reception and entertainment, was conducted to the city flate coach, in which his majesty took his feat on the right hand of the locum tenens, being accompanied in the coach by his excellency count Bernfdorff and Mr. deputy Patterson, attended by the fword and mace; and followed by nine noblemen of his majesty's retinue, and by the aldermen and sheriffs in a long train of carriages. From the Temple, his majefty (preceded by the artillery company, and worshipful company of goldsmiths, the city marshals on horseback, and the rest of the city officers on foot), was conducted to the Manfion-house; the feveral streets through which his majesty passed, viz. Fleet-street, Ludgate-hill, and Ludgate-street, St. Paul's church-yard, Cheapfide, and the Poultry, being crouded with an innumerable populace, while the windows and tops of houses were equally crouded with spectators of both fexes, whose acclamations, together with the ringing of bells, and the shouts of the multitude, loudly expressed their joy at his majesty's presence; his majesty expresfing his furprize at the populousness of this city, and his fatisfaction at the kindness of the citizens.

At the manfion-house, his majesty was received by the committee (appointed to manage the entertainment), in their mazarine gowns; who, with white wands, ushered his majesty into the great parlour, where, after he had rested himself a few mi-

nutes.

nutes, Mr. common ferjeant (in the absence of Mr. recorder) made him the city's compliments, in the sollowing words:

" Most illustrious prince,

"The lord-mayor, aldermen, and commons of the city of London, humbly beg leave to express their grateful fense of your very obliging condescention, in honouring them with your presence at the mansion

of their chief magistrate.

"The many endearing ties which happily connect you, fir, with our most gracious sovereign, justly entitle you to the respect and veneration of all his majesty's faithful subjects. But your affability, and other princely virtues, fo eminently displayed during the whole course of your residence amongst us, have, in a particular manner, charmed the citizens of London; who reflect with admiration on your early and uncommon thirst of knowledge, and your indefatigable pursuit of it by travel and observation; the happy fruits of which, they doubt not, will be long employed and acknowledged within the whole extent of your influence and command.

"Permit us, fir, to express our earnest wishes, that your personal intercourse with our most amiable monarch may tend to encrease and perpetuate a friendship so essential to the protestant interest in general, and so likely to promote the power, happiness, and prosperity, of the British and Danish nations; and that the citizens of London, in particular, may ever be honoured with a share of your remembrance and re-

gard."

To this compliment his majesty was pleased to return a most polite answer, in the Danish language; which, by his majesty's permission,

VOL. XI.

was interpreted to the company by Mr. Deputy Paterson, as follows:

" Gentlemen,

"I am highly sensible of the kindness of your expressions to me; I desire you will accept my best thanks in return, and be fully persuaded, that I can never forget the affection which the British nation is pleased to shew me, and that I shall always be disposed to prove my grateful sense of it to them, and in particular to you, gentlemen, and this great, celebrated, and flourishing city which you govern."

Upon notice that the dinner was ferved, his majesty, with the locum tenens on his left, was conducted by the committee into the Egyptian hall; where his majesty condescended to proceed quite round, that the ladies (who made a most brilliant appearance in the galleries) might have a full view of his royal person; and all the gentlemen of the common council below, an opportunity of personally paying him their re-

spects.

His majefty being feated in a chair of flate, on the right hand of the locum tenens, at a table placed upon an elevation across the upper end of the hall, with his noble attendants on the right, and the aldermen above the chair on the left, was faluted by a band of above 40 of the best performers, in an orchestra fronting his majesty's table.

During the dinner, the following toaffs were drunk, being proclaimed

by found of trumpet, viz.

1. The king.

2. The queen, prince of Wales, and royal family.

3. His majesty of Denmark and

Norway.

4. The queen and royal family of Denmark.

[M] 5. Profpe-

5. Prosperity to the kingdoms of

Denmark and Norway.

After which his majesty was pleased to propose the following toasts, which were proclaimed in the same manner, viz.

1. Prosperity to the British nation.

2. Prosperity to the city of London.

Mr. deputy Paterson had the honour to attend his majesty as interpreter. His majesty, through him, repeatedly expressing to the locum tenens, how much he admired the grandeur of the Egyptian hall, the brilliancy of the illuminations round it, the magnificence of the dinner, the excellence of the music, and the good order and decorum of the whole entertainment.

After dinner, his majesty was reconducted into the great parlour, where he was presented with tea and coffee, and entertained with solos on different instruments, by several ca-

pital performers.

At eight, his majesty and his retinue, after taking leave of the locum tenens and the corporation, were ushered to their coaches, the committee going before his majesty with wax-lights. His majesty then returned to his apartment in St. James's palace, amidst the same crowd and acclamations as before, with the addition of illuminations in almost every window, that the people might have the pleasure of seeing his majesty as long as possible.

The disposition of the lights (at least 2000), the arrangements of the tables, the erection of the temporary orchestra, and the whole of the ornamenting of the Egyptian hall, were executed with the utmost propriety and elegance, under the direction of Mr. George Dance, clerk

to the city works.

The bill of fare at the king of Denmark's table was as follows:

The king of Denmark's table at St. James's is at the expence of the king of Great Britain. Besides inferior ones, there are two principal tables; that of his Danish majesty is noble; the desert is elegant and superb; and the whole daily cost is estimated, we hear, at 84 l. (exclusive of wines) comprehending not the dinner alone, but every meal.

Dublin, Sept. 6. On Sunday his grace the duke of Bedford and the right honourable Richard Rigby arrived from Parkgate. His grace has been complimented on his arrival by a number of persons of the first distinction. We hear that his grace will be installed chancellor of our university

on Friday next.

A letter from Rome, dated August 24, says, "We still experience unheard-of hot weather. The great drought produces an absolute scarcity of herbs, pulse, and many of the necessaries of life. We have every thing to fear for our vines. The heat is so ardent, that it hath occasioned fires to break out in some forests and harvest-fields."

A Sicilian lady at Palermo having been feverely reprimanded by her mother-in-law, for some irregularities in her conduct, which her husband complained of, refented the matter fo violently, that she went the next day to her mother-in-law's bed, while the was asleep, and cut her throat. Seized then with horror at her crime, she fainted away at the bed's fide, in which condition she was found there, and conducted to prison. The council of Sicily have condemned her to have her head cut off; and it is supposed she will soon undergo this punishment, notwithstanding the great solicitations that are making for her, at court, by fome of her relations.

Drefden, September 7. military order, just instituted here, is not, as was first designed by the administrator, the restoration of the order of St. Henry, but a new distinction of the same order in his own name. The ceremony of this new institution was performed on Sunday last by his royal highness, who created twenty-fix knights, among whom were his brother Charles, and the marshal chevalier de Saxe. The chancellor began the ceremony by a short discourse, fetting forth the motives that had induced the prince administrator to institute this order: he said,

[M 2] "that

" that his roval highness having had in the late war, when he commanded the Saxon troops, an opportunity of observing the valour and merit of his officers, was glad to give them a public testimony of his approbation; that having, with inceffant labour, established a respectable army in Saxony, after accomplishing to necessary a meafure for the prefervation of the country, he embraced the earliest opportunity of inflituting a new military order (of which his nephew the elector was grand matter), whereby he might reward the military merit of some whose valour he had been witness to, and the indefatigable zeal of others who had affilted him in furmounting the obstacles he had met with in augmenting the army, and finding funds for its maintenance; that, at the same time, this order, with the penfions annexed to it, was intended as an incentive to emulation in military men, who might certainly promite themselves those distinguishing marks, cording as they thould merit them, by excelling in knowledge and spirited behaviour in their proiction."

The cross is oftangular, enamelled in white, and nearly refembling that of Malta, with a foutcheon in the middle. On one fide is feen St. Henry in his imperial robes, and round his name the following infcription: "HAVERIVE PRINCEPS POL. DYX ET ADMINISTRATOR SAX. INSTITUTT, 1768." On the reverse are the swords of Saxony, incircled with a laurel wreath, and the following motto: "VIRTUTI IN BELLO."

An epidemical diffemper having broke out among the horned cattle in some parishes of the Lyonnois and the Dauphiny, the inhabitants applied for affiftance to the Ecole royale Veterinaire, who fent fome students, by whole application, out of 378 beafts which had the distemper in the parish of Marennes, only two died. They had loft 22 beatts there, before the arrival of the fieur Joli, one of the students. A list is published of 64 persons whose cattle have been cured or kept alive in different parithes by the skill of the above gentleman, and other fludents.

Constantinople, August 17. A fire broke out the 6th instant in the palace of the grand vizir, by which that magnificent building was entirely consumed, and the greatest part of the rich surniture in it. That prime minister's spouse with great difficulty escaped the

Bames.

The quantity of rice exported from Charles-town, from the 1st of November last to this day, is 111,203 barrels; and the price now is 31. 10s. per cwt.

Last Friday a water-spout fell at Langton Herrings, in the county of Dorset, and uncovered seven houses, and three barns. The same water was seen to rise out of the

sea near Abbottbury.

A grand entertainment was provided, by order of 24th, his majerity, at Richmond-lodge, for the king of Denmark. A most elegant thructure was erected, in the centre of which was a large triumphal arch, about forty feet high, of the Grecian order, decorated with figures, trophies, and other embellithments; from which, on each fide, was a range of statues, supporting sessions of slow-

ers, in proper colours: at the termination on each fide, were two lesser arches, through which appeared emblematical pictures, alluding to the arts and sciences, the whole in extent 200 feet. These were all transparencies, with fuch outfide illuminations as the defign would admit. The great arch led into a very fuperb inclofed pavilion, in the centre of which was a dome, supported by eight columns, wreathed with flowers, and ornamented with gold; from the centre the plan extended four ways, with apartments within for a band of music, sideboards, &c. the whole decorated with elegant paintings. At one end was a passage to another room, which was painted and ornamented likewife on three fides, the other being all glazed, for seeing the fireworks, which were some of the finest ever exhibited. The entertainment was in every respect equal to the magnificence of the structure; and their majesties, and the nobility present, were pleased to express their entire satisfaction.

When the king of Den-26th. mark was in the Templehall on Friday last, James West, esq. presented to his majesty an ancient medal, that was struck on occasion of a marriage of a prince of Denmark with one of the royal family of England, which his majesty was pleased to accept, and to fay that he had never scen one

of them.

On the 2d instant, the last arch of the bridge over the river Tees at Stockton was finished. The fpan of the middle arch is feventy-two feet, that of the two adjoining arches fixty feet, and the other two forty-four feet each.

The whole of this work is extremely well executed.

Of the ten archbishops of Canterbury fince the Restoration, it appears, that Drs. Potter and Secker died at the age of 75, Dr. Sancroft at 77, Dr. Tennison at 78, Drs. Sheldon and Wake at 79, and Dr. Juxon at 81; of the other three, Dr. Hutton died at about 60, Dr. Tillotson at 64, and Dr.

Herring at 65.

We are informed from Rome, that a fire broke out on the 30th ult. in the library of the Vatican, which began in the head librarian's apartment, and destroyed all his books and papers, together with fome valuable works which were preparing for the press. The fame letters add, that the church of the Trinitarians at Montenero, near the palace of the French ambassador, also lately took fire, and that the whole edifice, with all its ornaments, &c. was confumed, except the glory and the host, which were preserved from the flames by a priest, at the utmost hazard of his life.

They write from Naples, that the excessive drought, which they have had the whole fummer, has raised provisions to such an exorbitant price as was hardly ever

before known there.

They also advise, that the council of marine there, have resolved, agreeable to his majesty's pleasure, to suppress all their galleys, and to apply the money, requisite for their construction and support, in building ships of greater utility.

A courier has been dispatched from the court of Rome to their imperial majesties, to know whether they countenance the conduct and

[M3]

pretentions of the duke of Mode-

na upon the Ferrareze.

Letters from Wetzlar mention the death of the princess Eleonore-Bernardine, landgravess by birth of Hesse Reinfolds, and countess dowager of Bentheim, aged 73.

John Taylor, of Pencoyd, in the county of Hereford, was lately recovered of his frenzy, in the hospital of Bethlem, and discharged, after being one year under the care of that noble charity. What is remarkable, he had a particular antipathy to his teeth, and during the time of his infanity would petition any person to draw them, or rather pull them wout with pincers, or any other instrument, not objecting to a hammer being exercised on his jaws for that purpose; when he was fent to Bethlem, he had only one remaining in his head, which he foon got rid of by the affiftance of one of his flighty companions, and from that time grew better every day in his intellects.

On Wednesday morn30th, ing, about half an hour
after ten, his Danish majesty, attended by three nobles, went in a
coach and four, from his apartments at St. James's, for Woolwich, being followed by four other
carriages with his attendants, to
see his majesty's ship the Denmark,
of 74 guns, launched at that place;
and, after viewing the warren,
dined with the commissioners, and
returned in the evening to St.

James's.

Yesterday his majesty was pleafed to honour the society of artists of Great Britain with his presence, at their room in Spring-gardens, to view an exhibition of pictures, &c. prepared for him, where he flaid a confiderable time, and expressed his satisfaction in the most obliging manner.

Extract of a letter from Dublin,

Sept. 12.65 16 Squad " Last Friday evening, after his grace the duke of Bedford was initalled chancellor of our university (when not only the provoit, fellows, students, &c. but the lord lieutenant, nobility, and gentry attended), a most elegant dinner was given by his grace, confifting of 250 dishes, and a most magnisicent defert: and this day he entertained the provost, fellows, profeffors, and students of the university. His grace intends to found two fellowships of sol, a year each, and to present the university, with the statue of queen Elizabeth (the founder), which is to be erected in the libraryfquare."

Another letter fays, "To the honour of his grace the duke of Bedford, chancellor of the university of Dublin, we hear the emoluments of that office will be folely appropriated towards founding a new college; one half for the study and revival of the antient Anglo-Saxon language; the other for erecting a magnificent elaboratory, for the better ascertaining and perfecting the knowledge of simples and minerals, natives of the kingdom of Ireland, and

other useful purposes."

His grace the duke of Bedford hath given 200 guineas, to be divided amongst the poor of the dif-

ferent parishes here.

At the above installation, the honourable Mr. Townshend, eldest for of his excellency the lord lieutenant, was admitted at this university.

There

There is now living, at his feat in Effex, fir Fleetwood Sheppard, (a friend of the late celebrated Mr. Prior), who is in perfect health, though at the age of 120 years.

And near Brampton in Cumberland, a woman named Margaret Foster, aged 136 years, and who has a daughter aged 104.

Married at the abbey-church at Bath, Mrs. Millard, tallow-chandler in Holloway, aged near 80, to her journeyman, aged about 25.

Died.] The late governor Stephenson of Bengal; this gentleman dying intestate, and without issue, his fortune, which is supposed to be upwards of 500.000 l. devolves

to his nephew.

At the feat of Thomas Blackhall, at Great Hafely, in the county of Oxford, efq. Mrs. Carter, aged 85. She first married George Blackall, of Great Hafely, in the faid county, efq. Afterwards Richard Carter, of Chilton, in the county of Bucks, efq. who died in 1755.

In the 81st year of his age, Mr. John Stede, upwards of fifty years prompter to the theatres royal in Lincoln's-inn-fields and Covent-

garden.

Aged 82, at his house at Mileend old town, Mr. George Thornton, formerly one of the greatest carcase butchers in London, and a contractor for serving the navy with oxen,

At Dulwich, aged near 102, Mr. Jacob Gorton, who had acquired a large fortune as a tallow chandler and foapmaker in Southwark.

Aged 92, Hugh Hency, esq. many years keeper of his majesty's

regalia in the tower.

At Hampstead, in an advanced ge, Mr. Peter Fletcher, who had

acquired upwards of twenty thoufand pounds in the business of a saleman in Holborn.

Mrs. Munden, a maiden lady,

aged 96.

At Pickley-hill, near Bishopaukland, Ralph How, aged 103, who retained his faculties perfect to the last.

Aged 73, at her house near the French Change, Soho, Mrs. Sarah Burchett, who had acquired a fortune of 10,000 l. by dealing in second-hand plate, laces, wearing-

apparel, &c.

At Gosport, Christopher Spiggett, aged 72 years. He was the oldest master cook in the navy. On board his majesty's ship Superb, in the year 1718, under fir George Byng, he had both his hands shot off at the wrifts by one thot, for which he enjoyed a pension of 121. 63. 8d. a year, upwards of 50 years. He was many years cook of the Royal William, but at his decease of the Worcester man of war. He was remarkable for his agility in using his stumps without any artificial affistance. He could play at cards, skittles, take snuff, help himfelf to drink, &c.

OCTOBER.

Her royal highness the princess dowager of Wales gave a grand entertainment last night, in honour of his Danish majesty, at Carlton-house; it consisted of three tables, one for their majesties, and the princess dowager of Wales; a second for the king of Denmark and sifty of the nobility; and the third for his royal highness the prince of Wales, and his attendants, &c.

The king of Denmark, with his fuite, went to Flamstead-house in

[M4] Greenwich-

Greenwich-park, on Saturday Jast: he was received by earl Morton, admiral Rodney, Sir Thomas Robinfon, general Honeywood, general Harvey, &c. After viewing with the greatest attention the many curious aftronomical inftruments, &c. he partook of a breakfast of fruit and tea. He went then to lady Catharine Pelham's house, and from thence into Greenwich hospital, and visited the great hall, chapel, wards, &c. of that magnificent structure: from thence he went to the admiral's apartment, where an elegant cold collation was provided; and his majesty and the company went back in the admiralty and navy barges to Whitehall, where they arrived about four.

Premiums this day commenced for the encouragement of herring boats, and for reducing the price of herrings for the benefit of the poor; by which, boats delivering not less than three last of herrings, each at one tide, at Billingsgate, at the rate of 121. 108. the last (about half a crown the 100 of fix fcore), with certificates that the same were in the sea 48 hours before their arrival, became entitled, the first boat that arrived, to 37 l. 10s. the fecond to 30 l. and the third to 221. 10s. To continue during the month of October.

A spot upon the sun is now discoverable by a common opera glass. Its longest diameter is nearly double that of Venus, as seen in 1760.

The archduchess, daughter to the emperor of Germany, and the archdukes Ferdinand and Maximilian, were inoculated by Dr. Ingenhouz, and are fince recovered, having received the infection in the most favourable manner. Dr. Ingenhouz came over to England to perfect himself in the practice, and was translating Dr. Franklin's new book of Electricity into Latin, when he was called upon to inoculate the imperial princesses.

At Laval, on the Lower Mayne, the most violent storm arose that ever was selt in that or any other part of the globe. It lasted only six minutes, and destroyed the fruits of the earth in five parishes. The pieces of ice, that fell in different forms, weighed from eight ounces to two pounds. The thunder and lightning that accompanied it were frightful.

This morning, at eleven o'clock, his Danish majesty, and the nobility his attendants, breakfasted in public at St. James's, on a grand cold collation of twenty-one dishes; and at half an hour after one his majesty and attendants set out for Newmarket.

His majesty's advocate general, Dr. Marriot, vice chan- 5th. cellor of Cambridge, together with the rev. Mr. Beadon, the public orator, had the honour of an audience of his Danish majesty, at Newmarket; and, in the name of the university, presented a letter of address and graces, for conferring the same degrees upon his majesty, and his attendants, as his majesty had been graciously pleased to accept at Oxford. The audience lasted about a quarter of an hour; and his majesty received the representatives of the university in the most respectful manner, and returned thanks for himself and his nobility, in terms greatly to the honour of the university.

His royal highness the duke 6th. of Cumberland arrived at his

house

house in Pall-mall, from the island of Minorca, in the Mediterranean. He landed at Portsmouth in the morning from on board the Venus, refreshed himself a little at the house of rear-admiral Sir John Moore, and then fet out immediately for London.

This morning between two and three o'clock, a fire broke out at Mr. Barnard's, leather-cutter, in Widegate-alley, Bishopsgate-street Without, whose house and workshop were confumed; and the flames communicated to the workshop of Mr. Decaux, painter in the fame alley. The fire was very violent; but, by the vigilance of the firemen, its progress was stopt without further damage.

The York stage-coach was unhappily overturned; there were fix passengers in it, among whom was major Weddel, who loft his · life; two ladies were taken out fpeechless, and without hope of recovery; the other three were much bruised. The major's fervant, who was upon the roof of the coach, had his thigh broke.

At a court of common 10th, council, it was resolved to prefent the king of Denmark with the freedom of London, in a gold box; and the lord mayor was defired to wait on his majesty, to know in what manner it should be

transmitted to him.

His majesty the king of Denmark gave a most superb masked ball at the Hay-market, at which were present the greatest number of nobility and gentry ever affembled together upon any occasion of the like nature. It is computed, that not less than 2500 persons of distinction were present. illuminations were particularly

fplendid and elegant. His Danish majesty went in a private manner to the theatre, accompanied only by his excellency count Holke, in his own coach and pair, and afterwards robed himself in masquerade in one of the dressing rooms. A little after ten, the noblemen of his majetty's retinue, followed in chairs, in their masquerade dresses. extremely rich and elegant. The ball was opened by his Danish majesty and the dutchess of Ancaster. The principal grotesque characters were the conjurer, the black, and the old woman; there was also a methodist preacher, a chimney fweeper, with his bag, shovel, and scraper, and a boar with a bull's head, all which were supported with great humour.

A noble duke had the misfortune to lose a particular fnuff-box in the crowd, on which was the king of France's picture, fet with diamonds, for which a reward of 50 guineas has fince been offered.

The king of Denmark had a numerous levee, at his a- 11th. partments at St. James's, at which were present most of the nobility. foreign ministers, and great officers of state, to take leave of his ma-

The first stone of the general infirmary at Leeds was laid, by Edwin Lascelles, esq. one of the knights of the shire for the county

of York.

The rev. Dr. Wetherell, vice chancellor of Oxford, together with Dr. Durell, principal of Hertford college, had the honour of being admitted to his Danish majesty at St. James's, and presented the diploma of his degree of doctor in civil law. His majesty was pleased to receive them very graci-

oully ;

ously; and expressed his entire fa- " Letters from Vienna bring an tisfaction with this additional mark of attention from the university. The seal annexed to the instrument was inclosed in a gold box of curious workmanship.

A gentleman in Coleraine has now living a parrot, which was fent over to his father, among other curiofities, from Jamaica, in the year 1694: it is of the maccaw kind, but through its great age has lost its former beautiful diversity of feathers, and is become

entirely grey.
The king of Denmark 12th. took leave of their majesties and all the royal family. His majesty, observing some poor people affembled under his window, in Cleveland Row, lifted up the fash, and threw a handful of gold a-

mong them.

This morning Robert Paterson and James Wright, for a robbery on the highway; Richard Holt, for forging a bill of exchange on Meilrs. Henton Brown and fon, and publishing the same; Richard Slocombe, for personating his father, and transferring sol. new S. S. annuities, part of his father's property, at the S. S. house, as if it had been his own; and Hannah Smith, for stealing 21 guineas from her mafter; were executed at Tyburn, pursuant to their sentences. Hannah Smith expressed great apprehensions for her foul, on account of her wicked life; she had lived in a variety of places, and had robbed in every one. Slocombe was only twenty-two years of age; his misfortune excited the compassion of the spectators of his untimely death. He behaved with decency, being fully convinced of the dangerous tendency of his crime.

account of a dreadful fire on the manor of Trautson in Bohemia, where near fix hundred houses and granaries have been reduced to ashes; and what renders the misfortune the more deplorable is, that all the product of the late harvest has been consumed, the poor inhabitants not being able to

fave any thing.

The king of Denmark having breakfasted, took a respectful leave of the earl of Hertford and lord Talbot, who attended him, and fet out for Dover, to embark on board the Mary yacht, for Calais, in his way to Paris. His majesty, before his departure, made a present to the right hon: the earl of Hertford, lord chamberlain, and to the right hon. lord Talbot, lord fleward, of a ring each, valued at 1500 l. and left 1000 guineas to be diftributed among the domestics at the king's palace.

The earl of Holderness, constable of Dover-castle, and warden of the Cinque ports, was appointed to attend his majesty till his em-

barkation.

We hear that Mr. Garrick had the honour of an interview with the king of Denmark on Wednefday morning last, when the king gave him a very elegant gold box. studded with diamonds, defiring him to receive it as a small mark of the regard he had for his extraordinary talents. 🦿

Yesterday, at a court of common council at Guildhall, the right hon, the lord mayor reported, That, in pursuance of the defire of that court, he had waited on the king of Denmark, to be acquainted with his majesty's pleafure in regard to the acceptance of the freedom of this city, and the manner it should be transmitted to him; that his Danish majesty had been pleased to honour the city with accepting the freedom, and desired it might be delivered to baron Dieden, his ambassador here, who would carefully transmit it to

his majesty.

His majesty the king of Denmark having signified his pleasure to take up his freedom in the worshipful company of goldsmiths, London, Mr. sheriff Halisax, the prime warden, immediately called a court of assistants for that purpose; and on Wednesday, it was unanimously ordered, that the freedom of the said company be most humbly presented to his majesty in a gold box of 150 guineas value.

His Danish majesty embarked on board the Mary yacht at Dover, and about in in the morning, set fail. He was faluted from the castle, forts, and vessels, at his departure; and the populace kept their eyes steadily fixed upon the vessel, till she was

out of fight.

The lady Agatha, from Hamburgh, was loft on the Yarmouth roads. Her cargo is valued at 50,000 l. Another ship came on shore at Eccles, without a soul on board, when the country people, like savages, fell to plundering the wreck of whatever they could carry away.

At Brenchley, Horfmonden, and the parishes adjacent, in Kent, a sudden inundation happened, when in less than an hour the waters in several rivulets rose to the second floors of some of the houses that were near them. The damage done to mills, meadows,

low grounds, and the contiguous roads, is hardly to be estimated.

The fessions ended at the Old Bailey, when John Me 21st. Cloud was found guilty of the wilful murder of John Stoddart, late keeper of Clerkenwell-Bridewell, and received sentence immediately to be executed on Monday next, and his body to be diffected and anatomized.—At this sessions eight received sentence of death; two to be transported for 14 years; 23 for seven years, and two to be whipped.

This morning John M⁵ Cloud, for the murder of 24th. William Stoddart, was executed at Tyburn, and his body delivered to the furgeons to be diffected. He was a young man, by trade a glazier, not quite twenty years of

age.

This day came into Gosport harbour, the Guadaloupe, the neat-est rigged and painted frigate in his majesty's navy. The men have been so trained, that all the ship's duty is done by beat of

drum.

The empress queen is going to iffue an ordinance, authorizing inoculation, according to the fieur Ingenhouz's method, throughout out the dominions of the house of Austria, and exhorting parents to have recourse of this expedient, for preserving their children from the dangers with which the natural small-pox is attended.

Dr. Ingenhouz, lately appointed physician to the imperial court, has engaged to go wherever their imperial majesties shall think proper to send him. It is thought he will soon repair to Florence to inoculate the grand duke of Tuscany; and as the queen of the

two Sicilies has not had the fmallpox, it is probable, if the king her fpoufe will confent to it, that he will likewife go to administer the same operation to her.

Extract of a letter from Paris.

An arret of the chamber of vacations of the 24th ult. condemns a hawker of books who has a wife and a numerous family, also a journeyman grocer, to the carcan for three successive days, then to be burnt in the hand, and afterwards fent to the gallies, and the hawker's wife to be confined in the prison of the hospital, for having fold "The man of forty crowns," published in the Mercury and other journals; also "Ericia, or The Vestal," a tragedy, which was to have been played by the French comedians; and " Christianity unveiled." The hard fate of this family greatly excites the compassion of the public."

An edict has been iffued at Rome, forbidding any altar to be raifed for the future, in the freets of that city, on the feaft of the holy Virgin, or on that of any

faint.

The young prince, Gustavus, of Sweden, has lately visited the copper mines of that kingdom, in the habit of a miner, and went down one of them, which was fifty toises deep, where he employed two

hours in examining it.

Madrid, September 13. The court has received a letter from capt. don Antonio Barcelo, by which we are informed, that he arrived the 2d instant at Barcelona with the division of three xebecks under his command, together with an Algerine corfair, which he took the 31st ult. between the island of Ibiza and that of Majorca. The

corfair was bored for 20 guns, and had 18 mounted; her crew confifted of 209 men, of whom 145 were taken prifoners, the reft having been killed in the engagement, which lasted near feven hours, during which the Algerines defended themselves with great vigour. The Spaniards had but one man killed and four wounded.

Letters, dated Sept. 18, have been received from Mr. Banks and Dr. Solander of the Museum, who lately set out on a voyage for the South-Seas, in the ship Endeavour: when these letters were dispatched, the ship was just going out of the Madeiras, and all in

good health.

Halifax, Nova-Scotia, July 30. We have advice from the island of St. John, that the superintendant and all the officers of government were fafe arrived at Charlotte-town. that the town plot was laid out, that the courts of justice were opened the 21st ult. with the usual formalities; that feveral fettlers had arrived on different parts of the island, and were well pleased with the foil, which is extremely fertile: oysters, lobsters, and flatfish, abound in every river; in fome there are falmon and trout. and on the North fide of the island there is plenty of cod-fish: partridges, ducks, and pigeons, also abound in their feafons: no fogs are feen there, but in general a serene air.

This morning, about two o'clock the Plymouth and 26th. Exeter stage-coach, which inns at the Bell-inn in Friday-street, was stopped in Belfond-lane, near Hounslow, by a highwayman, well mounted on a bay horse with a switch tail, who demanded the

money

money of the passengers, when the guard shot him dead with a carbine on the spot: he appears to be about 30 years of age, short in stature, but stout and well set, with a drab surrout coat on: he was carried to the Bell in the said lane, where he lies in order to be owned.

Lord Aberdour, now earl of Morton, attended at St. James's, and delivered to his majefty the enfigns of the order of the thiftle, with which his late father was invefted. A chapter of the order of the thiftle was then held, when his majefty was pleafed to inveft the marquis of Lothian with the enfigns of that most antient order, in the room of the late earl of Morton.

A coal meter's place, in the port of London, for 21 years, was fold for 6510 l. and a corn meter's

for 3300 l.

A very brisk action happened, between his majesty's cutter the Lord How, captain Cummins commander, and two smuggling vessels from France, manned with Irish, off Milford. The action began in the afternoon, and lasted till night, when the smugglers, under the favour of the darkness, and a brisk gale, made their escape.

Vienna, Oct. 1. On Monday last the empress queen gave a dinner, in the grand gallery of the castle of Schonburn, to fixty-five little boys and girls, who had been inoculated in the hospital of Meydling, prior to the inoculation of the archdukes and the archduchess Theresa: her majesty, and their royal highnesses the archdukes and the archduchesses waited on the children at table, and afterwards gave to each a crown of the value of two stories. Their pa-

rents were also entertained at another table in the castle; after which they were present at a German comedy; and at their return, musical instruments were sent to them, and they danced till night.

Paris, Oct. 21. The dearness of bread here being attributed to the monopolies of corn made by wealthy people under the pretence of exportation, it was moved, on Saturday last, in the chamber of vacations, to make enquiries for discovering the parties guilty; and at the same time the gentlemen of the law were ordered to give in their opinions, as yesterday, on this subject.

His Danish majesty, in order to encrease the commerce of his dominions, has declared the port of Gluckstadt a free port, and abolished all duties upon vessels which may pass the winter there, as well as all payments upon merchandize pas-

fing through that place.

By advices received from Corfica, we learn, that when the king of France's edict and ordinances, which contain certain promifes and menaces made to the Corficans, were fent the 27th of last month to Paoli, he convoked, the next day, at Oletta, an affembly of the natives; at which the above edicts, and the Paris Gazette of August 15, were torn and trampled under feet by all the chiefs; and, at the breaking up of the council, they cried out, with all their might, to the people, "War! War!"

Basseterre, in St. Christopher's, July 23. By accounts from St. Croix, we hear, that on Friday last the 15th instant, a most dreadful sire happened there. It is said to have begun on Mr. Manning's estate, and in a short time to have communicated to nine other estates, destroy-

ing

ing in its course all their works, and above 1000 acres of canes. It lasted from ten in the forenoon to sour in the afternoon, the wind blowing excessively hard all the time. The damage done cannot be justly ascertained; but is supposed to exceed 250,000l. sterling. One white woman is missing, supposed to have perished in the slames, but we do not hear of any negroes being lost.

A gentleman of large fortune, near Maidenhead in Berkshire, aged 76, was married to a fine young girl, to whom he stood godfather in the year 1750. She is his fourth wife, and he has several children twice the age of their mother-in-

law.

Died.] At Dunkirk, in an advanced age, col. Desmaretz, who had resided at that port, as first commissary of the court of England, ever since the last peace. He entered into the English service in the year 1709, and having served during the remainder of that war under the duke of Marlborough, he was employed in surveying the works of that place after the peace of Utrecht, in 1713.

At Paris, the 20th ult. M. Le Cat, doctor of physic, fellow of the royal fociety of London, and member of the academies of Petersburgh,

Madrid, Porto, and Berlin.

Near St. John's church, Westminster, Mrs. Churchill, mother of the late celebrated Mr. Charles Churchill, and likewise of miss Patty Churchill, who died on Thursday last; so that the mother and daughter now both lie dead in the same house.

On Friday last died, aged 102, at her house in Richmond-buildings, Soho, Mrs. Davis: she retained her memory to the last, and could read

the smallest print without spectacles, till within a week of her death.

Mrs. Sparrow, of Kenfington, aged ninety five. She was formerly the widow of John Moreton, efq; of Slaugham, in Suffex, from whose estate she enjoyed a jointure upwards of seventy years.

At his grandfon's house, in Horsleydown Fair street, capt. Samuel Urwin, aged 104, who had been many years a commander in the East Country trade, and had followed the sea till within these 12

years.

At Petworth, in Suffex, one Mary Prescott, aged 105, who had bore 37 children, most of whom are now living in good credit. Her death was occasioned at last by a cancer in her breast.

One Fraser, an invalid, in his majesty's royal hospital at Killmainham, near Dublin, aged upwards of 118 years. He served in all the campaigns made by the late king William, and was wounded in the trenches before Namur, at the siege of that place (where the king commanded in person), by a cannon ball, which carried away his right arm.

NOVEMBER.

Mr. Wilkes's address to the gentlemen, clergy, and 3d. freeholders of the county of Middlesex.

Gentlemen,

I cannot suppress the emotions of a grateful heart. I must pay you my best tribute of thanks for the many proofs of a noble and generous friendship, which you have continued to me in this prison for above fix months. I will not lament my past sufferings, nor even a

harsh

harsh and cruel sentence, because I find that your favour and protection are extended to me in proportion to the increase of the persecutions I undergo. Every day gives a fresh mark of your kindness and affection: I trust that I may add likewise, of my firmness in the cause, as well as steady attachment to my friends, the supporters of freedom, and the constitution of our native country.

The parliament being fummoned to meet the next week for the difpatch of business, I think it my duty to submit to you the particulars of my future conduct. I mean to petition the house of commons, as the grand inquest of the nation, in the full hope of a redress of all my grievances, which have arisen from various acts of arbitrary power exerted by the ministers, the illegalities respecting the two trials, and especially the alteration of the records. I have already lodged an appeal against the two sentences before the house of lords, as the supreme judicature of this kingdom; and I shall bring before their lordships the whole state of the legal proceedings, which I believe are no less erroneous and invalid, than those have already been declared to be which respected the outlawry. The meeting of parliament will suspend the important public cause against lord Halifax, which cannot be tried till the term following the next prorogation.

I look forward, gentlemen, to the happy moment of regaining my freedom, and of giving you in a British fenate the clearest demonstration that the principles of liberty have taken a deep root in my heart. You shall find me a faithful guardian of the civil and religious liberties of the people of England, strenuous and

unwearied in my endeavours to destroy all the remains of despotic power among our freeborn countrymen. I shall think it a glorious reward of my toils, if, in one instance only, a point of the utmost moment, grand juries may, through my efforts, recover the power and right given them by the principles of the constitution, which are at present entirely lost in the mode of proceeding by information, fo long, to the great grievance of the subject, practised both by the attorney-general and the judges of the court of king's bench. In this, and every other point of national liberty, I shall earnestly beg your affiftance. I hope at all times in public business to have the advantage of your counsels, to perfect the plan of fecuring and guarding the liberties of the freest nation in the world, against future attacks of wicked ministers, or even encroachments of the crown; which fecurity can only be obtained by the most wholesome laws and the wifest regulations, built on the firm basis of Magna Charta, the great preferver of the lives, freedom, and property of Englishmen. I am,

Gentlemen,
Under increasing obligations,
Your faithful and obedient
humble servant,
JOHN WILKES.

King's Bench Prison, Thursday, Nov. 3, 1768.

Letters from Stockholm fay, the royal college of physicians there, having sent to the house destined for inoculation an hundred children, between the ages of nine and fourteen, all of them have been inoculated, and had the small-pox, without the least accident. The principal members of the college have also inoculated their own children.

A young.

: A young woman, daughter to Mr. Benfon, near Rippon in Yorkthire, lately fell into a trance as the was eating her dinner: being put to bed; she continued as in a found fleep for five days; she then recovered, but in two days after relapfed, and continued as before three days longer. Though she received no nutriment while she was in a trance, each time of her awaking fhe was in good spirits, and without the least fymptom of weakness.

Being the first day of term, Mr. Bingley, bookfeller, furrendered himself in the court of king's bench (according to his recognizance which he had enteredinto), to record his appearance, and to have his bail discharged. Their lordships defired he would enter into a new recognizance, which was to answer interrogatories. This Mr. Bingley refused, saying, that his friends and the people of England in general had formed so dreadful an idea of interrogatories, that no perfon would be bail for him on fuch conditions. He was then informed by the court, that, if he could not find bail, he must stand committed. To which he replied, that he would fuffer a life of imprisonment sooner than take an oath to answer interrogatories, by which he might be the means of accusing himself; and that he was provided (either by himself or counsel) with arguments, which he humbly hoped their lordships would do him the favour to hear, against the process by attachment. He was answered, that to argue it was against the rules of the court and the laws of the land. The latter, Mr. Bingley affured their lordships, he was not satisfied of; for that he did not know, that the law of the land would oblige him on a criminal accusation to accuse himfelf; and, after about half an hour's debate between the court and Mr. Bingley, he was ordered into the custody of the marshal of the king'sbench prison.

This day his majesty went to the house of peers, and, having opened the parliament with the usual folemnity, made a most. gracious speech from the throne to both houses. The reader will see the speech, addresses, &c. in our

State Papers.

About seven o'clock in the evening, her majesty was taken in labour, of which notice was immediately fent to her royal highness the princess dowager of Wales, his grace the archbishop of Canterbury, the two secretaries of state, and the ladies of the bed-chamber, &c. who attended; when, at half an hour past eight, her majesty was safely delivered of a princess. Her majesty and the princess were yesterday as well as could be expected.

This day, a great number of the nobility attended at the queen's house, to enquire after her majesty's and the young princess's health, and were all entertained with cake and caudle.

Two messengers were sent away to the court of Mecklenburgh, and also to other courts, with dispatches, to notify the fafe delivery of her

majesty.

At feven o'clock in the evening, the two young princes of Mecklenburgh, brothers to her majesty, arrived at St. James's, from Germany, who were immediately conducted to the queen's house,

Private contributions have been raised among some gentlemen in Scotland, in behalf of Paoli, and a present of 32 pieces of ordnance

has been actually fent from thence to Corfica, at the expence of the subscribers.

Extract of a letter from Norwich.

"The price of leather having, in the space of about two years, risen to a degree before unknown; tanned hides, being about two years ago fold currently for 9s. 6d. the stone, are now advanced to the price of 14 s. 6d. nor can any person that does not buy large quantities have them at that extraordinary price, though their payment is prompt: the case with the calf skins is the same, in that time they are advanced from 18s. to 11. 6s. per stone. These are the grievances the manufacturers of leather at prefent labour under; and they are come to a refolution to request of their members, by a petition from themselves to parliament, for a redress in favour of the poor (the burthen upon whom they can hardly conceive) as well as themselves, that such remedies may be applied as they in their wisdom shall think fit, whether by the taking off the drawback, encouraging the importation, or fuch means as may be thought most proper.

Early in the morning it 11th. began to rain at Birmingham, and continued incessantly for 36 hours, which caused the greatest flood that has been remembered for 40 years in that neigh-

bourhood.

In the afternoon, about 12th. four o'clock, a melancholy catastrophe happened at the duke of Grafton's house, now building on Hayhill; while upwards of fifty men were at work within-fide of it, part of the inside partition walls VOL. XI.

fell down, and buried feveral of them in the ruins; those who escaped, began immediately to dig out their companions; and, after fome time, they took out nine men, two of whom were quite dead, others terribly bruised, and fome with their limbs broken: four of them were carried to the Middlesex hospital, and two to St.

George's hospital.

About one in the morning Mr. William Pimlot, of 14th. Symond's-inn, was murdered by a woman with whom he had formerly cohabited. On making fome disturbance in the inn, he got up to charge her with the watch, when she plunged a penknife to his heart, which killed him in a few minutes. She was immediately apprehended, and committed to Newgate, where she behaves with becoming forrow, wishing for death, being tired of the world.

St. James's, November 16. This day the right honourable the lord mayor, aldermen, and commons, of the city of London, waited on his majesty; and James Eyre, esq. the recorder, made their compliments in the following address:

" Most gracious sovereign, WE your majesty's most dutiful and loyal subjects, the lord mayor, aldermen, and commons of the city of London, in common council affembled, most humbly beg leave to express our fincere and hearty congratulations on the fafe delivery of the queen, and the aufpicious birth of another princefs.

Every increase of domestick happiness to your majesty and your most amiable confort will always fill the hearts of your faithful ci-

[N]tizens tizens of London with joy and gratitude to the divine goodness.

Permit us, Sir, to offer you our most unseigned affurances of duty and affection to your royal person; and we most ardently pray, that your reign may be long and prosperous; that loyalty to your majesty, submission to the laws, the love of true constitutional liberty, and a well-governed zeal for the common welfare, may animate your majesty's subjects throughout every part of your extensive empire.

Signed by order of court,

JAMES HODGES."

To which address his majesty was pleased to return this most

gracious answer.

"I receive with the greatest pleasure this dutiful and affectionate address; and return you my hearty thanks for your congratulations on the happy delivery of the queen and the birth of a princess, as well as for the repeated affurances you give me of your loyalty and attachment to my perfon and family.

The preservation of the religion, laws, and liberties of my people, in every part of my dominions, is effential to their true happiness, and is, therefore, the great object of my attention.—These are the principles which ever have been, and ever shall be, the fole

rule of my government."

They were all received very graciously; and had the honour to

kiss his majesty's hand.

Yesterday Mr. Richard Webh hanged himself in New Ludgate, Bishopsgate-street, where he had been for a short time a prisoner: he was lately a very reputable silversmith in the Quakers-buildings, Smithfield.

This morning, at two o'clock, died, at his house in Lincoln's-inn-fields, in the 76th year of his age, his grace Thomas Pelham Holles, duke of Newcastleupon-Tyne, and duke of Newcastle-under-line in the county of Stafford, marquis and earl of Clare, viscount Haughton, and baron Pelham of Laughton and of Stanmere, and baronet, lord lieutenant and custos rotulorum of the county and town of Nottingham; steward, keeper, and warden of the forest of Sherwood, and park of Folewood, in the county of Nottingham, and recorder of the town of Nottingham; one of the governors of the Charter-house, knight of the most noble order of the garter, one of his majesty's most honourable privy council, chancellor of the university of Cambridge, fellow of the royal fociety, and LL.D. His grace was born August 1, 1693, and succeeded his father as baron Pelham of Laughton, Feb. 23, 1711,12; and by the last will and testament of his uncle John Holles, duke of Newcastle, who died July 15, 1711, was adopted his heir, and authorised to bear the name and arms of Holles. His grace was married, April 2, 1717, to the lady Harriot Godolphin, daughter of the right honourable Francis earl of Godolphin, by the lady Henrietta his wife, eldest daughter and coheir of his grace John late duke of Marlborough, but has no iffue by her grace.—By the death of his grace, without iffue, the title of duke of Newcastle-upon-Tyne becomes extinct; but the title of

duke of Newcastle-under-line, which was granted to his grace in 1756, by king George II. devolves to the earl of Lincoln, and the barony of Pelham comes to Thomas Pelham, of Stanmere, efq. member of parliament for Suffex, and a privy counfellor.

This morning an express was fent to Bath, to acquaint her grace the dutchess of Newcastle, who is much recovered, with the death of

the duke.

The estate of his grace the late duke of Newcastle, when he first came into possession of it, is said to have been worth 50.000 l. per annum, which he greatly reduced in the fervice of his king and country; notwithstanding which, he nobly refused to accept a large pension, when he retired from public bufinefs. In private life, his character was very amiable; he was affable and religious, having divine fervice constantly performed twice a day in his family, both in town and country, and at stated times the facrament was administered, at which he constantly communicated. He received the same the day before he died, from the hands of the bishop of Salisbury; and his behaviour in his dying moments was perfectly calm, pious, and refigned.

Paris, Nov. 4. Inflammatory papers have been found fluck up in different parts of this city, which the commissaries of the police have torn down, and it is affured that the prefident of the parliament has fent them to the king. The police is endeavouring to detect the authors of these papers, and some people have been taken up even for talking of

them.

All our public diversions are crowded with people, in hopes of feeing the king of Denmark, who omits nothing that is worth no-When he went to the Gobelins, the duke de Duras acquainted him, that he was charged by the king his mafter to defire him to chuse a piece of that fine tapeftry which was most agreeable to him; and he was pleased to make choice of that which represents the

history of Esther.

Berne, Nov. 10. A woman here, whose fon was named Isaac. and the husband Abraham, took it into her head that she was under an obligation to facrifice her fon, for the expiation of her fins, and actually performed the facrifice upon her toilet, which she converted into a kind of altar; perfuading her husband that it was a good and laudable act. They are both taken up, and imprisoned; and, excepting their fanaticism, appear to be both in their right senses.

This morning, at eight o'clock, the remains of his grace the late duke of Newcastle were carried from his house in Lincoln's-inn-fields, in order to be interred in the antient family vault at Laughton in Suffex, in the following order: 1. The two porters, mounted on milk-white horses, leading the van. 2. Eight of his grace's domesticks in mourning cloaks, mounted on grey horses. 3. A gentleman on horseback, uncovered, bearing a ducal coronet richly gilt, laid on a crimfon velvet cushion with gold taffels, two men with hand on the horse walking on each fide. 4. The corpse, in a hearse drawn by fix horses. 5. Four mourning coaches, drawn by four [N 2]

horses each, in which were his grace's principal gentlemen. 6. A gentleman, followed by fix livery fervants in mourning cloaks, all on horseback, closed the procession.

The dukedom of Newcastleunder-line is, we are informed, limited to the male issue of the present duke, by his late lady the countess of Lincoln, eldest daughter of the late right honourable Henry Pelham, by whom his grace has three sons living.

His excellency count de Czernichew, the new Russian ambassador, arrived at his house in Sohosquare from Petersburgh, but last

from Calais.

Extract of a letter from Porto Fe-

raro, Oct. 9.

"After a continual drought of five months, there fell such a heavy and abundant rain last Sunday, that the like was never before known in the memory of man. It has caused great damages, both in town and country. The lower part of the town was entirely under water, and all the goods in the shops and warehouses much damaged. In the country, whole vineyards have been torn up and washed away by the torrents, and others covered with slime and flones; and in the village of Rio, feveral mills have been destroyed."

A letter from Nottingham, dated Nov. 19, fays, "The heavy rains, attended with mow, which fell for 30 hours together the latter end of last week, occasioned the greatest flood we have had their many years; not only the rivers Trent, Derwent, and Dove, but all the lesser brooks, overflowed their banks, and have done much damage. Great numbers of sheep,

grazing near Castle-Dunnington, Emmington, and Sawley, have been swept away, the waters rising so suddenly that the owners could not save them, without risking their own lives. In Lancashire and Cheshire, especially near Chapple-Frith, the snow lay three feet deep; and a brisk wind from the Northeast so silled the roads, that they were obliged to be cut through before the carriers could pass, which occasioned many to postpone their stages."

John Urquhart, alias Richards, for robbing Dr. 24th. Piggot of his watch and a guinea, near Cranford-bridge; Patrick Hanlon and William Miller, for robbing Mrs. Rogers of a guinea and a crown, near Hampstead; and Edward Williams, for returning from transportation, were exe-

cuted at Tyburn.

John Andrew Martin, a Dane, was committed to Newgate, charged with breaking open and robbing several houses in and about London. There was found in his lodgings, plate and goods to the value of near 30001. One person in Foster-lane he had robbed of plate to the amount of 6001, and a weaver in Spittle-fields swore to 27 pieces of filk, 26 of which were found in his custody.

Mr. Steare, publisher of the North Briton extraordinary, No. 4. and Messes Pridden and Williams, sellers of the same, were summoned before the court of king's bench; the first has been sentenced to suffer three months imprisonment; the second fined 6s. 8 d. the latter 13s. 4d. and discharged. Mrs. Bret, seller of the North Briton, No. 50, was fined 6s. 8 d. and discharged

The second

The late Mr. Titley, envoy to the court of Denmark, and fellow of Trinity college, having left 5001. to the university of Cambridge, the vice chancellor has appropriated it to the building an amphitheatre for public lectures and mufical performances, and has added a benefaction of twenty guineas. The reverend Dr. Long, professor Shepherd, and Mr. Alderson, have also subscribed ten guineas each.

Mr. Seaton's annual prize is this year adjudged to Mr. Jenner, of Sidney college, for his poem on

the destruction of Nineveh.

His majesty went, with 25th. the usual state, to the house of peers, attended by the duke of Ancaster and the earl of Denbigh; and gave the royal affent to the bill for prohibiting, for a further limited time, the exportation of corn, grain, meal, malt, flower, biscuit, and starch, and also the extraction of spirits from low wines.

Naples, October 25. In memory of the cessation of the great eruption of mount Vesuvius last year, attributed to a miracle of St. Januarius, a marble statue has been erected by the city of Naples upon Maddalena bridge; at the bottom of the pedestal an inscription has been lately placed, of which the following is a translation:

Clement XIII. pope, grants one hundred days indulgences, toties quoties, for ever, to each believer, who devoutly invokes this statue of our patron St. Januarius .- By brief, dated the 10th of May, 1768.

Co nhagen, Nov. 7. In con-"fideration of the high price of

rye, and to relieve the inhabitants of this capital, the college of the chamber of finances hath ordered ten thousand tons of that commodity to be taken out of the king's magazines, in order to be fold among the people at two crowns and four marks Danish the ton.

Rome, Oct. 6. The prelate Azpuni, minister from Spain to the holy fee, has received from his court 18.000 Roman crowns, which he has orders to distribute among the Spanish jesuits at Bologna, Ferrara, and Ravenna; and 4.500 more, to be distributed among those in the district of Ancona, and in the other parts of Romania.

Several pirates and murderers have been apprehended and brought to the Marshalsea, of whom the following is an account: a fet of daring fellows for upwards of feven years past, most of whom lived at Hastings in Sussex, and, during that time, boarded and robbed feveral ships coming up the channel, and in particular boarded a Dutch ship homeward bound, plundered the ship, murdered all the crew, and then funk the ship. At last, they were discovered by their bragging to one another how the Dutchman wriggled about when they had cut him on the back bone with an ax: upon this, information was given to the government, who immediately ordered a detachment of two hundred foldiers to march from London for Hastings, with first charge not to let the least word transpire that could give any person suspicion of what they came for; and also, if any disturbance should happen in the town, not to interfere therein; upon their arrival arrival [N3]

arrival there, or the next day after, the mayor of Hastings was walking in the town, when he was interrogated by one of the gang (as they went by the name of Ruxey's crew, or gang) what the foldiers came for, upon which the mayor anfwered him he could not tell; upon which they affaulted the mayor, who called to the foldiers to affift him; and they, having orders not to intermeddle in any difturbance, refused their assistance, but, upon their officers appearing, they immediately feized three of the gang, who, together with feveral others, have been fent to London. A man of war and a cutter lay off Hastings for some time to receive them, the appearance of which gave the gang more uneafiness than the arrival of the soldiers.

They write from Boston, New England, that, from the first arrival of the troops and men of war, all trade had been at a stand, no business being transacted at the custom-house, or any of the public

offices.

The following is a translation of the charge given by the grand fignior to the new grand vizir at

his installation:

"Thou Hamzey Pacha, my grand vizir, and absolute minister, who hast been raised to the circuit of my imperial palace, and whose behaviour and fidelity have been approved; I have chosen thee, in preserence to all my other vizirs, to intrust thee with my imperial feal. In consequence of which, if thou conductest the affairs of the slaves of the Deity with the requisite sidelity, in protecting and favouring the poor, and by conforming thyself to my imperial mind, thou wilt be beloved in this

world, and in that which is to come. Mehemed Pacha, thy predeceffor, drawn away by his extreme avarice, and by fome evil counfels, having difgraced, by his corruption, the honour of my fublime porte, has been therefore deprived."

Extract of a letter from Petersburgh, October 10.

" By the journals of the profesfors Gmelin and Pallas we learn. that the former has discovered in the mountains of Walda a number of coal-mines and other minerals near Kresteskoi-Jam, on both shores of the river Gremetcha; as also another coal-mine of a remarkable good fort not far from the village Usties, pretty near the river Krupiza, and which extends above twenty wersts around, besides mines of alum, vitriol, copper, and iron. Professor Pallas affures us, that he has discovered an animal plant, of a very curious nature, and which he takes to be a species of the fresh-water polype. He adds, that near Fedojtewa he found beautiful agates, with a multitude of petrifactions, and likewise a number of pieces of jasper, agate, and topazes, in the rivulet of Sungir."

There is now living at Chertfey in Surrey, one Groves, a hamper and broom-maker, who has been married only eight years, and has had by his wife fixteen children, fifteen of which are now living; the other was drowned accidental-

ly a few weeks ago.

The wife of Mr Shury, cooper, in Vine-street, Westminster, was delivered of two fine boys, which, together with all her former children by Mr. Shury, makes in the whole 26; and what is still more remarkable, she has been brought

to bed twice within the space of one year last past, and had twins each time, being four children in

twelve months.

Died.] Mr. Bamford, hatter, in Shire-lane, Temple-bar; commonly called the Giant, on account of his extraordinary stature. It is said, that 2001. was offered for his body by the surgeons for dissection. He was thirty-six years of age, has left a wife (who was brought to bed of a son the day he died), and two children. She has been very near death fince her delivery from the bigness of the child, but is now better.

At Croydon, Peter Wilmot, esq. late a scarlet dyer, said to be worth

near 60,000 l.

In Tothill-fields Bridewell, aged 68, Mr. Carl Gotlick Ulman, cabinet-maker, in Wild-street: he was unhappily engaged in procuring artificers to go abroad; for which he was last sessions tried at Guildhall, Westminster, and found guilty; but in regard of his age was fentenced only to three months imprisonment, and to pay a fine of 2001, with which sentence he was for affected, having till that time lived in good credit, that he was immediately taken ill, and continued in a languishing condition ever fince, which is about three weeks.

At Hackney, aged near 90,

Peter Purchas, efq.

At Stratford, aged 103, Thomas Crosby, gent. who had been formerly one of the cocket-writers in the long room at the custom-house.

Thursday se'nnight died in the alms-house belonging to the Brewers company, at Aldenham in Hertfordshire, Mrs. Bampton, aged 127 years.

DECEMBER.

The confequence of the late heavy rains appears in a dread 5th. ful manner by the floods, which extend from Stratford, northward, all over the marshes for many miles up the fides of the river Lee. On Friday and Saturday the stream ran through the arches over the road beyond Lee-bridge, in a torrent like that at the tail of a mill : but on Sunday morning it greatly abated, and by eleven o'clock the ways were passable. - On Saturday a poor man, driving fome cows from the low grounds in Hackney marshes, was carried away by the force of the thream, and drowned in Lee river. The inhabitants of Stratford, &c. had the waters for high in their houses, that they were obliged to have scaffolds erected, by which, and the use of ladders, they got in at the chamber windows. In many places the stream ran so high, that the drivers of the stages were obliged to open the coach doors to allow a paffage for the water, the weight of which would otherwise have overset the carriages. The Exeter stage-coach, which fet out yesterday morning between one and two from the Bell in Friday-street, was overset by the violence of the waters on this fide Staines, and all the infide paffengers, namely, Mr. Foy, Mr. Lawrence, Mr. Coleman, Mrs. Tyrell and her two children, were drowned, together with four korfes: the coachman, guard, and one outfide paffenger, were faved, after being driven more than half a mile by the impetuofity of the current. In St. George's-fields, Dr. Townshend's house and gardens were overflowed, and a fine large [N 4]

bear was drowned. Up the Thames, the tide of flood is so obstructed. by the freshes from innumerable rivulets, that it is with the utmost difficulty the craft can make their way up the river. In Berkshire, feveral sheep and horses at Batty farm are drowned; the banks of the Kennet and Lodden are quite overflowed; Burfield bridge is entirely washed away; part of Twyford bridge is broken down, and numbers of people are obliged to leave their houses: in short, the whole looks like a fea. In Effex. a black fervant of William Stapleton, esq. of Danbury-hall, in attempting to cross the river at Chelmsford on horseback, was carried away by the rapidity of the fiream; both the fervant and horfe were drowned. In Suffolk, most of the fields, meadows, &c. are entirely under water; near a thoufand men are hired to mend the roads and make drains to carry the floods off. In Nottingham, at East Retford, one neighbour was obliged to affift another, by getting ladders, and helping them out of the windows; the cries of the poor women and children were fhocking. The tradefmen who live near to the river have suffered greatly in their warehouses; and the loss cannot be computed: the current came into the market place; but luckily no lives are loft. On the North road, the mail which should have arrived on Saturday morning did not arrive till Sunday: and on the western, carriages were retarded for feveral hours, at Cranford-bridge, Hounflow heath, Longford, Colnbrooke, &c. &c:

At Gloucester, the express was retarded ten hours by the sloods, which in every county are higher than can be remembered.

Such a general inundation as the prefent has fearcely been remembered. The flat country in Herefordshire and Shropshire is a perfect sea, so that the roads are impassable.

Extract of a letter from Paris, Nov. 28.

"On the 24th, the duke of Orleans gave a most magnificent entertainment to the king of Denmark, to which all the principal nobility were invited. The fupper was ferved at 12 tables. That of the king of Denmark, at which were present the duke of Orleans, who performed the honours of it, mademoiselle, the prince de Conde, and the ministers of the king, confifted of 90 covers. His Danish majesty handed mademoiselle to her place. The duke de Chartres did the honours of the fecond table, which confifted of 99 covers. The 12 tables confifted in all of 672 covers, and were ferved with great order and dispatch. The supper was preceded by a ball, to which 1500 persons of all ranks were admitted. On the zzd, his Danish majesty was entertained by the prince de Soubife." A Maria de la

They write from Worcester, that on Monday the 21st of last month, the quicksilver in the barometer was remarkably low; and on Tuesday lower than scarce ever before remembred. The air was so very light, that the cylinder of mercury supported thereby measured but twenty-eight inches. The cause thereof is apprehended to be great storms at a distance, resphane at sec.

perhaps at fea.

We have received the like accounts from several other places; and some pretend to prognosticate we shall not have any settled fair weather for sour months to come.

They write from Mocbury in Devonshire, that the barometers there were lower the 21st, 22d, and 23d, than has been known

these ten years. - "

One day last week James Ellis, of Colney-street, in Hertfordshire, had a turnip dug out of his ground that weighed seventy-three pounds, which he sold for a penny, after he had previously won sive guineas from a man that wagered him that sum, that he could not produce

him one of that weight.

7th. baptized by his grace the archbishop of Canterbury, in the grand council room at St. James's, by the name of Augusta Sophia. The sponsors were the eldest prince of Mecklenburgh Strelitz, and the duchesses of Ancaster and Northumberland, as proxies for the queen of Denmark and the princes of Brunswick.

Extract of a letter from Paris.

"A case which lately happened in one of the hospitals of this city greatly engaged the attention of gentlemen of the faculty. The unhappy object had the stone to a great degree, from which he suffered the most excrutiating pains. Upon examining him with the probe, the slone was discovered to be of an amazing size, and when it was extracted, it weighed 26 ounces; whereas the largest that have been found have not exceeded seven or eight ounces. It is

very remarkable, that the patient fuffered little or no pain till within about a fortnight of his being cut. The most skilful anatomists doubted the case till they were eye-witnesses of the operation."

Edinburgh, Dec. 3. Yesterday about 12 o'clock, part of the walls and roof of the church adjoining to the palace of Holyrood-house gave way and fell down; and last night the most of the remainder alfo shared the same fate; so that now this fine edifice is entirely deftroyed. This accident is faid to be owing to the enormous weight of a new stone roof laid over it fome years ago, which the walls, it is thought, were unable to fupport. The pillars and ornaments of this church, though for many years past waste, and almost ruinous, were greatly admired, as one of the finest Gothic remains in the The fine vaults, where part of the royal family, several of the nobility, and a great number of the gentry were deposited, are now under the ruins.

This morning, a little before 11 o'clock, the sheriffs of opened the poll for a knight of the shire for the county of Middlefex, at Brentford, which was carried on with much tranquillity till about a quarter after two; at which time it was generally thought that Mr. ferjeant Glynn had polled a greater number than fir W. B. Proctor, when on a fudden a great riot enfued; the mob mounted the hustings, attempted to feize some of the poll-books, and entirely put a stop to the businefs. On this, great numbers of freeholders were hurt in trying to get away, others came home directly, and the remainder of the day was a scene of confusion.

The

The following spirited address which appeared the next day in the papers, together with the ensuing consequences of this riot, will sufficiently serve to shew the nature and defign of it.

To the gentlemen, clergy, and freeholders of the county of Mid-

dlesex.

Gentlemen.

The warm professions of gratitude, so frequently uttered by those who feel no gratitude to their constituents because the means by which they succeed take off all obligation, make me at a loss for terms to express myself on so signal, so generous, and so glorious a support as I have met with from you.

Every means employed, every influence, exerted during a fix months canvass, have not been able to divert a great majority of you from espousing the cause of a candidate, whom you supposed a friend to the CAUSE OF THE PEOPLE, and in whom you hoped to find a zealous defender of the rights and liberties

of his country.

Honour or infamy will deservedly attend me, in the tame manner as my future conduct shall answer or disappoint your expectations. I do not owe your support to any perfonal friendship or connexions; and am therefore free, even from the temptation of leaning to them: my obligations are to the public, and to the public I will return them.

For my conduct in the course of this election, I can appeal even to my adversaries; and the truth of my declaration to you has been most convincingly proved, by the infamous behaviour of my opponents, in their lawless interruption of the poll, when a mob of hired russians were, at a fignal, let loose upon the peaceable, unarmed, and inoffenfive freeholders of the county of Middlefex, in order to defiroy those whom they could not corrupt, and to wrest from them by violence that freedom of election, which every undue and unconstitutional interposition has failed to overthrow.

The sheriffs, and every person present, were witnesses of a scene never before exhibited at an election, A desperate set of russians, with Liberty and Proctor in their hats, without the least opposition, without the least provocation, or cause of quarrel, destroying those who did not lift up a hand in their desence. Sir William, to whom I called to go with me and face this mob, made me no answer, and left me: I remained the last man upon the hustings.

However, I live, gentlemen, to affert not so much my election, as your rights; and I pledge myself to you, that your blood so wantonly shed yesterday shall be vindicated, and the charge brought home both to the hired and the hirers. The more exalted their stations, and the more privileged their persons, the louder is the call for justice; and the more necessary its execution. Whether as your representative, or as a private gentleman, I pledge myself to you to go through with this business, or to perish in the attempt.

The freedom of a county election is the last facred privilege we have left; and it does not become any honest Englishman to survive it. For my own part, I will not. And if by this declaration I may seem to depart from that moderation which has always particularly marked my character, it is because I think tameness in a cause like this, is infamy. There is virtue still left in this coun-

er h

try; we are come to a crifis, and the consequence of this struggle will determine whether we shall be freemen or slaves.

It is at present depending before the house of commons, what meafures shall be next pursued in regard to this election. When they have decided, I will give you the earliest notice possible; and I promise you that no discouragement shall ever make me desert you, who have shewn that you will not desert yourselves. I am, Gentlemen,

Your most grateful, and faithful humble servant, Bloomsbury-square, John GLYNN."

Dec. 9, 1768.

The lord mayor behaved at the Old Bailey, upon this occasion, in such a manner as will always secure him the esteem of his fellow-citizens. When the jury was called, his lordship asked them, upon their honour, if any of them were freeholders of Middlesex; it appeared that about eighteen of them were so, on which his lordship immediately dismissed them, that they might not be hindered from discharging their duty at Brentford.

They write from Florence, that the first shock of the earthquake, which was felt lately at Santa Sofia, on the frontiers of the ecclefiastical state, happened about eleven o'clock in the evening, and so violent as to throw down feveral of the weaker houses, especially in the country The inhabitants, who were all a-bed, being waked by it, fled towards the fields; but in their flight a fecond fhock, more terrible than the first, happened, by which the ftrongest buildings were overturned, a number of persons under the ruins, and the great bridge which separates Santa Sofia from the ecclefiaftical

state, and cost that community upwards of thirty thousand crowns, split through the middle from one end to the other.

They also say, that the senator John Baptist Nelli is sent by the grand duke to St. Sophia, to enquire into the most pressing wants of the inhabitants, whom the late earthquake hath reduced to a most deplorable condition, in order to relieve them. All the houses and churches of the communities of Specia, Campo Sonaldo, Gaballe, and S. Flora, have also been thrown down; and not a building of any kind remains standing at Berletta, except the church and the curate's house.

Letters from Florence of the 12th ult. mention, that the grand duke hath suppressed every tax upon corn, oil, and other commodities, to prevent provisions becoming dear.

We are affured from Brest, that the captain of the king's frigate called the Enjouée, is arrived there, and confirms the great utility of the fieur Poissonnier's method of making sea water fresh, his crew and himself having drank several hogsheads of sea water prepared in that manner, without the least inconvenience. [This method of making salt water fresh was first practiced by our countryman Dr. Lind, from whom the French physician has taken the process.]

They write from Scania in Sweden, that the mortality among the cattle in that province is confiderably leffened this year; and, what is worthy of attention in every country where the contagion may prevail, they remark, that all such infected beafts as have been shut up in stables where horses were kept, have every

one recovered in a few days.

Bond the control of the A prin-

A printer, named de Coignard; has lately died at Paris, in whose possession were found, at his death, no less than 73000 louis d'ors. Befides this fum, he had at the fieur Bel's, first valet de chambre to the king, a million of livres in ready money, with about 500000 more at the duke de Nevers, and a further fum of 100,000 livres at the abbe d'Oliver's; making in the whole near 150,000l. ster-

Last night, the remains of 10th. the late marchioness of Taviftock were brought from Lifbon to her late house in Great Russelsteeet, Bloomsbury, and will in a few days be interred at Cheneys, in

the county of Bucks.

The fessions ended at the Old Bailey. At this fessions seventy eight prisoners were tried; seven received ientence of death, one to be transported for fourteen years, twentyfix for feven years, five to be whipped, and two branded.

On Monday, Mr. Bingley, bookfeller, was, by writ of Habeas Corpus, brought before Sir Jos. Yates, at his house in Bedford Row, where, on entering into two different recognizances for his appearance only on the first day of next term, in the court of king's-bench, he was dif-

charged.

St. James's, Dec. 12. A chapter of the most noble order of the garter having been fummoned to meet this day, the knights companions, with the officers of the order hereafter mentioned, all in their mantles, attended the fovereign; and being called over by Garter king of arms, a procession was made to the great council chamber, in the following order: segment con air

Marquis of Rockingham. Earl of Hertford - Duke of Northumberland. Duke of Newcastle,

Duke of Bedford, well would His royal highness the Duke of

Gloucester. Black Rod-Register-Garter,

The Chancellor-Prelate. The SOVEREIGN.

The fovereign and knights companions being feated, the chancellor fignified his majesty's pleasure for filling up the vacant stall; and as, by the statutes, none but a knight can be elected, his grace the duke of Marlborough was conducted by Garter and Black Rod to the fovereign, and knighted with the fword of state.

The chapter then proceeding to the election, George duke of Marlborough was declared duly elected; whereupon, being received at the door by the two junior knights companions, and conducted to the fovereign, he was invested with the garter, ribbon, and George, as usual, the chancellor pronouncing the admonitions.

Garter then calling over the knights companions, a procession was made back in the fame order as before.

At the queen's house, an inoculation for the small pox was performed on the princess royal and prince William; and their royal highnesses were put under the care of fir Clifton Wintringham, physician to his majesty, sir John Pringle, physician to the queen, Cæfar Hawkins, efq; ferjeant furgeon, and Pennell Hawkins, esq; furgeon to the queen. Extract of a letter from Paris, dated

Nov. 30, 1768.

"The entertainment given to the king king of Denmark by the prince of Condé at Chantilly, surpassed every other, except that given by the king our sovereign. It was on Monday last the 28th instant. It being free to all persons, it is computed that there were at least 6000 persons at it; there went fuch a prodigious concourse of the nobility and gentry of both fexes to it, that the street of St. Dennis, which is longer and wider than Holborn in London, was filled with their carriages from end to end; infomuch that there was no room to pass through it on foot. The entertainment continued three days and three nights; during which there was an open house kept for all comers and goers, without exception. There was likewise a most grand hunt in the forest of Chantilly, by candle-light: After a wild boar had been chaced for a good while, he was killed by a nobleman, with a bow and arrow."

The poll for a knight of the shire for the county of Middlefex ended, when the numbers stood thus:

For Mr. serjeant Glynn — 1542 For sir W. B. Proctor — 1278

Majority for Mr. Glynn 264 whereby Mr. Glynn was by the theriffs declared to be duly elected.

It is faid, that the number polled at this election exceeds by forty-two, the greatest number that ever was known to poll at any preceding election.

The election was carried on with the utmost tranquillity and regularity, without the least appearance of disorder, except that a few snow-balls were thrown at the friends of one of the candidates; but the constables interposing, all was quiet.

Edward Umfreville, efq; one of the coroners for the 15th. county of Middlesex, took an inquifition upon the body of George Clarke, a young gentleman, then lying dead, at the White Hart, in Wellbeck-street, in the parish of Marybone, before a very respectable jury of neighbours, fummoned to enquire how he came by his death; when it appeared to them, from very clear and positive evidence, that it was occasioned by a blow given him by a flick or bludgeon at Brentford election, on the 8th instant, from a person or persons, of the mob concerned in the riot on that day, at the time of the faid election. jury, very prudently, defired to have the affiftance and opinion of a furgeon, when a very eminent one was fent for, and, after opening the head of the deceased, examining him in a very particular manner, and giving his opinion, that the faid blow was the cause of his death, the jury, without the least hefitation, unanimoully gave in their verdict to be wilful murder, by fome person or persons unknown.

The whole livery of the worshipful company of cordwainers met at their hall in Distast-lane, and came to a resolution to apply to parliament, in order to have the drawback taken off leather; there having been so much exported of late as to have almost doubled the price it formerly fold for

His Danish majesty was to take his departure from Paris the 8th instant, and had settled his route, in order to return to his own dominions, as follows: he was to go from Paris to Ferre; on the 9th he goes to Chalons; to Verdun on the 10th; to Metz on the 11th; to Nancy on

the

the 12th; the 14th to Luneville; the 15th to Savern; 16th to Strafburgh; 19th to Weissenburg; 20th by Landau to Manheim; 23d to Heidelburg; 24th to Hanau; 27th to Giessen; 28th to Jesbourg; 29th to Cassel; 1st of January to Seeson; 2d to Brunswick; 5th to Oultzen or Elbstorff; and on the 6th his majessy intended lying at Altena. Extract of a letter from Copenha-

gen, dated Nov. 25.

"Our excellent fovereign is continually displaying instances of the goodness of his heart. A courier is just arrived with an order from his majesty, that collections be made on Sunday next, not only in the churches of this capital, and other places in Zealand, but also in those of all the commercial towns in the kingdom, in favour of the poor dissidents of Poland."

The empress of Russia, willing to encourage the fine arts in her dominions, has affigned an annual sum of 5000 rubles for the translation of foreign learned works into the Russian

fian language.

Hague, Dec. 6. Upon the prince of Orange's notifying, on Friday last, the pregnancy of her royal highness his confort, to the principal colleges of the republic, deputations were sent to compliment him; and public prayers are ordered for the princess's happy delivery throughout the United Provinces.

18th. Institution of the new Royal Academy of Arts.

His majefty, ever ready to encourage useful improvements, and always intent upon promoting every branch of polite knowledge, hath been graciously pleased to institute in this metropolis a royal academy of arts, to be under his majesty's

own immediate patronage, and under the direction of forty artists of the first rank in their several professions.

The principal object of this institution, is to be the establishment of well-regulated schools of design, where students in the arts may find that instruction which hath so long been wanted, and so long wished for in this country. For this end, therefore, there will be a winter academy. of living models of different characters to draw after, and a fummer academy, of living models of different characters to paint after; there will also be laymen, with all forts of draperies, both ancient and modern, and choice casts of all the celebrated antique statues, groups, and baffo relievos. Nine of the ablest academicians, elected annually from amongst the forty, are to attend these schools by rotation, to fet the figures, to examine the performances of the students, to advise and instruct them, and to turn their attention towards that branch of the arts for which they shall feem to have the aptest disposition.

And in order to instruct the students in the principles and laws of composition, to strengthen their judgement, to form their tafte of defign and colouring, to point out to them the beauties and imperfections of celebrated performances, and the particular excellencies and defects of great masters, to fit them for an unprejudiced study of books, and to lead them into the readiest and most efficacious paths of study, there are appointed, a professor of painting, a professor of architecture, one of anatomy, and one of perspective, who are annually to read a certain number of public lectures in the schools,

calcu-

calculated for the purpoles above recited.

Furthermore, there will be a library of books of architecture, feulpture, painting, and all the feiences relating thereto; also of prints of bas-reliefs, vases, trophies, ornaments, antient and modern dresses, customs and ceremonies, instruments of war and arts, utenfils of facrifice, and all other things useful to students in the arts.

The admission to all these establishments will be free to all students properly qualified to reap advantage from fuch studies as are there cultivated. The professors and academicians, who instruct in the schools, have each of them proper falaries annexed to their employments; as have also the treasurer, the keeper of the royal academy, the fecretary, and all other persons employed in the management of the faid institution; and his majesty hath, for the present, allotted a large house in Pall Mall for the purpoles of the schools, &c.

And that the effects of this truly royal inflitution may be conspicuous to the world, there will be an annual exhibition of paintings, sculptures, and defigns, open to all artists of distinguished merit, where they may offer their performances to public view, and acquire that degree of fame and encouragement which they shall be deemed to deserve.

But as all men who enter the career of the arts are not equally successful, and as some unhappily never acquire either fame or encouragement, but, after many years of painful study, at a time of life when it is too late to think of other pursuits, find themselves destitute of every means of subsistence; and as others are, by various infirmities incident

to man, rendered incapable of exerting their talents, and others are cut off in the bloom of life, before it could be possible to provide for their families: his majesty, whose benevolence and generosity overslow in every action of his life, hath allotted a considerable sum, annually to be distributed, for the relief of indigent artists, and their distressed families.

This is but a flight sketch of the institution of "The Royal Academy of Arts;" yet sufficient to convince the world, that no country can boast of a more useful establishment, nor of any established upon more noble principles.

The present officers are,
Joshua Reynolds, president,
William Chambers, treasurer,
George Michael Moser, keeper,
Francis Mil. Newton, secretary,
Prosessor of Painting, Edward Penny,

of Architecture, Thomas Sandby, of Anatomy, Dr. William Hunter, of Perspective, Sam. Wale,

Council:
George Barret,
William Chambers,
Francis Cotes,
Nathaniel Hone,
Jeremiah Meyer,
Edward Penny,
Paul Sandby,
Joseph Wilton.

Visitors:
Agostino Carlini,
Charles Catton,
J. Bap. Cipriani,
Nathaniel Dance,
Francis Hayman,
Peter Toms,
Benjamin West,
Richard Wilson,
Francesco Zuccares.

A letter

A letter from Paris favs, " The fieur Brioche, a notary of this city, has just given a rare example of generofity and difinterestedness. The late fieur Coignard, his uncle, made him his heir and universal legatee, leaving only trifling legacies (confidering his fortune) to his other nephews and relations; but the fieur Brioche has proved himself worthy of that preference, by augmenting all the legacies of the other kindred, in proportion to their degrees of affinity, &c. An action which must certainly heighten, if possible, the general efteem which that gentleman had before acquired."

Extract of a letter from Rochester,

Dec. 20. "A most terrible fire at this place broke out at the house of an eminent undertaker, at twelve on Saturday night. There were two young women in the house burnt to death; one, the maid-fervant, and the other her fifter. A foldier, on the roof of the adjoining house, fell in with it, and shared the same fate. Seven houses in front, with the stables, out-houses, hay-stacks, &c. were wholly confumed, and three more fo much damaged, that they are not habitable. By what means this calamitous affair happened, is not known; but the owner of the house where it began is strongly cenfured for words which he had been heard to speak some time before; and certain it is, that he, in the midst of his trouble, last night cut his own throat, and died this morning; but before he expired, he made figns for pen and ink, and wrote that he did his endeavour to fave the young women. Several families, not being infured, have loft their all."

Thursday last, miss Gardiner, only

daughter of Frederic Gardiner, esq; of Blossom-hall in Wiltshire, being dreadfully frightened by a bull, was so strangely affected, that, in the space of sour hours, her hair, which was before of a fine brown, became as grey as that of a person of 80 years of age.

Letters from Petersburgh give us the following account of the progress of the inoculation for the smallpox, lately performed on the empress of Russia, viz. The operation was performed on the 23d of October last, by Dr. Dimsdale, who had been fent for from England for that purpose; and her imperial majesty fet out the next day for Czarsko Selo. It had no visible effect till the 20th, when, the weather being fine, and the ground covered with fnow, her majesty took a walk in the morning for the air, as the had done the preceding days; and, on her return to her apartment about two in the afternoon, felt some fymptoms of a fever, which continued till the 31st towards fix in the evening, when the eruption first began to appear. The empress kept her apartments but three days, the rest of the time she went abroad and faw company.

His majefly went in flate to the house of peers, and 20thgave the royal affent to the follow-

ing bills :

The bill for granting an aid to his majesty of three shillings in the pound land-tax, to be raised in Great Britain, for 1769.

The bill for continuing the duties on malt, mum, cyder, and perry, for

1769.

The bill for allowing a further time for the free importation of rice into this kingdom, from his majesty's colonies of North America.

The

The bill for the regulation of his majefty's marine forces while on thore.

The bill for the more effectually preventing the clandesine importation of foreign spirits, and for explaining an act which relates to penalties inflicted upon persons selling ale, beer, or other exciseable liquors, by retale, without licence, &c.

The bill for punishing mutiny and desertion, and for the better payment of the army and their

quarters.

The bill for repairing, improving, and better preferving, the harbour and quay of Wells, in the county of Norfolk.

The bill for naturalizing George

Madrass.

The bill for naturalizing Paul Niedrick.

The bill for naturalizing John Henry Schneider.

The bill for erecting a markethouse, and holding a market, at Taunton, in Somersetshire, for cleansing the streets, and for lighting certain streets in the said town.

And to fuch bills as were ready.

Between five and fix in the evening, the shock of an earthquake was felt at Worcester,

and the parts adjacent.

The shock was also felt at Gloucester, where many people in a fright left their houses. One who was in the cathedral says, the whole of that edifice was shaken. A gentleman, passing through the fields, affirms, the birds were sensible of it, and left the hedges in a kind of terror.

Advices from Russia inform us, that the grand duke, who was lately inoculated there for the small-pox, is daily recovering. Nothing perhaps ever shewed the greatness of the present empress's mind more, than her courage and public spirit on this occasion; in endeavouring to get the better of her subjects prejudice against this very beneficial practice, by ordering the operation to be sirst performed on herself and son.

A horse, belonging to Mr. Delimore of Hanstead in Hertsordshire, was cut for the stone, and a calculus extracted which weighed 17lb. The horse died immediately after the ope-

ration.

His majesty went, with the usual state, to the house of peers, attended by his grace the duke of Ancaster and the earl of Denbigh; and gave the royal assent to the bill for prohibiting, for a surface time, the exportation of corn, grain, meal, malt, shour, biscuit, and starch, and also the extraction of spirits from low wines.

We hear that his royal highness prince William Henry, and the princess royal, have both had the small-pox in the most favourable manner, and are judged to be out

of danger.

The eldest prince of Mecklenburgh Strelitz, now here, has been twice inoculated for the small-pox; but no irruption having yet appeared, it is supposed his highness must have had it in the natural way in so favourable a manner as to have escaped the notice of the family.

The ingenious Dr. Short, well known for his curious observations on the air, and by his history of mineral waters, remarks, in a late letter from Rotherham, that, for seventy years past, in the course of his journal on the weather and atmosphere, he had not remembered a

[O] feafon

feason in which there had fallen fuch quantities of rain, as in every fummer for the four last years.

The common council of London passed an act on the 28th of October last, for regulating the watch of this metropolis for the year ensuing, viz. from Dec. 25, 1768, to Dec. 25, 1769; and the sum to be paid to the watchmen and beadles for all the wards in the city for next year amounts in the whole to 11 747 l. 7 s. The sum to be assessed on the inhabitants next year will amount to 23.680 l. 7 s.

A dreadful hurricane arose on the 25th of October, on the island of Cuba, by which the town and harbour of the Havannah suffered irreparably. Houses, ships, and docks were involved in one common ruin, and above 1000 souls perished almost instantaneously. The storm began on the south-side, and died away on the North, and did not continue more than two hours: 96 public edifices, and 4048 houses, were de-

froyed by it.

Petersburgh, Dec. 6. On Saturday, Sunday, and yesterday, very folemn fervices were performed in the imperial chapel and the different churches here. On the first day for the recovery of the empress and the grand duke, after their having been inoculated. The second, to ask the divine assistance in the course of the war, which was that day declared. And yesterday, on account of the feast of St. Catherine, the empress's name day. After the empress had received the compliments of the fenate, &c. her imperial majesty was pleased to grant to Dr. Dimsdale,

and to his lawful heirs male, the dignity of a baron of the Russian empire; and as a farther instance of the fense her imperial majesty entertains of his merit, and of the fervice he has performed to her person, family, and empire, she has been pleased to make him a present of 1000 l. for his journey hither: the like fum for his return to England; and also a present of 10.000 l. and has fettled on him 5001. per annum during his life, with the title of medicin du corps, and counsellor of state, which gives him the rank of major general.

Letters from Petersburgh mention, that the empress of Russia has ordered two merchants in London to pay Dr. Dimsdale 10.000 l. serling, upon his arrival in London, and granted him 500 l. per annum during his life. She has likewise made the doctor physician to herfelf and the grand duke; also appointed him privy counsellor of state, and created him baron of the empire of all the Russias.

Pifa, Dec. 13. The dutchess dowager and regent of the little dutchy of Massa died there a few

days ago.

Vienna, Dec. 17. A medal has been firuck here, in honour of the fuccessful inoculation of the archdukes and archduches Theresia; it bears on one fide the busts and names of their imperial majesties; on the reverse is the following inscription; "FRDINANDVS, MAXIMILIANVS, EORVMQVE NEPTIS THERESIA, ARCHIDVCES AVSTRIÆ DE INFESTIS VARIOLIS RESTITVTI. 29 SEPT. 1768."

Berlin, Dec. 17. His Prussian majesty, accompanied by the prince

oi

of Brunswick, arrived here yesterday from Potsdam, in order to spend his Christmas in this city. His majesty has sent the most magnificent presents to the queen and the royal family; the gifts to prince Henry consist of the ensigns of the order of the black eagle, richly garnished with diamonds.

Paris, Dec. 28. The king has figned the contract of marriage between the marquis de Fitz James, colonel of the regiment of his name, and mademoifelle de Thi-

ard.

Extract of a letter from Naples. Dec. 1. "Sixteen thousand per-

fons have died here of the smallpox; but the fury of that distem-

per begins to abate."

Married, at Oldwinford, Mr. Bathom of Stourbridge, to Mrs. Martin of Kniver. They were both born in the fame year, and their ages, when added together, amounts to upwards of 160. Mr. Bathom has been totally dark for feven years.

We are affured that there is now living in Queen-square, Westmin-ster, one Mr. Dives, a gentleman, who is in the 115th year of his age, and descended from Sir Lewis Dives, who was a cavalier in the reign of king Charles the first.

At the village of Wainsford in Hampshire, there is now living one Peter White, in the 95th year of his age, who was born deaf, dumb, and blind, and without legs or arms, which are supplied by stumps of about four inches long.

Died.] At Leeds, after having compleated his 114th year, Robert Ogleby, the noted old tinker. It appears by his register, that he was born at Rippon the 16th day of November, 1654; to corroborate

which, his own account of himfelf is, that he was put apprentice in 1668 to one Sellers, a brazier in York, when he was 14 years old; ferved him feven years in that capacity, and two years more as a journeyman; then he began business for himself at Ripon, which he carried on five years, and failed; after which he went to Hull, and wrought journey-work there four years, when he entered into king James's service; was sent with the regiment into Ireland, where he changed his master, and was among the number of those who fought under king William, at the battle of the Boyne, in 1690, where he faw the duke of Schomberg fall. He ferved about 23 years longer in the army in different places, and was discharged after the peace of Utrecht; but having neither wounds nor infirmities to plead for him, he got no pension; so he resumed his old trade, or rather took up the new one of travelling brazier, which he continued till within four years of his death, and, at the amazing age of 100, would carry his budget 20 miles in a winter day, and do his business with as much alacrity as any other man at 50. But he foon after grew infirm, and was obliged to give up the itinerant trade he had carried on above 50 years, and take to begging.

William Carter, a poor blind man, at Upingstone in Hampshire, who had received pay of the parish for 25 years last past. He was 113 years old, and was a serjeant in the service of queen Anne, and in all the battles and sieges with the duke of Marlborough and

prince Eugene.

HRONICLE.

The LORDS PROTEST.

Die Lana, 8 Feb. 1768. Hodie 3ª vice lecta est billa-intituled, An act for further regulating the proceedings of the united company of merchants of England trading to the East-Indies, with respect to the making of dividends. The question was put, whether the faid bill hall pass; it was refolved in the affirmative.

Dissentient.

ist, DECAUSE this bill is an exertion of the supreme power of parliament, equally unnecessary

and dangerous, after having had the most mortifying experience of the operation of a like restriction last year, which increased the very mischief it was intended to remedy, at a time when the circumstances of the company are clear beyond a doubt, and their opulence verified beyond the most fanguine expectation: no supposed misconduct of the company calling for the interpolition of parliament; no rash and excessive dividends declared; no increase of dividends even defired; on the contrary, the company has restrained itself

[P 2]

on principles much more rational than those adopted by the bill, as they have a reference to their circumflances, and not to a fixed period of time, marked by an arbitrary resolution. We cannot therefore avoid confidering this bill as a mere act of power, without a colour of delinquency on the part of the company, or of necessity on the part of the public.

adly, Because it appears to us, that this bill is an high violation of the national faith, taking away; without any judicial process, or even any criminal charge, that power of declaring dividends, which the company purchased from the public for a valuable

confideration.

adly. Because it appears to us altogether unaccountable to pass in one year an act for regulating the modes and conditions of declaring dividends by the company; and, in the very next year, to prohibit the exercise of those very powers fo regulated : this act is now in full force; no defect in it has been stated; no amendment has been proposed; no infraction has been pretended. This law, made expresly to regulate the method of declaring dividends, does of necessity imply the exercise of that right under the conditions therein prescribed, which cannot be taken from the E. I. company. without the most signal disgrace to the wisdom and good faith of the legislature, and the subversion of every principle of legal government.

4thly, Because it appears to us. that to restrain the subject in the disposition of his own property, without any other pretence than the mere possibility of abuse (this bill having been chiefly defended upon that ground), is a principle unheard-of in any free country, and most alarming to all the trading and monied interests of this kingdom: it goes to the subjecting to the fame restraint, on the fame loofe reasons, every great company, as well as every public or private stock, which may become of magnitude fufficient to tempt, in future times, an impoverished treasury and a rapacious administration, since no degree of innocence can be a security against fuch suspicion of a possible fraud; and fuch a fuspicion may be made a ground for continuing an arbitrary restraint, until the subject shall consent to ransom his property on fuch terms as shall be

prescribed to him.

5thly, Because this annual restraint tends to establish a perpetual interpolition of parliament, in declaring dividends for this company, and indeed all companies whatsoever, to the increase of that most dangerous and infamous part of stock-jobbing, which is carried on by clandestine intelligence. and to the vesting it in the worst of all hands, those of administration; for a minister, who shall hereafter acquire in parliament (by whatever means) sufficient influence for the purpose, may, by his power of increasing, diminishing, or withholding dividends at his pleafure, have all the stock-holders in these companies (a body extremely confiderable for wealth and numbers) entirely at his mercy, and probably at his disposal, to the infinite increase of the already overgrown, and almost irrefittible influence of the crown.

6thly, Because we apprehend, that this unprecedented practice of declaring dividends in parliament may become a more alarming mode of undue influence on the members themselves, than any of those which have hitherto so frequently excited the jealousy of the legislature, since it furnishes a fund of corruption far greater than any hitherto known; a fund in its nature inexhaustible, of the greater facility in the application, and quite out of the reach of all discovery and prosecution. think the principle of this bill the first step towards the introduction of fuch a new system of corruption; and have therefore refifted it. left the constitution should become totally perverted from the ends for which it was originally established, and be no longer venerated by this nation, as giving security to liberty and property, and protec-- tion to the subject from all violence injustice of the part of government.

The Speech of the Speaker of the House of Commons, when he reprimanded Philip Ward, late mayor of the city of Oxford; John Treacher, Sir Thomas Munday, Thomas Wife, John Nicholes, John Philips, Isaac Lawrence, Richard Tawney, all of the faid city; Thomas Robinson and John Brown, late bailiffs of the faid city; upon their knees, at the bar of the faid house, upon Wednesday the tenth day of February, 1768.

Philip Ward, John Treacher, Sir Thomas Munday, Thomas Wife, John Nicholes, John Philips, Ifaac Lawrence, Richard Tavney, Thomas Robinfon, John Brown,

THE offence of which you have been guilty has justly brought you under the fevere displeasure of this house. A more enormous crime you could not well commit: fince a deeper wound could not be given to the constitution itself, than by the open and dangerous attempt which you have made to subvert the freedom and independence of this house.

The freedom of this house is the freedom of this country, which can continue no longer than while the voices of the electors are uninfluenced by any base or venal motive. For if abilities and integrity are no recommendation to the electors; if those who bid highest for their voices are to obtain them from fuch deteffable confiderations. this house will not be the representatives of the people of Great Britain. Instead of being the guardians and protectors of their liberties, instead of redressing the grievances of the fubject, this house itself will be author of the worst of grievances: they will become the venal instruments of power to reduce this happy nation, the envy and admiration of the world, to the lowest state of misery and servitude. This is the abject condition to which you have attempted to bring your fellowsubjects.

Many circumstances concur to aggravate your offence. The place of your residence was a singular advantage. You had at all times the example of one of the most

[P 3] learned

fearned and respectable bodies in Europe before your eyes. Their conduct in every instance, but especially in the choice of their representatives in parliament, was well worthy your imitation.

You are magistrates of a great city. In such a station, it was a duty peculiarly incumbent upon you to watch over the morals of your fellow-citizens; to keep yourselves pure from venality; and to prevent, by your influence, those under your government from being tainted by this growing and pettilential vice. How have you abused this trust! You yourselves have set the infamous example of prostitution, in the most public and daring manner.

Surely you must have felt some remorse from the generous distain with which your corrupt offer was rejected by your representatives. They thought, and justly thought, that a feat in this house, obtained by a free and independent choice of their constituents, was the highest honour to which a subject can aspire; and that discharging their duty, as such representatives, was the noblest of services. Sorry I am to say, that these considerations do not appear to have had the least weight with you.

However, you have at last acknowledged your guilt; and, by your petition yesterday, you seem conscious of the enormity of your offence. This house, in the terror of its judgements, always thinks upon mercy; nor do they ever inslict punishment but for the sake of example, and to prevent others from becoming the objects

of their resentment.

The confure passed upon you will, they hope, have that effect.

You are now the objects of their mercy, and are brought to the bar

to be discharged.

May you be penetrated with a due fense of their justice and lenity! May you atone for your past offence, by your constant endeavours to make a right use of the invaluable privileges which you enjoy as electors! Consider these privileges as a facred trust reposed in you. Discharge it with integrity.

But, before you rife from your present posture, I do, in obedience to the commands of this house,

REPRIMAND YOU.

I am now to acquaint you, that you are discharged, paying your sees.

Abstract of the trial of John Grainger, Daniel Clark, Richard Cornwall, Patrick Lynch, Thomas Murray, Peter Flaharty, and Nicholas M'Cabe, for spooting at John Green, contrary to the statute, on the 21st of April last.

TOHN GREEN, living at the bottom of New Gravel-Lane, Shadwell, deposed, that he was employed as deputy-agent under Mr. William Russel, who, as agent appointed by Mr. alderman Beckford, was concerned in the execution of the act of parliament for regulating coal-heavers; that before this they were under the direction of justice Hodgson, and revolted from the coal-undertakers, infifting first upon 16 d. a score, and then 18 d. but at last would have nothing to do with the undertakers, and would have their price under the act of

parlia-

parliament; that Mr. Ruffel and the deponent had fixed upon an office at Billingsgate for registering the coalheavers, but none of them came there; alledging they were under the direction of justice Hodgson, to whom only they would apply; that the deponent was fent with a complaint to the justice by Mr. Russel, desiring a meeting with him, which he excufed, but would fend his clerk; and further told him, that, if Mr. Russel did not desist, he would meet with trouble, and he would give him a pretty dance to Westminiter-hall, for the act of parliament was in fo vague a manner, that any body might keep an office, and that, as they had the best men at their office, they did not fear to have the business; that, however, in a few days after, Mr. Russel advertised for men to come. but none came; and then he advertised for their coming at such a time, or he would employ fuch able-bodied men as chose to come. whereupon many came, and they were put in the gangs; that, Dunster, justice Hodgson's clerk, having seen the deponent do this at Billingsgate, brought to his door no less than 3 or 400 of these men, a great many of whom threatened they would pull down his house, or they would do for him; that the deponent went to the Mansion-house, to acquaint the lord mayor of the danger he was in, and received for answer, that he must be directed by some magistrate in his neighbourhood; that on Saturday morning, the 16th of April, the coal-heavers having put up some bills, a neighbour's fervant went and pulled one down, upon which the coal-heavers cried

out, that Green's maid had pulled down their bills; and then they directly came running from different parts to his door, to the amount of 100 and upwards. The purport, the deponent faid, of thefe bills, was a libel on Mr. alderman Beckford, and that what was done was Mr. Ruffel's own doing.—The acts of violence, committed by the coal-heavers againft this deponent, best appear from his own words.

I asked them, said he, what they wanted with me; they cried, By I-s, they would have my life if I offered to meddle with any of their bills; I faid, I had not meddled with any, nor none had that belonged to me; one of them cried, By J-s, he shall have a bill put up at his own window; he took up a handful of dirt, and put it upon the window, and put the bill upon it; another of them laid hold of my collar, and dragged me off the step of my door; another faid, Haul him into the river; faid another, By J-s, we will drown him; I got from them, and retreated back into my house. After that I went to Billingate, and met several of them there : there they threatened they would have my life. When I came home, I faw a great many of these people running from their different habitations, fome with bludgeons, or broomsticks, and weapons of that fort; they did not collect themselves in a body, but were running to the head of New Gravel Lane, I believe about 4 or 500 of them came within 200 yards of my house; they went to Mr. Metcalf, a neighbour of mine, and threatened him; there was one of them that was a pretended friend

of mine, that had promised, when he knew of any thing against me, he would let me, know: I fat up to guard my house, and I sent my wife and children out of the house; after that, I prevailed upon my wife to stay in the house upon this man's intelligence; he came about twelve, and told me nothing was intended against me, that they had done their business they were about; I went to bed, and was afleep; I was awaked by my fifterin-law, calling, Mr. Green, Mr. Green, for God's fake, we shall be murdered; this was about one o'clock on the Sunday morning; I jumped out of bed, and ran into the next room where my arms were; I took and levelled one, and faid, You rascals, if you do not be gone, I will shoot you; they were then driving at my doors and shutters, the noise was terrible, like a parcel of men working upon a ship's bottom, I could compare it to nothing else; I sired among. them, I believe I fired about fourteen times, and, when I had not any thing ready to fire, I threw glass, bottles upon them; - they were at this about a quarter of an hour, when they all dispersed. On the Monday I went to Billingsgate about eleven, I saw several of them there who threatened me. Dunfter was there also, they told me they would do for me if I did not defift in my proceedings, which was to register such people as applied; there were always fome of the coal-heavers about Dunster, he talked of the advertisements that had been in the paper, and faid they were mine; for he faid Mr. Ruffel had told him he totally declined having any thing to fay in it, and it was my doing

only; I faid, Do not deceive thefermen, that is very wrong of you; I asked him, if Mr. Russel did not tell him he would advertise to this effect; I began to be afraid, and, as many of them came about me, I left them.

Nothing happened after till Wednesday night, that was the 20th, about feven in the evening; then I faw a great many of these coal-heavers affembling together about 3 or 400 yards from my house, going up Gravel-lane. shut up as fait as I could, and told my wife to get out of the house as fast as she could with her children; accordingly she went away with the child that was afleep in the cradle; Gilberthorp was in the house drinking a pint of beer (I did not know his name then); faid I, Brother tarpawling, the is a fea-faring man) I am afraid I shall have a desperate attack to-night from what I have heard, will you stand by me and give me all the assistance you can't Yes, said he, that I will. When the house was fecured backwards and forwards I went up stairs, some stones had broke some windows there; I believe fome of them had thrown stones, and run away; I heard them call out 'Wilkes and liberty! I faw the neighbours lighting up candles; I faid to my maid, For God's fake, light up candles, for these people shall have no occasion at all to use me ill. I went to the window, and begged of them to defift, and faid, if they knew any thing particular of me, I was willing to refolve any thing they wanted to know: feeing I could not defend myself, I disguised my felf, and put on an old watch-coat and a Dutch cap, and went down **stairs**

flairs in order to get a magistrate to come and prevent my house from being pulled down; I had one Dunderdale, a shoemaker, that lodged in my house, he went down with me; when I came down to the back door, I heard them threaten they would have me and my life; I then found it impossible to get out of the house; I ran up stairs then, fully determined to defend myself as long as I was able; I spoke to them again in the itreet from the window, and defired them to tell me what I had done; they called out in the fireet they would have me, and hang me over my fign-post; others faid, they would broil and roaft me, and words to that effect; stones came up very fast. I then took a brace of piffols from the table and fired among them, loaded with powder only; after that, I kept firing away among them what arms I had loaded with bird and fwan shot; they dispersed in the front then; I immediately ran backwards, they were heaving stones into the back chamber windows; I fired from the back chamber windows; after I had fired fome few rounds backwards, they defifted from heaving stones into the back part of the house, but I did not find they had left the place. I was again attacked, both in the front and back part of the house; I fired among them sometimes from the front of my house, and fometimes from the rear; I imagined they would have broke into the house presently, if I had not kept a warm fire upon them; I heard them call out several times, I am shot, I am wounded; still they faid they would have me, and do for me. I had various attacks

in the night: I faw no fire-arms they had till eleven or twelve in the night; they were driving at the door about ten, but I cannot tell with what; I looked through the door and faw their hands moving, driving fomething hard against it. About twelve they fired into the house both in the front and the rear: the balls ftruck the cieling in the room where I was. fometimes close over my head; as they were in the street and I in the one pair of stairs, the balls went into the cieling and dropped down on the floor; I could not walk about the room with any fafety, I was forced to place myfelf by the wall between the windows, and fometimes I would crawl under the window to the next, and fometimes I flood behind the brackets; then I would stand up and drive among them like dung; I have feen their balls strike the cieling as I have stood under the cover of the wall, and as I have been going to fire they have come over my head, and fome lodged in the cieling.

This firing continued all the night, and all the morning, at dif-

ferent periods.

When I attacked them backwards, I used to crawl out of the window on my belly, and lie upon the wash-house leads with my arms; I have heard them say, You that have arms are to fire upon him, and you that have some to heave, and so many to break the door, and so many to climb the wall; if they got up there, they could get in at the window from the leads; I had Gilberthorp below to guard the door, for part of the front door was broke. I got off, I believe, about nine in

the morning, when I had no more ammunition left, only the charge that I had in my blunderbuis, except what was in the musket, that would not go off; lo I faid to the men that were in the house, You fee they are firing from every quarter, there is no help for me, they will come in, and I can make no return upon them to check their infolence; the best way to make them defit is for me to get out of the house, you will all be very fafe whether I make my efcape or not; Mr. Gilberthorp. faid, Do what you think best; I faid. They only want me, if they get me, it is all over; or if they know I am gone, they will defift: I took my blunderbufs ever my arm, and my drawn hanger in my hand, and went out of the back window upon the leads; I faw feveral of them in the alley, I levelled the blunderbufs at them, and faid, You rafcals, be gone, or I'll blow your brains out, especially you (that was to one under me), but I fcorn to take your life; he faid, God blefs you, Mr. Green, you are a brave man; he clapped his hand on his head, and ran away; I went over into Mr. Mereton's ship-yard, one of the shipwrights met me; just as I jumped, he faid, Mr. Green, follow me; he took me to a faw-pit, and shewed me a hole at the end where the fawyers, used to put things; he faid, Go into that hole, you will be fafe enough; faid I, Don't drop a word but that I am gone over the wall; I got in, he left me; there I lay till the guards came; I heard the mob fearch for me; some said, he is gone one way, fome another; they were got into the yard, I heard one of the ship-

wrights fay he is gone over the wall, and gone away by water.

When the guards came, one of the shipwrights came to me, and a defired to know what I should do ; I faid, Go and tell the officer to. draw his men up and come into the yard, and I'll furrender myfelf to him; the foldiers came, and I came out of the faw-pit; I had nothing but my handkerchief ad bout my head; I had been wounded between ten and eleven at night; I surrendered myself to the officer; justice Hodgson said; Mr. Green, you are one of the bravest fellows that ever was; whom do you intend to go before, me, or fir John Fielding? I faid, I do not care who it is; Then, faid he, you will go before me; accordingly we went, and when I came there he committed me to Newgate.'- In the course of this evidence it does not appear, that the deponent swore to the identity of any of the prisoners, as engaged in the act of firing against, or otherwife affailing his house, though he did to some few of them threatening him at Billing feate f but this identity was fworn to by the next evidence George Crabtree, in the persons of Cornwall. David Clark, or Clarey, Lynch, Flaharty, and Grainger. The first he saw fire several times towards Green's windows: Clark he also saw fire after Green had shot his brother; Grainger he faw heaving a stone, or brickbat, l'at Green's windows, and Lynch with a musket in his hand, but did not fee him fire. Robert Anderson fwore to Clark's and Cornwall's firing feveral times, as did alfo Andrew Evenerus to Clark's firing Thomas Cummings fwore to the

fame as committed by Flaharty. Clarke Lynch Cornwall, and Murray; and he particularly accufed Elaharty of getting into his own house, and firing out at his garret windows. Philip Oram and William Burgess corroborated the fame as to Cornwall, and the latter faw M'Cabe and John Grainger firing, knowing their persons but not their names. M'Cabe asked him for his sleeve buttons to load a piece with to fire at Green, and moreover examined his coat, and wanted to feel in his pocket for fomething to load: M'Cabe also enquired in the house where he the deponent lodged, for the pewter spoons and pots to cut them in pieces for shot, faying he would pay for them. There were feveral other evidences to prove the identity of the prisoners as concerned in this riot. Some of the prisoners declared their innocence of the charge; others faid they were there with the defign of keeping the peace, and preventing the escape of Green, who had been guilty of murder by firing out of his windows. Several appeared to their character : but all feven were brought in guilty, death; and were executed the 26th July, pursuant to their fentence.

Abstract of the trial of Samuel Gillam, esq. for the wilful murder of William Redburn.

John Taylor deposed, that he lives in High-street, Mile-end, is a journeyman weaver; that William Redburn was the same, and lived next door but one to him eighteen years; that Redburn and he went from home about two

o'clock, in the afternoon, on the 10th of May, to Westminster, but passed over London-bridge into St. George's-fields: that it might want about a quarter to three o'clock when they got there; that the horse-guards were just come, and were clearing the people out of the fields; that Redburn and he stopped about five or fix minutes in the causeway, and in that time two or three of the foot foldiers fired: that he faw no rioting, nor nothing done in the time he flood there; but that, when the foldiers had fired. Redburn faid to him. Taylor, let us go; that they then came out of the causeway into the road, their backs being towards the foldiers, and in that time Redburn received a ball, which wounded him in the hind part of the thigh; that, a great many helping Redburn along, he went to a furgeon in Blackman-street: the furgeon probed the wound, it went in behind, and came out before; that he did not fee the defendant Mr. Gillam, at the time he was looking at the foldiers and the mob; and nothing at all between the foldiers and the mob previous to the firing, nor any body make any diffurbance during the whole time he was there.

Cross examined. Says, he can give no guess what number of people might be there, but that there was a vast number; and all were quiet while he was there.

Richard Nicholl, a rope-maker, and constable of St. George the Martyr, deposed, that he was posted at the king's-bench prison the tenth of May, came there at half an hour past two in the afternoon; but that he had been there before between ten and eleven; that there

was a vast number of people, a thousand or more; that when he first came down before the king'sbench, he went nigh the brickwall; that Mr. Ponton faid, there was a paper fluck up against the prison-wall, and defired it might be taken down; which Mr. Latham the constable did, and foon after that the people cried out, Give us the paper, and throwed stones at them: this was between eleven and twelve, as nigh as he can guess; that the people threw stones at the justices and constables as they went towards the marshal's house, and continued so doing from the time of the taking down the paper till they got to the marshal's house; that the justices and constables went in there for foldiers, as he believes; after they had got into the house, the people kept on throwing stones, which he fays might continue for about four or five minutes; that there is a way through the house, and there was a guard of foldiers; that they came from behind the house, and the guard of soldiers came after them, round to the front of the house; believes there were three justices, Mr. Ponton, Mr. Gillam, and another; but did not know the other; that when they came round the house, the people began to halloo, and cry out for the paper, and kept throwing of stones; upon which Mr. Gillam, Mr. Ponton, and the other gentleman, drew up to read the riot-act, and while they were reading it, or were going to read it, the mob heaved stones at the justices; faw one stone cut a serjeant's lip, and another struck Mr. Ponton on the breast; that whilst a man was hallooing out, Wilkes and liberty

for ever!' he was in the field facing the brick-wall, about five yards from it, and was ordered to take hold of him; that, getting within ten vards of him, he faw him run, and, looking over his left hand, faw an officer and fome foldiers running after him as far as the Hay-market, then lost fight of him: that is all he knows of that part, this was near twelve o'clock. About one, was standing near the road, where some soldiers were posted; says, the people behaved very riotous, and threw stones at the foldiers, fo that they could not keep their posts for them; Mr. Gillam, who was there, begged of the people to disperse, and go about their business; he told them that the riot-act had been read; fome people there faid, D-n you, we do not believe the riot-act has been read; Mr. Gillam faid, If I thought that would appeale you, I would read it again; upon which, he took a pocket-book out of his pocket, called out filence, and read it again, and he the deponent heard him read it; the people came round about, were pretty filent at that time, and afterwards he begged of them again to difperfe. Between two and three o'clock, as he was flanding by the king's-bench, Mr. Gillam faid to him, Constable, go with me; and he went with him to the foldiers. They were posted near a road: when they got there, he begged of the people to disperse, told them the riot-act had been read, and they were every foul liable to be taken up; while he was begging them to disperse, they threw stones at the soldiers, Mr. Gillam, and himself, as they stood all together; Mr. Gillam then said, For 'God's

God's fake, good people, go away; if I see any more stones thrown, I will order the guards to fire: while he was fo faying, a stone came, and hit him over the head, about the temple, it caused him to reel three or four yards backwards; and when he recovered himself, or foon after, the deponent heard him fay, Fire; the foldiers were then in two rows, they fell back a few paces into four rows, and then fired; does not know whether there were four or fix in front then; after they had fired, the horse rode down and fired. riot-act had been read above an hour the fecond time; heard ino orders for the horse to fire; after they had fired, faw a man fit upon the ground wounded in the pathway; he held his hand upon his thigh, and faw blood in his hand, and it ran down; does not know how that man was dreffed, they faid he was a weaver; a good many persons were taken up, but none rescued that he saw, yet they would not disperse.

William Abbot, a constable of St. Olave's, deposed, that a stone or something hit Mr. Gillam on the head, between two and three, when he was in the fields near Mr. Gillam; that some of the mob appeared to throw it, but cannot say who; the stone made him stagger; poresently after somebody gave orders to sire; but who it was cannot say, as he was looking towards the people at the same time.

Cross examined. Says, he had been there during the whole of the day; that he saw Mr. Ponton struck in the morning; Mr. Gillam on the head, and a serjeant cut on the lip; that the throwing stones were several times repeat-

ed; heard the justices desire them to disperse a great many times, but did not hear the proclamation read, and says there were sisteen or twenty thousand people there.

Robert Allen, a constable, deposed, that he was present on the 10th of May, when the firing was; does not think there was, upon his foul, any provocation, for there was no attempt made to take any prisoners; a great number of people were in the fields; it was a general thoroughfare, and he believes every body that went through the fields stopped there; fays, a great party of horse-guards came and rode among the people, caufing a great disturbance; the gaof is railed round, and the people were leaning upon these rails; the horse rode among them, and dispersed them to the out-borders of the fields; when they came to the road and causeway, they huzzaed and hissed the soldiers, that was all the provocation he faw: that he faw two or three people fall with their wounds, was not near enough to hear any orders. given to fire, but remembers the manner of firing was thus: The body of foldiers were within about forty yards of the causeway, the way that people walk in; they call it platoons, believes they were feparated, not all together; they fired at random half a dozen at a time, more or less; a great number of them loaded three times, and feemed to enjoy their fire, which he thought a great cruelty; this was about three, or a little after; cannot fay he faw a stone thrown the whole day, was in different parts, but did not fee the weaver.

Cross

Crofs examined. Says, the commanding officer came up, and faid, he believed they had dispersed the mob: Mr. Gillam faid, I hope there is no mischief done; this was a very short time after the firing: the commanding officers faid, You may depend upon it, there is no mischief done, because we always fire in the air: a great number of people afterwards reported, murder was done. This was the horse officer. That a ball went through the thigh of one Boddington, and shivered it; they were going to order him, the deponent, into confinement, for faying it was a cruel thing; and, as they ordered this fire, it was very proper, he faid, they should order the man away; Mr. Gillam faid, Why do not you go and take him away? The deponent faid, it was not in his power. That, when the fir-ing was ordered, he was in the field by the justices almost the whole day, but not near enough to hear any order for firing, being fometimes he supposes forty yards from Mr. Gillam, fometimes close to him; and, at the time the firing was ordered, supposes he might be about forty yards. Being afked then, if he was not near, how he could tell there was no occasion to order a firing? fays, he was amongst the general body of the people, and could fee those upon whom the firing was, but obferved nothing but hallooing, and did not fee a stone thrown the whole time he was there. tioned whether he was relation to Allen that was killed, faid, None at all.

George Milford Flowers, of St. Olave's, depofes he was prefent in St. George's-fields the 10th of

May; came there a few minutes after twelve; went into the Haymarket, and continued there a quarter of an hour; was there part of the day besides, and observed the people a good deal diffatisfied at the death of Allen; the people expressed it in words; did not see any flicks or any thing thrown; went to Mr. Allen's, and from thence down the Borough to enquire for a justice of the peace, to have an evidence made of that young man; came back near two: went along the wall of the king'sbench about three, passed from thence to the king's-bench, and from thence to the marshal's house; observed during that time there was a great tumult among the foldiers; believes the people were fleeing, and the foldiers after them; was not in a fituation to observe the foot, this was the horse; was close by the prison-wall; did not observe he was there the time the foot fired, as he did not remain, but passed along; saw Mr. Gillam a little after, but not immediately; was waiting to obtain a warrant for a foldier that had killed Mr. Allen; Mr. Gillam took off his wig, and rubbed his head; faid, he had received a blow with a brickbat or fomething, but thanked God that his skull was thick, it had not hurt it; Mr. Gillam did not give any reason in his hearing for firing; did not fee Redburn that day to his knowledge; had some conversation with Mr. Gillam in the evening, who faid he had fomething thrown at him. Asked, whether Mr. Gillam at any other part of the day gave any reason for firing r says, he did nothing but what was mentioned before.

barbyshire deposed, that he knows Mr. Gillam, and remembers the roth of May very well; had conversation with Mr. Gillam about the accident that day; it was about two o'clock, after the murder of Mr. Allen, before the killing of Redburn. Being told by the council for the profecution that had nothing to do with this matter, and that they would not alk any further questions, demanded then what he came there for? faid he could prove fomething. having been there from twelve till nine at night, and feen the whole behaviour of Mr. Gillam; is himfelf a bookfeller, and lives in the parish of St. George's Hanoverfquare; went into the king'sbench prison a little before twelve o'clock, staid there about half an hour: could fee into the fields because there were glass windows; did not observe the least ill behaviour in the people; did quit the prison, and, when he came out, was going into the city, but, at the end of the wall, there were people crying out, that there was a murder committed; this was a little before one o'clock. Being told to keep to the death of Redburn, and Mr. Gillam's behaviour, fays, that, after the murder, he returned to the king's-bench prison, by defire of Mrs. Allen, to see after the murderer; this was about one o'clock; applied to the justices for a warrant to apprehend the murderer or murderers; the juftices would not grant any; then applied to justice Gillam, who told him, he had orders from the miniltry to fire upon the people, and that there must be some men killed; and that it was better to kill five-and-twenty to-day, than have

an hundred to kill to-morrow a this was in the field opposite the marshal's house, between one and two o'clock, in the presence of the foldiers: and that all the afternoon there were people taken into custody, and put into a cellar under the marshal's house. Being defired by the court to name those persons that were present, very properly exclaimed, 'What! the foldiers!' faid, he was not fo well acquainted with them; but believes it was twice faid in the house. and out of the house, and with a fneer, as murder was a thing of no consequence; says, there were some people by at this time, but does not recollect who they were. Asked, Was Mr. Ponton there? replied, Yes; but does not know whether in hearing, but faw him there.

Cross examined. Believes it was spoken twice, but is not certain. only as to once, and, to the best of his knowledge, that it was spoken the first time opposite the marshal's house, about two o'clock; that they talked of it as a thing of trifling concern, a matter of no concern; that Mr. Gillam, upon his application to him for a warrant for the murderers, faid he would grant no warrant, and that it was no murder: for that he had orders from the ministry to fire upon the people, and there must be some killed, and it was better to kill five and twenty to-day than a hundred to-morrow. IN. B. The deponent repeats this feveral times.] Asked, How long that was after the first conversation? fays, he cannot tell; but it was not at night, he was in bed at night: does not fay the very particular words were faid, but feveral things were faid. Is not certain whether

it was in the marshal's house, but believes it was. When he heard it a fecond time, it was not the fame words, but to that purport; it was with great difficulty that any warrant could be obtained. Gillam faid it was no murder; that he did not hear the other justices say any thing in particular; imagined that this gentleman was Foreman on that most glorious day. Adds that, Mr. Gillam said, if their names could be procured, he would grant warrants; but would not grant any warrants till he knew their names. was in the marshal's house, but the words were used on the first application for warrants. Being afked how long he had been acquainted with Mr. Gillam, fays, The 10th of May about 12 o'clock, was the first of his acquaintance with him; but did not know there was a Mr. Gillam living before, and wished he had not feen him then, because he faw fuch acts of cruelty he never faw before. Adds, Gillam was in company with him in that fecond conversation many hours, and that they came together as acquaintance, because he was applying for warrants, endeavouring to bring the murderers to light; that he was there, and drank there, and believes out of the same glass, but is not fure of that; that Mr. Flowers was in the room, and the cowman, whose name he does not recollect: faw also Mr. Ponton there several times; that the application for the warrants was particularly made by Mr. Flowers, and another gentleman, Mr. Horne, who, the deponent believes, is a clergyman, and lives at Brentford, Says, the justice's clerk, upon taking a deposition for the murder of Allen, beginning

with what happened from twelve o'clock; when he came to that part wherein he faid he heard Mr. Gillam order the military to fire upon the people, Mr. Gillam faid, Hold, hold, do not take his deposition from the time before that, but what happened in the cow-house; imagined Mr. Gillam was conscious of his guilt. Asked, Were any justices present except Mr. Gillam, at the time he said it was no murder? Answered No, not as he knew of. [Much bickering passed between this evidence and the council.]

George Milford Flowers, being asked whether he remembered seeing Mr. Darbyshire there, replied, Yes; that he [Geo. Flowers] made repeated applications for a warrant to Mr. Gillam, in the marshal's house, about three o'clock, when he faw Mr. Darbyshire several times, who faid a great many things to him; that the justice ordered him [George Flowers] into custody for helping the woman; that he [the justice ordered depositions to be taken; but faid they were all alike, and would not have them, he would have them otherwise. The deponent did not get a warrant. Mr. Pardon was taking depolitions; he [the latter] faid he could not help it, it was as they gave them.

Flowers further deposed, that he [Gillam] said it was owing to their throwing at his head; that justice Capel was there, who said he had an order from the ministry to kill 25 of the people: that Col. West was there, he made some slight apologies, and said it was owing to the gun going off; he said he could have drove them all away without breaking their shins, there was no reason to hurt any of them. Mr.

Gillam,

Gillam, in the evening, to have

them fire again.

William Penrith, turnkey at the king's bench prison, deposed, that he was minding the prisoners on the infide, knows nothing what happened without, but faw a great number of people on the outfide. That he took in many that day for milbehaviour; but there were no stones thrown that day, as he knows of, though fome were the day before. Asked, If he was not afraid of their breaking the prison the second day? Replied, No; because he had a fufficient guard with him on the infide, half a dozen people, not foldiers. Did not fend the day before for a guard, but believes the marshal did. It was a guard on the outside, did not see what was done there. Being asked whether there was any force used the second day, replied there was not.

John Wills, a glazier, and constable of St. Olave's parish, was in St. George's fields on the 10th of May; he went there about twelve o clock; faw Mr. Ponton, Mr. Gillam, Mr. Russel, and several others, whose names he does not know. At the time the horse-grenadiers came, there was a fad disturbance, the people cried out Wilkes and liberry!' and threw stones; the guards were ordered to the field-gate, Mr. Gillam was along with them; the deponent went with them; Mr. Gillam defired the people to difperfe, and for God's fake to go home; faying, if he faw any more stones thrown, he would order the guards to fire; just at that time, fomething came and hit him on the fide of the head, he fell back about two or three yards; came forwards again, and faid to the officer, It

this be the case, we shall all be killed, you must fire; he faid, Fire; upon that the foldiers fired immediately. The deponent faw the horsegrenadiers fire; then thought him-telf in danger, because they fired into the path where he and others were. Asked, If he knew how they fired? Says there were three rows, believes they fell into fix, but cannot be positive; looked upon them to be 35 or 36 men; did not hear the riot act read, but Mr. Gillam told the people it had been read, and the time was nearly expired; in the evening it was read again; it was read three feveral times afterwards, that he rememibers; faid, Mr. Gillam spoke in a very friendly manner to the people. but, if they threw any more stones, they must order the guard's to fire.

Serjeant Glynn. I call no more witnesses, your Lordships will never find me acting a part against humanity and candour; I am not now pressing this gentleman's conviction; I opened the law, that, where it was absolutely neessay for suppressing a riotous mob, there the magistrate is justified: the application thereof from facts is the whole question; with respect to me, I shall say not a word more about it.

Without going into his defence, or calling any witness, the Justice was honourably acquitted, and had a copy of his indictment granted.

No account was allowed to be published by authority, of the trial of Donald Macleane at Guildford.

Those that have appeared, are so contradictory, and so deeply tinged by the wiolent spirit of party which then prewailed, that we think any extract from them would only serve

to mislead the opinion of our readers. The most remarkable circumflance attending this trial was, that it appeared by justice Gillam's evidence, that he know Macloughlan to be the person who shot young Allen.

Lord Baltimore's Defence, read to the Court and Jury, upon his trial at Kingston in Surry, on Saturday the 25th of March, for a rape said to be committed by him, on Sarah Woodcock; of which his Lordship was acquitted. Taken in Court by a Gentleman present.

My Lord, and Gentlemen, Have put myself upon my country, in confidence that prejudice and clamour will avail nothing in this place, where it is the privilege of the meanest of the King's subects to be presumed to be innocent until his guilt has been made appear by legal evidence. I wish I could fay, that I have been treated abroad with the fame candour; I have been loaded with obloquy; the most malignant libels have been circulated, and every other method that malice could devise has been taken to create a general prejudice against me., I thank God, that, under such circumstances, I have had firmness and resolution enough to meet my accusers face to face, and provoke an enquiry into my conduct. His murus abeneus efto. nil conscire sibi.

The charge against me, and against these poor people, who are involved with me because they might otherwise have been witnesses for me, is, in its nature, easy to be made, and hard to be disproved. The accuser has the advantage of supporting it by direct and positive

evidence. The defence can only be collected from circumstances.

My defence is composed of a very great variety of circumstances, all tending to shew the falsity of this charge, the absurdity of it, the impossibility that it can be true. It will be laid before the jury by evidence, under the direction of my counsel; and I have the considence of an innocent man, that it will manifest to your lordship, the jury, and the whole world, that the story told by this woman is a perversion of the truth, and a mere invention.

What could induce this woman to make fuch a charge, I can only fulpect.-Very foon after the came to my house, upon her representation to me that her father was distressed, I sent him a considerable fum of money; whether the ease with which that money was obtained from me, might suggest this idea, as a means of obtaining a larger fum of money, or whether it was thought necessary to destroy me in order to re-establish the character of the girl with the world, I know not; but I do aver upon the word of a man of honour, that there is no truth in any thing which has been faid or fworn of my having offered violence to this girl. I ever held fuch brutality in abhorrence; may I be allowed to add, without offending against that decorum which ought to be obferved here, that as a man of pleafure, I am in opinion against all force. I should not have introduced this fentiment, if it had not been pertinent to the fubiect; other opinions on other subjects, no way relating to this charge, have been imputed, and falfely imputed to me, to inflame this accusation. Libertine as I may have been represented, I held

I hold no fuch opinions; and confidering the debility of my constitution, it is not only a moral but a physical impossibility for me to have ravished this woman, who is stronger than I am. Much has been urged against me upon that of having seduced her from her parents and friends. Seduction is not the point of this charge; but I do affure your lordship and the jury, that this part of the case has been aggravated exceedingly beyond the truth; if I have been in any degree to blame, I have very fufficiently atoned for every indifcretion which a weak attachment to this unworthy woman may have led me into, by having fuffered the difference of being exposed as a criminal at the bar, in the county which my father had the honour to represent in parliament, and where, if this fort of an active life had been my object, my own rank and fortune gave me some pretentions to have attained the fame honours. I will take up no more of your lordship's time than to add; that if I had been conscious of the guilt now imputed to me, I could have kept myself and my fortune out of the reach of the laws of this country. I am a citizen of the world, and could have lived any where; but I love my country, and submit to its laws; and resolving that my innocence should be justified by the laws, I now, by my own voluntary act, by furrendering myfelf to the court of king's-bench, stake upon the verdict, of twelve men my life and fortune, and what is dearer to me than either, my honour.

The public writings, which the extraordinary transactions in our colonies have this year produced, are fo numerous and diffuse, that in themfelves they would form a volume of very considerable bulk; for which, reason, it is only in our power to Jelect a few of the most interesting and important of them for our readers.

Copy of the Agreement entered into by the inhabitants of Boston, the capital of the province of Massachusetts.

THE merchants and traders in the town of Boston having taken into confideration the deplorable fituation of the trade, and the many difficulties it at prefent labours under on account of the scarcity of money, which is daily increasing for want of the other remittances to discharge our debts in Great Britain, and the large fums collected by the officers of the customs for duties on goods imported; the heavy taxes levied to discharge the debts contracted by the government in the late war; the embarrassments and restrictions laid on the trade by feveral late acts of parliament; together with the bad fuccess of our cod fishery this season, and the disconraging prospect of the whale fishery, by which our principal sources of remittance are like to be greatly diminished, and we thereby rendered unable to pay the debts we owe the merchants in Great Britain, and to continue the importation of goods from thence;

We; the subscribers, in order to relieve the trade under those discouragements, to promote industry, frugality, and occonomy, and to dif-- courage

[2 2]

courage luxury, and every kind of extravagance, do promise and engage to and with each other as fol-

First, That we will not send for or import from Great Britain, either upon: our own account, or upon commission; this fall, any other goods than what are already ordered

for the fall supply.

Secondly, That we will not fend for or import any kind of goods or merchandize from Great Britain, either on our own account, or on commissions, or any otherwise, from the ist of January 1769, to the ist of January 1770, except fair, coals, fish-hooks and lines, hemp, and duck bar lead and shot, wool-cards and card-wire.

Thirdly, That we will not purchale of any factor, or others, any kind of goods imported from Great Britain, frem January 1769, to

January 1776

Fourthly, That we will not import. on our own account, or on commissions, or purchase of any who shall import from any other colony in America, from January 1769, to - January 1770, any tea, glals, paper, or other goods commonly imported from Great Britain.

Fifthly, That we will not, from and after the 1st of January 1769, import into this province any tea, paper, glass, or painters colours, until the act imposing duties on those articles shall be repealed.

In witness whereof, we have hereunto fet our hands, this first

day of August, 1768.

New-York, Sept. 15. The following resolves are agreed to by the tradefmen of this city, reflecting on the falutary meafures entered into by the people in Boston and this city,

to restrict the importation of goods from Great Britain, until the acts of parliament laying duties on paper, glass, &c. are repealed: and being animated with a spirit of liberty, and thinking it our duty to exert ourselves by all lawful means, to maintain and obtain our just rights and privileges, which we claim under our most excellent constitution as Englishmen, not to be taxed but by our own confent or that of our representatives: and in order to support and strengthen our neighbours, the merchants of this city, we the subscribers, uniting in the common cause, do agree to and with each other, as follows:

I. That we will not ourselves purchase or take any goods or merchandize imported from Europe, by any merchant, directly of indirectly, contrary to the true intent and meaning of an agreement of the merchants of this city, on the 27th of

August last.

II. That we will not ourselves. or by any other means, buy any kind of goods from any merchant, store-keeper, or retailer, (if any fuch there be) who shall refuse to join with their brethren in figning the said agreement; but that we will use every lawful means in our power to prevent our acquaintance from dealing with them.

III. That if any merchant, in or from Europe, should import any goods in order to fell them in this province, contrary to the above agreement, that we ourselves will by no means deal with fuch importers: and as far as we can, by all lawful means, endeavour to discourage the fale of fuch goods.

V. That we will endeavour to fall upon some expedient to make

known

known such importers or retailers as shall refuse to unite in maintaining and obtaining the liberties of their

country.

V. That we, his majesty's most dutiful and loyal subjects, inhabitants of the city of New-York, being filled with love and gratitude to our present most gracious sovereign, and the highest veneration for the British constitution, which we unite to plead as our birth-right, and are always willing to unite to support and maintain, give it as our opinion. and are determined to deem those persons who shall refuse to unite in the common cause, as acting the part of an enemy to the true interest of Great Britain and her colonies, and confequently not deferving the patronage of merchants or mechanics.

New-York, Sept. 5, 1768.

Proceedings at Boston. From the New York Gazette of Monday, Sept. 26, 1768.

Boston, Sept. 19.
At a meeting of the freeholders, and other inhabitants of the town of Boston, legally qualified and warned in public town meeting affembled, at Faneuil-Hall, on Monday the 12th of September, A. D. 1768.

The meeting was opened with prayer by the Rev. Dr. Cooper.

The hon. James Otis, esq; was unanimously chosen moderator.

THE petition of a confiderable number of the respectable inhabitants to the select-men, dated the 8th instant, praying that the town might be forthwith legally convened, to enquire of his excellency the governor, the grounds and

reasons of fundry declarations made by him, that three regiments may be daily expected, two of them to be quartered in this town, and one at Castle-William; as also to confider of the most wise, constitutional, loyal, and falutary measures to be adopted on such an occasion, was read, whereupon the following vote was passed:

Whereas it has been reported in this town meeting, that his excellency the governor has intimated his apprehensions that one or more regiments of his majesty's troops are

daily to be expected here:

Voted, That the hon. Thomas Cushing, esq; Mr. Samuel Adams, Richard Dana, esq; Benj. Kent, esq; and Dr. Joseph Warren, be a committee, to wait upon his excellency, if in town, humbly requesting that he would be pleased to communicate to the town the grounds and assurances he may have thereof.

Upon a motion made and se-

conded.

Voted, That the following petition be presented to his excellency the governor; and a committee was appointed for that purpose, who were directed humbly to request his excellency to favour the town with an immediate answer.

To his excellency Francis Bernard, esc; governor, &c.

May it please your excellency,

The inhabitants of the town of
Bolton legally affembled, taking
into confideration the critical state of
the public affairs, more especially
the present precarious situation of
our invaluable rights and privileges,
civil and religious, most humbly request that your excellency would be
pleased forthwith to listue precepts
for a general assembly, to be con-

[23] vened

vened with the utmost speed, in order that such measures may be taken as in their wisdom they may think proper for the preservation of our said rights and privileges.

And your petitioners, as in duty

bound, &c.

Upon a motion made and seconded, a committee was appointed to take the state of our public affairs into consideration, and report at the adjournment the measures they apprehend most falutary to be taken in the present emergency.

Adjourned till the next day ten

o'clock, A. M.

Tuesday, the 13th Sept. ten o'clock, A.M. met accordingly.
THE committee appointed vesser-

day to wait upon his excellency with the petition and request of the town, reported from his excellency the following answer in writing;

Gentlemen,

his majefty's troops are to be expected in Boston, arise from information of a private nature: I have received no public letters, notifying to me the coming of such troops, and requiring quarters for them; whenever I do, I shall communicate them to his majesty's council.

The business of calling another affembly for this year is now before the king, and I can do nothing in it until I receive his majesty's commands. FRA BERNARD.

The committee appointed to take the flate of our public affairs into confideration, reported the following declaration and refolves.

W HEREAS it is the first principle in civil society, founded in nature and reason, that no law of the society can be binding on any individual without his consent, given by himself in person, or by his

representative, of his own free elec-

And whereas in and by an act of the British parliament passed in the first year of the reign of king William and queen Mary, of glorious and blessed memory, entitled, An act declaring the rights and liberties of the subject, and fettling the succession of the crown; the preamble of which act is in these words, viz. 'Whereas the late king lames the Second, by the affiftance of divers evil councellors, judges, and mini-flers, employed by him, did endeavor to subvert and extirpate the protestant religion, and the laws and liberties of this kingdom;' it is expresly, among other things, declared. That the levying money for the use of the crown, by pretence of prerogative, without grant of parliament, for a longer time or in other manner than the same is grant-

ed, is illegal:

And whereas in the third year of the reign of the same king William and queen Mary, their majesties were graciously pleased, by their royal charter, to give and grant to the inhabitants of this his majesty's province, all the territory therein described, to be holden in free and common foccage: and also to ordain and grant to the faid inhabitants certain rights, liberties, and privileges therein expressly mentioned: among which, it is granted, established, and ordained, that all and every the subjects of them, their heirs and fucceffors, which shall go to inbabit within the faid province and territory, and every of their children. which shall happen to be born there, or on the feas in going thither, or returning from thence, shall have and enjoy all liberties and immunities of free and natural subjects, within

within any of the dominions of them, their heirs and fucceffors, to all intents, purposes, and confiructions whatever, as if they and every of them were born within the realm of England:

And whereas by the aforesaid act of parliament made in the first year of the said king William and queen Mary, all and singular the premises contained therein are claimed, demanded, and insisted on, as the undoubted rights and liberties of the subjects born within the realm:

And whereas the freeholders and other inhabitants of this town, the metropolis of the province in the faid charter mentioned, do hold all the rights and liberties therein contained to be facred and inviolable; at the fame time publicly and folemnly acknowledging their firm and unfhaken allegiance to their alone rightful fovereign king George the third, the lawful fucceffor of the faid king William and queen Mary to the British throne: Therefore,

Resolved, That the faid freeholders and other inhabitants of the town of Boston will, at the utmost peril of their lives and fortunes, take all legal and conflitutional measures to defend and maintain the person, family, crown, and dignity of our faid Tovereign lord George the third; and all and fingular the rights, liberties, privileges, and immunities, granted in the faid royal charter; as well those which are declared to be belonging to us as British subjects by birthright, as all others therein specially mentioned.

And whereas by the faid royal charter it is specially granted to

the great and general court or affembly therein conflituted, to impose and levy proportionable and reasonable affessments, rates, and taxes, upon the estates and persons of all and every the proprietors and inhabitants of the said province or territory, for the fervice of the king, in the necessary desence and support of his government of the province, and the protection and preservation of his subjects therein: Therefore,

Voted, As the opinion of this town, that the levying money within this province for the use and fervice of the crown, in other manner than the fame is granted by the great and general court or affembly of this province, is in violation of the faid royal charter; and the same is also in violation of the undoubted natural rights of fubjects, declared in the aforesaid act of parliament, freely to give and grant their own money for the fervice of the crown, with their own confent, in person, or by representatives of their own free election.

And whereas in the aforesaid act of parliament it is declared, that the raising or keeping a standing army within the kingdom, in time of peace, unless it be with the consent of parliament, is against law; it is the opinion of this town, that the faid declarations are founded in the indefeafible right of the subjects to be consulted, and to give their free confent, in person, or by representatives of their own free election, to the raising and keeping a standing army among them; and the inhabitants of this town, being free subjects, have the same right, derived from nature, and confirmed

[2,4] by

by the British constitution, as well as the faid royal charter; and therefore the raifing or keeping a standing army, without their confent, in person, or by representatives of their own free election, would be an infringement of their natural, constitutional, and charter rights; and the employing fuch arts for the enforcing of laws made without the consent of the people, in person, or by their representatives, would be a grievance.

The foregoing report being divers times diffinctly read, and confidered by the town, the queftion was put, Whether the same shall be accepted and recorded? and passed unanimously in the

affirmative.

Upon a motion made and feconded, the following vote was

unanimously passed, viz.

WHEREAS by an act of parliament of the first of king William and queen Mary, it is declared, that for the redress of all grievances, and for amending, ftrengthening, and preferving the laws, parliaments ought to be held frequently; and inafmuch as it is the opinion of this town, that the people labour under many intolerable grievances, which, unless speedily redressed, threaten the total destruction of our invaluable, natural, conflitutional, and charter rights:

And furthermore, as his excellency the governor has declared himself unable, at the request of this town, to call a general court, which is the affembly of the states of this province for the redress of

fuch grievances:

Voted, That this town will now make choice of a fuitable number

of persons, to act for them as a committee in convention with fuch as may be fent to join them from the feveral towns in this prevince, in order that fuch measures may be confulted and advised, as his majesty's service, and the peace and fafety of the subjects in the province, may require.

Whereupon the hon. Otis, efq. hon. Thomas Cushing, efq. Mr. Samuel Adams, and John Hancock, efq. were appointed a committee for the faid purpose; the town hereafter to take into confideration what recompence shall be made them for the

fervice they may perform.

Voted. That the felect-men be directed to write to the felect-men of the feveral towns within this province, informing them of the foregoing vote; and to propose that a convention be held, if they shall think proper, at Faneuil-hall, in this town, on Thursday the 22d of September instant, at ten o'clock before-noon.

Upon a motion made and feconded, the following vote was paffed by a very great majority,

WHEREAS by an act of parliament of the first of king William and queen Mary, it is declared, that the subjects, being protestants, may have arms for their defence; it is the opinion of this town, that the faid declaration is founded in nature, reafon, and found policy, and is well adapted for the necessary defence of the community:

And forafmuch as, by a good and wholesome law of this province, every listed soldier, and other housholder (except troopers, who by law are otherwise to be

provided)

provided) shall be always provided with a well-fixed firelock, musket, accoutrements and ammunition, as is in the faid law particularly mentioned, to the fatisfaction of the commission officers of the company: and as there is at this time a prevailing apprehension in the minds of many, of an approaching war with France; in order that the inhabitants of this town may be prepared in case of sudden danger: Voted, That those of the faid inhabitants, who may at present be unprovided, be, and hereby are, requested duly to observe the said law at this time.

The hon. Thomas Cushing, esq. communicated to the town a letter received from a committee of the merchants in the city of New-York, acquainting him with their agreement relative to a nonimportation of British goods:-Whereupon the town, by a vote, expressed their highest satisfaction

therein.

The town taking into ferious confideration the present aspect of their public affairs, and being of opinion that it greatly behoves a people professing godliness, to address the Supreme Ruler of the world, on all occasions, for that wildom which is profitable to di-

Voted unanimously, That the felect-men be a committee to wait on the feveral ministers of the gospel within this town, defiring that the next Tuesday may be set apart as a day of fasting and prayer.

Ordered, That the votes and proceedings of the town in their present meeting be published in

the feveral news-papers.

The town voted their thanks to the moderator for his good fervices, and then the meeting was diffolved.

Atteft,

W. COOPER, Town-clerk.

The following is a copy of the circular letter, written by the select-men of this town, and directed to the selectmen of the several towns within this province; agreeable to a vote at the meeting on the 13th inft.

Gentlemen, Boston, Sept. 14. VOU are already too well acquainted with the melancholy and very alarming circumstances to which this province, as well as America in general, is now reduced. Taxes, equally detrimental to the commercial interests of the parent country and her colonies, are imposed upon the people, without their confent: taxes defigned for the support of the civil government in the colonies, in a manner clearly unconstitutional, and contrary to that in which, till of late, government has been supported, by the free gift of the people in the American assemblies or parliaments; as also for the maintenance of a large standing army; not for the defence of the newly-acquired territories, but for the old colonies, and in time of peace. The decent, humble, and truly loyal applications and petitions from the representatives of this province, for the redrefs of these heavy and very threatening grievances, have hitherto been ineffectual, being affured from authentic intelligence that they have not yet reached the royal ear: the only effect of tranfmitting these applications hitherto perceivable, has been a mandate from one of his majesty's secretaries of state to the governor of

this province, to dissolve the general affembly, merely because the late house of representatives refused to rescind a resolution of a former house, which implied nothing more than a right in the American subjects to unite in humble and dutiful petitions to their gracious sovereign, when they found themselves aggrieved: this is a right naturally inherent in every man, and expressly recognized at the glorious Revolution as the birth right of an Englishman.

This diffolution you are fensible has taken place; the governor has publicly and repeatedly declared that he cannot call another affembly; and the secretary of state for the American department, in one of his letters communicated to the late house, has been pleased to fay, 'proper care will be taken for the support of the dignity of government;' the meaning of which is too plain to be misunderstood.

The concern and perplexity into which these things have thrown the people, have been greatly aggravated by a late declaration of his excellency governor Bernard, that one or more regiments may soon be expected in this province.

The defign of these troops is every one's apprehension; nothing short of enforcing by military power the execution of acts of parliament, in the forming of which the colonies have not, and cannot have, any constitutional instance. This is one of the greatest distresses to which a free people can be reduced.

The town which we have the honour to ferve, have taken these things at their late meeting into

their most ferious consideration: And as there is in the minds of many a prevailing apprehension of an approaching war with France, they have passed the several votes, which we transmit to you, desiring that they may be immediately laid before the town whose prudentials are in your care, at a legal meeting, for their candid and particular attention.

Deprived of the councils of a general affembly in this dark and difficult feafon, the loyal people of this province will, we are perfuaded, immediately perceive the propriety and utility of the proposed committee of convention: and the found and wholesome advice that may be expected from a number of gentlemen chosen by themselves, and in whom they may repose the greatest confidence. must tend to the real service of our gracious fovereign, and the welfare of his subjects in this province, and may happily prevent any fudden and unconnected measures. which in their present anxiety, and even agony of mind, they may be in danger of falling into.

As it is of importance that the convention should meet as soon as may be, so early a day as the 22d of this instant September has been proposed for that purpose—and it is hoped the remotest towns will by that time, or as soon after as conveniently may be, return their respective committees.

Not doubting but that you are equally concerned with us, and our fellow citizens, for the prefervation of our invaluable rights, and for the general happiness of our country, and that you are disposed with equal ardor to exert

vourfelves

yourfelves in every constitutional way for so glorious a purpose.

Signed by the felect-men.

The following articles of intelligence from Boston are taken from the Same paper.

T is faid that orders for troops to be quartered in this province, are in confequence of letters wrote here on the 19th of March last.

On Thursday next there will be a general muster of the regiment in this town; and, we hear, a critical view of the arms of the foldiers.

Monday in the night the post contiguous to liberty tree was fawed off; the damage was inconfiderable, but discovers the evil disposition of the perpetrators of fuch a bafe action.

By private advices we hear, that the person who performed the above feat was detected, and flogged by the populace till he confessed by whom be was set upon this enterprize.

The following spirited and judicious answer, to the circular letter from the select-men of Boston, is the best comment upon many of their late transactions that has yet appeared; and will be a lasting testimonial of the good sense and moderation that directed the conduct of the inbabitants of Hatfield in New England upon this occasion.

From the Massachusets Gazette of Thursday, October 6, 1768.

At a full meeting of the inhabitants of the town of Hatfield, September 22, 1768.

A Letter from the select-men of the town of Boston, together with the votes passed by the said town the 12th and 13th inft. was, by the select-men, communicated

to this town, which being read calmly, and fully deliberated and confidered, the question was then put by the moderator, Whether this town will chuse any person or persons a committee to meet in convention with others in Boston, as proposed in the said letter? and it paffed unanimously in the negative. It was then moved and feconded, that the meeting would chuse a committee to prepare an answer to the select men of Boston, to be laid before this town for their confideration at the time to which this meeting shall be adjourned: it passed unanimously in the affirmative. A committee was chose accordingly, and then the meeting adjourned till to-morrow at five o'clock in the afternoon.

Sept. 23. The inhabitants being affembled agreeable to adjournment, the committee appointed yesterday report, which being repeatedly read and duly confidered, was accepted; and then unanimously resolved, that the following answer be fent by the felect-men as foon as may be to the felect-men of the town of Boston;

Gentlemen,

IN E have fully confidered your proposal of a convention, and the reasons you are pleased to asfign for it, and hereby take the liberty to express our fentiments.

We are not fenfible that the state of America is so alarming, or the state of this province so materially different from what they were a few months fince, as to render the measure you propose either falutary or necessary. act of parliament for raising a revenue, fo much complained of, has been in being and carrying into execution for a confiderable time past, past, and proper steps taken by' feveral governments on this continent to obtain redress of that grievance; and humble petitions by them ordered to be presented to his majesty, we trust, have already, or foon will reach the royal ear, be graciously received, and favourably answered; and the petition from the house of representatives of this province the last year among the rest: if it should not, for want of an agent from this province at the court of Great Britain to present it, we presume you very well know, if it be an impolitic and imprudent omission, where to lay the blame; and we apprehend that nothing that can or will be done by your proposed convention can or will aid the petition.

And here we beg leave to fay, that we judge that it would be much for the interest of this province to have an agent at this critical day: a person that would have served us faithfully, we make no doubt, might have been found; but the reasons given, and the methods we hear have been taken, to prevent it, are diffatisfactory, and give us much uneasiness.

We are further informed, that all matters of a public and private nature lying before the last general court were fully confidered and acted upon, and all then proposed to be done, finished before the adjournment, except the impeachment of his majesty's representative, which perhaps might not have been agreed to had they fat donger, or not been afterwards diffolved. We are forry for that circumstance that occasioned so early a diffolution of the general court; though we must own that the governor by charter is vested

with that power; yet we wish, if he had judged it consistent with his duty to the king, it had been as usual: however, we hope another will be soon called, or at farthest on the last Wednesday in May next,—and that in the mean time the public affairs of the province will not greatly suffer.

And here we propose to your confideration, whether the circular letter, which gave fuch umbrage, containing these expressions, or others of the like import, 'that the king and parliament, by the late revenue act, had infringed the rights of the colonies, imposed an inequitable tax, and things yet worse might be expected from the independence and unlimited appointments of crown officers therein mentioned, was so perfectly innocent, and entirely confistent with that duty and loyalty professed by the house of representatives the last year, in their petition to his majesty; and whether the last house might not have complied with his majesty's requifition, with a full faving of all their rights and privileges, and thereby prevented our being destitute of a general court at this day.

We cannot comprehend what pretence there can be of the proposed convention, unless the probability for a considerable number of regular troops being sent into this province, and an apprehension of their being quartered, part in your town, and part at the castle.—And here we would observe, that it was a matter of doubt and uncertainty whether any were coming or not; if otherwise, for what purpose the king was sending them, whether for your defence in case of a French war (as

you

you tell us there is in the minds of many a prevailing apprehenfion of one approaching (and, if we don't misunderstand your letter, induced them to pass the votes transmitted to us), or whether they are deflined for the protection of the new-acquired territories, is altogether uncertain: that they are to be a standing army in time of peace, you give us no evidence; and if your apprehensions are well grounded, it is not even supposable they are intended as fuch - and if your town meant fincerely, we can't fee the need they had of interpoling in military matters, in an unprecedented way requesting their inhabitants to be provided with arms, &c. (a matter till now always supposed to belong to another department), efpecially as they must know such a number of troops would be a much better defence in case of war than they had heretofore been favoured with: to suppose what you furmife they may be intended for, is to mistrust the king's paternal care and goodness; - if, by any fudden excursions or insurrections of some inconsiderate people, the king has been induced to think them a necessary check upon you, we hope you will, by your loyalty and quiet behaviour, foon convince his majesty, and the world, they are not longer necessary for that purpose, that thereupon they will be withdrawn, and your town and the province faved any farther trouble and expence from that quarter.

We are fenfible the colonies labour under many difficulties, and we greatly fear what the confequences of the disputes with our mother country will prove; however, we are far from thinking the measures you are pursuing have any tendency to deliver the good people of this province, but, on the contrary, immerge them in greater; - after all, we should hope (were it not for your present attempt, attended with a bad complexion) we might foon have deliverance from our present troubles, and things restored as at the first. The governments have, in our opinion, confulted, and are purfuing, the properest methods to obtain redrefs of their grievances; our duty is to wait with patience the event, unless we are determined to take the alternative. How far passion and disappointment and private refentment may influence any to harry their neighbours into fuch mad and defperate measures, we don't know, but pray God prevent: Suffer us to observe, that in our opinion the measures the town of Boston are purfuing, and proposing to us and the people of this province to unite in, are unconstitutional, illegal, and wholly unjustifiable, and what will give the enemies of our conflitution the greatest joy, subverfive of government, destructive of that peace and good order which is the cement of fociety, and have direct tendency to rivet our chains, and deprive us of our rights and privileges, which we the inhabitants of this town defire may be fecured to us, and perpetuated to our latest posterity.

Thus we have freely expressed our fentiments, having an equal right with others, though a lesser part of the community, and take this first opportunity to protest against the proposed convention—and hereby declare our loyalty

to his present majesty, and sidelity to our country; and that it is our firm resolution, to the utmost of our power, to maintain and defend our rights in every prudent and reasonable way, as far as is consistent with our duty to God and the king.

Attest,
Oliver Partridge, town-clerk.

Boston, Sept. 26. On Thursday last; the 22d instant, a number of gentlemen, upwards of feventy, from the different parts of this province, affembled at Faneuil-hall in this town: these gentlemen, by the appointment of the feveral towns to which they belong, to the number of fixty-fix towns besides districts, then and there convened, to confult and advife the most effectual measures for promoting the peace and good order of his majesty's subjects in the province, as far as they lawfully might, under the present very dark and threatening aspect of the public affairs. The debates and proceedings are open: their first step was to prepare an humble petition to the governor of the province, praying that his excellency would be pleased to convene the constitutional assembly of the province; and three of their number were appointed to prefent the fame.

The Petition is as follows, viz.

May it please your excellency,

THE committee chosen by the feveral towns in this province, and now convened in Boston, to consult and advise such measures as may most effectually promote the peace and good order of his

majesty's subjects in this government, at this very dark and difirefling time, take the earlieft opportunity, openly to disclaim all pretence to any authoritative or governmental acts: nevertheless as we freely and voluntarily come from the different parts of the. province, at the earnest defire of the inhabitants, and must be supposed to be well acquainted with their prevailing temper, inclination, and fentiments, under the present threatening aspect of our public affairs, we think ourselves indispensably obliged, from a sense of duty to his majesty, to whom we, and the people of this province, bear the firmest allegiance, and from the tenderest concern for the welfare of his subjects, with all due respect to your excellency, to declare our apprehensions of the absolute necessity of a general affembly.

If ever this people needed the direction, the care, and the support of such an assembly, we are humbly of opinion that their present circumstances immediately require

ıt.

Your excellency cannot be infensible of their universal uneasiness, arising from their grievances occasioned by the late acts of parliament for an American revenue: from an authentic information that the dutiful and loyal petition of the late house of representatives has not been allowed to reach the presence of our gracious king: from the diffolution of the late general affembly: from undoubted advice that the enemies of Britain, and the colonies, are still unwearied in the most gross misrepresentations of the people of the province to his majesty's ministers. ministers, as being on the eve of a general infurrection: and from the alarming intelligence that the nation by means of fuch mifrepresentations is incensed to a high degree, so that it is generally apprehended that a standing army is immediately to be introduced among the people, contrary, as we apprehend, to the bill of rightsa force represented to be sufficient to overawe and controul the whole civil power of the province; which must render every right and possession dreadfully precarious.

From these weighty considerations, and also that the people may not be thrown into a total despair; that they may have a fresh opportunity, at the next meeting of the parliament, of taking off the impression from the mind of the nation, made by fuch misrepresentations as is before mentioned, and by that means preventing the most unhappy confequences to the parent country, as well as ourselves; we beg leave most earnestly to pray, that your excellency would commiserate his majesty's truly loyal subjects of this province under their deplorable circumstances, and restore to them the full possession of their invaluable charter-right to a general affembly, and cause one to be immediately convened, that the most effectual measures may be taken, in the manner prescribed by our happy constitution, for the redress of grievances, for the preventing an unconstitutional encroachment of military power on the civil establishment, for the promoting the prosperity of his majesty's government, and the peace, good order, and due submission of his subjects in the province, and making the necessary provision for the support of government, and, finally, for the restoration of that harmony, union and affection, between the nation and the colonies, which appear to us to be in the utmost danger of being totally and irrecoverably lost.—As in duty bound, the committee shall ever pray,

In the name and behalf of the

committee,

Thomas Cushing, chairman.

His excellency was pleased to decline receiving the petition; but delivered to the gentlemen the following writing, viz.

Gentlemen,

Y OU must excuse me from receiving a message from that assembly which is called a committee of convention; for that would be to admit it to be a legal assembly, which I can by no means allow.

The faid writing not being figned by the governor, the gentlemen, at the request of the committee, declared in writing, under their hands, that his excellency delivered the fame to them, in consequence of their offering to him the petition.

The day following, the chairman acquainted the committee, that he had received of the fecretary of the province a writing figned by the governor, dated yesterday, which was publicly read,

and is as follows:

By his excellency FRANCIS BER-NARD, efq. captain-general and governor in chief of the province of Maffachufetts-bay, and vice-admiral of the fame. To the gentlemen affembled at Faneuil hall under the name of a committee of convention.

A S I have lately received from his majefty strict orders to support his constitutional authority within this government, I cannot fit still, and see so notorious a violation of it, as the calling an assembly of the people by private persons only. For a meeting of the deputies of the towns is an assembly of the representatives of the people to all intents and purposes; and it is not the calling it a committee of convention that will alter the nature of the thing.

I am willing to believe that the gentlemen who so hastily issued the summons for this meeting were not aware of the high nature of the offence they were committing; and they who have obeyed them have not well considered of the penalties which they will incur if they should persist in continuing their session and doing business therein. At present, ignorance of law may excuse what is past: a step farther will take

away that plea.

It is therefore my duty to interpose, at this instant, before it is too late. I do therefore earnestly admonish you, that instantly, and before you do any business, you break up this affembly, and separate yourselves. I speak to you now as a friend to the province, and a well-wisher to the individuals of it.

But if you should pay no regard to this admonition, I must as a governor affert the prerogative of the crown in a more public manner. For assure yourselves (I speak from instruction), the king is determined to maintain his entire fovereignty over this province; and whoever shall persist in usurping any of the rights of it, will repent of his rashness.

FRA. BERNARD.

Province-House, Sept. 22. 1768.

On the 24th, five gentlemen were appointed to wait on his excellency governor Bernard with the following message:

Message to the GOVERNOR. May it please your excellency,

THE committee from a number of towns in this province, now convened at Faneuil-hall, having received from your excellency a message, containing a remonstrance against our thus meeting, and an admonition to break up and feparate ourselves instantly, and before we do any business, have taken the fame into our ferious and attentive confideration; and we affure your excellency, that though, according to the best of our abilities, we have confidered the matters that are hinted by your excellency as the foundation of your message, yet we are not able to collect fufficient information therefrom to place our prefent meeting and proceedings in the fame light in which they feem to lie in your excellency's mind. We do affure your excellency most freely, that neither the views of our conflituents in fending us, nor the delign of any of us in this meeting, was to do, propose, or confent to, any thing oppugnant to, or inconsistent with, the regular execution of government in this his majetty's province; and that though the letters from the felect-men of the town of Boston. to the respective towns from which

We came, might first give rise to Our being chosen and fent; yet that neither the faid letter from the felect-men of the town of Bofton, nor any votes of the faid town accompanying the fame, were confidered by our respective towns in the choosing, nor by us in our affembling, as the foundation and warrant of our convening. But may it please your excellency, being affured that our constituents, as well as ourselves, have the most loyal and affectionate attachment to the person and government of our rightful fovereign king GEORGE the third, we beg leave to explain to your excellency the real cause and intention of

our thus convening.

Your excellency cannot be unacquainted with the many difficulties under which his majesty's fubjects on the whole continent of America apprehend themselves to labour, and of the uneafiness which the subjects in this province have repeatedly expressed on the same account. The minds of the people who have fent us are greatly disturbed, that the humble and dutiful petition of their representatives for the removal of those difficulties has not been permitted to reach the royal ear; and they are greatly agitated with the expectation of a standing army being posted among us, and of the full exertion of a military government; alarmed with these apprehensions, and deprived of a house of reprefentatives, their attention is too much taken off from their daily occupations; their morals and industry are in danger of being damaged, and their peaceable behaviour disturbed for want of such persons as they can confide in, to VOL. XI.

advise them in these matters, and to make application for their redress...

Your excellency will further naturally conceive that those of his majesty's subjects who live remote from Boston, the center of their intelligence, and whose occupations do not admit of much knowledge of public affairs, are subjected to many misrepresentations of their public concerns, and those generally of a most aggravated kind; nor is it in the power of the most knowing persons amongst us to wipe off the pernicious effects of such rumours without the appearance of a pub-

lic enquiry.

Induced by these motives, and others of the same kind, our constituents thought it no ways inconfident with good order and regular government, to fend committee-men to meet with fuch committees as might be fent from the feveral towns in the province, to confer upon these matters, and learn the certainty of those rumours prevailing amongst us, and to consult and advise as far as comes legally within their power to fuch measures as would have the greatest tendency to preserve the peace and good order among his majesty's subjects, and promote their due submission; and at the fame time to confult the most regular and dutiful manner of laying our grievances before our most gracious fovereign, and obtaining a redress of the same. This, we affure your excellency, is the only cause and intention of our thus convening; and we are exceeding forry it should be viewed by your excellency in an obnoxious light.

Your excellency may be affured, that had our constituents conceived, or did their committee thus convened conceive, this proceeding to be illegal, they had never fent us, nor should we pretend to continue our convention: but as your excellency, in the message with which you have been pleased to favour us, has not been fo explicit in pointing out the eriminality of our present proceeding as we could have wished, but has left us to our own judgement and understanding, to search it out, we would with all duty to your excellency, as the representative of our rightful fovereign, request of your excellency to point out to us wherein the criminality of our proceedings confifts, being affured we cautiously mean to avoid every thing that has the least appearance of usurpation of government in any of its branches, or any of the rights of his majefty's fovereignty, or that is in the least incentive to rebellion, or even a mental difaffection to the government by law established and exer-

Your excellency will be pleafed, in your well-known knowledge of human nature, and the delicacy of British privileges, to be sparing in your frowns on our prefent proceeding; we being at prefent inclined to think, till better informed, that if criminality be imputed to us, it will be applied only to our doings, and not to the professed manner and design of our meeting; but if your excellency has a different apprehension of the matter, we entreat an explanation of the fame, and affure your excellency we shall deliberately attend to it. Nothing could give us more uneafinefs than a

fuggestion that our proceedings are criminal; not so much from a fear of personal punishment, as from a fixed aversion we have to any thing inconsistent with the dignity of our sovereign, and the happiness of his extended dominion; and we statter ourselves, that when the real design of this convention is understood, it will prove an argument to evince the entire loyalty of his majesty's subjects in this province, and their disposition to peace and good order.

In the name and behalf of the committee of a number of towns in this province, convened in Boston, Sept. 24, 1768.

Tho. CUSHING, Chairman. These gentlemen reported also in writing, that they had accordingly waited on his excellency, and that he was pleased to say he could not receive the message.

The committees then appointed nine gentlemen of their number, to confider and report the most effectual measures, consistent with the express design of their convening, to promote the peace and good order of his majesty's subjects in the province.

This committee having made their report on the 26th, a letter with a representation of their transactions, and grievances, in which was inclosed a petition to his majesty, to be delivered in person, was forwarded to their agent Denys de Bert, esq. in London, and on the 20th the convention dispersed. At this convention, committees from 98 towns, and eight districts, were present.

An

An address of the subscribers, members of his majesty's council of the province of the Massachusettsbay.

To his excellency general Gage, commander in chief of his majefty's forces in America.

SIR,

A General council being held yesterday, gives the distant members of it, together with members in the town and neighbourhood, the pleasure of addressing you. We take the first opportunity of doing it, and, at the same time, of paying our compliments

to your excellency.

In this time of public distress, when the general court of the province is in a state of dissolution, when the metropolis is possessed by ships of war, and when more troops are daily expected, it affords a general satisfaction, that your excellency has visited the province, and has now an opportunity of knowing the state of it by your own observation and inquiry.

Your own observation will give you the fullest evidence that the town and province are in a peaceful state. Your own inquiry will satisfy you, that, though there have been disorders in the town of Boston, some of them did not merit notice; and that such as did have been magnified beyond the truth.

Those of the 18th of March, and 10th of June, are faid to have occasioned the above-mentioned armament to be ordered hither. The first was trivial, and could not have been noticed to the disadvantage of the town, but by persons inimical to it; especially, as it happened in the evening of a day of recreation: the other was

criminal, and the actors in it were guilty of a riot; but we are obliged to fay, it had its rife from those persons who are loudest in their complaints about it, and who, by their overcharged representations of it, have been the occasion of so great an armament being ordered hither; we cannot persuade ourselves to believe they have sufficient evidence to support such representations, which have most unjustly brought into question the loyalty of as loyal a people as any in his majesty's dominious.

This misfortune has arisen from the accusation of interested men, whose avarice, having smothered in their breasts every sentiment of humanity towards this province, has impelled them to oppress it to the utmost of their power, and, by the consequence of that oppression, essentially to injure Great

Britain.

From the candour of your excellency's fentiments, we affure ourselves you will not entertain any apprehension that we mean to justify the disorders and riotous proceedings that have taken place in the town of Botton: we deteit them, and have repeatedly and publicly expressed that detestation, and, in council, have advised governor Bernard to order the attorney-general to profecute the perpretators of them; but, at the fame time, we are obliged to declare, in justice to the town, that the diforders of the 10th of lune last, occasioned by a seizure made by the officers of the customs, appear to have originated with those who ordered the feizure to be made. The hour of making the feizure, at or near fun-fet, the threats and armed force used in it, the forcibly carrying the vessel away, and all in a manner unprecedented, and calculated to irritate justly the apprehension, that the seizure was accompanied with those extraordinary circumstances, in order to excite a riot, and furnish plausible pretences for requiring troops a day or two after the riot; and, as if in profecution of the last mentioned purpose, notwithstanding there was not the least insult offered to the commission oners of the customs either in their persons or property, they thought fit to retire, on the pretence of fecurity to themselves, on board the Romney man of war, and afterwards to Castle William; and when there, to keep up the idea of their being still in great hazard, procured the Romney, and feveral other vessels of war, to be stationed, as if to prevent an attack upon the castle, which they affected to be afraid of.

These proceedings have doubtless taken place, to induce a belief among the officers of the navy and army, as they occasionally came hither, that the commissioners were in danger of being attacked, and procure from those officers representations coincident with their own, that they really were fo; but their frequent landing on the main, and making incurfions into the country, where it would have been easy to seize them, if any injury had been intended, demonstrates the infincerity of the declarations, that they immured themselves at the castle for fafety. This is rather to be accounted for, as being an effential part of the concerted plan for procuring troops to be quartered here, in which they and their coadjutors have succeeded to their wish, but, unhappily, to the mutual detriment and uneasiness of both countries.

We thought it absolutely necessary, and our duty to the town and province require us, to give your excellency this detail, that you might know the sentiments of this people, and that they think themselves injured, and injured by men to whom they have done no injury. From the justness of your excellency, we assure ourselves, your mind will not admit the impressions to their disadvantage, from persons who have done the injury.

Your excellency, in your letter to governor Bernard, of the 12th of September, gave notice, that one of the regiments from Halifax was ordered for the prefent to Castle William, and the other to the town; but you was pleased afterwards to order them into the

town.

If your excellency, when you know the true state of the town, which we can assure you is quite peaceable, should think his majesty's service does not require those regiments to continue in the town, it will be a great ease and satisfaction to the inhabitants, if you will please to order them to Castle William, where commodious barracks are provided for their reception, or to Point Shirley, in the neighbourhood of it, in either of which, or in both, they can be well accommodated.

As to the two regiments expected here from Ireland, it appears from lord Hillsborough, of the 20th of July, they were intended for a different part of North America.

If your excellency should think it not inconfistent with his majesty's fervice, that they should be fent to the place of their first destination, it will contribute to the ease and happiness of the town and province, if they might be ordered thither.

As we are true and faithful subjects of his majesty, have an affectionate regard for the mother country, and a tender feeling for our own, our duty to each of them makes us wish, and we earnestly beg your excellency, to make a full inquiry into the disorders above-mentioned, into the causes of them, and the representations that have been made about them: in doing which, your excellency will eafily discover who are the persons, that, from lucrative views, have combined against the peace of the town and province, some of whom, it is probable, have discovered themselves already by their own letter to your excellency.

In making the inquiry, though many imprudences, and fome criminal proceedings, may be found to have taken place, we are perfuaded, from the candour, generosity, and justice, which distinguish your character, your excellency will not charge the doings of a few, and those of an inferior fort, upon the town and province; and, with regard to these individuals, if any circumstances shall appear justly to extenuate the criminality of their proceedings, your excellency will let them have their effect: and on the same candour and generofity we can rely, that your excellency's representations of this affair to his majesty's ministers will be fuch as even the criminals themselves will allow to be just.

(Signed) . Boston, October 27. I. DANFORTH, &c.

To the foregoing address, the general gave the following answer. Gentlemen,

I return you thanks for the honour you do me in this address, and am greatly obliged to you for the good opinion you are pleafed to conceive of me.

Whatever may have been the particular cause of the disturbances and riots which have happened in the town of Boston, these riots, and the resolves which were published, have induced his majesty to order four regiments to this town, to protect his loyal subjects in their persons and properties, and to affift the civil magistrate in the execution of the laws.

The discipline and order which will be preserved among the troops, I trust, will render their stay in no shape disrespectful to his majesty's dutiful subjects in this town; and that the future behaviour of the people will justify the best construction of their past actions, which I flatter myfelf will be fuch as to afford me a fufficient foundation to represent to his majesty the propriety of withdrawing most part of the troops.

(Signed) Boston, October 27th. THOMAS GAGE.

The two following pieces, taken from Boston news-papers, are so uncommonly curious, and bear such peculiar marks of originality, in [R 3]their

their stile, manner, and sentiments, that we make no doubt but they will be entertaining to many of our readers.

Boston, Sept. 5.

By letters from Rhode-island we learn, that John Robinson, esq. one of the commissioners, after his late elopement, travelled very privately in bye-ways till he got to Newport, where, on Wednesday last, he made his public entry, as much to the surprize of most of the inhabitants, as if he had dropped from the clouds. It was even imagined by some of the credulous and timid, that he had been killed at Boston, and that the pale and trembling figure presenting itself to view, was indeed but the ghost of their old friend Jack Robinson. However, the next morning was found posted up at the Swingbridge, on the Long-wharf, an advertisement to the following purport, viz. 'This is to defire all the true fons of Liberty, and none else, to appear under Liberty-tree in Newport, at eight o'clock this evening, to confult what measures are necessary te be taken with the -infamous John Robinson, who had the impudence to make his public appearance in our streets yesterday, having, before he made his elopement, boafted among his brother commissioners, that the could be well supported in the execution of his office at Rhodeisland, and be fully protected from the least infult.'. At the time and place appointed, fome hundreds, not to say thousands, assembled, and went in quest of master commissioner to the tavern, where, it was faid, he lodged the night before. But after sa very diligent fearch (not by virtue of a writ of

affistance, but by candle-light) of the house, outhouses, bales, barrels, meal-tubs, trunks, boxes, packs and packages, packed and unpacked, and in short of every hole and corner sufficient to conceal a ram cat, or a commissioner, they could find neither. On this, they returned peaceably to their respective habitations, without the least injury to the person or property of any man. What is become of master Jacky, we cannot (fays our correspondent) yet learn. Some think he is gone to Virginia, to enquire if they will now give 10.000 l. fterling, for the beatitudes attendant more immediately on the colony where the American board is fixed, as it was given out last fall that their agent had offered it; others think he is on his return to Massachufetts.

Where once more pent in William's castle, Be he shut up as if in Bastile.

Last night lodged at Dorchester, John Robinson, esq. and this morning proceeded to the castle.

Boston, Sept. 26.

Petersham, Sept. 24. On the 19th instant the sons of Liberty here (after chufing a committeeman to attend the convention at Boston) appointed the next day to meet and dedicate a tree to that most amiable goddess, at 45 minutes past two o'clock, P. M. Accordingly they met at the time appointed, and having made choice of a beautiful young elm, they cut off 17 useless branches (leaving 92 thereon) and one of them taking hold of the tree uttered the following words: 'O Liberty! thou divine goddess! may those that love thee flourish as the branches of this tree! but those that hate

thee be cut off and perish as these 17, which we are now about to commit to the flames.' And a pile of condemned shingles being instantly set on fire, the amputated branches, together with the effigies of the 17 strong asses, were cast thereon and confumed, while the well-known fong of Liberty was fung; and having scattered their ashes towards the four winds of heaven, they gave three cheers, and then walked back in proceffion, where a dish of barley coffee was prepared for them: after which the following constitutional toasts were drunk:

I. The KING.

2. The Queen and Royal Family.

3. May we always be under his Majesty's protection, may he al-

ways hear our grievances, and fend us speedy relief.

4. The downfall of Tyranny of

all kinds.

5. Lord Chatham, Wilkes, and all our Friends at home.

6. The brave Corficans.

7. Those who had rather die than submit to the iron yoke of Slavery.

8. To the memory of our glo-

rious intrepid Ancestors.

- 9. The generous Farmer.
- 10. The famous Ninety-two.

12. James Otis, esq.

13. A speedy Repeal of all unconstitutional acts.

The whole was conducted with the greatest decency and order.

Copy of an inscription on a monument, about 35 or 36 feet high, erected by sir JEFFERY AMHERST, knt. of the Bath, Sc. on a pleasant eminence, almost opposite to his house, now building, called Montreal, near Riverhead, in Kent.

First side, facing almost South-east.

DEDICATED

To that most able statesman,
During whose administration
Cape Breton and Canada were conquered;
And from whose influence
The British arms derived
A degree of lustre
Unparallesed in past ages.

Second side. North-east.

To commemorate
The providential and happy meeting
Of the three brothers,
On this their paternal ground,
On the 25th of January, 1764,
After a fix years glorious war:
In which the three were successfully engaged
In various climes, seasons, and services,
[R 4]

Third

Third side. North-west.

Louisbourg surrendered,
And fix French battalions
Prisoners of war, the 26th of July, 1758.
Fort du Quesne taken possession of, the 24th of November, 1758.
Niagara surrendered, the 25th of July, 1759.
Ticonderago taken possession of, the 26th of July, 1759.
Crown-point taken possession of, the 4th of August, 1759.
Quebec capitulated, the 18th of September, 1759.

Fourth side. South west,

Fort Levi surrendered, the 25th of August, 1760.
Isle au Noix abandoned, the 28th of August, 1760.

Montreal surrendered,
And with it all Canada, and
Ten French battalions laid
Down their arms, the 8th of September, 1760.
St. John's, Newfoundland,
Retaken, the 18th of September, 1762.

In a small shaw, on an eminence that overlooks some part of Holms-dale, is erected a fort of shed, in a rustic taste, looking towards the opposite hills; on the walls whereof are the following lines, said to be wrote by Mrs. T——, fir Jessery's sister.

While neighb'ring heights affume the name Of conquer'd lands, well known to fame; Here mark the valley's winding way,
And lift to what old records fay.
This winding vale of Holmfdale
Was never won, or ever fhale.
The prophecy ne'er yet has fail'd,
No human pow'r has yet prevail'd
To rob this valley of its rights:
Supported by its val'rous wights.
When foreign conqueft claim'd our land,
Then rose our sturdy Holmsdale band
With each a brother oak in hand;
An armed grove the cong'ror meet,
And for their ancient charters treat;

Refolv'd to die e'er they refign'd
Their liberties in gavel-kind.
Hence freedom's fons inhabit here,
And hence the world their deeds revere.
In war, in ev'ry virtuous fray,
A man of Kent shall win the day.
Thus may our queen of vallies reign,
While Darent glides into the main:
Darent, whose infant reed is seen
Uprearing on yon bosom'd green.
Along his wid'ning banks may peace
And joyful plenty never cease.
Where'er his waters roll their tide,
May heav'n-born Liberty abide.

N. B. The Darent is a small river, running from Sundrish to Cheapsted, and crosses the London road to Tunbridge-wells, at a mill called Longford, 21 miles and an half from London; and is runs to Otford, an ancient village remarkable for the ruins of Thomas Becket's palace; the park being now turned into farms. From thence it goes to Shoreham, Eynsford, Fanningham, &c. and falls into the Thames about Dartford. Holmssale is the valley, a mile or two north of this place, through which the river runs, and is remarkable for a battle sought here, as I remember, between the Britons and Saxons. (See the octavo edition of Rapin's history, vol. I.)

A mag-

A magnificent Cenotaph is erecting by fir WILLIAM DRAFER, in his garden at Clifton, in honour of the late 79th regiment, of which he was colonel during the last war, with the following inscription.

This Cenotaph is facred
To the virtues and memories
Of those departed warriors
Of his majesty's 79th regiment;
By whose excellent conduct,
Cool deliberate valour,
Steady discipline, and perseverance,
The formidable and impetuous efforts
Of the French land forces in India
Were first withstood and repulsed,

Our own fettlements rescued from impending destruction,

The ever memorable defence of Madras, The decifive battle of Wandewash, Twelve strong and important fortresses,

Three superb capitals
Arcot, Pondicherry, Manilla,
And the Philipine islands,

Are witnesses of their irresistible bravery,
Consummate abilities, unexampled humanity:
Such were the men of this victorious regiment,
And by such as these their surviving companions,
The conquests and glory of our fovereign,
The renown and mainly of the British empire.

The renown and majesty of the British empire Were extended to the remotest parts of Asia; Such were their exploits,

That would have done honour even to the Greek or Roman name,
In the most favourite times of antiquity;

And well deserve to be transmitted down to the latest posterity,

And heldin esteem and admiration,

As long as true fortitude,

Valour, discipline, and humanity,

Valour, discipline, and humanity,
Shall have any place
In Britain.

Three field officers, ten captains, thirteen lieutenants, five enfigns, three furgeons, and 1000 private men, belonging to this regiment, fell in the course of the late war.

tra

ANNUAL REGISTER 2647 clusive, to the 31st of December, 1768, inclusive, £. and the faid sum to be issued without any deduction 29000 0 0 6. Upon account, for enabling the faid hospital to put out apprentice the faid children, fo as that the faid hospital do not give with one child more 2000 than 7 l. 156803 14 FEBRUARY 8. 1. To make good to his majesty the like sum issued by his majesty's orders, in pursuance of the addresses of this house 10500 2. To make good the deficiency of the grants for the fervice of 1767 392484 3. To replace to the finking fund the like fum paid out of the same, to discharge for one year and a quarter, ended the 25th of December 1767, the annuities after the rate of 41. per cent. attending the remainder of the joint stock, established by an act of the third of his present majesty, in respect of certain navy, victualling, and transport bills, and debentures, that have been redeemed, in pursuance of an act made in the last session, and the charges of management during the faid term of the annuities 88435 19 4. To replace to ditto the like sum issued thereout, to discharge from the 10th of October 1767, to the 5th of January following, the annuities attending fuch part of the joint stock established by an act made in the third of his present majesty, for granting several additional duties on wines imported, and certain duties on cyder and perry, and for

raising the sum of 3.500.000 l. by way of annuities and lotteries, to be charged on the faid duties, as hath been redeemed in pursuance of an act made in the last fession

5. To redeem and pay off the remaining parts of

the faid capital flock of annuities

Sum total of the supplies granted this session

Ways and means for raising the above supply granted to his majesty, agreed to on the following days, viz.

DEC. 7, 1767.

That the duties upon malt, mum, cyder and perry, be continued from the 24th of June 1768, to the 24th of June 1769, and charged upon all the malt which shall be made, and all mum which shall be made or imported, and all cyder and perry which shall be made for sale, within the kingdom of Great Britain, 7000col.

DECEMBER 10.

That the fum of 3 s. in the pound, and no more, be raifed within the space of one year, from the 25th of March 1768, upon lands, tenements, hereditaments, pensions, and personal estates, in that part of Great Britain called England, Wales, and the town of Berwick upon Tweed; and that a proportionable cess, according to the ninth article of the treaty of union, be laid upon that part of Great Britain called Scotland, 15285681. 11 s. 11 d. 3.

FEBRUARY 9, 1768.

1. That the fum of 1900000 l. be raised in the manner following; that is to fay, the fum of 13000000 l. by annuities, after the rate of 3 l. per centum, to commence from the 5th day of January last, and the sum of 6000001. by a lottery, to confift of 60000 tickets, the whole of fuch fum to be divided into prizes, which are to be attended with the like al. per cent. annuities, to commence from the 5th of January, 1769; and that all the faid annuities be transferable at the bank of England, paid half yearly, on the 5th of July, and the 5th of January, in every year, out of the fink-Vol. XI.

ing fund, and added to, and made part of, the joint stock of 3 l. per cent. annuities, which were confolidated at the bank of England, by certain acts made in the 25th and 28th years of the reign of his late majesty, and several subsequent acts, and subject to redemption by parliament; that every contributor towards the faid fum of 1300000 l. shall, in respect of every 651, agreed by him to be contributed for raising such a sum; be intitled to receive three tickets in the faid lottery, upon payment of 101. for each ticket; and that every contributor shall, on or before the 18th of this instant February, make a deposit with the cashiers of the bank of England of 151. per centum, in part of the monies so to be contributed towards the faid fum of 1.300.000 l. and also a deposit of 5 l. per centum, in part of the monies fo to be contributed in respect of the faid lottery, as a fecurity for making the respective future payments to the faid cashiers, on or before the times herein after limited; that is to fay, on the 13000001. 101. per cent. on, or before, the 9th of April next; 101. per cent. on, or before, the 7th of June next; 151. per cent. on, or before, the 19th of July next; 151. per cent. on, or before, the 20th of August next; 15 l. per cent. on, or before, the 21st of October next; 201 per cent. on, or before, the 25th of November next. On the lettery for 6000001. 25 l. per cent. on, or before, the 17th of May next; 30 l. per cent. on, or before, the 28th of June [8]

next; 401, per cent. on, or before, the 8th of September next. And that all the monies so received by the faid cashiers be paid into the receipt of his majesty's exchequer, to be applied, from time to time, to fuch fervices as shall then have been voted by this house, in this session of parliament; and that every contributor who shall pay in the whole of his contribution towards the faid fum of 1300000l. at any time, on, or before, the 17th of October next, or towards the faid lottery, on, or before, the 25th of June next, shall be allowed an interest by way of discount, after the rate of 3 l. per centum per annum, on the fums fo compleating his contribution respectively, to be computed from the day of compleating the same, to the 25th of November next, in respect of the sum paid on account of the faid 13000001. and to the 8th of September next, in respect of the fum paid on account of the faid lottery.

z. That, from and after the 5th of April next, the annuities, after the rate of 41. per centum, attending the remainder of the capital flock, established by an act made in the third year of his majesty's reign, intituled, 'An act for granting to his majesty several additional duties upon wines imported into this kingdom, and certain duties upon all cyder and perry; and for raising the sum of 3500000 l. by way of annuities and lotteries, to be charged on the faid duties, be charged upon, and made payable out of, the furplusses, excesses, or overplus monies, and other revenues, compofing the fund commonly called

the finking fund, until the redemption of the faid capital flock, which is to be compleated on the 5th of January 1769. 100 gates at

3. That the duties, revenues, and incomes, which now stand appropriated to the payment of the faid annuities, be continued, and be, from and after the said 5th of April, carried to, and made part of, the faid fund, commonly called the finking fund, towards making. good the payment of the faid annuities, and of the annuities after the rate of 31. per cent. intended to be granted in respect of the said 19000000 l.

4. That, towards raising the fupply granted to his majesty, the fum of 18000001. be raised, by loans, or exchequer bills, to be charged upon the first aids to be granted in the next fession of parliament; and fuch exchequer bills, if not discharged, with interest thereupon, on, or before, the 4th of April 1769, to be exchanged, and received in payment, in fuch manner as exchequer bills have usually been exchanged, and re-

ceived in payment.

5. That, towards raising the fupply granted to his majesty. there be applied the fum of 2250000 l. out of fuch monies as shall, or may, arise out of the furplusses, excesses, or overplus monies, and other revenues, composing the fund commonly called

the finking fund. And Layeres

6. That a fum, not exceeding 70000 l. out of fuch monies as shall be paid into the receipt of the exchequer, after the 2d of February 1768, and on, or before, the 5th of April 1769, of the produce of all, or any of, the duties and revenues, which, by any act

or acts of parliament, have been directed to be referved for the difposition of parliament, towards defraying the necessary expences of defending, protecting, and fecuring, the British colonies and plantations in America, be aplied towards making good fuch part of the fupply as hath been granted to his majesty, for maintaining his majesty's forces and garrifons in the plantations, and for provisions for the forces in North America, Nova Scotia. Newfoundland, and the Ceded islands, for the year 1768.

7. That such of the monies, as fhall be paid into the receipt of the exchequer, after the 2d of February 1768, and on, or before, the 5th of April 1769, of the produce of the duties charged, by an act of parliament made in the 5th of his present majesty's reign, upon the importation and exportation of gum fenega, and gum arabic, be applied towards making good the fupply, granted to his ma-

jesty. 8. That the fum of 400000 l. which is to be paid within the present year, into the receipt of his majesty's exchequer, by the united company of merchants of England trading to the East Indies, in pursuance of an act made in the last fession of parliament intituled, An act for establishing an agreement for the payment of the annual fum of 400000 l. for a limited time, by the East-India company, in respect of the territorial acquisitions and revenues lately obtained in the East Indies,' be applied towards making good the supply granted to his majesty.

9. That the charge of the pay and cloathing of the militia, in

that part of Great Britain called England, for one year, beginning the 25th of March 1768, be defrayed out of the monies arising by the land-tax, granted for the fervice of the year 1768.

FEBRUARY 22.

That a fum not exceeding 1063581. 178. 8 d. out of the fums received for provisions delivered to the troops ferving in North America, and of certain fums charged on the pay of the forces ferving at Minorca, the Floridas, and in Africa, and out of the balance of the 12d. in the pound deduction from the pay of the out-pensioners of Chelsea-hospital, from the 25th of June 1757, to the 4th of December 1767, and also out of the monies remaining in the hands of the earl of Kinnoul, and the executors of the late earl of Darlington, and of the late Thomas Potter, esq. being part of the balances of the faid earls of Darlington and Kinnoul. and Thomas Potter, as paymasters general of his majesty's forces, be applied towards making good the fupply granted to his majesty, towards defraying the extraordinary expences of his majefty's land forces, and other fervices, incurred to the 25th of December 1767, and not provided for by parliament.

FEBRUARY 23.

1. That grew or crow-falt, faltscale, sand-scale, crustings, or other foul-falt, be allowed to be taken from the falt works in England, Wales, or Berwick upon Tweed, to be fold as manure, upon payment of a duty of four pence per bushel only.

2. That all policies, by which the property of one person, or of [S 2]

a particular number of persons in one general partnership, or of one body politic or corporate, in any ship or cargo, or both, shall be assured, to the amount of more than 1000 l. be stamped with two

5 s. stamps.

3. That so much of an act, made in the thirty-third year of the reign of his late majesty king George the second, intituled, An act for encouraging the exportation of rum and spirits, of the growth, produce, and manufacture of the British sugar plantations from this kingdom, and of British spirits, made from molasses, as directs that the rum, or spirits, of the growth, produce, and manufactures of the British sugar plantations, in America, which should

be intitled to the allowance of the duty of custom, and freed from the duty of excise, on exportation thereof, should be proof spirits, be repealed.

4. That upon the exportation of fuch rum, or fpirits, there be an allowance, or drawback, of all the duties of customs payable upon the importation thereof; and that such rum, or spirits, be freed and discharged from all the duties of excise, though the same shall not be proof spirits.

These were the only resolutions of the committee of ways and means agreed to by the house; and with respect to the sums thereby provided for, that can at present be ascertained, they stand as

follows:

	L. 3. d.
By the resolution of December 7 — —	700000 0 0
By that of December 10 — —	1528568 0 0
By the first of February 9 — —	1900000 0 0
By the fourth article of ditto — —	1800000 0 0
By the fifth of ditto — — —	2250000 0 0
By the fixth of ditto — —	70000 0 0
By the eighth of ditto — —	400000.00
By the resolution of Feb. 22	106358 17 0
Sum total of fuch provisions as can be afcertained	8754626 17 8

Sum total of such provisions as can be alcertained

419180 6 6

Thus it appears that the sum total of the provisions made by this short session considerably exceed the grants; but then it ought to be considered, that as in the preceding year no money was granted for the pay and cloathing of the militia, the whole of that expence was to be paid out of the

Excess of the provisions

land tax, without any fum of money being granted for replacing it; fo that if we deduct 150000 l. which had been in former fessions granted for the militia, with the usual desiciencies of the land and malt taxes, this excess will be much less considerable than it appears at first sight.

STATE PAPERS.

His majesty's most gracious speech to both houses of parliament, on Thursday the 10th day of March, 1768.

My lords, and gentlemen,

THE readines with which you entered into the views I recommended to you at the opening of this session, and the affiduity with which you have applied yourselves to the dispatch of the public business, give me great satisfaction. At the same time, the affectionate concern you have shewn for the welfare of your fellow subjects, by the salutary laws passed for their relief in respect to the high price of provisions, cannot sail of securing to you their most grateful regard.

I have nothing new to communicate to you in relation to foreign affairs. The apparent interests of the several powers in Europe, as well as the express affurances I have received from them, leave me no room to doubt of their disposition to preserve the general tranquillity. And, on my part, you may rest assured, that every measure that is consistent with the honour of my crown, and the rights of my subjects, shall be steadily directed to that most falutary purpose.

Gentlemen of the house of commons,

Your chearfulness in granting the necessary supplies, and your attention to the ease of my good subjects in the manner of raising them, equally demand my acknowledgements. I see, with pleasure, that you have been able to prosecute your plan for the diminution of the national debt, without laying any additional burthen upon my people.

My lords and gentlemen,

As the time limited by law for the expiration of this parliament now draws near, I have refolved forthwith to iffue my proclamation for diffolving it, and for calling a new parliament. But I cannot do this, without having first returned you my thanks, for the many fignal proofs you have given, of the most affectionate attachment to my person, family, and government, the most faithful attention to the public fervice, and the most earnest zeal for the preservation of our excellent constitution. When, by the vigorous fupport which you gave me during the war, I had been enabled, under the Divine Providence, to restore to my people the blessings of peace, you continued to exert yourselves, with equal alacrity and fleadiness, in pursuing every meafure that could contribute to the maintenance of the public fafety and tranquillity; which you well understood could no otherwise be preferved, than by establishing on a respectable foundation, the strength, the credit, and the commerce of the nation. The large fupplies you have from time to time granted, and the wife regulations you have made for these important purposes, will, I am persuaded, be found to have been productive of the most beneficial consequences.

In the approaching election of representatives, I doubt not but my people will give me fresh proofs of their attachment to the true interest of their country; which I shall ever receive as the most acceptable mark of their affection to me. The welfare of all my subjects is my first object. Nothing therefore has ever given me more real concern, than to fee any of them, in any part of my dominions, attempting to loofen those bonds of constitutional subordination, so essential to the welfare of the whole. But it is with much fatisfaction that I now fee them returning to a more just fense of what their own interest, no less than their duty, indispenfably requires of them; and thereby giving me the prospect of continuing to reign over an happy, because an united people.

A proclamation for diffolving this present parliament, and declaring the calling of another.

GEORGE R.

WHEREAS we have thought fit, by and with the advice of our privy council, to diffolve this prefent parliament, which now flands prorogued to Thursday the 31st day of this instant March; We do for that end publish this our royal proclamation, and do hereby dissolve the said parliament accordingly; and the lords

spiritual and temporal, and the knights, citizens, and burgeffes. and the commissioners for thires and burghs of the house of commons, are discharged from their meeting and attendance on Thursday the faid 31st day of this inflant March. And we being desirous and resolved, as soon as may be, to meet our people, and to have their advice in parliament, do hereby make known to all our loving subjects our royal will and pleasure to call a new parliament; and do hereby further declare, that, with the advice of our privy council, we have this day given order to our chancellor of Great Britain to iffue out writs in due form, for calling a new parliament; which writs are to bear teste on Saturday the 12th day of this instant March, and to be returnable on Tuefday the 10th day of May next.

Given at our court at St. James's, the eleventh day of March, one thousand seven hundred and sixty-eight, in the eighth year of our reign.

GOD fave the KING.

The lord chancellor's speech to both houses of parliament, at the opening of the session on Wednesday the 11th of May 1768, when the commons presented their speaker, for the approbation of the lords commissioners appointed by his majesty.

My lords, and gentlemen,

I N pursuance of the authority given us by his majesty's commission under the great seal, amongst other things, to declare the causes of your present meeting, we are, by the king's command, to acquaint you, that his majesty has not called you together at

this

this unufual feafon of the year, in order to lay before you any matters of general business, but merely to give you an opportunity of dispatching certain parliamentary proceedings, which his majesty's desire of providing, at all events, for the welfare and security of his good subjects, makes him wish to see completed as soon as possible, and with that dispatch which the public convenience as well as your own require.

His majetty, at the fame time, has commanded us to affure you of his perfect confidence in this parliament; and that he has the strongest reason to expect every thing from their advice and assistance, that loyalty, wisdom, and zeal for the public good, can dic-

tate or fuggeft.

An address of both houses of parliament, on Friday the 13th of May,

Most gracious sovereign,

WE your majesty's most du-tiful and loyal subjects, the lords fpiritual and temporal, and commons, in parliament affembled, beg leave to return your majesty our most hearty thanks for that gracious and paternal attention to the welfare of your people, which has induced your majesty, at this time, to interpose your own more immediate authority for putting an end to that dangerous disturbance of the public peace, those outrageous acts of violence to the prosperity of your majesty's subjects, and that most audacious defiance of the authority, of the civil magistrates, which have of late prevailed to fo alarming a degree in and near this great metropolis.

Your majefly's express command, fignified by your royal proclamations, that all the laws, for preventing, suppressing, and punishing, all riots, tumults, and unlawful assemblies, be put into immediate execution, will, we hope, effectually prevent the continuance or repetition of these diforders.

But should any of your majef-ty's subjects continue so lost to all fense of their own true interest, as well as duty, as to go on to interrupt, by their lawless and desperate practices, that quiet and peaceable enjoyment of every right and privilege allotted to each individual among us by our excellent constitution, which it has ever been your majesty's first object and chief glory to fecure and perpetuate to us all; permit us, your majesty's truly dutiful and grateful subjects, the lords spiritual and temporal, and commons, in parliament affembled, to affure your majesty of our ready concurrence in every measure that may contribute to enable your majesty most effectually to maintain the public authority, and carry the laws into due execution; and of our determined resolution, most chearfully and vigorously to support your majesty against every attempt to create difficulty or diffurbance to your majesty's government.

His majesty's most gracious answer.

My lords, and gentlemen,

I receive with great fatisfaction this loyal, dutiful, and feasonable address of both houses of parliament. It is with the utmost concern, that I see this spirit of outrage and violence prevailing among different classes of my sub
[S4] jects.

jects. I am however convinced, that the vigorous exertion of lawful authority, which I will continue to enforce, joined to your support and affistance, will have the defired effect of restoring quiet and good order among my subjects.

His majefty's most gracious speech to both houses of parliament, on Tuefday the eighth day of November, 1768.

My lords, and gentlemen,

THE opportunity which the late general election gives me of knowing, from their representatives in parliament, the more immediate sense of my people, has made me desirous of meeting you as early as could be, confiftent with your own convenience. The shortness of the last fession of the late parliament prevented their profecuting the confideration of those great commercial interests, which had been entered upon in the preceding fession. You will, I am perfuaded, agree with me in opinion, that your deliberations on those very important objects ought to be refumed without loss of time; and I trust that they will terminate in such measures, as may be productive of the most constderable and effential benefits to this nation.

It would have given me great fatisfaction to have been able to acquaint you, that all the other powers of Europe had been as careful, as I have ever been, to avoid taking any step that might endanger the general tranquillity. I have constantly received, and do still receive from them, the strong-

est assurances of their pacifick dispositions towards this country. No assurances, however, shall divert my constant resolution, stedfassly to attend to the general interests of Europe; nor shall any consideration prevail upon me to suffer any attempt that may be made, derogatory to the honour and dignity of my crown, or injurious to the rights of my people.

At the close of the last parliament, I expressed my satisfaction at the appearances which then induced me to believe, that such of my subjects, as had been misled in fome part of my dominions, were returning to a just fense of their duty. But it is with equal concern that I have fince feen that spirit of faction, which I had hoped was well nigh extinguished, breaking out afresh in some of my colonies in North America; and, in one of them, proceeding even to acts of violence, and of refistance to the execution of the law; the capital town of which colony appears, by late advices, to be in a flate of disobedience to all law and government; and has proceeded to measures subversive of conflitution, and attended with circumstances that manifest a disposition to throw off their dependance on Great Britain. On my part, I have purfued every measure that appeared to he neceffary for supporting the constitution, and inducing a due obedience to the authority of the legislature. You may rely upon my steady perfeverance in these purposes; and I doubt not but that, with your concurrence and fupport, I shall be able to defeat the mischievous designs of those tur-

, bulent

bulent and feditious persons, who, under salse pretences, have but too successfully deluded numbers of my subjects in America; and whose practices, if suffered to prevail, cannot sail to produce the most satal consequences to my colonies immediately, and, in the end; to all the dominions of my crown.

Gentlemen of the house of commons,

The proper estimates for the service of the ensuing year I have ordered to be laid before you; sully relying on your readiness to grant me the necessary supplies. Indeed I cannot have a doubt of finding, in this house of commons, the same affectionate attachment to my person and government, as I have always hitherto experienced from my faithful commons.

My lords, and gentlemen,

It is with great fatisfaction that I now find myself enabled to rejoice with you upon the relief, which the poorer fort of my people are now enjoying, from the diffress which they had so long laboured under from the high price of corn. At the fame time that we are bound devoutly to acknowledge, in this instance, the gracious interpolition of Providence, it will become us to apply the best precautions that human wisdom can suggest, for guarding against the return of the late calamity. In the choice, however, of proper means for that purpose, you cannot proceed with too great circumspection.

I have nothing further to recommend to you, than that in all your deliberations you keep up a spirit of harmony among your-felves. Whatever differences of opinion may prevail in other points, let it appear, that where-ever the interest of your country is immediately concerned, you are all ready to unite. Such an example from you cannot fail of having the best effects upon the temper of my people in every part of my dominions; and can alone produce that general union among ourselves, which will render us properly respected abroad, and happy at home.

The address of the house of lords.

Most gracious sovereign,

WE, your majesty's most dutiful and loyal subjects, the lords spiritual and temporal, in parliament assembled, beg leave to return your majesty our humble thanks for your most gracious speech from the throne.

We defire, with hearts full of gratitude, to acknowledge that royal goodness, so evidently manifest to all your people by your majesty's constant attention to the great commercial interests of this country. We should be wanting on our part, if we did not apply to the consideration of them with that alacrity, which objects so very important, and capable of producing the most effential benefits to the nation, demand of us.

The refolution, which your majefty is pleased to express, that you will not suffer any attempt to be made derogatory to the honour and dignity of your crown, or injurious to the rights of your people, does, and ever will, call from us the assurances of our most chearful support; nor do we con-

ceive that any conduct can contribute more than this will, to render all the other powers of Europe as careful, as your majesty has ever been, to avoid taking any step that may endanger the

general tranquillity.

We feel the most fincere concern, that any of our fellow fubjects in North America should be missed, by factious and defigning men, into acts of violence and of resistance to the execution of the law, attended with circumstances that manifest a disposition to throw off their dependence upon Great Britain. At the same time that we shall be always ready to contribute to the relief of any real grievance of your majesty's American subjects, we most unfeignedly give your majesty the strongest assurances, that we shall ever zealously concur in support of fuch just and necessary measures, as may best enable your majesty to repress that daring spirit of disobedience, and to enforce a due fubmission to the laws: always confidering, that it is one of our most effential duties, to maintain inviolate the supreme authority of the legislature of Great Britain over every part of the dominions of your majesty's crown.

We thankfully adore the merciful interposition of Providence, in the relief, which the poorer fort of your majesty's subjects have received, from the distress they had so long laboured under from the high price of corn. We shall apply our utmost attention to prevent, as far as in human prudence lies, the return of such a calamity; and shall give so important a subject that full consideration, which

the nature of it necessarily re-

Engaged in the deliberation of fo many important matters, we beg leave to affure your majefly, that we shall studiously endeavour that our proceedings may testify our readiness to unite, wherever the interest of our country, and our attachment to your majefly, is concerned. Happy, if by such an example, the deluded part of your majesty's subjects may be induced to return to their duty, and gratefully feel the blessings of the mildest government, and most perfect constitution.

His majesty's most gracious answer.

My lords,

I receive with great fatisfaction the affurances you give of your refolution to pursue the commercial interests of this country; and your readiness to support the honour of my crown, and the rights of my

people.
Your zealous concurrence in every measure that can bring relief to my people is well known to me; nor do I doubt of the attention that you will always give to any real grievances of my American subjects. The strong assurances I receive from you at the same time, of your determination to vindicate the just legislative authority of parliament over all the dominions of my crown, deferve my warmest approbation.

The address of the house of commons.

Most gracious sovereign,

W E your majesty's most dutiful and loyal subjects, the commons of Great Britain in parliament assembled, return your maiesty jefty our humble thanks for your most gracious speech from the throne:

And beg leave to congratulate your majesty upon the safe delivery of the queen, and the birth of another princes; an event which must afford the greatest comfort to all your majesty's subjects, as it is an increase of your own domestick felicity, and an additional security that the blessings we enjoy under your majesty's auspicious government will be continued to our latest posterity.

We affure your majesty, that, duly sensible of the importance of those great commercial interests pointed out to us by your majesty, we will with all convenient dispatch enter upon the consideration of them, and will use our utmost endeavours to adjust and regulate them in such a manner as may be productive of solid and lasting ad-

vantages to the publick.

We most gratefully acknowledge your majesty's paternal regard for the ease and welfare of your people, which has made you ever defirous of continuing to them the bleshings of peace; at the fame time, we entirely rely on your majesty's constant and watchful attention to the general interests of Europe; and feel the highest satisfaction from your gracious declaration, that no confideration shall prevail on your majesty to suffer any attempt which may be made, derogatory to the honour of your crown, or injurious to the rights of your people.

We fincerely lament that the arts of wicked and defigning men should have been able to re-kindle that flame of fedition in some of your majesty's colonies in North America, which, at the close of the late parliament, your majesty saw reason to hope was well nigh

extinguished.

We shall be ever ready to hear and redress any real grievance of your majesty's American subjects; but we should betray the trust reposed in us, if we did not withstand every attempt to infringe or weaken our just rights; and we shall always consider it as one of our most important duties, to maintain entire and inviolate the supreme authority of the legislature of Great Britain over every part of the British empire.

We beg leave to present our most dutiful thanks to your majesty, for having taken such steps as you judged necessary for supporting the constitution, and for repressing that spirit of faction and disobedience, which, in the chier town of one of your majesty's colonies, appears to have proceeded even to acts of violence, in direct defiance of all legal authority; and we will, by every means in our power, chearfully and zealously support your majesty in all such future measures as shall be found requisite to enforce a due obedience to the laws, to restore order and good government where they have been disturbed, and to establish the constitutional dependence of the colonies on Great Britain, so essential to the interest and prosperity of both.

With hearts full of gratitude to the divine goodness, we partake of the joy which fills your majesty's royal breast, on seeing the poorer fort of your people relieved from the distress which they have

lately

lately suffered by the high price of corn; and we will, by every prudent measure, endeavour to guard as far as in us lies against the return of that calamity.

Your faithful commons will with the utmost zeal and alacrity grant to your majesty every ne--ceffary fupply; and ftudy to manifest in all their proceedings that uniform attachment to the public good, which your majesty is graciously pleased to recommend to them, and of which your majefty's own conduct furnishes an illuftrious example.

His majesty's most gracious answer. Gentlemen,

I return you my hearty thanks for your very dutitul and affectionate address.

The attachment which you manifest to me, and my family in your congratulations upon the fafe delivery of the queen, and the birth of another princess, is extremely acceptable to me. Nothing can afford me greater fatisfaction than the assurances you give me of applying your earnest attention to the relief of my people; and your resolution to maintain the authority of the legislature over all the dominions of my crown.

St. James's, Jan. 9.

The following address of the manufacturers and traders of the cities of London and Westminster, as also those of Spital-fields and parts adjacent, bas been presented to bis majesty: which address his majesty was pleased to receive very gracioufly.

To the KING'S most excellent majesty.

May it please your majesty,

M/ E your majesty's most dutiful and loyal subjects, manufacturers and traders of your cities of London and Westminster, as also those of Spital-fields and parts adjacent, humbly offer our most grateful thanks, for the late instance of your majesty's paternal tenderness and compassionate regard, expressed in your royal declaration, that all future court mournings shall be shortened.

We have the deeper fense of this mark of your majesty's gracious condescension, as it was unfolicited; a refolution which at once promotes trade, invigorates industry, and can never be forgotten in the annals of your majefty's reign.

The example so replete with love to your subjects in general, and compassion to the poor manufacturers in particular, inspires us with the warmest and most respectful gratitude; and will ever engage our prayers to Divine Providence, that your majesty may long continue to reign in the hearts of your grateful people; to share the blessings of domestic felicity with your illustrious confort, and royal iffue; and to experience the happy reward your majesty's distinguished virtues so eminently

The following address of the bayliffs, wardens, assistants, and commonality of the trade, art, and mystery of weavers, London, has been presented to his majesty: which address his majesty was pleased to receive wery graciously.

To the KING's most excellent

Most gracious sovereign,

W E your majesty's most dutiful and loyal subjects, the bayliffs, wardens, assistants, and commonalty of the trade, art, and mystery of weavers, London, in behalf of ourselves, and the silk manufacturers in and about Spitalfields:

Most humbly beg leave to embrace the first opportunity, as in duty bound, to return our most grateful thanks to your majesty, for your majesty's late most gracious declaration, that, in compassion to the number of manufacturers and traders, who have been great fufferers by the length of court-mournings, your majesty hath been pleased to give directions for shortening them in future. Such tender feelings for the fubjects of a state could only infpire the royal breast of a prince, whose virtues loudly proclaim the good of his people to be the first objects of his thoughts, and the ultimate end of all his actions.

We beg leave most humbly to assure your majesty, that this your majesty's benevolent resolution will greatly promote the silk manufactures of this kingdom, give great spirit to the trade, tend to the improvement of it in many branches, and be the means of giving constant employment to our workmen; many of whom,

owing to the late mournings, have been out of employ, and in want of bread.

At the fame time that we offer up our tribute of thanks to your majefly, we should think ourselves very ungrateful to your majefly's royal confort, if we did not humbly express our sense of the great obligations we say under to her majefly, for her generous patronage and encouragement of our silk manufacture; and we are bound to make the same acknowledgment to the rest of the royal samily, for the distinguished preference they give to the wrought silks of this kingdom.

That your majesty's reign may be happy, long, and glorious, will be the constant prayer of us your majesty's most faithful sub-

jects.

Weavers-hall, Jan. 4, 1768. EB. BRIGGS, clerk.

A proclamation against riots, tumults, and unlawful assemblies, &c.

GEORGE R.

TAT HEREAS it has been represented unto us, that divers dissolute and disorderly perfons have, of late, frequently affembled themselves together in a riotous and unlawful manner, to the disturbance of the public peace; and, particularly, that large bodies of feamen, confifting of feveral thousands, have affembled tumultuously upon the river Thames; and, under a pretence of the infufficiency of the wages allowed by the merchants and others, have, in the most daring manner, taken possession, by violence, of feveral outward-bound ships

fhips ready to fail, and, by unbending the fails, and firiking the yards and topmasts, have stopped them in the profecution of their voyages; and that these acts of violence have been accompanied with threats of still greater outrages; which have fpread terror and alarm among those the most likely to be affected thereby: and it has been further represented to us, that some of the said dissolute and disorderly persons have audaciously attempted to deter and intimidate the civil magistrates from doing their duty: We having taken the same into our ferious confideration, and being duly fensible of the mischievous consequences that may enfue from the continuance or repetition of fuch disorders, have thought fit, by and with the advice of our privy-council, to iffue this our royal proclamation; hereby firictly requiring and commanding the lord-mayor, and other the justices of the peace of our city of London, and also the justices of the peace of our city and liberties of Westminster and borough of Southwark, and of our counties of Middlesex, Surry, and Kent, and all other our peace officers, that they do severally use their utmost endeavours, by every legal means in their power, effectually to prevent and suppress all riots, tumults, and unlawful affemblies, and to that end to put in due execution the laws and statutes now in force for preventing, suppressing, and punishing, the same; and that all our loving subjects be aiding and affifting therein: and we do further graciously declare, That the faid magistrates and all others acting in obedience to this our command, may rely on our royal protection and support for so doing.

Given at our court at St. James's, the 11th day of May, 1768, in the eighth year of our reign.

His excellency George lord viscount. Townshend, lord lieutenant general and general governor of Ireland, his speech to both houses of parliament at Dublin, on Friday the 27th day of May, 1768, with the proclamation for dissolving the parliament.

My lords, and gentlemen,

THE advanced season of the year, and the extraordinary length of your attendance, make it necessary for you to return to your several counties as soon as

offible.

Amongst the many good laws which have been passed, it was with particular satisfaction that I gave the royal assent to that for limiting the duration of parliaments: his majesty's gracious condescension to his subjects, in that instance, call for the warmest returns of gratitude and affection; and I trust it will be productive of the most substantial and permanent advantages to the kingdom in general.

Gentlemen of the house of commons,

I am commanded to thank you, in his majesty's name, for the supplies which have been granted to support the present establishment; and, you may be affured, they shall be applied, with the utmost frugality, to the purposes for which they were intended.

My lords and gentlemen,

That the inconveniencies which unavoidably attend a general election may be as little felt as possible, his majesty, in his paternal goodness, hath commanded me, with all convenient speed, to dissolve the present parliament, and to issue writs for calling a new one, as soon as the usual and constitutional course of proceedings in like cases will permit.

But his majefly will not put an end to this parliament, without having first thanked you for the many eminent proofs which you have given him of your inviolable sidelity and attachment to his person, family, and government: nor can his majesty in the least doubt of receiving fresh marks of the same affection, loyalty and zeal, in the choice of representatives at the next general election.

I recommend it to you, most earnessly, that by your example and authority you do, in your several stations, preserve that good order, and due execution of the laws, so peculiarly necessary at this time,

And that you do, by your firmness and prudence, discountenance the repeated attempts, which have been made, by false representations, to alienate the affections of the people; to fill their minds with groundless jealousies; and stir up unjust

complaints.

I return you my warmen acknowledgments for the very honourable and obliging manner in which you have expressed your approbation of my conduct; and I desire you will be assured, that my best endeavours shall, upon every occasion, be uniformly and strenuously exerted to promote the interest and prosperity of Ireland. And then the lord chancellor declared, that it was his excellency the lord lieutenant's pleafure, that this parliament be prorogued to the 14th day of June next; and the parliament was accordingly prorogued to the 14th day of June next.

Dublin-Castle.

By the Lord Lieutenant General and General Governor of Ireland.

A PROCLAMATION.

Townshend.

WHEREAS his majefty, hath fignified unto us his royal pleasure, that the present parliament of this kingdom, which now stands prorogued to the 14th day of June next, be forthwith dislolved:

WE the lord lieutenant of Ireland, in obedience to his majefly's commands, do publish and declare that the said parliament be, and accordingly the said parliament is hereby, distolved. And the lords spiritual and temporal, and the knights, citizens and burgestes of the house of commons, are discharged from their meeting and attendance on the said 14th day of June next.

Given at his Majesty's Castle of Dublin, the 28th day of

May, 1768.

By his excellency's command,
Frederick Campbell.
God fave the KING.

The addresses of both houses of parliament to his excellency the lord lieutenant.

The humble address of the lords spiritual and temporal in parliament assembled.

May it please your excellency,
WE, the lords spiritual and temporal in parliament assembled,
cannot look back upon what has
passed during the present session of
parlia-

parliament, which now feems to be drawing near to its conclusion, without observing, with gratitude and pleasure, how eminently it is distinguished by the many useful bills which have received your excellency's kind countenance and affistance, and most eminently by the bill for limiting the duration of parliaments, which, having passed into a law, will for ever restect the highest glory and honour upon your excellency's administration.

Your excellency's many public and private virtues have most defervedly acquired our greatest esteem; and it is but just that we should express it, as we now beg leave to do. But this expression would be inadequate, did we not add to it, as we most fincerely do, our grateful and hearty thanks to your excellency for your faithful and most disinterested conduct, for your vigilant and unwearied attention to, and your zealous endeavours to promote and pre--ferve, the trade, manufactures, the peace, and prosperity of this kingdom.

We cannot but have remarked, and we must honour and admire the amiable humanity, charity, condefcension, and goodness, by which your excellency has rendered your government honourable and respectable in itself, and highly satisfactory and agreeable to us.

To this permit us, with all humble submission and duty to his majesty, to subjoin our wishes and our hopes, that, as far as may consist with his majesty's affairs, your excellency, so acceptable to us as our chief governor, may not soon be taken from us,

His excellency's answers of My lords,

Your approbation of my endeavours for the public fervice gives me the most sensible satisfaction, and deserves my sincerest acknowledgments. Your lordships may be affured, that the interest and prosperity of this kingdom shall be the constant objects of my care and attention.

The humble address of the knights, citizens, and burgesses in parliament offenbled.

May it please your excellency, W.E., his majesty's most dutiful and

loyal fubjects, the commons of Ireland in parliament affembled, think it our duty to return your excellency our most fincere thanks for your mild, just, and prudent administration.

Happy in having devoted our own existence to the liberties of our country, we find ourselves under an indispensable obligation, at our approaching diffolution, to express the warmest acknowledgments to a chief governor, in whose administration, and with whose affistance, we have been gratified with the noble opportunity of distinguishing ourselves from our predecessors, by leaving to posterity a monument of our difinterested love for the people we have the honour to represent; and an example, that the happiness of our constituents has in our own breasts taken place of every other confideration.

The many good laws obtained during this fession of parliament, particularly those for the encouragement of tillage, and the support of our manufactures, and the sund which has so happily been established for the reduction of our national debt, by the tax on absences.

will

will ever remain the most lasting and honourable memorials of your excellency's administration, and will, in as eminent a degree, distinguish your public, as the most amiable manners adorn your excellency's private character.

We chearfully embrace this opportunity of affuring your excellency we have the firmest reliance, founded on his majesty's paternal regard for his people, and your excellency's affectionate wishes for the prosperity of this kingdom, that all fuch laws, as may be necessary for the further improvement of our constitution, will be obtained at such time as his majesty, in his royal wifdom, shall think most feafonable.

Impressed with the deepest sentiments of gratitude to the best of kings, we have, during the whole course of his majesty's reign, supported his majesty's government with dignity and honour; and from your excellency's known justice and candour, we have the fullest confidence, that your excellency will make the most favourable representation to his majesty of the inviolable attachment of the commons of Ireland to his majesty's facred perfon, and illustrious family.

His excellency's answer.

Gentlemen,

I return you my fincerest thanks for this very kind address: I receive with particular fatisfaction this honourable approbation of my conduct. - It was my duty, and it will always be my inclination, to promote the true interest and prosperity of this kingdom to the utmost of my power. - I will most faithfully represent to his majesty your constant and affectionate zeal for his person, family, and government.

VOL. XI.

Manifests of the grand seignion, concerning the war declared by his highness against the empress of Rusfia, delivered the 30th of October last, to the foreign ministers residing at Constantinople.

T may clearly be feen by what follows, that the fublime porte has strictly observed the articles of the peace, established between his empire and the court of Russia, who, on the contrary, has infringed them in many instances.

The court of Russia, against the faith of treaties, has not defifted from building various fortreffes on the frontiers of the two states, and has provided them with troops and

ammunition.

In the year 1177 (or 1763), on the death of Augustus the third, king of Poland, the republic of Poland intending, according to the fystem of the Polish liberty, to proceed to the election of a king, the court of Russia set up for king a private Polish officer, in whose family there had never been any king, and to whom royalty was not becoming: and has, by fiding with this king, intruded on and traverfed, against the will of the republic, all the affairs of the Poles. The porte having given notice of this to the Ruffian resident, he declared that the republic of Poland having required a certain number of troops to protect its own liberty, fix thousand horse and a thousand cossacks were granted for that purpose, who had neither cannon nor ammunition with them. and were to be under the command of the republic; and that there was not a fingle Russian soldier above that number in Poland. Yet, when he was asked, some time after, why the court of Russia had sent more [T]troops troops into Poland; and why violence had been used on the election of Poniatowsky, son of one of the grandees of Poland, the faid refident affured, by a writing figned with his hand, that his court had not declared for any person, nor had ever made use of violent means for the election of any one whatfoever. Notwithstanding this assurance and declaration, the court of Russia has been continually fending troops, cannon, and ammunition, under the command of its own generals, who continued to attack the Polish liberty, and put to death those who refused to submit to the person that themselves had not elected for their king, and who was not the fon of a king; stripping them, with clamour and violence, of their goods and estates. Such a conduct being productive of confusion in the good order of the fublime porte, he was given to understand, that, according to the tenor of the articles of the old and new imperial capitulations, the court of Russia must order her troops to evacuate Poland; this, the faid refident promifed by feveral memorials figned, but this promife has not been fulfilled. In the mean time the sublime porte received advice, that some Russian troops had been fent to Balta (one of the muffulman frontiers), with fome artillery, and had, unexpectedly, attacked the musfulmans, and massacred upwards of a thousand persons, men, women, and children.

The fublime porte having again demanded fatisfaction from the court of Russia for this outrage, which, against the tenor of treaties, had been committed with artillery; and the khan of Crimea having also demanded fatisfaction for the same, the said court denied the fact, alledging

that the Haydamacks had done some damage, but that care would be taken to punish them; although it is notorious that the Haydamacks never make use of cannon nor bombs in their irruptions. The fublime porte, notwithstanding, still persisted in requiring satisfaction for such a conduct, and still demanded the reafon why the court of Russia would not, these three years past, withdraw its troops from Poland, fince the articles of the treaty, concluded in 1133 (1719), and that of 1152 (1738), stipulate, 'That as often as any event shall happen, capable of disturbing the perpetual peace of the two empires, they should proceed, ipso facto, to the means of terminating them in an amicable manner:' nevertheless, the outrages and devastations at Balta have been denied, and the punishment of those who had the boldness to be guilty of them, has been postponed and even neglected. The filence itself of the Russian resident, who having been invited to come to the porte to anfwer for this proceeding, and to declare what his court meant by still keeping its troops in Poland, proves the infraction of the treaty. At last he was asked definitively, whether, according to the antient and new treaties, which subfift between the two empires, the court of Russia would defift from meddling with the affairs of Poland, under pretence of guaranty and promise; he replied, that his full power was limited, and that he could not answer thereupon, fince that article was known to his court only. Such a behaviour plainly demonstrates that the above mentioned power thinks proper to take upon itself the infraction of treaties: therefore it is, that the illustrious doctors of the law have given by fetras (or legal fentences) their anfwers that, according to the exigency of justice, it was necessary to make war against the Muscovites: an opinion that has been unanimously confirmed. Thus the arrest of the said resident being become necessary, we give by these presents, notice to all the powers of Europe, that the faid resident shall be guarded in the castle of the Seven Towers, and that, during the whole time that this transaction has lasted, the fublime porte has done nothing that might break the friendship, nor any thing contrary to the articles of the treaties concluded between the two empires, &c.

The declaration of the imperial court of Russia to the courts of Europe, upon the arrest of its minister, resident at Constantinople.

LIER imperial majesty, in taking a part in the transactions of the republic of Poland, as humanity on one fide, and the obligations of her crown on the other, had prompted her, was no less careful to conduct herself in such a manner as not to give any umbrage to a jealous and powerful neighbour: every part of her conduct was public; and she had likewise a particular attention to communicate in confidence to the Ottoman porte her resolutions upon every step she took, and the conduct she intended to observe, till the peace and tranquillity of that kingdom was entirely re-established. But the enemies to the peace of these two empires were not wanting to blacken at the porte all the actions of her imperial majesty, and to sow there the feeds of discord by the most false imputations. The porte, restrained by the upright conduct the court of Russia continued to maintain

towards them, listened, but it was with caution, to the calumny that was spread. Some attention to the affairs of Poland, and an impartial examination of what Russia had done, compared with the overtures made by that court at the porte, had dispelled all suspicion, and the public tranquillity feemed to be no more threatened. The common enemies, however, repeated their infinuations with more rage and audacity than ever, to impose upon the credulity of the Turkish nation, and infused a spirit of discontent among them, which called for the notice of government, for it had forced its way even into the feraglio. The change in the ministry, brought about by these events, soon produced a revolution in the fystem of peace, equally dear to both nations. The new vizir, upon his advancement, immediately fent for Mr. Obreskow, her imperial majesty's resident at the porte, and, after having caused to be read in his presence a declaration full of heavy charges against his court, part of which already have been invalidated by the most fair and candid explanations, and others that had never existed, or were ever thought of, the vizir pressed him to fign immediately, under the guaranty of the allies of his fovereign, some very offenfive conditions, in regard to which there never had been made the least proposal during the whole course of the operations in Poland. These conditions, very derogatory to the honour and glory of an empress accustomed to receive no law, proposed in a tone and form repugnant to the freedom of negociation adopted by every power, were attended with the alternative of an immediate rupture of the perpetual peace between the two empires. The Ruffian [T 2]

Russian minister confident of the upright intentions of his court, and conscious of the probity of his own conduct, as having fulfilled the duties of a long ministry, was incapable of unworthily degrading his court and his own character by a humiliating engagement, and which would have exceeded the power and commifsion of any minister, let them be ever fo extensive; he gave therefore a positive refusal, as became his honour and his duty: - and the resolution of the divan, which followed immediately after, was to arrest him, and part of his retinue, and carry him to the castle of the Seven Towers.—It would be needless for the imperial court of Russia, to dwell any longer upon this event, or to enter here into an examination of it. The fact speaks for itself. The honour and glory of her imperial majesty - the regard to her empire, point out the part it is right for her to take. Confiding in the juttice of her cause, she appeals to all christian courts on the situation the finds herfelf in with regard to the common enemy of christianity, certain as she is, that her conduct will meet with equal approbation from each of them, and that she shall have the advantage to join to the divine protection, the just assistance of her friends, and the good wishes of all christendom.

Treaty concluded between the French king and the republick of Genoa, for the cession of the island of Corsica. together with its fortreffes, to France, the latter paying in money for the artillery and warlike stores, according to a valuation which shall be made of them.

II. The fovereignty of that ifland shall always remain vested

id the republick.

III. Every person shall be preferved in his effects, on proving the right he has to them.

IV. The Corficans shall be deemed subjects of France, so long as the latter continues in possession of that isle.

V. France shall be obliged to maintain there fixteen battalions.

VI. France shall guaranty the Genoese commerce against the Corsican and Barbary cruisers.

VII. In case the republick should be desirous of resuming again the possession of that kingdom, it shall repay to France all the charges that crown shall have been at by that time; for which purpose an exact account shall be kept of all that the latter shall have advanced, and likewise of the revenues it shall have collected.

VIII. The king shall bestow in property on the republic the so-vereignty of the isle of Capræa. This treaty contains besides three secretarticles.

Declaration made by the French king, on sending his troops to take possession of the island of Corsica.

L OUIS, by the grace of God, king of France and Navarre, to all to whom these presents shall come greeting:

The ferene republic of Genoa having entrusted in our hands, by a voluntary cession, the rights of

I. THE republic of Genoa cedes the kingdom of Corfica,

fovereignty which she possessed over the kingdom of Corsica, and having delivered to our troops the places which the Genoese occupied in that island, we have taken charge of the government and independent sovereignty of the kingdom of Corsica; and that the more willingly, as we hope to exercise it merely for the good of the people of that island, our new subjects.

Our intention is, to grant to the Corfican nation all the advantages they can defire, if they submit to our sovereign rights. We will preserve them from all suture apprehensions with respect to the continuation of the disturbances by which they have been disturbances by which they have been disturbances by which they have been disturbanced by which they are prospected in general, and of every individual in particular, with the sentiments of a paternal heart. We will maintain, upon

our royal word, the conditions we have promised, in regard to the form of government, to the nation, and to those who shall shew themselves most zealous and most ready to submit to our obedience; and we hope that nation, enjoying this advantage and our royal protection by fuch precious ties, will not put us upon treating them as rebels, and perpetuate in the illand of Corfica disturbances which cannot but prove destructive to a people whom we have adopted with complacency among the number of our subjects. And in order that our intentions upon this head might be fully known, we have caused our seal to be put to these presents.

> Given at Compeigne, the 5th day of August, 1768, and in the 53d year of our reign.

(Signed) LOUIS.
And underneath,
The Duke de CHOISEUL.

CHARACTERS.

CHARACTERS.

Of the English; from Voltaire's Princess of Babylon.

A MAZAN had heard fo much among the Batavians, in praise of a certain island called Al-bion, that he was led by curiosity to embark with his unicorns on board a ship, which, with a favourable eafterly wind, carried him in four hours to that celebrated country, more famous than Tyre, or the Atlantic island.

In a little time Amazan was on the road to the capital of Albion. in his coach and fix unicorns, all his thoughts employed on his dear princess: at a small distance he perceived a carriage overturned in a ditch; the fervants had gone different ways in quest of assistance, but the owner kept his feat, smoaking his pipe with great tranquility, without testifying the smallest impatience: his name was My Lord What-then, in the language from which I translate these memoirs.

Amazan made all the hafte poffible to help him, and with his fingle arm fet the carriage to rights; fo much was his strength superior to that of other men. My Lord Whatthen took no other notice of him, than faying, A flout fellow, by G-d! In the mean time, the country people being come up, flew into a great passion at being called out to no purpose, and fell upon the stranger. They abused him,

called him outlandish dog, and challenged him to strip and box.

Amazan feized a brace of them in each hand, and threw them twenty paces from him; the rest seeing this, pulled off their hats, and bowing with great refrect, asked his honour for something to drink. His honour gave them more money than they had ever feen in their lives before. My Lord What-then now expressed great esteem for him, and asked him to dinner at his countryhouse, about three miles off. His invitation being accepted, he went into Amazan's coach, his own being out of order by the accident.

After a quarter of an hour's filence, My Lord What-then looking upon Amazan for a moment, said, How d'ye do? which, by the way, is a phrase without any meaning; adding, You have got fix fine unicorns there. After which he fell a

fmoaking as ufual.

The traveller told him his unicorns were at his fervice, and that he had brought them from the country of the Gangarids: from thence he took occasion to inform him of his affair with the princess of Babylon, and the unlucky kiss she had given the king of Egypt; to which the other made no reply, being very indifferent whether there were any fuch people in the world, as a king of Egypt, or a princess of Babylon. He remained dumb for another quarter of an hour; after which he

asked his companion a second time, how he did, and whether they had any good roaft beef among the Gangarids. Amazan answered with his wonted politeness, that they did not cat their brethren on the banks of the Ganges; he then explained to him that fystem which many ages afterwards was furnamed the Pythagorean philosophy. But My Lord fell afleep in the mean time, and made but one nap of it till he came to his own house.

He was married to a young and charming woman, on whom nature had bestowed a foul as lively and fenfible, as her husband's was dull and stupid. Several gentlemen of Albion had that day come to dine with her; among whom there were characters of all forts; for that country having been almost always under the government of foreigners, the families that had come over with these princes had imported their different manners. There were in this company fome persons of a very amiable disposition, others of a superior genius, and a few of very profound learning.

The mistress of the house had none of that aukward affected stiffness, that false modesty, with which the young Albion ladies were then reproached; she did not conceal, by a scornful look, and an affected taciturnity, her deficiency of ideas, and the embarrassing humility of having nothing to fay. Never was a woman more engaging. She received Amazan with a grace and politeness that were quite natural to her. The extreme beauty of this young stranger, and the fudden comparison she could not help making between him and her husband, immediately struck her in a most fenfible manner.

Dinner being ferved, she placed Amazan at her fide, and helped him to all forts of puddings, having learned from himself, that the Gangarids never fed upon any thing which had received from the gods the celestial gift of life. His beauty and strength, the manners of the Gangarids, the progress of arts, religion and government, were the fubjects of a conversation equally agreeable and inftructive all the time of the entertainment, which lasted till night: during which, My Lord What-then did nothing but push the bottle about, and call for the toast.

After dinner, while my lady was pouring out the tea, still feeding her eyes on the young stranger, he entered into a long conversation with a member of parliament; for every one knows that there was, even then, a parliament called Wittenagemot, or the affembly of wife men. Amazan enquired into the constitution, laws, manners, customs, forces, and arts, which made this country so respectable; and the member answered him in the

following manner:

For a long time we went flark naked, though our climate is none of the hottest. We were likewise for a long time enflaved by a people come from the ancient country of Saturn, watered by the Tiber. But the mischiefs we have done one another, have greatly exceeded all that we ever fuffered from our first conquerors. One of our princes carried his dastardliness to such a pitch, as to declare himself the subject of a prieft, who dwells also on the banks of the Tiber, and is called the Old Man of the Seven Mountains: it has been the fate of these feven mountains, to domineer over the greatest part of Europe, then inhabited by brutes, in human

shape.

To those times of infamy and debasement, succeeded the ages of barbarity and confusion. Our country, more tempestuous than the furrounding ocean, has been ravaged and drenched in blood by our civil discords; many of our crowned heads have perished by a violent death: above a hundred princes of the royal blood have ended their days on the fcaffold, whilst the hearts of their adherents have been torn from their breafts, and thrown in their faces. In fhort, it is the province of the hangman to write the history of our island, seeing this personage has finally determined all our affairs of moment.

But to crown these horrors, it is not very long since some fellows, wearing black mantles, and others who cast white shirts over their jackets, having been bitten by mad dogs, communicated their madness to the whole nation. Our country was then divided into two parties, the murderers and the murdered, the executioners and the sufferers, plunderers and slaves; and all in the name of God, and whilst they

were feeking the Lord.

Who would have imagined that from this horrible abys, this chaos of dissension, cruelty, ignorance, and fanaticism, a government should at last spring up, the most perfect, it may be faid, now in the world; yet such has been the event. A prince, honoured and wealthy, all-powerful to do good, without any power to do evil, is at the head of a free, warlike, commercial, and enlightened nation. The nobles on one hand, and the representatives of the people on the other, share the legislature with the monarch.

We have feen, by a fingular fatality of events, diforder, civil wars: anarchy and wretchedness, lay waste the country, when our kings aimed at arbitrary power: whereas tranquility, riches, and universal happinefs, have only reigned among us, when the prince has remained fatisfied with a limited authority. All order has been subverted whilst we were disputing about mysteries: but was re-established the moment we grew wife enough to despife them. Our victorious fleets carry our glory over all the ocean; our laws place our lives and fortunes in fecurity; no judge can explain them in an arbitrary manner, and no decision is ever given without the reasons assigned for it. We should punish a judge as an affassin. who should condemn a citizen to death without declaring the evidence which accused him, and the law upon which he was convicted:

It is true, there are always two parties among us, who are continually writing and intriguing against each other; but they constantly reunite, whenever it is needful to arm in defence of liberty and our country. These two parties watch over one another, and mutually prevent the violation of the facred deposit of the laws: they hate one another, but they love the state; they are like those jealous lovers, who pay court to the same mistress with a

fpirit of emulation.

From the same fund of genius by which we discovered and supported the natural rights of mankind, we have carried the sciences to the highest pitch to which they can attain among men. Your Egyptians, who pass for such great mechanics; your Indians, who are believed to be such great Philosophers; your Babylonians,

bylonians, who boast of having obferved the stars for the course of four hundred and thirty thousand years; the Greeks, who have written so much, and said so little; know in reality nothing, in comparison of our shallowest scholars, who have studied the discoveries of our great masters. We have ravished more secrets from Nature, in the space of an hundred years, than the human species has been able to discover in as many ages.

This is a true account of our prefent state. I have concealed from you neither the good nor the bad; neither our shame nor our glory; and I have exaggerated nothing.

At this discourse Amazan selt a strong desire to be instructed in those sublime sciences his friend spoke of; and if his passion for the princess of Babylon; his silial duty to his mother, whom he had quitted; and his love for his native country, had not made strong remonstrances to his distempered heart, he would willingly have spent the remainder of his life in Albion. But that unfortunate kiss his princes had given the king of Egypt, did not leave his mind at sufficient ease to study the abstruct sciences.

I confess, faid he, having made a folemn vow to roam about the world, and to escape from myself, I have a curiosity to see that ancient land of Saturn, that people of the Tiber, and of the Seven Mountains, who have been heretofore their masters; they must undoubtedly be the first people on earth. I advise you by all means, answered the member, to take that journey, if you have the smallest taste for music or painting. Even we ourselves frequently carry our spleen and melancholy to the Seven Mountains.

But you will be greatly surprized when you see the descendants of our conquerors.

Of the Modern Italians; from the the same.

MAZAN was already failing upon the fea, possessed of a geographical chart, with which he had been presented by the learned Albion he had conversed with at Lord What-then's. He was extremely astonished to find the greatest part of the earth upon a single

sheet of paper.

His eyes and imagination wandered over this little space; he obferved the Rhine, the Danube, the Alps of Tyrol, there specified under different names, and all the countries through which he was to pass before he arrived at the city of the Seven Mountains; but he more particularly fixed his eyes upon the country of the Gangarids, upon Babylon, where he had feen his dear princefs, and upon the fatal country of Baffora, where the had given a fatal kiss to the king of Egypt. He fighed, and tears streamed from his eyes; but he agreed with the Albion who had prefented him with the universe in epitome, when he averred, that the inhabitants of the banks of the Thames were a thoufand times better instructed than those upon the banks of the Nile, the Euphrates, and the Ganges.

As he returned into Batavia, Formofanta flew towards Albion with her two ships that went at full sail. Amazan's ship, and the princess's crossed one another, and almost touched; the two lovers were close to each other, which they could not doubt of. Ah! had they

but

but known it! but tyrannic destiny

would not allow it.

No sooner had Amazan landed on the flat muddy shore of Batavia, than he flew like lightning towards the city of the Seven Mountains. He was obliged to traverse the fouthern part of Germany. At every four miles he met with a prince and princess, maids of honour and beggars. He was aftonished every where at the coquetries of these ladies and maids of honour, which they displayed with German good faith; and he only answered with modest refusals. After having cleared the Alps, he embarked upon the fea of Dalmatia, and landed in a city that had no refemblance to any thing he had heretofore feen. The fea formed the streets, and the houses were erected in the water. The few public places with which this city was ornamented, were filled with men and women with double faces; that which nature had bestowed upon them, and a pasteboard one, ill painted, with which they covered their natural vifage; fo that this people feemed composed of spectres. Upon the arrival of strangers in this country, they immediately purchase these vifages, in the fame manner as people elsewhere furnish themselves with hats and shoes. Amazan despised a fashion so contrary to nature; he appeared just as he was. There were in the city twelve thousand girls, registered in the great book of the Republic; these girls were useful to the state, being appointed to carry on the most advantageous and agreeable trade that ever enriched a nation. Common traders usually send, at great risk and expence, merchandizes of various kinds to the East; but these beautiful merchants carried on a conflant traffic without risk, which constantly sprung from their charms. They all came to present themselves to the handsome Amazan, and offer him his choice. He fled with the utmost precipitancy, in uttering the name of the incomparable princes of Babylon, and swearing by the immortal gods, that she was far handsomer than all the twelve thousand Venetian girls. Sublime traitress, he cried in his transports, I will teach you to be faithful!

Now the yellow furges of the Tiber, pestiferous fens, a few pale emaciated inhabitants, clothed in tatters, which displayed their dry tanned hides, appeared to his fight, and bespoke his arrival at the gate of the city of the Seven Mountains, that city of heroes and legislators, who conquered and polished a great

part of the globe.

He expected to have feen at the triumphal gate, five hundred battalions commanded by heroes, and in the fenate, an affembly of demigods, giving laws to the earth; but the only army he found confifted of about thirty tatterdemalions, mounting guard with umbrellas for fear of the fun. Being arrived at a temple, which appeared to him very fine, but not fo magnificent as that of Babylon, he was greatly affonished to hear a concert performed by men with female voices.

This, faid he, is a mighty pleafant country, which was formerly the land of Saturn. I have been in a city where no one shewed his own face; here is another where men have neither their own voices nor beards. He was told that these singers were no longer men; that they had been divested of their virility, that they might sing the more

3 agree-

agreeably the praifes of a great number of persons of merit. Amazan could not comprehend the meaning of this. These gentlemen defired him to fing; he fung a Gangaridian air with his usual grace. His voice was a fine countertenor. Ah! Signior, said they, what a delightful foprano you would have, if-If what, faid he; what do you mean?—Ah! Signior, if you were—If I were what?—If--you were-without a beard! They then explained to him very pleafantly, and with the most comic gesticulations, according to the custom of their country, the point in question. Amazan was quite confounded. I have travelled a great way, faid he, but I never before heard of fuch a

After they had fung a good while, the Old Man of the Seven Mountains went with great ceremony to the gate of the temple; he cut the air in four parts with his thumb raifed, two fingers extended and two bent, in uttering these words in a language no longer spoken: To the city and to the universe. The Gangarid could not comprehend how two fingers could extend so far.

He presently saw the whole court of the master of the world file off. This court consisted of grave personages, some in scarlet and others in violet robes: they almost all eyed the handsome Amazan with a tender look; they bowed to him, and said to one other, San Martino, the bell ragazzo! San Pancratio, che bell fanciullo!

The zealots, whose vocation was to shew the curiosities of the city to strangers, very eagerly offered to conduct him to several ruins, in which a muleteer would not chuse to pass a night, but which were formerly worthy monuments of the grandeur of a royal people. He moreover saw pictures of two hundred years standing, and statues that had remained twenty ages, which appeared to him master-pieces in their kind. Can you still produce such works? No, your Excellency, replied one of the zealots; but we despise the rest of the earth, because we preserve their rarities, We are a kind of old-cloaths-men, who derive our glory from the cast off garbs in our warehouses.

Amazan was willing to fee the prince's palace, and he was accordingly conducted thither. He faw men dreffed in violet-coloured robes. who were reckoning the money of the revenues of the domains of lands, fituated fome upon the Danube, fome upon the Loire, others upon the Guadalquivir, or the Vi-Oh! oh! faid Amazan, after having confulted his geographical map, your master, then, possesses. all Europe, like those ancient heroes of the feven mountains? He should possess the whole universe by divine right, replied a violet livery-man; and there was even a time when his predecessors nearly compassed universal monarchy; but their successors are so good as to content themselves at present with some monies, which the kings their subjects, pay to them in the form of a tribute.

Your master is, then, in fact, the king of kings; is that his title? faid Amazan. No, your Excellency, his title is the fervant of fervants; he was originally a fisherman and porter, wherefore the emblems of his dignity consist of keys and nets; but he at present issues orders to

everv

every king in Christendom. It is not a long while fince he fent one hundred and one mandates to a king of the Celtes, and the king obeved.

Your fisherman must, then, have fent five or fix hundred thoufand men to put these orders in execu-

tion?

Not at all, your Excellency; our holy mafter is not rich enough to keep ten thousand soldiers on foot: but he has five or fix hundred thoufand divine prophets dispersed in other countries. Those prophets of various colours, are, as they ought to be, supported at the expence of the people: they proclaim from heaven, that my mafter may with his keys, open and thut all locks, and particularly those of strong boxes. A Norman priest, who held the post of confidant of this king's thoughts, convinced him he ought to obey, without replying, the hundred and one thoughts of my master; for you must know that one of the prerogatives of the Old Man of the Seven Mountains is, never to err, whether he deigns to fpeak, or deigns to write.

In faith, faid Amazan, this is a very fingular man; I should be curious to dine with him. Were your Excellency even a king, you could not eat at his table; all that he could do for you, would be to allow you to have one ferved by the fide of his, but fmaller and lower. But if you are inclined to the honour of speaking to him, I will ask an audience for you, on condition of the buona mancia, which you will be kind enough to give me. Very readily, faid the Gangarid. The violet livery-man bowed. I will introduce you to-morrow, faid he; you must make three very low bows,

and you must kiss the Old Man of the Seven Mountains feet. At this information Amazan burst into so violent a fit of laughing, that he was almost choaked; which, however, he furmounted, holding his fides, whilst the violent emotions of the rifible muscles forced the tears down his cheeks, till he reached the inn, where the fit still con-

tinued upon him.

At dinner, twenty beardless men and twenty violins produced a concert. He received the compliments of the greatest lords of the city during the remainder of the day; these made him proposals still more extravagant than that of kissing the Old Man of the Seven Mountains feet. As he was extremely polite, he at first imagined that these gentlemen took him for a lady, and informed them of their mistake with great decency and circumfpection. But being fomewhat closely pressed by two or three of the violet-coloured gentry, who were the most forward, he threw them out of the window, without fancying he had made any great facrifice to the beautiful Formofanta. left with the greatest precipitation, this city of the masters of the world, where he found himself necessitated to kiss an old man's toe, as if his cheek were at the end of his foot; and where young men were accosted in a still more whimfical manner.

Of the French; from the same.

Neall the provinces through which he passed, having conflantly repulsed every amorous overture of every species, being ever faithful to the princess of Babylon, B 4

though incessantly enraged at the king of Egypt; this model of constancy at length arrived at the new capital of the Gauls. This city, like many others, had alternately submitted to barbarity, ignorance, folly, and misery. The first name it bore was Dirt and Mire; it then took that of Isis, from the worship of Isis, which had reached even here. Its first senate consisted of a company of watermen. It had long been in bondage, and submitted to the ravages of the Heroes of the Seven Mountains; and some ages after, fome other heroic thieves, who came from the farther banks of the Rhine, had feized upon its little lands.

Time, which changes all things, had formed it into a city, half of which was very noble and very agreeable, the other half somewhat barbatous and ridiculous: this was the emblem of its inhabitants. There were within its walls at least a hundred thousand people, who had no other employment than play and diversion. These idlers were the judges of those arts which the others cultivated. They were ignorant of all that past at court; though they were only four short miles distant from it:-but it seemed to be at least fix hundred thoufand miles off. Agreeableness in company, gaiety and frivolity, formed the important and fole confiderations of their lives: they were governed like children, who are extravagantly supplied with gewgaws to prevent their crying. If the horrors, which had two centuries before laid waste their country, or those dreadful periods, when one half of the nation massacred the other for fophisms, came upon the carpet, they, indeed, faid, This

was not well done; then they fell a laughing, or finging of catches.

In proportion as the Idlers were polished, agreeable, and amiable, it was observed there was a greater and more shocking contrast between them and those who were engaged in business.

Among the latter, or fuch as pretended to to be, there was a gang of melancholy fanatics, whose abfurdity and knavery divided their character, whose appearance alone diffused misery, and who would have overturned the world, had they been able to gain a little credit. But the nation of Idlers, by dancing and finging, forced them into obscurity in their caverns, as the warbling birds drive the creaking bats back to their holes and ruins.

A fmaller number of those who were occupied, were the preservers of ancient barbarous customs, against which, nature terrified, loudly exclaimed; they confulted nothing but their worm-eaten registers. they there discovered a foolish horrid custom, they considered it as a facred law. It was from this vile practice of not daring to think for themselves, but extracting their ideas from the ruins of those times when no one thought at all, that in the metropolis of pleasure there still remained some shocking manners. Hence it was, that there was no proportion between crimes and punishments. A thousand deaths were fometimes inflicted upon an innocent victim, to make him acknowledge a crime he had not committed.

The extravagancies of youth were punished with the same severity as murder or parricide. The Idlers screamed loudly at these exhibitions, and the next day thought no more about them, but were buried in the contemplation of fome new fashion.

This people saw a whole age elapse, in which the sine arts attained a degree of perfection that far surpassed the most sanguine hopes: soreigners then repaired thither, as they did to Babylon, to admire the great monuments of architecture, the wonders of gardening, the sublime essorts of sculpture and painting. They were charmed with a species of music that reached the heart without astonishing the ears.

True poetry, that is to fay, such as is natural and harmonious, that which addresses the heart as well as the mind, was unknown to this nation before this happy period. New kinds of eloquence displayed sublime beauties. The theatres in particular re-echoed with master-pieces that no other nation ever approached. In a word, a good taste prevailed in every profession to that degree, that there were even good writers among the Druids.

So many laurels, that had branched even to the skies, soon withered in an exhausted soil. There remained but a very small number, whose leaves were of a pale dying verdure. This decay was occasioned by the facility of producing, laziness preventing good productions, and by a fatiety of the brilliant, and a taste for the whimsical. Vanity protected arts that brought back times of barbarity; and this same vanity, in persecuting real talents, forced them to quit their country; the hornets banished the bees.

There was scarce any real arts, scarce any more genius; merit now confisted in reasoning right or wrong upon the merit of the last age. The dauber of a sign-post criticised with

an air of fagacity the works of the greatest painters; and the blotters of paper disfigured the works of the greatest writers. Ignorance and a bad taste had other daubers in their pay; the fame things were repeated in a hundred volumes, under different titles. Every work was either a dictionary or a pamphlet. A Druid gazetteer wrote twice a week the obscure annals of some unknown people possessed with the devil, and of celestial prodigies operated in garrets by little beggars of both fexes; other Ex-Druids, dreffed in black, ready to die with rage and hunger, fet forth their complaints in a hundred different writings, that they were no longer allowed to cheat mankind, this privilege being conferred on fome goats clad in grey; and some Arch-Druids were employed in printing defamatory libels.

Amazan was quite ignorant of all this; and even if he had been acquainted with it, he would have given himself very little concern about it, having his head filled with nothing but the princes of Babylon, the king of Egypt, and the inviolable vow he had made to despise all female coquery, in whatever country his despair should drive him.

The gaping ignorant mob, whose curiosity exceeds all the bounds of nature and reason, for a long time thronged about his unicorns; the more sensible women forced open the doors of his *botel* to contemplate his person.

He at first testified some desire of visiting the court; but some of the Idlers who constituted good company, and casually went thither, informed him that it was quite out of fashion, that times were greatly changed, and that all anusements

were

were confined to the city. He was invited that very night to fup with a lady, whose sense and talents had reached foreign climes, and who had travelled in some countries through which Amazan had passed. This lady gave him great pleasure, as well as the fociety he met at her house. Here reigned a decent liberty, gaiety without tumult, filence without pedantry, and wit without asperity. He found that good company was not quite ideal, though the title was frequently ufurped by pretenders. The next day he dined in a fociety far less amiable, but much more voluptuous. The more he was fatisfied with the guests, the more they were pleased with him. He found his foul foften and disfolve, like the aromatics of his country, which gradually melt in a moderate heat, and exhale in delicious perfumes.

After dinner he was conducted to a place of public entertainment which was enchanting, condemned, however, by the Druids, because it deprived them of their auditors, which the most excited their jealoufy. The representation here confifted of agreeable verses, delightful fongs, dances which expressed the movements of the foul, and perfpectives that charmed the eye in deceiving it. This kind of pastime, which included fo many kinds, was known only under a foreign name; it was called an Opera, which formerly fignified, in the language of the Seven Mountains, work, care, occupation, industry, enterprize, bufiness. This business enchanted him. A female finger, in particular, charmed him by her melodious voice, and the graces that accompanied her: this girl of bufiness, after the performance, was introduced to him

by his new friends. He presented her with a handful of diamonds; for which she was so grateful, that she could not leave him all the rest of the day. He supped with her, and during the repast he forgot his sobriety; and after the repast he also forgot his vow of being ever insensible to beauty, and all the blandishments of coquetry. What an instance of human frailty!

The beautiful princess of Babylon, who had been fo long in purfuit of her wandering lover, happened to arrive at this very critical juncture, and found him and the opera girl fast asleep in each others arms. The princess, who felt all the emotions natural to her fituation, quitted Paris immediately without awakening him. Our hero, being informed of his misfortune, followed her; but some delays intervening, gave his French companions an opportunity to endeavour to mitigate his grief: the following closes the scene.

The report of this adventure drew together his festive companions, who all remonstrated to him, that he had much better flay with them; that nothing could equal the pleafant life they led in the center of arts and peaceable delicate voluptuousness; that many strangers, and even kings, had preferred fuch an agreeable enchanting repose, to their country and their thrones; moreover, his vehicle was broke, and that another was making for him according to the newest fashion; that the best taylor of the whole city had already cut out for him a dozen fuits in the last taste; that the most vivacious and most amiable ladies in the whole city, at whole houses dramatic performances were represented, had each appointed

a day

a day to give him a regale. The girl of basiness was in the mean while drinking her chocolate at her toilet, laughing, finging, and ogling the beautiful Amazan, who by this time perceived she had no more

fense than a goose.

As fincerity, cordiality, and frankness, as well as magnanimity and courage, constituted the character of this great prince, he related his travels and misfortunes to his friends. They knew that he was cousin-german to the princess; they were informed of the fatal kifs she had given the king of Egypt. Such little tricks, faid they, are forgiven between relations, otherwise one's whole life would pass in perpetual uneafiness. Nothing could shake his design of pursuing Formosanta; but his carriage was not ready, and he was compelled to remain three days among the Idlers, in feafting and pastimes: he, at length, took his leave of them, in embracing them, and making them accept of the diamonds of his country that were the best mounted, and recommending to them a constant pursuit of frivolity and pleafure, fince they were thereby more agreeable and happy. The Germans, faid he, are the grey-heads of Europe; the people of Albion are men formed; the inhabitants of Gaul are the children, and I love to play with children.

Some account of the Inhabitants of Lombardy, particularly the Milanese; from Barretti's Account of the Manners and Customs of Italy.

ROM the Genoese and Piedmontese territories we enter Lombardy, under which denomination a large tract of western Italy is comprehended, whose metropolis is Milan.

The inhabitants of Lombardy, and the Milanese especially, value themselves upon their being de bon cœur: a phrase which in the spelling appears to be French, though it be somewhat different in the meaning, as well as in the pronunciation, answering with much exactness, to the English adjective goodnatured. Nor do the Milanefe boaft unjustly of this good quality, which is so incontrovertibly granted to them by all other Italians, that they are perhaps the only nation in the world not hated by their neighbours. The Piedmontese, as I said, hate the Genoese: the Genoese detest the Piedmontese, and have no great kindness for the Tuscans: the Tuscans are not very fond of the Venetians or the Romans; the Romans are far from abounding in good-will to the Neapolitans; and fo round. This foolish world is so formed, that almost every nation is actuated by fome ridiculous antipathy towards another, generally without knowing why. But the Milanese are, much to their honour, an exception to the general rule, and enjoy the privilege of being loved by all their neighbours, or at least looked upon without any kind of aversion: and this noble privilege they certainly owe to their universal candour and cordiality.

They are commonly compared to the Germans for their plain honefty, and to the French for their fondness of pomp and elegance in equipages and houshold furniture: and I have a mind to add, that they resemble likewise the English in their love of good eating, as well as in their talking rather too long and too often about it; which has procured

them

them the sudicrous appellation of Lupi Lombardi, that is, Devourers

of meat.

Not only the generality of the Milanese nobles, but a great number of their gentry and merchants, keep open tables, at which plenty and facetiousness preside. Mr. Sharp has observed that the Neapolitans keep more coaches in proportion, than even the English and the French. The same remark he might have made with regard to the Milanese, had he known any thing of their town: and their great number of coaches is not merely the effect of their love of pomp and show, as Mr. Sharp observes, with his usual flyness, but the natural consequence of the riches of both countries, both

fertile to a proverb.

The Milanese are likewise remarkable amongst the Italians for their love of rural amusements. They generally pass the greatest part of the fummer and the whole autumn in the country; and they have good reasons for so doing, as that hilly province of their's called Monte di Brianza, where their country-houses chiefly lie, is in my opinion the most delightful in all Italy, for the variety of its landskapes, the gentleness of its rivers, and the multitude of its lakes *. There they retire as foon as the feafon begins to grow hot, and pass the time in a perpetual round of merriment, eating, drinking, dancing, and vifiting; and contributing small sums towards giving portions to the pretty wenches in their neighbourhood, in order to marry them instantly to their sweethearts. There the richest people have their cappuccina's;

that is, a part of their country-houses built after the manner of a capuchin-convent, distributed into many small bed-rooms, like cells, for the reception of their visitors who are always welcome, provided they come fully resolved to eat plentifully, to talk loud, and to be very merry.

Of the Mantuans, whose country forms another part of Austrian Lombardy, I have little to say, but that they resemble the Milanese as little things resemble great things. The same may be said with regard to the inhabitants of the small states of Parma and Modena. Little nations have no very remarkable character of their own, but borrow it from their more considerable neighbours.

Some account of the manners and customs of the inhabitants of the Marian, or Ladrone islands. Translated from the French.

E here present the reader with a very curious extract from Father Gobien's History of the Ladrone or Marian Islands. His work was printed at Paris, 1700, in 12mo; and contains, for the most part, uninteresting accounts of the endeavours of the missionaries to plant the Catholic faith in these islands, some details relating to the Spaniards refiding there, besides many relations of miracles faid to be performed by the priests among these Indians, which, being now treated in Europe with the contempt those pious frauds merit, are quite unnecessary in a work destined only to convey useful instructions, and not to perpetuate

^{*} From a finall town called Galbiate in this province, seven of those lakes

fabulous legends. As Gobien's work is very little known, and rare to be met with, it has escaped all our other collectors of voyages to this part of the globe; and this account from an eye-witness, of what he relates, appears in English for the first time.

"The Marian or Ladrone Islands have Japan to the north, and New Guinea to the fouth. They are fituated at the extremity of the Pacific Ocean, betwixt the line and the tropic of Cancer, near four hundred leagues from the Phillipines. distance from Guam, or Guaham, the most foutherly of these isles, to Vrack, the most northerly, is about one hundred and fifty leagues. Though fi-tuated within the Torrid Zone, yet the sky here is always serene, the air pure and healthy, and the heat is never excessive. The trees covering the mountains are always green, and the vallies every where interfected by crystal streams, render those islands a perfect paradife.

Before the Spaniards discovered these islands, the natives lived in the most perfect freedom and independence, subjected to no laws, but every man lived as it best pleased himfelf. Separated from every other nation by immense tracts of ocean, and confined to their own limits, they concluded that no other lands existed, and looked upon themselves as the only inhabitants on this globe. As they retained no traditionary accounts of their own origin, they followed the method of several ancient nations, and afferted that the author of their race was formed of a piece of the rock of Funa, a small island, lying west of Guam, and therefore looked upon this rock with a facred dread, as the birth-place of the human race.

Many things looked upon by us

as absolutely necessary to our existence, were utterly unknown to thefe Indians. They had no animals of any fort, and would not have had even the least idea of them, had it not been for the birds, of which they had but one specie, somewhat like the turtle-dove, which they never killed for eating, but only tamed them, and taught them to speak. They were very much aftonished on feeing a horfe, which a Spanish captain left among them, in the year They were never tired of viewing and admiring him; and the force, beauty, and spirit of this extraordinary animal, brought them from all the different islands to fee him. They could not understand how he could eat and digest iron, for they thought that the metal of the bit was his food. His long tail was the subject of universal admiration, and, in order to obtain fome hairs from it, which they highly valued, they careffed him; made him presents of cocoa-nuts, to gain his friendship, and prevail on him to fuffer them to pull out fome hairs, without kicking them, which fometimes happened. The Uritaos (fo are their young men called, who keep mistresses, without engaging in the marriage-tie) made use of those hairs to adorn the hollow flicks they carry, instead of the pieces of bark they commonly wove round them, and accounted these their greatest ornament.

What is most surprising in their history, and must appear quite incredible, is, that fire, an element of such universal use, was utterly unknown to them, till Magellan, provoked by their repeated thests, burned one of their villages. When they saw their wooden houses blazing, they first thought the sire a

beaft which fed upon the wood; and fome of them, who came too near, being burnt, the rest stood as off, lest they should be devoured, or poisoned, by the violent breathings of this terrible animal.

We neither know when, or from whence these islands were first peopled. Japan lying within fix or feven days fail, has induced some to believe that the Marian Islands were thence peopled. To support this opinion, they observe that the nobles here are haughty and proud, like the Japanese. But this conjecture has but little in it, and it would feem much more probable, that they came from the Phillipine Islands, as their colour, language, and manners, much refemble those of the Tagales, who inhabited the Philippines at the arrival of the Spaniards; and they are certainly the furest evidences of the original of nations. It is therefore probable that these people are the descendents of some Tagales, who, at some uncertain period, were driven on these isles.

Be this as it may, the Ladrones are very populous. Guam, though only forty leagues in circuit, contains thirty thousand inhabitants, Saypan nearly as many, and the others in proportion to their fize. They are all full of villages, both on the mountains and the plains, and some of these are composed of one hundred, and one hundred and fifty houses.

The natives are olive-coloured, but not of so deep a dye as those of the Phillippines. Their stature is advantageous, and their limbs well-proportioned. Though their food consists entirely of fish, fruits, and roots, yet they are so fat that, to strangers, they appear swelled, but this does not render them less nim-

ble and active. They often live to an hundred years or more, yet retain the health and vigour of men of fifty. Many are the concurrent causes of this longevity. Habituated from their early infancy to the changes of the atmosphere, their nourishment is quite simple and uniform, nor do they know any of those despicable arts used by us to quicken a depraved appetite, and incite them to overload their stomachs. Their exercifes, though regular, are always moderate, in fifting, cultivating the ground, and caring for their cocoa-trees. Above all, their easy and careless manner of life, exempt from cares and folicitude for the future, leaves their minds and bodies in full vigour, even to the extreme of old age. Diseases are rarely known among them; but if they are attacked by fickness, they generally deliver themselves from it, by the use of a few simples.

The men go stark-naked, but the women are covered. They are not ill-looked, and take great care of their beauty, though their ideas on this subject are very different from They love black teeth, and white hair. Hence one of their principal occupations is to keep their teeth black, by the help of certain herbs, and to whiten their hair, fprinkling on it a water prepared for this purpose. The women have their hair very long, but the men generally shave it close, except a fingle lock on the crown of the head, after the manner of the Japanese.

Their language refembles much that of the Tagales in the Phillippine Islands. It is agreeable to the ear, with a foft and easy pronunciation. One of its chief graces confists in the facility of transposing words, and even all the syllables of one word,

and

and thus furnishing a variety of double-meanings, which these people

are greatly pleased with.

Though plunged in the deepest ignorance, and destitute of every thing valued by the rest of mankind, no nation ever showed more prefumption, or a more overweening conceit of themselves, looking on their own nation as the only fenfible. polished, and wife in the world, and beholding every other people with the greatest contempt. Though they are ignorant of the arts and sciences. yet, like every other nation, they have their fables, which ferve them for history, and some poems which they greatly admire. A poet is, with them, a character of the first eminence, and greatly respected *. We have a specimen of their manner of speaking and reasoning in the following harangue, which our historian puts into the mouth of one of their chiefs who attempted to perfuade his countrymen to shake off the Spanish yoke, in the year 1670.

"These Europeans (says this Indian) would have done better had they continued quiet at home. We had no need of their assistance to live happily. Content with what our islands afford, we wanted nor wished for any thing more; and the knowledge they have brought us, serves only to instame our appetites, and increase the number of our wants. They find fault with us for going naked. Had a contrary fashion been necessary nature would not have omitted it. Why load ourselves with cloaths,

things in themselves quite superfluous, and impede the free action of our limbs, under the pretext of modest covering? They call us unlettered and barbarous. But are we to take this on their affertion? Do not we daily fee, that, under the specious pretence of instruction, they corrupt our manners, abolish our ancient fimplicity, and deprive us of liberty, the first bleffing of this world! They try to persuade us, that they come to make us happy: and, alas! there are among us many foolish enough to believe them. But how can we fall into this error. when we reflect, that it is only fince the arrival of these strangers, that we are afflicted with a variety of difeases, formerly unknown, and that our quiet and repose are gone! In fhort, they feem to have arrived here, only to afflict and torment us. Their priests murder our children with their poisoned water, and our fick with their oils, while their attendants massacre our people with impunity, by the superiority of their destructive weapons. Before their coming we knew nothing of these infect tribes that now cruelly disturb us. We had neither rats, flies, mice, or musquitos, which seem sent into the world to be the scourge of mankind. Such are the goodly prefents they brought us in their large Till now, when did we canoes. hear of rheums, fluxes, and fevers? Some flight ailments we had, but they were eafily removed; while they have brought numberless ma-

^{*} We need scarce observe to the learned reader, that in this they resemble the ancient Jews, Greeks, and Arabs, among whom a poet was greatly revered, his name honoured, and his works transmitted with the utmost regard to his posterity. The cause of this was the same in these different nations, poets being generally their oracles in theology, history, physic, and legislation; and this, added to the charms of song, procured them high honours among their countrymen.

ladies to infect our people, which all their boafted science is utterly unable to cure. And is this the price at which we purchase iron and a thousand other trifles, the value of which is only imaginary? These Christians upbraid us with our poverty. What then do they feek among us, and what can incite them to make fuch long and hazardous voyages to get at our iffands? Believe me, they would not come fo far, if they had not need of us? To what purpose serve the doctrines they profess to teach us? To bring us under subjection to their laws, to oblige us to adopt their customs, and thus to deprive us of that liberty our ancestors transmitted to their descendants: In one word, to make us unhappy during our whole lives, in expectation of a chimerical felicity, which is to take place when we no longer exist. They call our history a heap of fa-But have we not the fame right to call theirs a collection of abfurdities? Their whole art lies in taking advantage of our candour and fimplicity; and thus they abuse our good-nature, and render us miferable. We are blind and ignorant, fay they; and true it is, we have been blind in not fooner discovering their pernicious designs, and hindering their establishment amongst But let us yet apply the remedy before it be too late. They are but a handful of men, whom we can cafily mafter. Though we have none of their destructive weapons, yet we can overpower them by numbers, and, by one blow, regain our liberty, and deliver ourselves from the infults of those intruders."

An authentic account of the late Archabishop of Canterbury.

R. Secker, late Archbishop of Canterbury, was born at a fmall village called Sibthorpe, near Newark, Nottinghamshire, in the year 1693. His father was a protestant dissenter, and having a small patrimony of his own, followed no profession. He was sent to school first at Chesterfield in Derbyshire. under the care of Mr. Brown, whom he left about the year 1708, and went to a diffenting academy at Attercliffe, near Sheffield in Yorkshire. Here he studied about a year, and went from thence to London. and after a short stay there, to an academy at Gloucester, kept by one Mr. Jones. In this place he continued about three years, and contracted an acquaintance with Mr. Butler, afterwards bishop of Durham. From Gloucester Mr. Jones removed to Tewksbury, where Mr. Secker accompanied him, and lent him money to pay the expences of removing. When he had acquired under Mr. Jones what learning he thought fufficient, in the year 1714, he went into Nottinghamshire, and lived partly with his half-brother at Chesterfield, partly with his fister at Nottingham, and fometimes in London, where he attended Mr. Eames's lectures in mathematics and natural philosophy. Besides making a confiderable progress in these and other branches of useful knowledge, he applied himfelf very early to critical and theological studies, especially to the controverfy betwixt the church of England and the differers. About the year 1716, he turned his thoughts to the study of physic. This he pursued in London till 1719; when he went to Paris, and there attended

tended lectures on all the various branches of the medical art, vet never wholly discontinued his application to divinity. Here he first became acquainted with Mr. Martin Benson, afterwards bishop of Gloucester. Foreseeing at this time many obstacles in his way to the practice of physic, and having an unexpected offer made to him by Mr. Edward Talbot (through Mr. Butler) of being provided for by his father, the bishop of Durham, if he chose to take orders in the church of England; he took fome months to confider of it. After mature deliberation, he resolved to embrace the proposal; and came over to England in the year 1720, when he was introduced by Mr. Butler to Mr. Edward Talbot, to whom he was before unknown. To facilitate his obtaining a degree at Oxford, he went in January 1721 to Leyden, where he took the degree of doctor of physic, and published his exercise, a Dissertation de Medicina Statica. He left Leyden after about three months residence, and entered himself a gentleman commoner in Exeter College, Oxford, and was foon after admitted to the degree of batchelor of arts. He was ordained deacon in St. James's church, Westminster, by bishop Talbot, Dec. 23, 1721, and priest in the same church by the same bishop, March 10, 1722, and immediately became his lordship's domestic chaplain. On Feb. 12, 1723-4, he was instituted to the rectory of Houghton-le-Spring in the county of Durham, and in the fame year, was admitted to the degree of master of arts. In October 1725, he married the fifter of his friend Dr. Martin Benson; and on account of her health principally, he exchanged Houghton for the third

prebend in the church of Durham. and the living of Ryton near Newcastle, to both which he was instituted June 3, 1727. His degrees of batchelor and doctor of the civil law he took at the regular times. In July 1732, he was made chaplain to the king; in May 1733 he resigned the living of Ryton for that of St. James's Westminster, and on the fifth of July in the same year, he preached his celebrated fermon before the university of Oxford at the public act. His eminent abilities as a preacher and a divine, and his exemplary discharge of all his parochial duties, quickly recommended him to a more elevated station. He was confecrated bishop of Bristol, Jan. 19, 1734-5, and translated to Oxford May 14, 1737. His inceffant labours in the care of his parish growing rather too great for his health and strength, he accepted, in Dec. 1750, the deanery of St. Paul's, for which he refigned his prebend of Durham, and the rectory of St. James's. On the death of Abp. Hutton in 1758, the great talents he had displayed, and the high reputation for piety and beneficence, which he had acquired in the feveral stations thro' which he had passed, plainly pointed him out as a person every way worthy to be raifed to the fupreme dignity of the church. He was accordingly without his knowledge recommended to the king by the duke of Newcastle for the see of Canterbury, and was confirmed archbishop at Bow-church in April 1758.

His Grace was for many years much afflicted with the gout; but it encreased greatly upon him towards the latter part of his life. The last winter he felt very troublesome, and sometimes violent pains in his shoul-

der.

der, which were thought to be rheumatic. About the beginning of the present year, they moved from his shoulder to his thigh, and there continued with extreme and almost unremitting severity to his last illness. On Saturday the 30th of July, he was feized with a fickness at his ftomach as he fat at dinner. In the evening of the next day, as he was turning himself on the couch, he broke his thigh bone. It was immediately fet, but it foon appeared that there were no hopes of his recovery; he fell into a flight kind of delirium, in which he lay without any pain till about five o'clock on Wednesday afternoon, August the 3d, when he expired with great tranquility, in the 75th year of his age. After his death it was found that the thigh bone was quite carious, and that the excruciating pains he fo long felt, and which he bore with wonderful nationce and forti-

tude, were owing to the gradual corrofion of this bone by fome acrimonious humour.

He was buried, pursuant to his own directions, in the passage from the garden door of his palace to the north door of the parish church at Lambeth, and has forbidden any monument or epitaph to be placed for

him any where.

By his will, he has appointed Dr. Daniel Burton, and Mrs. Catharine Talbot, (daughter of the Rev. Mr. Edw. Talbot) his executors; and has left thirteen thousand pounds in the three per cent annuities to Dr. Porteus and Dr. Stinton his chaplains, in trust, to pay the interest thereof to Mrs. Talbot and her daughter during their joint lives, or the life of the survivor, and after the decease of both those ladies, then eleven thousand of the said thirteen thousand are to be transferred to the following charitable purposes, viz.

with wonderful patience and forti- lowing charitable purposes, viz.

Besides these donations, he lest toool. to be distributed amongs his servants; 2001. to such poor persons as he had assisted in his life time; 50001. to the two daughters of his nephew Mr. Frost; 5001. to Mrs. Secker, and 2001. to Dr. Daniel Burton. After the payment of those, and some other smaller legacies, he has lest his real, and the residue of his personal estate to Mr. Thomas Frost of Nottingham.

The greatest part of his very noble collection of books he has bequeathed to the Archiepiscopal library at Lambeth, the rest betwixt his two chaplains and two other

friends.

To the manuscript library in the fame palace, he has left a large number of very learned and valuable MSS, written by himself on a great variety of subjects, critical and theological.

His well known catechetical lectures, and his manuscript sermons he has left to be revised and published by his two chaplains, Dr.

Stinton and Dr. Porteus.

His options he has given to the archbishop of Canterbury, the bishop of London, and the bishop of Winchester for the time being, in trust, to be disposed of by them, (as they become vacant) to such persons, as they shall in their consciences think it would have been most reasonable for him to have given them had he been living.

His grace's person was tall and majestick; his countenance open and benevolent; his conversation, chearful, entertaining, and instructive; his temper even and humane. He was kind and steady to his friends, liberal to his dependants, a generous protector of virtue and learning, and unboundedly chari-

table to the poor, many of whom he not only relieved by occasional donations, but, in a great meafure, supported by yearly pensions. He performed all the sacred functions of his calling with a dignity and devotion that affected all who heard him. He was a most laborious and useful parish priest, a vigilant and active bishop, and presided over the church in a manner that did equal honour to his abilities and his heart. He was particularly eminent as a plain, pathetic, practical preacher, and well knowing the great utility of fo excellent a talent, he was not sparing in the exercife of it, but continued preaching and catechifing, whenever his health would permit him, to the latest period of his life.

One of the last fermons he preach ed, was at Stockwell chapel in the parish of Lambeth, to which he had been a very great benefactor, having begun a subscription towards building it with the sum of 500 l. besides a present of the communion plate, and furniture for the pulpit, reading desk, and communion ta-

pre.

Some extracts, taken from the history of the great Prince of Conde, wrote by Mr. Deformaux, and lately published at Paris; in which are contained some well drawn characters, particularly those of Anno of Austria, and the samous Cardinal Mazarin.

EWIS de Bourbon, the fecond of that name, was born at Paris, Sept. 7, 1621. He was flyled duke d'Enguien, till he fucceeded to the title of Prince of Condé, by his father's death, in

1646. As he was of a tender and delicate conflitution, the prince sent him to the castle of Montrond in Berry, that he might breathe a more pure and falutary air. Instead of intrusting his first education to women of quality, he chose some citizens wives, experienced, prudent, and attentive: The success was anfwerable to his hopes, and the young duke by degrees gained ftrength. When he was of a proper age, the prince referved to himfelf the arduous task of governor: He only appointed for his affiftant, not a man of quality, but M. de la Bouffieres, a private gentleman, a man of honour, fidelity, and great good nature, and who made it a rule to observe inviolably the orders that were given him. He also gave him for preceptors two jesuits who were distinguished by their genius and their knowledge. He formed him a houshold of 15 or 20 officers or domesticks, all men of the greatest virtue and discretion, because he would have every thing that approached the duke, instead of flattering and corrupting him, inspire him with the love of virtue and of glory. And in order to excite his fon's emulation, fome young gentlemen were educated with him, on whom the fame attention was beflowed, and who were to yield to him in nothing. With these attendants, the duke d'Enguien went to fettle at Bourges, where he frequented the college of jesuits. But his studies were not confined to the course that is usually pursued there, He was taught ancient and modern history, the mathematics, geography, declamations: He was inured to bodily exercises, to riding and dancing, in which he excelled. He made fuch a furprizing progress, that, before the age of 13, he defended in public some questions in philosophy with an incredible applause. At his return from Montrond, the young duke had for his tutor M. de Merille, a man deeply versed in the knowledge of the common law, of ancient and modern laws, of the holy feriptures, and of the mathematics. Under his direction, the duke went through that new course with prodigious success. He acquired a critical taste in the arts and sciences, which he retained all his life; he never fuffered a day to pass without dedicating two or three hours at least to reading; his thirst for knowledge was universal, and he endeavoured to fearch every thing to the bottom.

As foon as the Prince, his father, thought proper to bring him to court, he was immediately the object of general attention. He diffinguished himself at the hotel de Rambouillet, which was then the school of the French nobility, and his reputation was so increased in that literary democracy, that he was esteemed the arbiter of taste.

But whatever pleafure he tasted in his connection with the muses, his courage called him away; he devoured fuch books as treated on the art military, and he incessantly interrogated officers in order to avail himself of their knowledge. He earnestly solicited, and obtained at the age of 18, permission to make his first campaign as a volunteer in the army commanded by Marshal de la Meilleraye. This campaign was unfortunate, and the duke d'Enguien was only a witness of the marshal's imprudence and difgrace. Nevertheless, in this campaign he laid the foundation of that renown, which made him afterwards confidered as the greatest general of his age.

The duke at his return to Paris. went to vifit Cardinal Richlieu, at Ruel. That minister, who was curious to know from his own mouth, whether fame had not exaggerated in her account of this young prince, converfed with him for two hours on the most abstruse and difficult subjects, and could not forbear faying to M. de Chavigni, as foon as the duke was gone, "I have just had a two hours conversation with the duke on religion, war, politics, the interest of princes, the government of a state; he will certainly be the greatest general in Europe, and the first man of his age, and perhaps of future ages, in all things."

Richlieu, full of ambition, made overtures to unite his blood with that of this prince, whom he ad-The duke acquiefced in this project, out of obedience to the prince his father; and he espoused in 1641, though with reluctance, Claire Clemence de Maillé Brezé. the Cardinal's Niece. The force that he put upon himself in order to confent to this marriage, threw him into a fevere fit of illness; it was long before he was out of danger, but at length he recovered, and his constitution grew so strong, as afterwards to support with ease the

He made two more campaigns as a volunteer, the one under Marsh. de la Meilleraye, the other in the army of Lewis XIII, which conquered Roussillon. But in 1643, at the age of 22, he obtained from the king, at the perfuasion of Cardinal Mazarin, the command of the army destined to cover Champaigne and Picardy; a command that was confirmed to him after the king's death by the queen regent, Anne of Austria, to whose interest he was strongly devoted.

greatest fatigues.

revenged

Without following this hero in all his campaigns, and describing all his exploits, his fieges, and his battles, it may be fufficient to fay, that the duke d'Enguien, who had never yet been present at any battle. gave a specimen of his abilities, by an attempt that crowned him with glory. The Spaniards who threatened France with an invasion, were defeated by him at Rocroi, and this fignal victory made him from that time confidered as the guardian genius of his country. This defeat of the Spaniards had exhausted all their strength, and enabled the duke to undertake whatever he pleafed. He formed the project, bold as it was, of befieging Theonville, and proposed it to the council of regency, who were amazed at it, as they faw it attended with too many obstacles, and they consented to it not without fear and distrust; but he carried it into execution with fuch skill, activity, and courage, that he was justly the subject of general admiration. After two months fiege, Theonville capitulated and furrendered. At length, after having covered Alface and Lorrain from the enterprises of the Imperialists, he came to Paris to receive the rewards of his triumphs, and obtained the government of Champaigne, and of the city of Stenai.

The three following years, were little more than a feries of military. operations. The three battles of Fribourg, in which the duke d'Enguien triumphed over Velt Marshal count de Mercy, the greatest general in all Germany, the taking of Philipsbourg, and a great number of other places, which rendered him master of the palatinate, and of the whole course of the Rhine; the victory of Nortlingue, by which he

revenged the viscount du Turenne's descat at Mariendal; the siege and conquest of Dunkirk; the good and bad success of his arms in Catalonia, where, though he was forced to raise the siege of Lerida, he kept the Spaniards in awe, and cut to pieces their rear guard: these are the principal events which distinguish the campaigns of 1644, 1645, and 1646.

The victories of the duke d'Enguien, his great reputation, and his esteem with the people, began to give umbrage to Mazarin. Hitherto, full of respect for the princes of the blood, and of regard for the nobility, indefatigable in business, attentive only to the glory and the happiness of the state; condemning, by his moderation, the pride, arrogance, and cruelty of his predeceffor, whose memory the parlia-ment were desirous to brand, this minister had shewn himself worthy of the high station that he filled. He displayed only his virtues, his talents, and his accomplishments; unknown were his infatiable avarice; and his contempt for probity and virtue; unknown were his habitual ingratitude, his weakness, his constant propensity to deceive, and his profound ignorance of legislation, and of the constitution of the state. In proportion as his authority was established, his faults were feen. The death of the duke de Brezé, admiral of France, made him discover his ingratitude to the prince of Condé, and the duke d'Enguien. The prince earnestly demanded for his fon the duke de Breze's places. But Mazarin, afraid of increasing the wealth and power of a prince, whom his victories, and the love and confidence of the people and the army, had already rendered too formidable to him, had the address to elude a compliance with his request, by perfuading the queen to take the admiralty herself. The prince was the more incensed at the cardinal, as by this device he appropriated to himself the duties and revenues of that important office. Mazarin only gave him promises, which he soon saw were frivolous and deceitful.

This minister's dislike to the duke d'Enguien, now, by his father's death, become prince of Condé, was still much more apparent, when, by Mazarin's perfuafion, he had accepted the command of the army in Catalonia. On his arrival at Barcelona, the prince found there neither troops, nor money, nor artillery, nor ammunition, nor provisions. Grieving to fee himself so grossly deceived by the minister, who had promised him mountains and wonders, he vented his refentment in bitter complaints, and fevere threats; but he was by no means wanting to himself, and by the refources that he found, he added a new lustre to his glory.

When the prince made his public entry into Barcelona, the negligence of his dress formed a striking contrast to the splendor that was displayed by the principal officers of his army, who accompanied him, and who were all magnificently dressed and mounted. He was still in deep mourning for his father. A fuit of black, his long lank hair, and his extreme youth, amazed fome of the citizens, who faid aloud, that a student was fent them for their viceroy. These words did not escape the prince; convinced that the eyes of the multitude must fometimes be dazzled by an outward pomp, he ordered a superb ca-

roulal

roufal, where he appeared in a habit covered with pearls, and mounted on a horse most sumptuously accoutered. The Catalonians immediately owned, that "if Conde had the soul and the genius, no one also had more the air and the countenance of a hero."

The love of glory was not the only passion of which this hero was fusceptible. He was scarce married, when he was ftruck with the charms of Mademoifelle du Vigean, who with great beauty, had the most alluring accomplishments, and an improved and polished mind. passion carried him to such lengths, that he formed a scheme, of having his marriage with Mademoifelle de Brezé dissolved, under a pretence that it was contracted by compulfion. The princess, his mother, readily came into this project, either from her hatred to the memory of Richlieu, or in order to preserve her credit with her fon. But the prince, to whom this fecret was difcovered by the duchess de Longueville; baffled their scheme. Nevertheless, the Duke d'Enguien retained his passion for his mistress, till the diforder under which he languished after the battle of Nortlingue. Then his love immediately vanished, with the prodigious quantity of blood that was taken from him: this revolution was fo complete, that, after his recovery, he scarce retained a flight remembrance of the object that he had loved to excess. Mademoiselle du Vigean was fo fensible of this alteration in the prince, that it was thought she would have died of grief, and she went and thut herfelf up among the Carmelites. This hero fuffered himself again to be enfnared by the charms of Mademoiselle de Toucy; but

this was no more than a transient amour, and foon passed over.

France had never attained fuch a height of glory, power, and grandeur, fince the time of Charlemagne. A long feries of triumphs had made her respected by her allies, and formidable to the emperor Ferdinand III. who begged a peace, and enabled her to give law to conquered Spain. But amidst this torrent of prosperity, the kingdom was threatened with the most dangerous revolutions; its mifery was equal to its glory. Henry IV. a model for kings, was wholly engrossed by the public felicity; the wife administration which he had introduced, had delivered the state from an abyss of misfortunes, and promifed her the happiest days; but these hopes foon vanished under a weak regency, which gave an inlet to boldness, factions, civil wars, which it knew not how to suppress; and the diftresses of the kingdom were carried to the utmost height by the ill use which Richlieu made of his power. This proud and cruel minister subverted all the forms of justice, and of the finances; he increased prodigiously the revenues of the crown, by loading the subjects with taxes; he did every thing for the king, and nothing for the nation, which grean ed in servitude and misery. His despotic administration was so odious, that at his death there was a great party at court for condemning his memory as that of a publick The queen regent, Anne enemy. of Austria, prevented this. From that princess, then adored, the nation expected relief, and a reformation of abuses.

She had really all the good qualities necessary to render a people happy. To the charms of person,

fhe added a noble, generous, elevated, magnanimous and fenfible mind; her constancy was equal to her firmness; invariable in her private conduct; unmoved both in prosperity and adverfity; faithful to her promifes; flow to believe evil, ready to pardon it; full of equity and humanity, no one had more dignity of manners, more candour and frankness of character; she would have rendered the throne adorable, if the had had refolution enough to have governed herfelf. But indolence, which then feemed natural to every branch of Spanish Austria, a diffidence of her own strength, and an extravagant modesty, prevented her from incumbering herself with a burden, which her virtues, and the love of the people, would have rendered lighter to her. In consequence of this, she gave herself up without referve, to those who had gained her efteem and confidence. adopted their passions, their prejudices, their interests, so as scarce to make any use of her power, but in their favour. . . . She fubmitted to be fo dependant on Mazarin, that the deprived herfelf of the only advantage which a great mind knows on a throne, that of making others happy. She provoked the hatred and contempt of the public, affronts and civil wars, to support the choice she had made of that minister, disclaimed and reproached as he was by the nation. This extreme warmth was a long time prejudicial to her reputation; fome pretended to entertain fuspicions of her virtue..... But she had the happiness before she died to unite To this all voices in her favour. queen the nation owes the glory of being thought the most polite, and the most sociable in the world. She

introduced at court, where she acted with as much majesty as grace, that noble, true, easy, delicate, gallant ton, which constitutes the soul and delight of society; and which being communicated to the capital, and to the great cities in the provinces, makes France the most agreeable residence in the universe.

To this portrait of Anne of Austria, so true and so well drawn, we cannot help adding that of cardinal Mazarin, as a clue to all the events is found, by knowing the characters of the principal persons that appear on the stage. " Julius Mazarini had a noble and majestic figure, an open and infinuating manner, a gracefulness and sweetness in his temper, supple, sly, cunning, full of gayety and intrigue, with a quick fenfibility of pleafure; no one possessed more than he the happy art of pleasing, but he only employed it to deceive. The most oblique and indirect methods were those that he preferred for the accomplishment of his defigns, and were most fuitable to his faithless and hypocritical character. Alike insensible of injuries and of favours, he knew not how to punish or to reward, or to encourage genius and talents; favours the best deserved, were only forced from him by threats, or by working on his fears. The characteriffics of his administration were cunning, distrust, patience, timidity, and forecast; however, this same man, who feemed almost always to wait for a happy turn of affairs, from time and circumstances, sometimes displayed resolution, intrepidity, and a contempt of death. If the qualities of his heart had been answerable to those of his mind; if he had more studied the genius, the manners, and the laws of the nation

nation he was to govern; if he had had more respect for religion, virtue, talents, good faith; if he had not endeavoured to corrupt the great by the allurements of pleasure; to soften, subdue, and ruin them by luxury; if at length, after innumerable troubles and dangers, arrived at the utmost height of power and grandeur, he had thought that he had other duties to discharge, besides those of accumulating treasures upon treasures, he would now have been deemed as great as he was fortunate."

Mazarin, who had not the least knowledge of interior administration, gave himself intirely to Particelli d'Hemeri, an Italian, like himself, and the most corrupt man in Europe. He made him fuperintendant of the finances; and this wretch, who, it is faid, had in his youth been condemned to be hanged at Lyons, answered the designs of the minister, with as much address as wickedness. He not only gratified his own debaucheries, and his luxury, which he carried to the most enormous excess; he not only fatisfied the infatiable avarice of Mazarin, but farther, the revenues of the state, which amounted, at the death of Richlieu, to about eighty millions, d'Hemeri raised to a hundred and forty-three. Add to this the confiderable loans for which the king paid exorbitant interest, the rigorous exactions that reduced a multitude of citizens to the utmost misery; the cruelty, in short, of the super-intendant, who neither paid the expences of the king's houshold, nor the rents of the town house, nor the penfions, nor the troops; and it is no wonder that bitter complaints against the minister, and the odious instrument of his wickedness, were fent to

court from all parts. The public indignation was chiefly inflamed by the reports that were spread, that Mazarin had refused to make peace with the Spaniards, who offered to cede to France all her conquests; thefe reports were well founded, and nothing, more was wanting to plunge in despair, all those who no longer faw an end of their miffortunes. The nobles, the parliament of Paris, the clergy themselves, the capital, and the provinces, exclaimed all at once. Mazarin, fure of the duke of Orleans, and the prince of Condé, despised these murmurs, confidering them as impotent; but scarce had the parliament pronounced the two celebrated arrets of union with all the parliaments, and the other fupreme tribunals of the kingdom, than the fortitude of Mazarin forfook him. He applauded the parliament, and above all, he facrificed his hateful favourite, the fuper-intendant, who was stripped of his employments, banished and confined tó his estate.

So much weakness excited contempt and fuspicion. The parliament engaged to reform all abuses, and took the power into their own hands. The queen and the minifter opposed such extravagant pretenfions; a general confusion enfued. The prince, in concert with the duke of Orleans, did all that could be expected from his zeal to ftop the evil at its fource; but mens minds were too much exasperated to concur in pacific measures. However, the campaign drew nigh; we must therefore leave these affairs in a certain criss.

The campaign of 1648 was as glorious to Condé, as those which preceded it. To disconcert at once

the projects of the archduke Leopold, he refolved to attack him even in the heart of the low countries; and notwithfanding the confiderable difficulties which he had to furmount, or to avoid, in order to arrive at Ypres, and to invest it in spite of the archduke, who was at hand to relieve it, he besieged that important place, and took it in sight of all the enemy's forces.

Notwithstanding this success, Condé saw himself at the point of experiencing the greatest reverse of fortune. His army was a prey to fcarcity, to contagious distempers, to nakedness, and to desertion. For eight months it received no supplies from the minister, but half a muster. But the prince himself supplied every thing; he lavished his money, and he borrowed more, to preserve his troops. When it was represented to him that he was in danger of ruining himself by such an enormous expence, he replied, that " fince he every day ventured " his life for the fervice of his " country, he could very well fa-" crifice his fortune to it; let but " the government exist, added he, " and I shall want nothing."

The French army having been reinforced by 4000 of the troops of Weimar, Condé attacked the Spaniards advantageously encamped near Lens, and gained a complete victory over them, which difabled them from attempting any thing more, and even from supporting themselves.

Afterwards, he befieged Furnes, the garrison of which, 500 men, surrendered themselves prisoners of war. But the prince was wounded there in the trenches, by a musket shot above the right hip, and the contusion that he received was so great, that it was necessary to have recourse to considerable incisions.

The court, animated by the victory of Lens, thought, that it was now time to execute its vengeance against the factions; and accordingly imprisoned Brouffel and Blancmenil, two of the principal leaders of the country party. It was miftaken: this vigorous proceeding, on the contrary, occasioned a general revolt. All Paris, 200,000 men, took arms, barricaded the streets, invested the Palais-Royal, and demanded the prisoners; it was necessary to release them; but from that time, the regal authority was annihilated; the queen was exposed to a thousand insults, and Mazarin dared no longer to venture out of the Palais-Royal, fearing to meet with the fame fate as his countryman the marshal d'Ancre. In this embarrassinent the queen recalled the prince of Condé, as the only one from whom the could hope for fome support. He went to Ruel, whither the regent had retired with the young king and Mazarin. Anne of Austria proposed to him the reducing Paris by force of arms; but he calmed the resentment of that princess, and instead of being accessary to her vengeance, he directed all his views to pacify the kingdom, and he brought about an accommodation between the parties, who defired it with equal ardor. But new incidents foon rekindled the combustion. The treachery of Mazarin, and the artifices of the leaders of the country party, occasioned new cabals, and fresh troubles. Condé, hitherto impartial, and undetermined as to what party he should take, listened by turns to the proposals of the court and of the country; but at length, prevailed on by his favourite, the duke of Chatillon, by the tears of the queen,

by the humiliation of the cardinal, and above all, enraged at the arrogance of the malecontents, who every day formed new pretentions, he took part openly with the court, though he thought it ungrateful, and protected the minister, though

he esteemed him not. The royal family, the duke of Orleans, Condé and Mazarin, left Paris privately, in the night between the 5th and 6th of January 1649, and went to St. Germains. The parliament fent deputies to learn from the queen herself, the reasons of her departure, and to beg her to name the citizens whom the fuspected, that they might be tried: Mazarin had the imprudence to difinifs them without an answer. Nothing more was wanting to exafperate men's minds, and to hurry them to the last extremities. took arms to defend themselves against the enterprizes of the court, who had determined to block up, and to starve the capital, in order to suppress the party of the malecontents. With 7 or 8000 men, the broken relicks of the last campaign, the prince of Condé formed the project of reducing above 500,000 intrenched behind walls. He had neither money nor magazines; he faw himself in the depth of a most severe winter; he had doubtless the utmost reason to believe that he should miscarry; nevertheless he triumphed over Paris, and this great success compleated his glory. It did him fo much the more honour, as during the fiege, he constantly defeated the troops of the malecontents; he prevailed on the army that marched to their assistance, under the command of Turenne, to abandon that general; he stopped the progress of the duke

of Longueville, who had caufed an infurrection in Normandy; and got the flart of the Spaniards, who were advancing to give him battle.

Condi de Retz, coadjutor of Paris, and afterwards cardinal, was the foul of the revolters, and directed all its motions. As he acted a principal part, our author has taken care to draw his character. This extraordinary man had taken Cataline for his model, and was equally daring, intriguing, fruitful in expedients, and in resources, intrepid, capable of the greatest actions, of an exalted genius, but governed by ambition. He distinguished his hatred to Mazarin, by arming the malecontents: and he himself raised, at his own expence, a regiment, which he called the regiment of Corinth: as foon as ever this corps took the field, during the blockade of Paris, it was defeated and dispersed. This check was called the first to the Corinthians.

The peace was figned at St. Germains; neither of the parties carried it's point. The queen, who was defirous to crush the country party, had not the pleasure of being revenged on it; and that party, which took arms only to destroy Mazzarin, could not accomplish his exclusion from the ministry. Scarce any one but Condé acquired glory and power in this war.

While the queen, guided by her refentment, went to Compiegne, and Mazarin dared not appear again at Paris, the prince of Condé repaired to that capital, and traversed all the streets in his coach alone. All persons of any consequence paid him their compliments, and the parliament sent him a solemit deputation to thank him for the

peace,

peace, to which he had so powerfully contributed. Nevertheless, the people made loud complaints of the absence of the king and the court; and the malecontents gave reason to apprehend a new infurrection; the queen and Mazarin were assaid to face so many enemies, Condé encouraged them, and brought them to Paris, amidit the acclamations and bleffings of the public.

The important service which Condé had just done the court, entitled him to the acknowledgments of the queen, and especially of Mazarin; but the dark foul of that cardinal, only remembered it to punish a too fortunate, and too powerful protector; he privately swore his destruction, at least that he fhould give the whole kingdom a pattern of submission and dependence on his will. However, not to excite the public indignation, he still kept up appearances with the prince, while he fecretly fpread about him disgusts, suspicions, snares of every kind, and the most heinous calumnies. Our author finely deferibes the intrigues, tricks, artifices, and strokes of malice, which distinguished the politicks of Mazarin, in order to crush all parties one after the other, to destroy the prince, and to re-establish his own authority on the ruins of all the factions.

The ungrateful minister deceived the prince, by making him the most flattering proposals, and the most alluring promises, which afterwards he always found means to avoid the fulfilling.—The enraged prince despised the minister, and treated him with disdain. After this, they were reconciled again, only to be again at variance. Each of them in turn, courted the country party, in order

to make it subservient to their defigns. Mazarin, still cunning and deceitful, that he might render the prince and that party irreconcileable, thought of an expedient which answered his purpose too well. There was among the malecontents, a Marquis de la Boulaie, a man of an infamous character, who had obtained the confidence of the party, by false appearances of hatred to the Cardinal, but who fecretly kept up a correspondence with him. It is pretended, that he made him an offer of killing Condé, without its being known who gave the blow. Mazarin was charmed with this proposal; but, says our author, he only required Boulaie to exhibit all the proofs of an affaifination, and to act in such a manner that every thing might concur to render the country party suspected of that crime. He was punctually obeyed; the coach was stopped; some pistols were fired at it, by which two of the footmen were dangerously wounded; and, after that shameful exploit, la Boulaie took refuge in the hotel of the duke of Beaufort who was the hero of the party, in order, no doubt, to countenance the prince's suspicion of the malecontents. Luckily, Condé was not in his coach when it was stopped; the cardinal had fpread the report of the projected affailination; and, in concert with the queen and the prince, he had prevailed to have the coach fent empty, to prove the reality of the attempt. Mazarin counterfeited a zeal for the prince's life; he furiously declaimed against the malecontents, who, he pretended, had made an attempt on a life fo precious to the state; and he inflamed Condé's refentment against the duke of Beaufort, and the Coadjutor,

Co-adjutor, whom he supposed to be the authors of this heinous outrage. The Prince, strongly prejudiced against them, refused to hear them, when they appeared before him to justify themselves. He demanded justice against them of the king, he formally accused them before the parliament, and remained inflexible in spite of the pains which the leaders of the party took to demonstrate to him that he had been imposed on. However, the affair was brought before the parliament, the accused defended themfelves, and the Co-adjutor, who had discovered the Cardinal's secret, unmasked him so well, that the Prince agreed to a private negociation with the malecontents, which Chavigny began; he required nothing more than the Co-adjutor's leaving Paris; but with the rank of ambaffador to Rome or Vienna. That prelate would have consented to it, to satisfy Condé, if Mazarin, some days after, had not given him the choice of any recompence, in order to engage his concurrence in the Prince's destruction. Affairs were now in fuch a dangerous confusion, that the Cardinal faw clearly that it was neceffary to haften to the winding up of the plot. Mafter of the Queen's foul, which he guided as he pleafed; fure of having inflamed against Condé all the resentment of the malecontents, he fought and obtained, by means of the duchess of Chevreuse, the support of that powerful faction, which connected itself with him the more readily, in hopes that the Prince's fall would foon enable it to crush without difficulty the Cardinal, hated, weak, and despised as he was, and as he never failed to create himfelf new enemies by his injustice

and deceit. The Co-adjutor had private conferences with the queen and the minister. Condé had notice of it; and, in order to discover if it were true, he endeavoured to furprize it from Mazarin's own mouth. " Cardinal, faid he one day, " it is publicly reported that you " have nightly meetings with the " Co-adjutor, difguifed like a " trooper." He accompanied this speech with a quick and penetrating look; but Mazarin, the best actor in Europe, answered him without being disconcerted, "It " would be a most whimsical mas-" querade, indeed, to fee the Co-" adjutor, with his crooked person " and bandy legs, in scarlet breech-" es, a hat covered with feathers, " and a fword by his fide: if he " should ever have a fancy to dif-" guise himself in this manner, I " promise your Highness I will " procure you the fight of him." The Cardinal's free, artless, and pleafant look removed the Prince's apprehensions, and he slighted the information that he received of the plot that was forming against him.

Mazarin wanted nothing but the support of the Duke of Orleans: he found means, by the Duchess of Chevreuse, to inflame the jealousy of that fickle and inconstant Prince, the constant sport of the passions and the caprices of others, and to engage him to confent to the imprisonment of Condé. Having thus united all parties, and fearing no other obstacle, this ungrateful and perfidious minister made preparations for privately arresting the prince; the order for it was figned January 18, 1650. Condé having that day repaired as usual to the Palais-Royal, to affift at council with the Prince of Conti and the Duke

of Longueville, the Queen gave orders to arrest them all three, and to convey them without noise to the castle of Vincennes. She was instantly obeyed, and the princes were strictly guarded in that prifon.

If adversity displays mens characters in their true light, it must be owned that Condé appeared no less great at Vincennes than at the head of armies; no one ever supported fuch an unexpected and grievous reverse of fortune with more fortitude and greatness of mind. Confined with the two other princes at the tower of Vincennes, in a large chamber, where neither fupper, nor furniture, nor beds were provided, to avoid raising fuspicions and alarms, he contented bimself with two new-laid eggs, and threw himself in his cloaths on a truss of straw, where he slept twelve hours without waking. still retained his chearfulness; he dedicated the greatest part of his time to reading, the rest to converfation, to playing at battledoor and fluttlecock, to bodily exercises, and the cultivation of flowers: he confoled his companions in difgrace by the fallies with which his gaiety infpired him. One day, the Prince of Conti defiring to borrow of a gentleman, who came to comfort him, the Imitation of Jesus Christ, to beguile the tediousness of his prison, "For my part, says Condé, "I only defire the imitation of M. " de Beaufort, to deliver me from " hence, as he did two years ago. * What shall we play at? whis-" pered he to the fon of M. de Bar, " his rough jailor; let us play at " the Baton of Marshal of France." The young officer understood not what these emphatical words meant.

The princes were removed to Marcaussi, and from thence to Havre de Grace *.

Mazarin triumphed at the difgrace of the princes. He profcribed all who were attached to Condé; he deprived that prince of all his revenues; he furveyed all the provinces and towns that belonged to him, or of which he had been governor, and fubdued them by force, or by the weight of the royal authority. He also removed Conti and Longueville from their governments. - At his return to Paris, he derided the friends of Condé, to whom he had promifed that prince's liberty, and the Co-adjutor, whom he had promifed to raife to the dignity of a Cardinal: Thinking himfelf superior to every storm, he threatened the malecontents with imprisonment; he despised the hatred and clamours of the public.

* On the road, Condé now and then desired his guards to fall back, that he might observe at his leisure the Count of Harcourt, who had orders to conduct him to Havre, and who was become the object of his jokes; he made this stanza upon him, which was sung all over France;

This fat and short hero,
So famous in story,
The great Count of Harcourt,
All cover'd with glory,
Who succour'd Casal, and who retook Turin,
Is now the bum-bailist of proud Mazarin.

The Original.

Cet homme gros & court, Si connu dans l'histoire, Le grand Comte d'Harcourt, Tout éouronné de gloire, Qui secourut Casal, & qui reprit Turin, Est maintenant Recors de Jales Mazarin.

However, the friends of the Prince of Condé were not asleep. In spite of the Argus's, they found means to keep up a punctual correspondence with him; they made various attempts to release him; they raised troops, in particular the Dukes of Bouillon and Rochefoucault, and the Viscount de Turenne. The Princess of Condé engaged the province of Guienne to declare in his favour; she made war in order to force the court to release him; at length the partisans of the prince figned a treaty with the Spaniards to labour in concert for his enlargement. But all these efforts would perhaps have been ineffectual, if other more powerful resources had not been employed.

In that gallant and warlike age, every thing was managed by the passions and intrigues of five or fix women, who possessed the confidence of the leaders of the state, and of the various parties. The Princess of Mantua, wife to one of the fons of the Elector Palatine, K. of Bohemia, was the foul of the counsels in the party of the Princes. She united all the talents which the art of negociation requires, and all the probity necessary to deserve an entire confidence. She undertook and the accomplished the reconciliation of the D. of Orleans, the Co-adjutor, and the malecontents with the friends of the Prince, and united their efforts against the Car-The parliament, on the other fide, loudly demanded the release of the prisoners. All the orders of the state united in folliciting it, infomuch that the Queen was prevailed on to give her confent.

At this news, Mazarin, amazed, confounded, betrayed by the Dutches of Chevreuse, attacked on all

fides, abandoned by almost all those on whom he had most depended, a-bandoned also himself; he made his escape for the fourth time disguised like a trooper, and arrived at the gates of Richlieu, where a body of horse waited for him.

The parliament, informed by the queen of the cardinal's flight, thundered forth an arret, by which he was enjoined to leave the kingdom, with his family and foreign fervants, in the space of fifteen days, under the penalty of being exposed to a criminal profecution. The queen defired to follow him with the king; but the nobles and the burghers invested the Palais-Royal, and prevented the execution of this project, which would have kindled a civil war.

Mazarin perceiving, therefore, that it was impossible for the queen to join him, determined to go himfelf to restore the princes their liberty, and to get the start of the deputies, who were coming to acquaint them with it. On his arrival at Havre, he informed the princes that they were free; he intreated Condé's friendship; he was fo abject, as to profrate himself at the feet of him whom he had fo basely oppressed. Condé gave him a polite reception; he spoke to him in a free and chearful tone; but, tired with the mean submissions which the cardinal lavished upon him, he left him without making him any promise, and set out on his return to Paris, which he entered, as it were, in triumph, amidst the acclamations of all the orders of the monarchy, and the demonstrations of a most fincere and general joy.

Character of Cardinal Richlieu, prime Minister to Lewis XIII, King of France, from De Bury's life of that prince.

R ICHLIEU has shared the fate of all those who are raised above others by their merit and their great actions. Envy, influenced by ambition and interest, was continually at work in forming cabals and plots against his power, and even against his life. The impotent malice of his enemies stooped fo low, as to fill the kingdom with fatires and libels upon his character and conduct, while foreigners beheld him with admiration. Beautru, (the French ambassador at the court of Spain) complaining one day to the count-duke Olivarez, of the defamatory libels that were printed in Flanders against the king and his council, the count-duke replied: " I will do all in my power " to prevent it, being equally con-" cerned myself in my character as " minister of state. But with re-" gard to the cardinal-duke, I have " often told the king of Spain, it " was his greatest misfortune, that " the king of France had the ablest " minister that had appeared in " Christendom for these thousand " years. For my own part, I could 66 be content to have whole libra-" ries published every day against " me, if my master's affairs were " but as well managed as those of " the most christian king." Never did minister meet with

Never did minister meet with greater obstacles to the execution of his designs than Richlieu. Scarce a year passed, in which some cabal was not formed to ruin, or some plot to affassinate him. If he had lived under Henry IV. he would not have shed so much blood. The great

lords of the kingdom, whom he in a manner annihilated, would have been undoubtedly preserved. Henry would have known how to have kept them within those bounds of duty, to which by his gentleness, wisdom, and resolution he had reduced them. The great will more willingly obey a prince who can maintain his authority, than a minister to whom he intrusts it, whom they usually consider as their equal, and often as their inferior. From hence arose all those plots and factions, which forced him to use severe methods, when mild and gentle means were infufficient. He gave a pretty just idea of his own character, when speaking one day to the Marquis of Vieuville he faid, "I never venture to undertake any thing till I have confidered it thoroughly: but when I have once formed my resolution, I never lose fight of my object, I overturn, I mow down all before me, and then I throw my red cassock over it, and cover all."

He would willingly have kept in favour with the queen mother, and even with Monfieur (the duke of Orleans, the king's brother) without being wanting in what he thought was due to the fervice of the king and the good of the state. He used to say sometimes, "That he had three mafters, the king, Mary of Medicis, and the duke of Orleans: that his honour, and his duty obliged him to ferve them all three, but in order, and each in their rank; and that he would never be reproached with having given to the third what was due only to the first." But he could not fucceed in pleasing these three persons, who feldom had the fame views or the fame interests: and the king

.

whom

whom he ferved with fo much zeal and fuccess, gave him more trouble

than the other two.

He was indefatigable in his application to business, though he had a very delicate constitution, and was subject almost to continual attacks of illness. He generally went to bed at eleven, and when he had flept three or four hours, he had a light, and pen, ink, and paper brought him, to write himself, or to dictate to a fecretary, who lodged in his chamber. He then went to fleep again at five or fix, and rose between seven and eight.

His word might be depended upon; and if he had once promifed a person a fayour, he was sure of obtaining it. He was earnest in serving his friends, and all those who were attached to him. The officers of his houshold looked upon him as the best of masters: they received from him nothing but marks of kindness, and they thought themfelves happy in his fervice. If at any time an angry or impatient expression escaped him, which happened very feldom, he made them abundant amends by the favours he

bestowed upon them.

The expences of his houshold amounted to four millions (of livres) every year, including the maintenance of his guard. He had a hundred horse-guards, commanded by a captain, a lieutenant, two quarter-masters, and four brigadiers. This was the first guard the king granted him at the time of the plot formed against him by de Chalois. From 1632, the king added to these a company of two hundred musketeers, and after that a second of an hundred and twenty gendarmes, and a third of fix fcore light horse. The number of his domesticks was prodigious. He had never less than twenty-four-or twenty-five pages: fometimes they amounted to thirty-fix, whom he educated with great care, and at a great expence. He had every day four different tables, and all ferved magnificently. The first confisted of fourteen covers, to which usually none but the first nobility, his relations or particular friends were There was a fecond in another hall, where his master of the houshold fat, confishing of thirty covers: a third for his pages and the principal officers of his houfhold, and a fourth for the servants in livery, who were very numer-

When he travelled, the vast number of carriages of all kinds in his train resembled the march of a sovereign prince rather than that of a rich subject. His band of music, with which he was always attended, was composed of twelve musicians, chosen out of the greatest artists in France: and his houshold was better paid, and made a more fplendid appearance than the king's. His master was displeased at the state and magnificence his minister affected, and did not conceal his fentiments from the Cardinal himself, especially when he was out of humour at any bad news: and when he durst not take notice of it to him, he complained of it to those with whom he was intimate.

The Cardinal had for some time before his death been losing ground in the king's favour, and probably would have been intirely discarded, if he had lived much longer. When the king paid him a visit in his last illness, as he was fitting by his bedfide, Richlieu, after thanking him for the honour he had done him, addressed him in the following manner: "Sire, this is the last adieu. In taking leave of your majesty, I have the fatisfaction to leave your kingdom in the highest degree of glory and reputation it has ever attained, and your enemies subdued and humbled. The only reward of my labours and fervices I prefume to ask of your majesty is, that you would continue to honour my nephews and other relations with your protection and favour. I give them my bleffing, only upon condition that they never fwerve from that obedience and fidelity which they owe you, and which they have folemnly engaged always to maintain." The king gave him his premise, and they had a private conversation together, in which the Cardinal recommended to him the ministers who were already in place, affuring him that they were thoroughly acquainted with the state of affairs, and strongly attached to his fervice. He added, that he knew of no person, more capable of filling up his own place, than Cardinal Mazarine, whose zeal and fidelity he had experienced on many occasions. The king replied, that he should always follow the advice he had given him, having long been convinced of the wisdom of his counfels, and that he would employ Mazarine and the other ministers, who should be continued in their

When the king was retired, the Cardinal asked the physicians how long they thought he could live: "Do not be afraid, says he, of telling me your real sentiments; you are speaking to one who is perfectly resigned to the will of God, either for life or death." They told him, they saw at present no immediate danger, and that they must wait till

the feventh day before they could absolutely pronounce upon the case. "That is well," replied the Cardinal: but towards evening, his fever returned with fo much violence, that they were obliged to bleed him twice. "M. Chicot, faid he, addressing himself to one of the king's physicians, speak to me, I beseech you, not as a physician, but as a friend, without difguife," My Lord, replied Chicot, after having made fome difficulty in giving his opinion, "I believe that in twenty-four hours you will be either dead or well. "" That is speaking as you ought, replied the Cardinal, I understand you." After confesfion, he asked for the viaticum, which was brought him an hour after midnight. "Behold my Lord and my God, cries the Cardinal, which I am just going to receive: I protest before him and call him to witness, that in the whole of my conduct during my ministry I have had nothing in view but the welfare of religion and of the state." Some hours after, he received extreme unction, " My lord, faid the curate who attended him, do you forgive your enemies?" It is faid he made him this answer, "I never had any but those of the state." Others affirm, that he only faid, "Yes, with all my heart, and as I wish to be forgiven myself." For a day or two after, he feemed a little revived by a medicine which was given him by a quack, who undertook to cure him, when his physicians had given him up. While the effects of this lasted, he conversed with the fecretaries of state upon business, and was well enough to receive the compliments that were fent him from the Duke of Orleans and the Queen; and gave his anfwers to them with a great deal of strength

Attenoth and presence of mind. But he foon after became fo weak, that he perceived he was near his end. "Niece, faid he to the Duchess of Equillon, I am very ill!—leave me, I beseech you; your tears affect me: fpare yourself the pain of seeing me die." Father Leon coming up to the Cardinal, told him he was at the end of his life, of which he was going to give an account to God; at the same time he presented the crucifix to him to kifs, and pronounced the last absolution to him. commendatory prayers were scarce begun, when he expired in the fiftyeighth year of his age, and the eighteenth of his ministry.—Soon after the king being informed that his minister was departed, said, very coldly, to some of his courtiers, " There is a great politician gone."

The Cardinal's most intimate friend and confident was father lofeph, a capuchin, who was reckoned the most able negotiator in Europe. He entered into all the Cardinal's views, and being less embarraffed with the numberless intrigues of the court and cabinet, and not obliged like his friend to take any state upon him, he could think over at leifure in his cell the schemes they had formed together: fo that our author thinks it exceeding probable that Richlieu would have been very much at a loss to have conducted fo many great and fuccessful negotiations, without his affiftance. Upon some occasion the popular clamour being raifed against the Cardinal, he kept himself shut up in his palace, and was afraid of being feen in the streets. But by Father Joseph's advice he was perfuaded to go through the city without his guards, and shew himself to the people; who instead of offering

him any infult, being pleased with this instance of his confidence, and with the affability and condescenfion he expressed to all he met, loaded him with their blessings. Upon his return, his friend said, "Did not I tell you, that you was only faint-hearted: and that with a little courage and firmness you would soon raise the spirits of the citizens, and restore your affairs."

Character of Mrs. Pritchard, the celebrated actress; wrote upon ber quitting the stage, some small time before ber death.

HOUGH it is a common faying, and generally faid in Latin, that we should not speak ill of the dead; yet, as it feems a maxim not founded upon reason, it will not be regarded in the following difquisition. How should we know what portion of effeem we ought to pay real, or theatrical heroes and heroines, and how far we should set them up for imitation, if we did not fairly and critically (in the best sense of the word) examine into their good and bad qualities? I would therefore change the maxim, and fay, " De mortuis ni nisi verum," that nothing but what is true should be faid of the dead. As the character under our present consideration is properly dead to the stage, I shall confider Mrs. Pritchard as an actress with the strictest justice, and for this reason, because in so doing, nothing but good can be faid of her.

Mrs. Pritchard has been near forty years upon the stage; though for the last twenty she has been in figure more than what the French call "en bon point," yet she never lost either her ease or vivacity. When

D 2

she was young, she was of a slim make, and though not a beauty, she had a most agreeable face, with very expressive eyes. What has been often faid of the famous Mrs. Bracegirdle, may be as justly applied to her; that though greatly flattered, surrounded by temptations, and upon the stage, she left it with an unblemished character.

Mrs. Pritchard performed a great variety of characters, and though fhe was well received, and justly applauded in all, yet her chief excellence certainly lay in the natural, fprightly, and what are called the higher characters in comedy: they who have feen her in Millimant, Clarinda, Estifania, Lady Brute, Mrs. Sullen, Rofalind, Beatrice, &c. will bear testimony to what I fay: in the last part particularly, and in Clarinda, I have feen her Ranger and Benedict hard put to it, (and they were thought not to want spirit) to return the ball of rapartee to her. She was equally excellent in the comic characters of passion, such as Lady Touchwood, Lady Brumpton, the Jealous Wife, &c. In fhort, where characters were naturally written, and animated with spirit, or passion, in comedy of the higher, or middle life, Mrs. Pritchard was superior to herself, as Mrs. Clive is in those of strong humour, and more marked features.

It may perhaps be faid to the praise of Mrs. Pritchard, that she could not enter into the characters of affectation with the same degree of excellence as she did into those of genuine, sprightly, unaffected nature.

Though she could do nothing ill, yet there always seemed a kind of restraint on her genius, when she appeared in such parts as Clarissa

in the Confederacy, and Lady Dainty in the Double Gallant; in them, indeed, the thewed her great knowledge of her business; but in the others I have mentioned, her genius fhone out in the greatest splendor. Mrs. Pritchard had fuch a happy, clear, spirited tone of voice, and such a natural facility in exerting it, that the most common things became of value by her manner: this in comedy was always attended with a most expressive look and smile, and which (when proper) would rife to the most natural laugh, that ever shook the fides of an audience: add to all this, fhe had fuch a happy eafe in her action, arising instantaneously from her feelings, that it proves, beyond a doubt, Mr. Addison's maxim (though often controverted) that when the conception of the speaker is just, the proper action will follow of course. I must now proceed to this lady's abilities in tragedy; and as my defign is to be impartial, I will not fcruple to declare, that though she was always deservedly applauded in tragedy, and has performed all the principal characters with great reputation, yet her merit there was not equal to herfelf in comedy: in this she never had, but in the other she might have a superior. And yet in the last character the performed, Lady Macbeth, in the Queen in Hamlet, Merope, and many others, we may long wish before we shall fee her out-done.

It was a faying, or reported to be one, of the Prefident Henault, the famous author of the History of France, that if there had been a fuccession of fuch ministers as the Duke of Sully, the friend and minister of Henry IV. that nothing could withstand the power of France: in imitation of which I will venture

to fay, that if our stage could have a succession of such astresses as Mrs. Pritchard, the public would never want rational amusement, nor me stage worthy examples to contradict the slander, falschood, and perversences of some fanatical preachers and writers.

Some account of Father Finetti, a Dominican Friar; from Baretti's account of the manners and customs of Italy.

ET me only mention here one, who is the most astonishing linguist in my opinion that ever existed. I mean father Bonifacio Finetti, a Dominican friar, who in the year 1756 published ten dissertations on the Hebrew language and its derivatives; that is, the Rabbinical, the Chaldaic, the Syriac, the Samaritan, the Phenician or Punic, the literal Arabic, the vulgar Arabic, and the Amharic. These ten dissertations were given in a volume * by father Finetti as a specimen of a larger work, which he intended to write upon all languages both antient and modern.

My learned reader will perhaps ftart to hear of a man, who intended to write a work on all languages, both antient and modern; and I must fay, that when I first cast my eye on the title page of Finetti's specimen, the first thought that occurred was, that its author could be no better than a literary quack or a madman. But the reading of his Ten Dissertations gave me reason to alter my hasty judgment; and I had then no

rest until I procured myself the honour of his personal acquaintance.

This friar is now near eighty years old, of which he has employed fixty at least in studying languages. As in the course of his life he scarcely ever stirred from his cell, he is not commonly known, not even in Venice, though it be the place of his birth and constant residence. However he has found means in his long folitude to have from the missionaries sent in partibus infidelium by the college of the propaganda at Rome, and from all corners of the world; all forts of books and manuscripts that could facilitate the study of the remotest tongues.

I have myfelf brought many English travellers acquainted with him, and they were as much pleased with the conversation of the reverend old man, as surprised at his odd library, which confists chiefly of grammars, dictionaries, bibles, catechisms, prayers, memorials, letters, treaties of peace or commerce, itineraries, and other things of this fort, written in the most obscure languages of Europe, Asia, Africa,

and America.

Being about seventy years of age, he formed the design of communicating some part of his immense knowledge to the world, and published his Ten Dissertations on the Hebrew language and its derivatives for a specimen, as I said, upon all languages, ancient and modern. This is a translation of part of his preface to that specimen.

"The FIRST CHAPTER of my work, fays he, shall be this very

" fpeci-

^{*} This book is intitled TRATTATO della lingua Ebraica e sue affini, del padre Bonifacio Finetti del ordine de' predicatori, offerto agli eruditi per SAGGIO, dell' opera da lui intrappresa sopra i linguaggi di tutto il mondo. In Venezia 1756, appresso Antonio Zatta.

" specimen a little enlarged. We " shall thus begin our great lan-"guage-journey from the east, " where the Hebrew transports us directly: and running over the "eastern countries, we shall only " flep a while from Arabia into A-" frica to pay a visit to the Ethiopic " and Amharic languages, because " these are both daughters of the " Hebrew. From Africa we shall " then return immediately to Asia, " and even enter fome parts of Eu-" rope, that we may speak of other " oriental tongues which have " likewise some affinity with the " Hebrew. Our SECOND CHAP-" TER therefore shall give an ac-" count of all those other eastern " languages that reach from the " eastern part of Europe to the ri-" ver Indus, and owe some part of " their origin to the Hebrew tongue; " that is, the Greek, the Arme-" nian, the Turkish, and the Per-" fian. Then without turning our " back to the rifing fun, we will " run through the East-Indies, and " give an account in our THIRD " CHAPTER of the East-Indian " tongues; that is, the Indoftanic, " the Malaccan, the Malabarical, " the Malejamic, the Tamulic, the " Telugic, the Siamefe, and some " others. Continuing then our " journey the fame way, we shall " fpeak in the Fourth Chapter " of the languages of the further-" most east; that is, of the Anami-" tic, which comprehends the Chi-" nese, the Cochinchinese, the Ja-" panese, the Formosan, and some " others. Then we will turn our " fleps to the north, and entering "the most eastern Tartary, we " will go a journey retrograde to " our first; that is, we will turn " to the west, for to come back a-

gain to Europe, after having vifited those vast regions. There-" fore the FIFTH CHAPTER shall " be of the Tartar languages; and as far as our few books in them " can lead us, we shall say some-" thing of the Majuric tongue, " which is spoke by the Chinese " Tartars; and of the Mongulese, " the Tibettan or Tanguttan, the " Calmucic, the Crimean, and " fome others. From the Greater " Tartary continuing our journey " to the west we enter into Mus-" covy, and from the Leffer Tar-" tary into Poland. Both in Muf-" covy and Poland we meet with " the tongue commonly called Scla-" vonian, though it ought to be " Slavonian or Slavish, which some " call likewife Illyric. Our SIXTH " CHAPTER shall then treat of the " ancient Sclavonian tongue, and of " its derivatives; that is, the Mus-" covite, the Polish, the Bohemi-" an, the Vandalic, the Illyric or " Dalmatian, the Carniolan, and " others. To the west of the coun-" tries where the Sclavonian tongues " are spoken, there is Germany and other countries, where we meet " many languages of Germanic o-" rigin. The ancient language of Germany is by fome called Old "Gothic, by others Teutonic, and " still by others Norrene, Norman, " or Northern. The SEVENTH " CHAPTER therefore shall treat " of the ancient Germanic tongue, " and of its feveral derivatives, " both ancient and modern. " modern, beginning from the " farther north, are the Icelan-" dic, to which we will join the "Greenlandish, as we shall have " no properer place for it than this; " then the Swedish, the Norvegian, " the Danish, the English, the " Low-

44 Low-Dutch, and the High-" Dutch: and this last will be the " first of which we shall speak. " Amongst the ancient Germanic " tongues there are the Runic, the " Anglo-Saxon, the Mesogothic, " the Teotisk, and some others. " From Germany, turning our " steps to the west, we will enter " France, and there find one of the " prettiest daughters of the Latin " tongue; then the Italian, the "Spanish, and the Portuguese, "with a few others of inferiour " rank. In the Eighth Chap-"TER therefore we shall dwell a " while with them, after having " paid our respectful compliments " to their noble mother the Latin " tongue. And behold! we are " here come to the utmost verge of " Europe. However, before we " fet sail for Africa, we must needs " fpeak of feveral languages in-" closed in some narrow spaces, " which having little or no offspring " of their own, are by the linguists " called SMALL TONGUES. " these too deserve our attention; " and we shall therefore form our " NINTH CHAPTER of the small " tongues of Europe, in which are " comprised the Hungarian, the " Lithuanian, the Livonian, the " Findlandish, the Welch with the " Cornwallian, Irish, Armoric, " and other of its dialects; the Bif-" cayan, which is thought to be " the ancient Spanish; the Alba-" nese, and some others. Then " we will cross over to Africa. But " in that country, though much " larger than Europe, I fear we " shall not be able to travel much, " because of the dreariness of its " defarts, and the barbarity of its nations: besides that we shall al-" ready have vifited the Barbary-

" States upon occasion of the Ara-" bic language commonly spoke " there, and the empire of Abyssi-" nia, where the Ethiopic and the " Amharic tongues are predomi-" nant. However Egypt will keep " us a while with the Coptic tongue " or Old Egyptian. This tongue " shall form the chief ornament of " the TENTH CHAPTER; and in " it we shall speak also of some "others, especially of the ancient " African, now called Tamagzet, " and of the Congoyan, Angolian, " Melindan, Ottentotic, Madaga-" fcaric, and fome others. From " Africa then we shall fail to Ame-" rica, travel it all over, liften to " the various speeches of those wild " nations, and interpret them as " far as we shall be affished by our " books. Of the American lan-" guages we shall make two chap-" ters. The first, which will be " the ELEVENTH in our work, " shall treat of the languages of " North-America; and the fecond, " which will be the TWELFTH in " order, shall comprehend those of " South-America. In the first of " thefe two chapters we will speak " of the Mexican, the Pocomanic, " the Virginian, the Algonkine, " the Huronic, the Caribbean, and " others; and in the second, of the " Brasilian, the Chilese, the Pe-" ruvian, and others. And with " this chapter we shall put an end " to our long and laborious pere-" grination."

Such was to be the work defigned by my reverend friend father Finetti, a work grand in the defign, and as far as it went, complete in the execution; a work that would have reflected infinite honour upon his country, as it would have added immensely to that stock of philolo-

D 4 gical

gical knowledge already pofferfed by the Europeans; and what is still of greater importance, would have apprifed the fludious part of mankind, by a striking example, of the vast and most incredible acquistions the human mind can make, when long and inceffantly employed upon the pursuit of knowledge. - But alas! the noble specimen that he gave us of the intended work, which he printed at his own expence, for a long time did not fell! The strangeness of its title, the obscurity of its author, the flupidity of his fellowfriars, the barbarous inattention of the Venetians, and some other caufes, unfortunately concurred to make this grand performance be neglected: and as father Finetti, like the generality of our friars, had no money to spare for the printing of it, he did not care for the trouble of writing it. Thus the literary world has been for ever robbed of his of ther eleven volumes, to the everlafting forrow of every cultivator of knowledge! It is true that eight years after the first edition of the first volume, all the copies of it were fold in a few weeks upon the strong recommendation of a periodical writer, who happened by chance to read it: but the heavy addition of eight years to the old age of the author, had so disabled him, that now he could write no more; and thus Italy and the whole world must for ever bemoan this great loss, as in all probability no man will ever a gain be found to well qualified for fo terrifying an undertaking.

Some extrasts from the life of Bernard Gilpin, Rector of Houghton le Spring, in the reigns of the Queens Mary and Elizabeth; taken from the 3d wol. of the British Biogra-

Y N the mean time Mr. Gilpin continued to reade at Houghton, discharging all the duties of his function in the most exemplary manner. When he first took upon him the care of a parish, he laid it down as a maxim, to do all the good in his power there; and accordingly his whole conduct was only one strait line drawn to this point. He fet out with making it his endeayour to gain the affections of his parishioners. Many of his papers shew how material a point he confidered this. To fucceed in it, however, he nied no fervile compliances: he would have his means good, as well as his end. His behaviour was free, without levity, obliging without meannefs, and infinuating without art. He condefcended to the weak, bore with the passionate, and complied with the ferupulous: and, in a truly apostolic manner, "became all things " to all men." By these means he gained mightily upon his neighbours, and convinced them how heartily he was their friends of the

To this humanity and courtefy, he added an unwearied application to the instruction of those under his care. He was not fatisfied with the advice he gave in public, but used to instruct in private; and brought his parishioners to come to him with their doubts and difficulties. He had a most engaging manner towards those whom he thought well-disposed: nay, his very reproof was fo conducted, that it feldom gave offence; the becoming gentleness with which it was urged, made it always appear the effect of friendship. Thus, with unceasing affi-

duity,

duity, did he employ himself in admonishing the vicious, and encouraging the well-intentioned; by which means, in a few years, he made a greater change in his neighbourhood, than could well have been imagined. A remarkable instance, what reformation a single man may effect, when he hath it carneitly at heart!

But his hopes were not fo much in the present generation, as in the fucceeding. It was an easier talk, he found, to prevent vice than to correct it; to form the young to virtue, than to amend the bad habits of the old. He employed much of his time, therefore, in endeavouring to improve the minds of the youngerpart of his parish; suffering none to grow up in an ignorance of their duty; but preffing it as the wifest part to mix religion with their labour, and amidit the cares of this life to have a constant eye upon the next. He attended to every thing which might be of fervice to his parishioners. He was very assiduous in preventing all law-fuits among them. His hall is faid to have been often thronged with people, who came to him about their differences. He was not indeed much acquainted with law, but he could decide equitably, and that fatisfied: nor could his Sovereign's commission have given him more weight, than his own character gave him.

His hospitable manner of living was the admiration of the whole country. He spent in his family every fortnight forty bushels of corn, twenty bushels of malt, and a whole ox; besides a proportionable quantity of other kinds of provision. Strangers and travellers found a chearful reception. All

were welcome that came; and even their beafts had fo much care taken of them, that it was humorously faid, "If a horse was turned loose "in any part of the country, it "would immediately make its way "to the rector of Houghton's.

Every Sunday, from Michaelmas till Eafter, was a fort of public day with him. During this season, he expected to see all his parishioners, and their families. For their reception he had three tables well covered: the first was for gentlemen, the fecond for husbandmen and farmers, and the third for day-labourers. This piece of hospitality he never omitted, even when loffes, or a fearcity of provision, made its continuance rather difficult to him. He thought it his duty, and that was a deciding motive. Even when he was absent from home, no alteration was made in his family-expences: the poor were fed as usual, and his neighbours entertained. And he was always glad of the company of men of merit and learning, who used much to frequent his house.

When Lord Burleigh, then Lord-Treasurer, was sent by Queen Elizabeth to transact some affairs in Scotland, that celebrated statesman refolved, on his return, to take that opportunity of paying a visit to Mr. Gilpin. Hurried as he was. he could not refift the defire of feeing a man, whose name was every where so respectfully mentioned. His free discourse from the pulpit to King Edward's court, had early recommended him to this noble perfon; fince which time, the great distance between them, had wholly interrupted their acquaintance. Lord Burleigh's teturn was fo fudden, that he had not time to give any no-

tice,

tice of his intended visit. But the ecconomy of so plentiful a house as Mr. Gilpin's, was not easily disconcerted. He received his noble guest with so much true politeness, and treated him and his whole retinue in so affluent and generous a manner, that the treasurer would often afterwards say, "he could hardly have expected more at Lambeth."

While Lord Burleigh staid Houghton, he took great pains by his own observation, and that of his domestics, to acquaint himself with the order and regularity with which every thing in that house was managed. It contained a very large family; and was befides continually crowded with persons of all kinds, gentlemen, scholars, workmen, farmers, and poor people: yet there was never any confusion; every one was immediately carried into proper apartments, and entertained, directed, or relieved, as his particular bufiness required. It could not but please this wise lord, who was fo well acquainted with the effects of order and regularity in the highest sphere, to observe them even in this humble one. Here too, he faw true simplicity of manners, and every focial virtue regulated by exact prudence. The statesman began to unbend; and he could fearcely avoid comparing, with a kind of envious eye, the unquiet scenes of vice and vanity in which he was engaged, with the calmness of this amiable retreat. At length, with reluctance, he took his leave; and with all the warmth of affection, embracing his much respected friend, he told him, "he " had heard great things in his

66 commendation, but he had now " feen what far exceeded all that " he had heard. If, added he, " Mr. Gilpin, I can ever be of any " fervice to you at court, or elfe-" where, use me with all freedom, " as one you may depend on." When he had got to Rainton-hill, which rifes about a mile from Houghton, and commands the vale, he turned his horse to take one more view of the place; and having kept his eye fixed upon it for some time, his reverie broke out into this exclamation: "there is the enjoy-" ment of life indeed; who can " blame that man for not accept-" ing of a bishopric! what doth " he want to make him greater, " or happier, or more useful to " mankind *."

Mr. Gilpin continued to discharge the duties of his ministerial office in the most conscientious, benevolent, and laborious manner. notwithstanding all this painful industry, and the large scope it had in so extended a parish, he thought the fphere of his benevolence yet too confined. It grieved him extremely, to fee every where in the parishes around him, so great a degree of ignorance and superstition, occasioned by the shameful neglect of the pastoral care in the clergy of those parts. These bad consequences induced him to fupply, as far as he could, what was wanting in others. For this purpose, every year he used regularly to visit the most neglected parishes in Northumberland, Yorkshire, Cheshire, Westmoreland, and Cumberland; and that his own parish, in the mean time, might not fuffer, he was at the expence of a constant assistant.

* He had refused the Bishoprick of Carlisse, and many rich benefices which had been offered him at different times.

In each place he flayed two or three days; and his method was, to call the people about him, and lay before them, in as plain a way as possible, the danger of leading wicked, or even careless lives; explaining to them the nature of true religion; instructing them in the duties they owed to God, their neighbour, and themselves; and shewing them how greatly a moral and religious conduct would contribute to their present, as well as sufficiently appiness.

As Mr. Gilpin had all the warmth of an enthufiast, though under the direction of a very calm and fober judgment, he never wanted an audience, even in the wildest parts; where he roused many to a sense of religion, who had contracted the most inveterate habits of inattention to every thing of a ferious nature. And wherever he came, he used to visit all the goals and places of confinement; few in the kingdom having at that time any appointed minister. And by his labours, and affectionate manner of behaving, he is faid to have reformed many very

abandoned persons in those places, He would employ his interest likewise for such criminals, whose cases he thought attended with any hard circumstances, and often procured pardons for them.

There is a tract of country, upon the border of Northumberland. called Readf-dale and Tine-dale; of all barbarous places in the north, at that time the most barbarous. Before the union, this place was called the debateable land, as fubject by turns to England and Scotland, and the common theatre where the two nations were continually acting their bloody scenes. It was inhabited by a kind of defperate banditti, rendered fierce and active by constant alarms; they lived by theft, used to plunder on both fides of the barrier, and what they plundered on one, they exposed to fale on the other; by that means escaping justice *. And in this dreadful country, where no man would even travel that could help it +, Mr. Gilpin never failed to fpend some part of every year.

He generally chose the Christmas holidays

^{*} Such adepts were they in the art of thieving, that they could twift a cow's horn, or mark a horfe, so as its owners could not know it; and so subtle, that no vigilance could guard against them. For these arts they were long afterwards famous. A person telling king James a surprizing story of a cow that had been driven from the north of Scotland into the south of England, and escaping from the herd, had found her way home. "The most surprizing part of the story, "replied the king, you lay the least stress on, that she passed unstolen through the debateable land."

[†] Mr. Cambden, describing Reads-dale and Tine-dale, says, "both these dales breed notable bog-trotters, and have such boggy-topped mountains, as are not to be crossed by ordinary horsemen. We wonder to see so many heaps of stones in them, which the neighbourhood believe to be thrown together in memory of some persons there slain. There are also, in both of them, many ruins of old forts. The Umfranvilles held Reads-dale, as Dooms-day book informs us, in fee and knight's service, for guarding the dale from robberies. All over these wastes you see, as it were, the antient Nomades, a martial peosephe, who from April to August lie in little tents, which they call little sheals, or shealings, here and there dispersed among their flocks."

holidays for this journey, because he found the people at that season most disengaged, and most easily affembled. He had fet places for preaching, which were as regularly attended, as the affize-towns of a circuit. If he came where there was a church, he made use of it: if not, of barns, or any other large building; where great crowds of people were fure to attend him, fome for his instructions, and others for his charity.—This was a very difficult and laborious employment; The country was fo poor, that what provision he could get, extreme hunger only could make palatable. The inclemency of the weather, and the badness of the roads through a mountainous country, and at that feafon covered with fnow, exposed him likewise often to great hardships. Sometimes he was overtaken by the night, the country being in many places defolate for feveral miles together, and obliged to lodge out in the cold. At fuch times, we are told, he would make his fervant ride about with his horses, whilst himself on foot used as much exercise as his age, and the fatigues of the preceding day, would permit. All this he chearfully underwent; esteeming such services well compensated by the advantages which he hoped might accrue from them to his uninstructed fellowcreatures.

Our Saxon ancestors had a great aversion to the tedious forms of law. They chose rather to determine their disputes in a more concise manner, pleading generally with their swords. This custom still prevailed on the borders, where Saxon barbarism held its latest possession. Nay, these wild Northumbrians

even went beyond the ferocity of their ancestors. They were not content with a duel: each contending party used to muster what adherents he could, and commence a kind of petty war: so that a private grudge would often occasion much bloodshed. It happened that a quarrel of this kind was on foot, when Mr. Gilpin was at Rothbury, in those parts. But during the two or three first days of his preaching, the contending parties observed fome decorum, and never appeared at church together: at length, however, they met. One party had been early at church, and just as Mr. Gilpin began his fermon, the other entered. They stood not long filent; but, inflamed at the fight of each other, began to clash their weapons, for they were all armed with javelins and fwords, and mutually approached. Awed, however, by the facredness of the place, the tumult in some degree ceased. Mr. Gilpin proceeded: when again the combatants began to brandish their weapons, and draw towards each other. As a fray feemed near, Mr. Gilpin stepped from the pulpit, went between them, and addressing the leaders, put an end to the quarrel for the prefent, but could not effect an entire reconciliation. They promised him, however, that till the fermon was over, they would make no more disturbance. Hé then went again into the pulpit, and spent the rest of the time in endeavouring to make them ashamed of what they had done. His behaviour and discourse affected them so much, that, at his farther entreaty. they promifed to forbear all acts of hostility, while he continued in the country. And fo much respected

was he among them, that whoever was in fear of his enemy, used to refort where Mr. Gilpin was, esteeming his presence the best protection.

One Sunday morning, coming to a church in those parts, before the people were affembled, he observed a glove hanging up, and was informed by the fexton, that it was meant as a challenge to any one that should take it down. Mr. Gilpin ordered the fexton to reach it him; but upon his utterly refusing to touch it, he took it down himfelf, and put it into his bosom. When the people were affembled, he went into the pulpit; and before he concluded his fermon, took occasion to rebuke them severely for these inhuman challenges. " hear, faid he, that one among so you hath hanged up a glove even " in this facred place, threatening " to fight any one who taketh it " down: fee, I have taken it "down;" and pulling out the glove, he held it up to the congregation; and then shewed them how unsuitable such favage practices were to the profession of Christianity; using such persuasives to mutual love, as he thought would most affect them.

The difinterested pains he thus took among these barbarous people, and the good offices he was always ready to do them, drew from them the warmest and sincerest expressions of gratitude. Indeed, he was little less than adored among them, and might have brought the whole country almost to what he pleased. One instance that is related, shews how greatly he was revered. By the carelessiness of his servant, his horses were one day stolen. The news was quickly propagated, and

every one expressed the highest indignation at the fact. The thief was rejoicing over his prize, when by the report of the country he found whose horses he had taken. Terrified at what he had done, he instantly came trembling back, confessed the fact, returned the horses, and declared he believed the devil would have seized him directly, had he carried them off, knowing them to have been Mr. Gilpin's.

We have already taken notice of Mr. Gilpin's uncommonly generous and hospitable manner of living, The value of his rectory was about four hundred pounds a year: an income, indeed, at that time very confiderable, but yet in appearance very unproportionate to the generous things he did: indeed, he could not have done them, unless his frugality had been equal to his generofity. His friends, therefore, could not but wonder to find him, amidst his many great and continual expences, entertain the defign of building and endowing a grammar school; a design, however, which his exact economy foon enabled him to accomplish, though the expence of it amounted to upwards of five hundred pounds. His fchool was no fooner opened, than it began to flourish; and there was fo great a refort of young people to it, that in a little time the town was not able to accommodate them. He put himself, therefore, to the inconvenience of fitting up a part of his own house for that purpose, where he feldom had fewer than twenty or thirty children. Some of these were the sons of persons of distinction, whom he boarded at easy rates: but the greater part

were poor children, whom he not only educated, but cloathed and maintained: he was at the expence likewise of boarding in the town many other poor children. He used to bring feveral every year from the different parts where he preached, particularly Readf-dale and Tinedale; which places he was at great pains in civilizing, and contributed not a little towards rooting out that barbarism, which every year prevailed less among them. And for the maintenance of poor scholars, whom he fent to the universities, he yearly fet apart fixty pounds. This fum he always laid out, often more. His common allowance to each scholar was about ten pounds a year, which for a fober youth was at that time a very fufficient maintenance: fo that he never maintained fewer than fix. By his will it appears, that at his death he had nine upon his lift, whom he took care to provide for during their stay at the university.

As to his school, he not only placed able mafters in it, whom he procured from Oxford, but himfelf likewise constantly inspected it. And that encouragement might quicken the application of his boys, he always took particular notice of the most forward: he would call them his own scholars, and would fend for them often into his fludy, and there instruct them himself. One method used by him to fill his school, was a little fingular. Whenever he met a poor boy upon the road, he would make trial of his capacity, by a few questions; and if he found it such as pleafed him, he would provide for his education. And besides those whom he fent from his own school to the univerfities, and there wholly maintained, he would likewife give to others, who were in circumstances to do fomething for themselves; what farther affiftance they needed. By which means he induced many parents to allow their children a liberal education, who otherwise would not have done it. And Mr. Gilpin did not think it enough to afford the means only of an academical education to these young people, but endeavoured to make it as beneficial to them as he could. He still considered himself as their proper guardian; and feemed to think himself bound to the public for their being made useful members of it, as far as it lay in his power to make them fo. With this view he held a punctual correspondence with their tutors; and made the youths themselves frequently write to him, and give him an account of their studies. So folicitous indeed was he about them, knowing the many temptations to which their age and fituation exposed them, that once every other. year he generally made a journey to the univerfities, to inspect their behaviour. And this uncommon care was not unrewarded; for many of his scholars became ornaments to the church, and exemplary instances of piety.

To the account that hath been already given of Mr. Gilpin's hofpitality and benevolence, the following particulars may be added. Every thursday throughout the year, a very large quantity of meat was dressed wholly for the poor; and every day they had what quantity of broth they wanted. Twenty-four of the poorest were his constant pensioners. Four times in the year a dinner was provided for them, when they received from his steward a certain quantity of corn, and a

firm

fum of money: and at Christmas they had always an ox divided

among them.

Wherever he heard of any in distress, whether of his own parish, or any other, he was fure to relieve them. In his walks abroad, he would frequently bring home with him poor people, and fend them away cloathed as well as fed. He took great pains to inform himfelf of the circumstances of his neighbours, that the modesty of the sufferer might not prevent his relief. But the money best laid out was, in his opinion, that which encouraged industry. It was one of his greatest pleasures to make up the losses of his laborious neighbours, and prevent their finking under them. If a poor man had loft a beaft, he would fend him another in his room: or if any farmer had had a bad year, he would make him an abatement in his tythes.—Thus, as far as he was able, he took the misfortunes of his parish upon himself; and, like a true shepherd, exposed himfelf for his flock. But of all kinds of industrious poor, he was most forward to affift those who had large families: fuch never failed to meet with his bounty, when they wanted to fettle their children in the world.

In the distant parishes where he preached, as well as in his own neighbourhood, his generofity and benevolence were continually shewing themselves: particularly in the desolate parts of Northumberland. " When he began his journey, says " an old manuscript life of him, he "would have ten pounds in his " purse; and, at his coming home, "he would be twenty nobles in " debt, which he would always pay " within a fortnight after." In the goals he visited, he was not

only careful to give the prisoners proper instructions, but used to purchase for them likewise what ne-

cessaries they wanted.

Even upon the public road, he never let slip an opportunity of doing good. He has often been known to take off his cloak, and give it to an half-naked traveller: and when he has had fcarce money enough in his pocket to provide himself a dinner, yet would he give away part of that little, or the whole, if he found any who feemed to fland in need of it. Of this benevolent temper, the following instance is preserved. One day returning home, he faw in a field feveral people crowding together; and judging fomething more than ordinary had happened, he rode up, and found that one of the horses in a team. had fuddenly dropped down, which they were endeavouring to raise; but in vain, for the horse was dead. The owner of it feemed much dejected with his misfortune; and declaring how grievous a loss it would be to him, Mr. Gilpin bad him not be disheartened; "I'll let " you have, fays he, honest man, " that horse of mine," and pointed to his fervant's. --- "Ah! master, " replied the countryman, my " pocket will not reach fuch a beaft " as that." " Come, come, faid " Mr. Gilpin, take him, take him;

" then thou shalt pay me." The following legacies in his will, gives us some idea of his hospitality. " I give to my fuccessor, and to his fuccessors after him, first, the

" and when I demand my money,

" great new brewing-lead in the " brewhouse, with the gile-fat, and

" mash-fat: likewise, in the kiln, " a large new steep-lead, which re-

" ceives a chauldron of corn at ss once:

" once: likewise, in the larder-"house, one great salting-tub, which will hold four oxen, or " more." " I give to the poor of "Houghton, twenty pounds, and or nine of my oxen: the other nine * T bequeath to my three execuce tors."

The life of Sir John Perrot; from the Same.

As at wall was to see a work of the see and a second

TOHN PERROT was fon to J Thomas Perrot, Efq; * by Mary, daughter and heirefs of James Berkley, Esq; who was second fon to the Lord Berkley. The exact time of his birth is not known. He received a genteel education; and being very tall, and of an extraordinary degree of strength and agility, he greatly distinguished himself in his youth by martial exercises, and feats of activity and chivalry, in which he much delighted. When he was eighteen years of age, which he was about the 36th year of king Henry the VHIth's reign, he was fent to the Marquis of Winchester, then Lord-Treasurer of England, in order to receive the completion of his education in that nobleman's house, agreeable to the custom of that age.

In the Marquis's house, among other young gentlemen fent thither with the same view, he found the Lord Abergavenny, a youth of fo ungovernable a temper, that the fervants and gentlemen in the house were made very uneasy by him. These observing Mr. Perrot to be at least equal to his lordship in stature, strength, and courage, easily contrived to breed a quarrel between them, which quickly came to blows +. His lordship found

* He at least passed for the son of this gentlemen, but an opinion very generally prevailed, and which Sir John Perrot himself appears to have believed, that he really sprung from the loins of king Henry VIII. It is said that there was an intimacy between his mother and that prince, a short time before her marriage with Mr. Perrot.-Vid. Lloyd's State-Worthies, vol. I. p. 396, 397. and Biograph. Brit. It is certain, that he greatly refembled king Henry in his

temper and spirit. The Lord of Abergavenny was so fierce and hasty a young nobleman, "that no fervant or gentleman in that house could continue long quiet, but he "would quarrel with them upon any finall cause, till Mr. Perrot came thither, "whom the gentlemen and ferving-men perceiving to be of a bold spirit, comely " stature, good strength, and seeming courageous, they then told the young "Lord of Abergavenny, that there was a young gentleman come to the house, "who would match him. Is there fuch a one? faid he; let me fee him. And fo coming where Mr. Perrot was, for the first salutation he asked him, What, " Sir, are you the kill-cow that must match me? No, said Mr. Perrot, I am no "butcher; but if you use me no better, you shall find I can give a butcher's blow. "Can you so, said he; I will see that. And so being both angry, they buckled, " and fell to blows; in trial and continuance whereof, the Lord Abergavenny " found that he had his hands full of him, and was rather over-matched in " ftrength, and had no advantage of him in stomach, whereby he was willing " to be parted from him. So the serving-men, and other gentlemen in the "Marquis's house, (when they found the young Lord of Abergavenny unruly) "would still threaten him with Mr. Perrot."—The History of that most e-minent Statesman, Sir John Perrot, Knight of the Bath, &c. Edit. &vo. 1728, P. 24; 25.

himself rather overmatched in point of strength, and that he had no advantage with respect to courage; and the trial having made each sensible of the other's abilities, an intimacy commenced between them; but their friendship did not last long; for having agreed to make a joint entertainment for their common acquaintance, the impetuosity of their tempers occasioned a quarrel between them, so that they broke the glasses, of which they had provided good store, about one another's ears, before the guests came.

But though the heat of Mr. Perrot's temper sometimes drew him into inconveniencies, it also proved the means of introducing him to the notice and favour of the king. Among other irregularities of his youth, he fometimes indulged himfelf with lewd women: and going for that purpose, shortly after his breach with Lord Abergavenny, to the Stews in Southwark, attended only with a page, he fell into a quarrel with two yeomen of the king's guard; who both attacking him with their fwords, he made a very gallant defence, and being hurt in the fray, the report reached the ear of his majesty, who was then hard by at Winchester-House. And Henry's curiofity being excited, he fent for him, and making fome enquiries concerning his name and family, he was much pleafed with his undaunted air, and the spirit of his answers; and accordingly in-Vol. XI.

vited him to court, and promifed to bestow some preferment on him *.

Whether King Henry, in the course of his conversation with young Perrot, found any reason to suspect the supposed affinity between them, does not appear. However, he repaired to court; but the king dying foon after, he returned to the house of the Marquis of Winchester, till the public affairs were fomewhat fettled; when he again went to court, and so recommended himself to the young King; Edward VI. that he was pitched upon for one of the Knights of the Bath at that Prince's coronation. And having received this instance of Royal favour, he frequently displayed his valour, strength, and activity, in tilts and tournaments, and acts of chivalry; fo that King Edward conceived a great liking for him, which was not a little heightened by the extraordinary comeliness and dignity of his person.

About this time Sir John Perrot attended the Marquis of Southampton in his embaffy to France, to treat of a marriage between King's Edward and the French King's daughter. And the Marquis being a nobleman that took much delight in active sports and exercises, was entertained by the French monarch with hunting the wild boar. In the chace, a gentleman charging the boar with his chacing-staff, happened to miss his aim, so that the enraged animal was ready to run in

[&]quot;The King being then at Winchester-house, near that place, was told how a young gentleman, having no hair on his face, had fought with two of his Majesty's servants. Which the King hearing, and being desirous to see him, sent for him, demanded his name, country, and kindred. This belong boldly by him related, it pleased the King very well to see so much valour and aussided the set of the court, where he would bestow a place and preferment on him." Life of Sir John Perrot, as before, P. 26, 27.

upon him; when Sir John Perrot stepped instantly to his rescue, and with a broad fword which he then wore, gave the beaft fuch a stroke, as very nearly parted the head from the shoulders. The French King, who stood in fight, came immediately to him, and taking him by the middle, cried out, BEAUFOILE. Sir John, thinking the king came to try his strength, returned the address, by taking his majesty in his arms, and lifting him a confiderable height from the ground; at which the king shewed not the least displeasure; but, on the contrary, offered him a good pension to enter into his fervice. To this proffer Sir John Perrot replied, "That he " humbly thanked his majesty for " his generous offer; but he was " a gentleman that had means of " his own to support himself; and " if he wanted any thing, he knew that he ferved a gracious and a " royal Prince, who would not fee " him want, and to whom only he "had vowed his fervice during 66 life *."

Shortly after, he returned to England, where he chiefly refided at court; but he lived in so expensive and magnificent a manner, that he was foon reduced to a necessity of mortgaging some of his estates: nor, was that fufficient; for notwithstanding these mortgages, he found himself in a short time involved in a debt of seven or eight thousand pounds. The bad state of his affairs made him very melancholy; and as he was one day walking in a kind of bye-place about the court, he entered into a kind of a foliloguy, reproaching himself for his past indif-

cretion, and bemoaning his prefent fituation; lamenting that he had been so unwise as to squander away his fortune, and waste a great part of that in a few years, which his ancestors had acquired and enjoyed fo many. " And must I," said he, " be the man that shall overthrow " my house, which hath continued " fo long? It had been better " that I had never been born: for "what shall I do to recover my " estate?" He went on in this manner, entering into a debate with himself, whether he had best follow the court, or leave the court, and follow the wars; fince he found, he faid, that should he continue at court, the king being young, and under government, if, upon his good deferts, his majesty should be pleased to grant him any thing in recompence for his fervice, yet his governors, as the Lord Protector and the Privy Council, might gainfay it, and so he should rather run into farther arrears, than recover his decayed fortunes. But if he retired into the country, where he might live at less charge, or betook himfelf to the wars, where he might get fome post of command and profit, it would be a means to fave his estate, and pay his debts .- In the mean time, while Sir John Perrot was arguing and debating with himfelf, it happened that the young king came that way, and over-heard the greatest part of what he had faid; and at length stepping up, " How " now, Perrot, (faid the king) what " is the matter that you make this " great moan?" Sir John, in a furprize, or at least appearing to be furprized +, told the king, that he

* Vid. Biograph. Brit. and Life of Perrot, as before, P. 28---31.

[†] It is intimated, that this foliloquy of Sir John Perrot's was made with a defign that it should be over-heard by the King, who was accustomed, it is faid,

alid not think his highness had been fo near him. "Yes," faid his majesty, "we heard you well enough; "and have you spent your estate in our fervice? and is the king fo "young, and fo under govern-" ment, that he cannot give you " any thing in recompence for your " fervice? Find out fomewhat, and " you shall see whether the king " has not power to bestow it upon " you." Sir John humbly thanked his majesty, and shortly after discovered a concealment of some estate or goods that had been forfeited to the crown; which, upon his petition, was readily bestowed upon him; and with which he paid the greatest part of his debts, and henceforward managed his affairs with more prudence and frugality.

After the death of King Edward, and the accession of Queen Mary, Sir John Perrot came into fome trouble, as being a favourer of the reformed religion. One Gaderne, his countryman, accused him of harbouring certain heretics at his house in Wales; particularly Alexander Nowell, and his uncle Perrot, who had been tutor to King Edward in the Greek tongue, with some others. Upon this accufation, Sir John not denying his religion, was committed prisoner to the Fleet; yet having many friends, and being personally well liked by the queen, he obtained his discharge. after, he went to St. Quintin, where he had a command under the Earl of Pembroke, who greatly esteemed him. But all ties of friendship, and

every other relation, were confumed by the flaming zeal for Popery in After their return to this reign. England, the Earl of Pembroke, who was then President of Wales, received a special charge from the queen, to fee that no heretics should remain in Wales. With this order the earl acquainted his friend Sir John Perrot, who was then bedfellow to this nobleman's fon, Sir Edward Herbert, defiring his affiftance in putting it into execution. But this Sir John refused, as being against his conscience; upon which the earl forbad him his house, and there enfued a quarrel, wherein from words they proceeded to blows, but were foon parted. The report of this foon reached the ear of the queen, who was highly offended at it; and on Sir John Perrot's next. coming to court, received him very coldly, and even looked on him with indignation. The business which brought him thither was a fuit which he had at that time to her majesty, for the castle and lordship of Carew, of which he had already received a promise. In this exigence, he was advised by his friends to reconcile himself to the Earl of Pembroke, and by his means to pacify the queen. But his high fpirit would not fuffer him to floop to fuch a fubmission. However, he found fome other friends, who in a short time prevailed upon her majesty to refer his fuit to the privy council.

When the affair came to be heard before the council, Gardiner, Bishop of Winchester, vigorously op-E. 2 posed

to come to this place at that time of the day; and in this manner it is related in the Biographia Britannica. But in the original account of his life, referred to before, the account of this incident is related ambiguously, as if it were a matter of doubt, whether Sir John's being over-heard by the King was the consequence of design, or merely the result of accident:

posed his suit, and sharply censured him for making fuch an application. "Sir John Perrot," faid the prelate, do you come to feek fuits of the queen? I tell you, that " except you alter your heretical " religion, it were more fit that the " queen should bestow faggots, than any living on you." It was taken for granted, on all hands, that the Earl of Pembroke would warmly oppose Perrot's fuit, on account of the late rupture between them. But when it came to this generous nobleman's turn to speak, he expressed himself in the following terms: " My Lords, (said the earl) I must " tell you my opinon of this man, " (meaning Perrot) and of this matet ter: for the man, I think he " would at this time, if he could, es eat my heart with falt; but yet, " notwithstanding his anger against " me, I must give him his due; "I hold him to be a man of good worth, and one who hath deferved of her majesty, in her fervice, " as good a matter as this which " he feeketh; and will no doubt " deserve better, if he reform his " religion; therefore fince the " queen has paffed her gracious " promife, I fee no reason but he " fhould have that which he feeketh." And accordingly the majority of the council affenting to what the earl faid, Sir John Perrot was put into possession of the castle and lordship which he solicited. And on all occasions hereafter, he chearfully and gratefully acknowledged the generous and noble behaviour of the Earl of Pembroke. During the remainder of this reign, he is faid to have chiefly refided in the country, where he was greatly beloved and respected.

On the accession of Queen Eliza-

beth, Sir John Perrot again appeared at court, where he was very graciously received by the queen; and he was one of the knights appointed to support the canopy of state at her coronation. In the first year of this reign, Sir John was also one of the knights pitched on to affift at a tournament at Greenwich, for the entertainment of the French ambassador. And in order to give our readers some idea of these romantic entertainments, which were formerly fo much admired, we shall give fome account of this, in which Sir John Perrot was a principal actor. Tents being fet up, and a banquet provided in Greenwich park, her majesty took the ambassador to the place, where, as she passed through the park-gate, a page prefented a speech, signifying, that there were certain knights come from a far country, who had dedicated their fervices to their feveral mistresses, ladies for beauty, virtue, and other excellencies, as they deemed incomparable; and therefore they vowed to advance their fame through the world, and to try the combat with any fuch as should dare to affirm, that they had any rivals in perfection. And hearing great fame of a lady which kept her court thereabouts, renowned both for her. own excellency, and for the wor-. thiness of many redoubted knights which she kept, they were come thither to try whether any of her. knights would encounter them, in defence of their mistress's honour. To this the queen replied, "Sir "Dwarf, you give me very short " warning, but I hope your knights " shall be answered." And then, looking about, she said to the Lord-Chamberlain, "Shall we be out-" bragged by a Dwarf?" " No, " may

" may it please your Majesty," replied he; " let but a trumpet be founded, and it shall be seen that of you keep men at arms enough to answer any proud challenges." Then was the trumpet founded, and immediately there issued out of the east lake at Greenwich, divers penfioners gallantly armed and mounted. The challengers were, the Earl of Ormond, Lord North, and Sir John Perrot; who prefently prepared themselves to run courses in the field against all comers. mong the defendants was one Mr. Cornwallis, a tall gentleman, and a good man at arms, who fell to the share of Sir John Perrot, who in the encounter chanced to wound him flightly in the thigh; at which he expressing some resentment, provoked Sir John; and as they were both choleric, they challenged each other to run with sharp lances without armour, in the presence of the queen. But her majesty would not fuffer it, but perfuaded them to be reconciled to each other; and fo after some courses performed as ufual, the combat ended. which her majesty invited the French ambassador to the banquet, provided in a pavilion raised for the purpose, in the park. But his excellency declined it, having in the interim received an account of the unfortunate end of his Sovereign, Henry II. King of France, who was about this time killed in a tournament by the Earl of Montgomery; and it is faid that the confideration of fuch accidents as thefe, was a principal cause of these diversions being laid afide.

Some years after, Sir John Perrot was called upon to difplay his courage and activity in more important affairs. In 1572, the queen fent him into Ireland as Lord-Prefident of Munster, a province which then lay almost entirely desolate, having been wasted by the Earl of Desmond and his accomplices. Sir John landed at Waterford on the first of March, and in three days after James Fitz-Morris burnt the town of Kyllmallog, hanged the chief magistrate, and as many more of the inhabitants as he could take, at the high cross in the market-place, and carried away all the plate and wealth of the place. Sir John Perrot, therefore, hasted to Dublin. to take the usual oath before the Lord-Deputy, Sir Henry Sidney, in order that he might speedily and vigorously proceed against the rebels. At his return to Corke, about the 10th of April following, he immediately assembled his troops, and went to Kyllmallog, and having directed the town-walls to be repaired, and the houses to be rebuilt, he proceeded in pursuit of the rebels with so much expedition and spirit, that he brought James Fitz-Morris to fwear fealty to the queen and crown of England, and reduced the whole province of Munfter into as good a ftate of quiet and tranquility as any part of Ireland, in little more than the space of a year. In the course of which he underwent great hardships *, and exposed himself to the utmost dangers, with the most undaunted courage. However, in the mean time, some complaints were fent against E 3

^{* &}quot;The Prefident, Sir John Perrot, followed his good fortunes and his foes with fuch carneftness, that feldom would they come to fight with him, except it were light skirmishes, and that upon great advantage. Which he perceived

him to England, that he had abused his power by arbitrary and unwarrantable proceedings. He no sooner received information of this, than he determined to cross the water, in order to clear himself in person from the charge preferred against him; and accordingly, without waiting for leave, having taken proper measures for the government of Munster in his absence, and made up his accounts, he departed from thence about the beginning of March. 1673.

On his arrival in England, he was admitted to an audience of the queen; though it was expected that he would have incurred her displeasure, by leaving his government without permission. But when he had related to her majesty the particulars of his fervice, the state of the country, and the cause of his coming over, and answered such objections as had been made against him, her majesty testified her ap-

probation of his proceedings, and expressed a desire that he should return to his government. But Sir John proposing several new regulations to be made, which were not approved by the council, he folicited for permission to retire into the country for the recovery of his health; and obtaining it, returned to his own house in Wales,

He had been there but a few years, when the court receiving intelligence that James Fitz-Morris, fince his fubmission, had been in Spain, and obtained a promise of ships and men to invade Ireland, and especially the province of Munster, Sir John was sent for, to take the command of a squadron to be sent to sea against him. And all things being got ready, he set out from London*, and repaired to the sleet. The names of the ships and pinnaces under his command, were, the Benenge, Sir John Perrot, admiral;

ing, pursued them night and day in person, even in the winter, and lay out many nights in the field, both in frost and snow, enduring such hardness, that I have heard two of his followers, yet living, report that of him, as were they not men of good credit, it would hardly be believed."—Life of Perrot, as before, P. 58. It appears that the famous rebel Fitz-Morris challenged Sir John Perrot to fight him in single combat, to which the latter readily consented; but when the time appointed came, Fitz-Morris declined the engagement. Vid. Life, P. 61—63.

Life, P. 61---63. * " Being royally furnished in all respects, he departed from London about 66 August, and going from thence by barge, he had with him divers noblemen " and gentlemen, who did accompany him into the ships. As they lay in their " barge against Greenwich, where the Queen kept her court, Sir John Perrot " fent one of his gentlemen ashore, with a diamond in a token unto Mrs. Blanch " Parry, willing him to tell her, that a diamond coming unlooked for, did al-" ways bring good luck with it. Which the Queen hearing of, fent Sir John "Perrot a fair jewel hanged by a white cypress; signifying withal, that as long as he wore that for her sake, she did believe, with God's help, he should have " no harm. Which meffage and jewel Sir John Perrox received joyfully; and "he returned answer unto the Queen, That he would wear that for his Sovereign's sake, and doubted not, with God's favour, to return her ships in safe-"ty, and either to bring the Spaniards (if they came in his way) as prisoners, or else to fink them in the seas. So as Sir John Perrot passed by in his barge, " the Queen looking out at the window, shaked her fan, and put out her hand " towards him, who making a low obeifance, put the scarf and jewel about his "neck, which the Queen fent him."- Life, P. 108, 109.

vice-admiral; the Forefight, Nicholas Gorge, rear-admiral; the Catys, Captain York; the Swiftfure, Captain Pierce; and the Seabright, Captain Ward. With this squadron, Sir John set out from Gillingham to the Downs, and thence passing by Falmouth and Plymouth, arrived at Ireland, and continued cruizing upon the coast about Waterford, till the feafon was past for making any attempt upon the country; when receiving intelligence that the Spaniards had dropped their enterprize for that year, he returned again with his fleet fafe to England. It appears, however, that in chacing a pirate, whom he took on his return, he very narrowly escaped shipwreck *.

He now repaired again to his feat in Wales; but he was still careful to keep up his interest at court. And with this view, on proper occafions, he gave his perfonal attendance there; and also kept up a correspondence with Sir Francis Walsingham, and some others in the ministry, who are faid to have often asked his advice upon public affairs. And in 1582, being confulted concerning the best means for quelling the Earl of Defmond's rebellion in Ireland, and fettling that kingdom in a more orderly state of government, he drew up a paper containing his fentiments upon the subject; which was so well approved, that, in 1583, he received a commission, appointing him Lord-Deputy of Ireland; and accordingly embarking with the Earl of Ormond at Milford Haven, he arrived at Dublin in the beginning of that year.

* Life, P. 114, 117, 116.

the Dreadnought, William Gorge, The Defmond family was now become extinct by the death of the fifteenth earl of that title; but notwithstanding this, yet the state of Ireland was still far from being fettled in any orderly course of subjection and government. On the contrary, in many parts of the kingdom, there was little appearance of any thing but anarchy, confusion, and lawless riot. Our new Lord-Deputy, foon after his entrance upon his office, refolved to make a progress throughout the whole country, and to vifit each province in person, in order to settle the better disposed in a good course of peace and tranquility, by hearing complaints and redressing grievances, and establishing a regular government to reduce the rebellious and feditious by force; and it appears that he made a great change in the state of affairs in a short time. But whilst he was employed in this important business, he did not always fufficiently attend to the rules of prudence and difcretion. He was naturally of a very choleric and haughty spirit, and had imbibed very high notions of government, and was of opinion that it ought to be administred with feverity. In acting upon these principles, while he conquered the rebel Lords, and reduced them to fubmission, he is faid to have given great offence to those who were well affected to the government, by acting in too arbitrary a manner. Hence complaints were carried to England, which produced feveral checks for the past, and restraints for the future, fent to him by the council; and thefe not being fufficiently regarded, the murmurs in Ireland E 4

Ireland grew louder, and the reprehenfions from England stronger. This greatly difgusted him, so that he frequently folicited to be recalled, but without effect. However, notwithstanding the complaints that were made against him, and the re-bukes that he received from England, he still continued to act uponthe same principles as before, relying upon the merit of his fervices, and the uprightness of his intentions. But the queen being much displeased with his conduct, he was at length recalled from his government in 1588. Thus difgraced at court, he failed from Dublin to his caille of Carew in Pembrokeshire, where he arrived with as splendid a retinue as ever attended any Lord-Deputy out of Ireland. But he did not long enjoy the fweets of his retirement; for a charge of high treafon being preferred against him, he was taken into custody, and after being some time confined in the Lord-Treasurer's house, he was committed prisoner to the Tower of London; from whence, on the 27th of April, 1592, he was brought to his trial before a special commisfion in Westminster-Hall. grounds of the indicament against him were; " for having treated the " person and character of the queen " contumeliously; for relieving Po-" pish Priests; for keeping a secret " correspondence with the Duke of " Parma, and Elizabeth's ene-" mies; and for fostering the civil

" commotions in Ireland." He

made a noble defence, but acknow-... ledged his indifcretion in speaking difrespectfully of the Queen: for indeed nothing was fairly and judicially proved against him, but some passionate disrespectful words against Elizabeth's perfon *, which having been reported to her, had greatly exasperated her against him. But Popham, the attorney-general, who knew that Elizabeth made it a point that he should be convicted, produced a fet of scandalous, and some of them infamous, witnesses, to prove the charge, and supported it with all his venal eloquence +. And at last, after a long trial, the jury brought him in guilty; and he received fentence of death on the 16th of June following. It is faid, that after he was condemned, Sir John Perrot exclaimed, "God's " death, will the queen fuffer HER " BROTHER to be offered up as a " facrifice to the envy of my frisk-" ing adverfaries?" It was thought that Elizabeth intended to have pardoned him, but he died in September following, a prisoner in the Tower.

Sir John Perrot was a man of great courage, and strong natural parts, though not much enlightened by literature. He was in his person remarkably tall, well made, and of great strength of body. He had a majestic air, a piercing eye, and a commanding aspect. He was of a noble and generous spirit, but proud, choleric, and imprudent, and

[&]quot;His mortal words were those in the Great Chamber of Dublin, when the Queen sent him some respectful letters after her expostulatory ones, with an in"timation of the Spaniard's design: Lo now (saith he) she is ready to p--ss her"felf, for fear of the Spaniard; I am ogain one of her white boys."---Lloyd's
State-Worthies, Vol. I. P. 397. See also Biograph. Brit. where it is observed,
that several of his speeches of this kind were told by his Secretary Williams,
who betrayed him.

[†] Vid. Guthrie's Hist. of England, Vol. III. P. 499.

and too much addicted to licentious amours. He was married to a fifter of the earl of Effex, by whom he had a fon, Sir Thomas Perrot, to whom the queen reftored his father's effate.

Some account of Sir Robert Dudley, fon to the Earl of Leicester; from the British Biography.

SIR Robert Dudley was fon to the Earl of Leicester, by the Lady Douglas Sheffield, and born at Sheen, in Surry, in the year 1573. His birth was carefully concealed, in order to prevent the queen's knowledge of the earl's engage-ments with his mother. He was, however, confidered and treated as his lawful fon, till the earl's marriage with the counters dowager of Effex; and then he was declared to be only his natural iffue by lady Douglas. Out of her hands the earl was very defirous to get him, in order to put him under the care of Sir Edward Horsey, governor of the Isle of Wight; which some have imagined to have been done, not with any view to the child's disadvantage, whom he is said to have always loved tenderly, but with a view of bringing him upon the stage at some proper time, as his natural fon by another lady. He was not, however, able to get him for fome time; but at last effecting it, he fent him to school at Offington, in Suffex, in 1583, where he was under the care of one Owen Jones, to whom, upon a certain occasion, the earl is faid to have expressed himself to this pur-Owen, thou knowest that "Robin my boy is my lawful fon; ff and as I do, and have charged

" thee, to keep it fecret, fo I charge thee not to forget it; and " therefore fee thou be careful of " him." After remaining four years in this private school, he was removed, in 1587, to the university of Oxford, and there entered of Christ-Church, by the stile of Co-MITIS FILIUS, i. e. an earl's fon. In about a year after he came to the university, and when he was about the age of fifteen, his father died, leaving him, after the decease of his uncle Ambrose, Earl of Warwick, his noble caftle of Kenelworth, and the lordships of Denbigh and Chirk, and the bulk of his estate, which, before he was of age, he in a good measure enjoyed, notwithstanding the enmity borne him by the countess dowager of Leicester. He was at this time looked upon as one of the finest gentlemen in England: in his perfon tall, and well-shaped, having a fresh and fine complexion, but

red-haired; learned beyond his age,

more especially in the mathematics;

and of parts equal, if not superior,

to any of his family. Add to all

this, that he was very expert in his

exercifes, and particularly in riding the great horse, in which he

was allowed to excel any man of

his time.

His genius prompting him to great exploits, and having a particular turn to navigation and difcoveries, he projected a voyage into the South-feas, in hopes of acquiring the fame fame thereby, as his friend the famous Thomas Cavendish, whose fifter he had married. But after he had taken much pains, and spent a great deal of money, in preparations for this design, the government would not suffer him to proceed, looking upon it as a dangerous

dangerous voyage, in which they thought it not fit to hazard the lives of the queen's subjects. However, notwithstanding this disappointment, he fitted out a small fquadron for the river Oroonoque, and the coasts adjacent, of which he took the command in person. He failed from Southampton in November, 1594, and returned to St. Ives, in Cornwall, about the end of May, 1595, having in the course of his voyage taken and destroyed nine fail of Spanish ships, one of which was a man of war of fix hundred tons. An account of this voyage, written by himself, is published in Hakluyt's collection. In the following year he fitted out two ships, and two pinnaces, for the South-seas, under Captain Benjamin Wood, at his own expence; and attending the earl of Essex, and the lord high admiral, in their expedition against the Spaniards, he received the honour of knighthood, for his gallant behaviour at the taking of Cadiz. In the latter end of queen Elizabeth's reign, having buried his first wife, he married Alice, the daughter of Sir Thomas Leigh. He then began to entertain hopes of reviving the honours of his family: and in the beginning of the reign of king James I. he commenced a fuit in the archbishop of Canterbury's Court of Audience, with a view of proving the legitimacy of his birth; and the plague being then at London, he obtained a commission, directed to Dr. Zachary Babington, chancellor of the diocese of Litchfield, to examine witnesses on that head, which was accordingly done. But no fooner had Lettice, countefs of Leicester, notice of these proceedings, than she procured an in-

formation to be filed, by Sir Edward Coke, the king's attorney-general, in the star-chamber, against Sir Robert Dudley, Sir Thomas Leigh, Dr. Babington, and others, for a conspiracy; and, upon the petition of Lord Sidney, an order issued out of that court for bringing in all the depositions that had been taken by virtue of the archbishop's commission, sealing them up, and depositing them in the council cheft. In order, however, to keep up some appearance of impartiality, Sir Robert Dudley was allowed to examine witnesses, as to the proof of his legitimacy, in that court; which, when he had done in as full a manner as in fuch a cafe could be expected, a fudden order was issued for stopping all proceedings, and locking up the examinations, of which no copies were to be taken, but by the king's licence.

This unfair proceeding was fuch a blow to the hopes of Sir Robert Dudley, and gave him fuch difguft, that obtaining a licence to travel for three years, which was eafily granted him, he quitted the kingdom; leaving behind him Alice Dudley his wife, and four daughters. He did not, however, go abroad without a female; for, as he inherited some of the vices, as well as most of the great qualities of his ancestors, he prevailed upon a young lady, at that time esteemed one of the finest women in England, to bear him company in the habit of a page. The name of this lady was Elizabeth Southwell, and she was daughter to Sir Robert Southwell, of Woodrifing, in Norfolk. He was afterwards married to her, by virtue of a dispensation from the Pope.

Though Sir Robert Dudley had.

a licence to travel for three years, yet, under a pretence of his affuming, in foreign countries, the title of Earl of Warwick, he was in a short time commanded to return home; and, on his refusing to obey, his whole estate was seized during his life, by the crown. A few years after, his right to the magnificent castle of Kenelworth, with the manors adjoining, were purchased, in confequence of an agreement with him, by Henry, prince of Wales, for 14,500l. of which, though much less than the value, but 3000l. was ever paid, and that to a merchant, who foon after failed.

The place which Sir Robert Dudley chose for his retreat abroad, was Florence; where he was very kindly received by Cosmo II. great duke of Tuscany: and, in process of time, he was made Great Chamberlain to his ferene highness's confort, the archdutchess Magdalen, of Austria, fister to the emperor Ferdinand II. with whom he was a great favourite. He discovered in that court, those great abilities for which he had been admired in England. He contrived several methods of improving shipping, introduced new manufactures, excited the merchants to extend their foreign commerce; and, by other fervices of still greater importance, obtained fo high a reputation, that, at the defire of his mistress, the arch-dutchefs, the emperor, by letters patent dated at Vienna, March the 9th, 1620, created him a duke of the Holy Roman Empire. Upon this, he affumed his grandfather's title of Northumberland; and, ten years after, got himself enrolled, by Pope Urban VIII, among the Roman nobility. Under the reign of the grand duke Ferdinand II. he became still more famous, on account of that great project which he formed, of draining a vast tract of morafs, between Pifa and the sea: for by this he raised Livorno, or Leghorn, from a mean and pitiful place, into a large and beautiful town: and having engaged his ferene highness to declare it a free port, he, by his influence, drew many English merchants to settle, and fet up houses there. In confideration of his services, and for the support of his dignity, the grand duke bestowed upon him an handfome pension; which, however, went but a little way in his expences: for he affected magnificence in all things; built a noble palace for himself and his family at Florence, and much adorned the castle of Carbello, three miles from that capital, which the grand duke gave him for a country retreat, and where he died in September, 1639.

Sir Robert Dudley was not only admired by princes, but also by the learned; among whom he held a very high rank, as well on account of his skill in philosophy, chemistry, and physic, as his perfect acquaintance with all the branches of the mathematics, and the means of applying them for the fervice and benefit of mankind. He wrote feveral things. His principal work is, " Del Arcano, del Mare, &c." Firenze, 1630, 1646, in 2 vol. fo!. This work, which is very scarce, is full of schemes, charts, plans, and other marks of its author's mathematical learning; but is chiefly valuable for the projects contained therein, for the improvement of navigation, and the extension of commerce. Mr. Wood tells us, that he wrote also a medical treatise, intitled " Catholicon," which was well effeemed by the faculty.

There

There is also another piece written by him, the title of which, as it flands in Rushworth, runs thus, A Proposition for his Majesty's " fervice, to bridle the imperti-" neney of Parliaments. Afterwards questioned in the Star-66 Chamber *." This production will ever reflect the greatest dishonour upon Sir Robert Dudley; and fhews that, like his father, he fometimes employed his talents to very pernicious purpofes. After he had lived fome time in exile, he still cherished hopes of returning to England; to facilitate which, and to ingratiate himfelf with king James, he was mean and wicked enough to draw up a scheme for enflaving his country. This piece, falling into the hands of some perfons of distinction, and being some years after by them made public, was confidered as a thing of so mischievous a nature, as to occasion their imprisonment: but they were released upon the discovery of the true author. Sir Robert Dudley was also the author of a famous powder, called "Pulvis comitis Warwicen-" fis, or, the earl of Warwick's pow-" der;" he being known in Italy by the title of earl of Warwick, before the emperor created him a duke.

Sir Robert Dudley, as he was filed in England, or the duke of Northumberland, as he was filed abroad, had by the daughter of Sir Robert Southwell, (who went into Italy with him, in the habit of a page, and to whom he was afterwards married, as we before obferved) a fon, named Charles, who assumed the title of earl of Warwick, and four daughters, who

were all honourably married in Italy, viz. the eldest to the prince of Piombino, the second to the marquis of Clivola, the third to the duke of Castilion del Lago, and the fourth to the count of Carpegna, brother to the cardinal of that name.

As to this lady of Sir Robert Dudley, though her following him into Italy, when he had another wife, justly exposed her to much censure, yet her conduct was, in other respects, without exception; and as fhe lived in honour and esteem, and had all the respect paid her, that her title of dutchefs could command, so it is faid that Sir Robert loved her with great tenderness to the last, and caused a noble monument to be erected to her memory, in the church of St. Pancratius, in Florence, where her body lies buried, and he by her.

Sir Robert Dudley's other wife, who was left by him in England, Lady Alice Dudley, is faid to have been a woman of great parts, and of distinguished piety. King Charles I. granted to her, by letters patent under the Great Seal, the rank, stile, and title of a dutchess, during the term of her natural life: and also the same privileges and precedences to her daughters, as if they had been dukes daughters; and in the preamble to the letters patent for this purpose, the legitimacy of Sir Robert Dudley is afferted, and the injustice that had been done him is acknowledged. Dutchess Dudley also, by the affiftance of her friends, fecured to herself and her daughters the remains of that great fortune which devolved to Sir Robert Dud-

* This piece is inferted at length in Rushworth's Collections, Appendix, p: 12-17.

ley, in confequence of the earl of Leicester's will, and other conveyances. She lived many years after the title of dutchess was conferred on her, and distinguished herself by her uncommon charity and benevolence. She died in 1668, in the ninetieth year of her age. One of her daughters, by Sir Robert Dudley, was married to Sir Richard Leveson, another to Sir Gilbert Kniveton, and another to Robert Holborn, Esq; afterwards Sir Robert Holborn, follicitor-general to king Charles I.

Some account of Sir Francis Vere; from the Jame.

RANCIS VERE was fecond fon to Geoffroy Vere, who was third Son of John, Earl of Oxford. He was born in the year 1554. He applied himself early to the art of war, and became one of the most famous generals of his time. first entrance on a military life, was when he went among the forces fent by queen Elizabeth, under the command of the earl of Leicester. to the affiftance of the States of Holland, where he gave proofs of a warlike genius, and undaunted In 1588, he was part courage. of the English garrison which gallantly defended Bergen-op-zoom, against the prince of Parma; and that true courage might not want its due reward or diffinction, (fays Cambden) the lord Wil-" loughby, who was general of the " English after Leicester's departure, conferred the honour of " knighthood on Sir Francis Vere,

" from this fiege."
In 1589, the town of Bergh, up-

whose great fame commenced

on the Rhine, being belieged by the marquis of Warrenbon, and distressed for want of provisions. Sir Francis Vere was fent by the States-General, to count Meurs, governor of Guelderland, with nine companies of English, to concert with him measures for the relief of that town. At his coming to Arnheim. the governor being greatly hurt by the blowing up of gun-powder, and the States of the province representing to Sir Francis the importance of the place, and the great extremity it was reduced to; at their earnest desire he hastened to its relief, with feven companies of Dutch foot, and twelve troops of horfe. With these, and carriages laden with provisions, he marched towards Bergh, through a heathy and open country, with fuch diligence, that having furprized the enemy, who lay dispersed in their forts about the town, in full view of them, he put provisions therein, and returned without loss. After fome days refreshment, the States, who had received advice how matters passed at Bergh, ordered a fresh supply of provisions to be put therein, under the command of Sir Francis. When he came within two English miles of the town, the way they were to take being very narrow, and leading by the castle of Loo, the enemy from the castle galled his men and horses in their pasfage with fuch resolution, that Sir Francis perceived they were not the ordinary garrison. Yet, by his military skill and valour, he beat them back to their castle, and was no further interrupted by them in his passage through the narrow way: but before he could well form his men on an adjoining plain, he was again attacked by a fresh body of

the enemy. At the first encounter, his horse was killed under him by a pike, and falling upon him, he could not presently rise, but lay between the two armies, receiving a hurt in his leg, and feveral thrusts with pikes, through his clothes, till the enemy was forced to give way. And though his forces confifted only of the two English troops under his command, and did not exceed four hundred men, yet by his valour and conduct, the enemy was defeated, and lost about eight hundred men. And he afterwards threw in provifions into Bergh, and exchanged the garrison, though count Mansfeldt was near, with thirteen or fourteen thousand foot, and twelve hundred horse.

In 1590, he bravely relieved the castle of Litkenhooven, in the fort of Recklinchusen, within the diocese of Cologn, in which the states had a garrifon that was befreged; and he also recovered the town of Burick, in Cleves, and a little fort on that fide of the Rhine, which had been furprized by the enemy. In 1591, he took, by stratagem, a fort near Zutphen, in order to facilitate the fiege of that town. The manner in which he made himself master of this place, is thus related by himself in his Commentaries. I chose (fays he) a good number " of lufty and hardy young fol-" diers, the most of which I apparelled like the country-women of those parts, the rest like the " men; gave to some baskets, to 66 others packs, and fuch burthens " as the people usually carry to " the market, with pistols, and " fhort fwords, and daggers, under " their garments, willing them, by " two or three in a company, by " break of day, to be at the ferry

" of Zutphen, which is just against " the fort, as if they stayed for the " passage-boat of the town; and " bad them to fit and rest them-" felves in the mean time, as near " the gate of the fort as they could " for avoiding suspicion, and to " feize upon the same as soon as " it was opened. Which took fo " good effect, that they possessed " the entry of the fort, and held " the fame till an officer, with two " hundred foldiers, (who was laid " in a covert not far off) came to " their feconds, and fo became fully " master of the place. By which " means the fiege of the town after-" wards proved the shorter."

Sir Francis Vere also assisted count Maurice at the siege of Deventer, being the chief instrument in the taking that place. And it was also chiefly through his conduct and valour, that the duke of Parma received a fignal defeat before Knodfenburgh fort, near Nimeguen; which obliged that prince to retire from thence, with more dishonour than in any action that he had undertaken in those wars. In 1506, he was recalled out of the Low Countries, and employed in the expedition against Cadiz, with the title of lord marshal; and in this enterprize he displayed his usual courage, and military skill.

He returned again to Holland the following year, and had a principal share in the action near Turnhout, where near three thousand of the enemy were killed and taken. Some time after he was appointed Governor of the Brill, one of the cautionary towns in the Low Countries. He was permitted at the same time to keep the command of the English troops in the service of the States. In 1599, when a new Spanish inva-

fion was apprehended, the Queen conflituted him Lord Marshal; and being fent for over in all possible haste, he embarked on the 22d of August at the Brill, and came to London the next day, where he staid till all apprehensions of an invasion were over. He then returned back to the Hague, and had there an audience of the States.

In the beginning of the year 1600, there arose great disputes between him and the States, about some accounts, and particularly because they had lessened, in his absence; the companies he commanded for them, from an hundred and fifty to an hundred and thirteen men. However, he still continued in his command; and about this time the forces of the States-General laid fiege to Newport. But Albert, Archduke of Austria, who commanded the Spanish forces, having recovered many forts which had been furprized by the troops in the Dutch fervice, and cut off eight hundred Scots who were posted as a rearguard to intercept his passage, came to the relief of Newport, and a battle became unavoidable. my of the States was commanded by Prince Maurice, and the chief officers under him were Sir Francis Vere, who was lieutenant-general of the foot, and Count Lodovick of Naffau, general of the horse. Vere, who commanded in the front, having occasion to repass a ford, before he could come to a convenient place of action, ordered his men not to flrip themselves; for which he asfigned this reason, "that they would " in a few hours either have better " clothes, or stand in need of none." A council of war being then held, Prince Maurice was entirely directed by Vere, who was of opinion,

that the army of the States ought to wait for the enemy. The dispositions for the battle were then made by Vere with admirable judgment: and the English, who were not above one thousand five hundred. were posted upon the eminences of the downs, and supported by a body of Friezland musqueteers. The Archduke was all this time advancing; but his horse, which had left his foot behind, were beat back by Vere. The foot, however, coming up, a bloody conflict enfued, in which Vere was wounded, receiving one shot through his leg, and another through his thigh, whilft his horse was killed under him, and himself almost taken prisoner: but Prince Maurice advancing with the main body, the battle became general; and the Spaniards, by the courage and good conduct of Vere, re-

ceived a total defeat.

The last and most signal military exploit performed by Sir Francis Vere, was his gallant defence of Oftend, which was befreged by the Archduke Albert, and a very numerous army. Vere had been appointed general of all the army of the states in and about Ostend; and accordingly he entered that city on the 11th of July, 1601, in order to undertake the defence of it, with eight companies of English, and found in the place thirty companies of Netherlanders, making about fixteen or feventeen hundred men. With this handful, for no less than four thousand were necesfary for a proper defence, he resolutely defended the place for a long time against the Spanish army, which was computed at twelve thoufand men. During the course of the fiege, he received a reinforcement of twelve companies of Eng-

lish, and cut out a new harbour at Oftend, which proved of great fervice to him. On the 14th of Auguft, he was wounded in the head by the blowing up of a cannon, and that obliged him to remove into Zealand till the 19th of September, when he returned to Oftend, and found that in his absence some English troops had arrived there to reinforce the garrison. On the 4th of December, in the night, the Spaniards fiercely affaulted the English trenches, so that Sir Francis Vere was called up without having time to put on his clothes: but by his conduct and valour the enemy were repulfed, and loft about 500 men. In the mean time, the place began to be much distressed; and Sir Francis having advice that the befiegers intended a general affault, in order to put them off, and gain time, he artfully contrived to enter into treaty with them for the furrender of the place. But receiving part of the supplies which he had long expected from the states, with an affurance of more at hand, he broke off the treaty. The Archduke being thunder-struck and enraged at this disappointment, took a resolution to revenge himself of those within the town, saying, He would put them all to the fword; and his officers and foldiers likewife took an oath, that if they entered, they would spare neither man, woman, nor child. They made a general affault on the 7th of January, 1602; but Sir Francis Vere, with no more than about twelve hundred fighting men, kept off the enemy's army of ten thousand men; which threw that day above two and twenty hundred shot on the town; and had before thrown upon it no less than one hundred and fixty-three thousand two hundred cannon shot;

leaving scarcely a whole house standing. Our heroic general having acquired immortal honour in the defence of Ostend for eight months together, resigned his government on the 7th of March, 1602, to Frederic Dorp, who had been appointed by the states to succeed him; and he and his brother, Sir Horatio Vere, returned into Holland.

Soon after his discharge from the government of Oftend, Sir Francis, at the request of the states, came into England to defire fresh succours, which went over in May, and were to be under his command. He accordingly returned again to Holland; and upon receiving the news of Queen Elizabeth's death, he proclaimed King James I. at the Brill, in April, 1603. A few months after he came to England: and his government of the Brill expiring, or being fuperfeded at Elizabeth's decease, it was renewed to him by King James. But under this pacific monarch, gentlemen of the fword became less considered than under his spirited predecessor; and they became almost useless to him upon his making peace with Spain in 1604. However, Sir Francis Vere could not live inglorious: but after an honourable repose of about four years, he died quietly at home on the 28th of August, 1608, in the fifty-fourth year of his age, and was buried in St. John the Evangelist's chapel in Westminster-Abbey, where a curious monument was erected to his memory by his lady. Besides his other preferments, he was governor of Portsmouth. He had three fons, and two daughters; but they all died before him.

Sir Francis Vere was a general of the greatest bravery, and of uncommon military abilities. Queen Elizabeth had an high opinion of

him

him, and always treated him with respect. She used to say, that she is held him to be the worthiest capital tain of her time." He was a man of letters, as well as an accomplished general. He wrote himself an account of his principal military transactions, under the title of Commentaries, which were published in Folio at Cambridge, in 1657. Vid. Biograph. Brit. Guthrie's Hist. of Eng. Vol. III. P. 552; and the Commentaries of Sir Francis Vere.

Character of Sir John Hawkins, the famous Navigator; from the same.

CIR John Hawkins was one of the most eminent; able, and experienced feamen of his time. He had naturally ftrong parts, (fays Dr. Campbell) which he improved by a conftant application. He was apt in council to differ from other men's opinions, and yet was referved in discovering his own: He was flow, jealous, and fomewhat irrefolute; yet in action he was merciful, apt to forgive, and a strict observer of his word. As he had paffed a great part of his life at fea, he had too great a diflike of land foldiers. When occasion required it, he could dissemble, though he was naturally of a blunt disposition. One of his greatest faults was the love of money, in which he exceeded all just bounds. But notwithstanding his imperfections, he was always effectmed one of the ablest of his profession; of which these are no inconsiderable proofs, that he was a noted commander at Tea forty-eight years, and treasurer of the Navy two-and-twenty. He had great perfonal courage, and presence of mind; and is said to

have been very affable to his feamen, and much beloved by them. He and his brother William, were owners at once of thirty fail of good ships; and it was generally owned, that Sir John Hawkins was the author of more useful inventions, and introduced into the Navy better regulations, than any officer who had commanded therein before his time *

SirJohn Hawkins was twice elected burgefs for the town of Plymouth; and he was also a third time in parliament for some other borough. Few particulars are preserved relative to his private and family affairs; but it appears that he had two wives †; and by the first ason.

Character of Sir Francis Drake; from the same.

OIR Francis Drake was one of the most able, active, and courageous feamen, that England ever produced. He was of a low stature, but well fet; had a broad open cheft, a very round head, his hair of a fine brown, his beard full and comely, his eyes large and clear. of a fair complexion, with a fresh, chearful, and very engaging countenance. As navigation had been his whole study, so he understood it thoroughly, and was a perfect master in every branch, especially in aftronomy, and in the application thereof to the nautic art. His enemies alledged, that he was of an ostentatious temper, self-sufficient, and an immoderate speaker. But it is acknowledged, that he spoke with much gracefulness, propriety, and eloquence: and it appears that he always encouraged and preferred

^{*} Vid. Lives of the Admirals, vol. I. p. 463, 464. † Vid. Biograph. Brit. Vol. XI.

merit, wherefoever he found it, and was affable and easy of access. He was prone to anger, and too fond of flattery; but then he was a steady friend, and extremely liberal and generous. And his voyage round the world will ever remain an incontestible proof of his courage, fortitude, public spirit, and capacity *. He had the felicity to be always a favourite with queen Elizabeth; and she gave a remarkable proof of it in regard to a quarrel he had with his countryman, Sir Bernard Drake, whose arms Sir Francis had affumed; which fo provoked the other, who was a fearman likewife, that he gave him a box on the ear. Upon this the queen took up the quarrel, and gave Sir Francis a new coat, which is thus emblazoned: Sable a fels wavy, between two pole-stars argent; and for his creft, a ship on a globe under ruff, held by a cable with a hand out of the clouds; over it this motto, "auxilio divino;" underneath, "fic parvis, magna;" in the rigging whereof is hung up by the heels, a wivern gull, which was the arms of Sir Bernard Drake. Her majesty's kindness however, did not extend beyond the grave ; for the fuffered his brother, Thomas Drake, whom he made his heir, to be profecuted for a pretended debt to the crown, which much diminished the advantages he would otherwise have reaped from his brother's fuccession +. brother of his accompanied him in his last expedition, as his brother John, and his brother Joseph, had done in his first voyages to the West-Indies, where they both died: and both Thomas and John left children behind them, whereas Sir

Francis, and nine of his other brethren, died without. As for the land effate which he purchased, and which was very confiderable, it came to his nephew and godfon, Francis Drake, fon to his brother Thomas, who was created a baronet in the reign of king James the first, and in the beginning of the next reign, was returned one of the knights of the Shire for the county of Devon.

Though Sir Francis Drake died without issue, he did not die a batchelor, as some writers have afferted; for he left behind him a widow, Elizabeth, daughter a d fole heirefs of Sir George Sydenham, of Combe Sydenham, in the county of Devon, knight, who, afterwards married William Courtenay, Esq; of Powderham-castle, in the fame county. Our brave admiral was elected burgels for the town of Bossiney, or Tintagal, in the county of Cornwall, in the parliament held the twenty-feventh of queen Elizabeth; and for the town of Plymouth, in Devonshire, in the thirty-fifth of that reign 1.

Some account of the Countess Dowager of Shrewsbury; from the same.

CHE was the daughter of John Hardwick, of Hardwick, in the county of Derby, by Elizabeth, the daughter of Thomas Leeke, of Loafland, in the fame county, Efq; and in process of time, became coheiress of his fortune, by the death of her brother without children. When she was scarce fourteen, she was married to Robert Barley, of Barley, in the county of Derby, Efq; a young gentleman of a large

^{*} Vid. Campbell, p. 478, 479. and Lediard, p. 312, 313. 4 Campbell, p. 481, 482.

¹ Biograph. Brit.

effate, all which he fettled abfolutely upon her, on their marriage: and by his death without iffue, she came into possession of it on the fecond of February, 1532. After remaining a widow about twelve years. the married Mr. Cavendish, by whom the had Henry Cavendish, Esq: who was possessed of considerable estates in Derbyshire, but settled at Tutbury in Staffordshire: William Cavendish, the first earl of Devonshire: and Charles Cavendish, who settled at Walbeck, in Nottinghamshire, father of William, Baron Ogle, and duke of Newcastle; and three daughters. Frances, who married Sir Henry Pierpoint, of Holm Pierpoint, in the county of Nottingham, from whom the dukes of Kingston are defcended; Elizabeth, who espoused Charles Stuart, Earl of Lenox, (younger brother to the father of king James I.) and Mary, afterwards countels of Shrewsbury. After the death of Sir William Cavendish, this prudent lady confenting to become a third time a wife, married Sir William St. Lowe, captain of the guard to queen Elizabeth, who had a large estate in Gloucestershire; which, in articles of marriage, she took care should be settled on her, and her own heirs, in default of iffue: and accordingly, having no child by him, she lived to enjoy his whole estate, excluding as well his brothers who were heirs male, as his own, female issue by a former lady. In this third widowhood, the charms of her wit and person captivated the then greatest subject of the realm, George Talbot, earl of Shrewfbury, whom she brought to terms of the greatest honour and advantage to herself and children; for he not only yielded to a confiderable jointure, but to an union of

families, by taking Mary, her youngest daughter, to be the wife of Gilbert, his fecond fon, and afterwards his heir; and giving the lady Grace, his youngest daughter, to Henry her eldest son. On Nov. 18, 1500, she was a fourth time left. and to death continued, a widow. "A change of conditions, (fays " bishop Kennet) that, perhaps, " never fell to any one woman, to " be four times a creditable and " happy wife; to rife, by every " husband, into greater wealth and " higher honours; to have an una-" nimous iffue by one husband only: "to have all those children live; " and all, by her advice, be ho-" nourably and creditably disposed " of in her life-time; and, after all, " to live seventeen years a widow, "in absolute power and plenty." She died on the 13th of Feb. 1607. when the was upwards of go years of age; though it is faid, by mistake, in the inscription on her tomb-stone, in Allhallows church, Derby, where the was buried, that the died in her 87th year.

This counters dowager of Shrewfbury built three of the most elegant feats, that were ever raifed by one hand within the fame county, Chatfworth, Hardwick, and Oldcotes. It must not be forgotten, that this lady had the honour to be keeper of Mary, queen of Scots, who was committed prisoner to George, Earl of Shrewfbury, seventeen years; and it was suspected by some persons, that there was too much familiarity between the earl of Shrewsbury, and the captive queen; and the countess herself is said to have been somewhat jealous, on account of the intimacy there appeared between them.-Vid. Biograph. Brit. and New and Gen. Biog. Dict. 8vo.

NATURAL HISTORY.

An Account of the very tall Men, feen near the Streights of Magellan, in the year 1764, by the equipage of the Dolphin man of war, under the command of the Hon. commodore Byron; in a letter from Mr. Charles Clarke, officer on board the faid ship, to M. Maty, M. D. Sec. R. S.

Weathersfield, Nov. 3, 1766.

SIR,

Read Feb. 12, I Had the pleafure of feeing my friend Mr. M—— a few days ago, when he made me acquainted with your defire of a particular account of the Patagonians, which I most readily undertake to give, as it will make me extremely happy if I can render it in the least amusing or agreeable to you. I wish I could embellish it with language more worthy your perusal; however, I will give it the embellishment of truth, and rely on your goodness to excuse a tar's dialect.

We had not got above ten or twelve leagues into the streights of Magellan, from the Atlantic ocean, before we saw several people, some on horseback and some on foot, upon the north shore (continent), and with the help of our glasses could perceive them beckoning to us to come on shore, and at the same time observed to each other that they seemed of an extraordinary size; however we continued to stand on, and should have passed

without taking the least farther notice of them, could we have proceeded; but our breeze dying away, and the tide making against us, we were obliged to anchor, when the commodore ordered his boat of twelve oars, and another of fix, to be hoisted out, manned and armed. In the first went the commodore. in the other Mr. Cummings our first lieutenant and myself. At our first leaving the ship, their number did not exceed forty; but, as we approached the shore, we perceived them pouring down from all quarters, fome galloping, others running, all making use of their utmost expedition. They collected themselves in a body, just at the place we Reered for. When we had got within twelve or fourteen yards of the beach, we found it a difagreeable flat shore, with very large stones, which we apprehended would injure the boats; fo looked at two or three different places, to find the most convenient for landing. They supposed we deferred coming on shore, through apprehensions of danger from them, upon which they all threw open the skins which were over their shoulders, which was the only cloathing they had, and confequently the only thing they could fecret any kind of arms with, and many of them laid down close to the water's edge. The commodore made a motion for them to go a little way from the water, that we might have room to land, which they immediately

complied with, and withdrew thirty or forty yards; we then landed, and formed each man with his musquet, in case any violence should be offered. As foon as we were formed, the commodore went from us to them, then at about twenty yards distance; they seemed vastly happy at his going among them, immediately gathered round him, and made a rude kind of noise, which I believe was their method of finging. as their countenances bespoke it a fpecies of jollity. The commodore then made a motion to them to fit down, which they did in a circle, with him in the middle, when Mr. Byron took some beads and ribbons, which he had brought for that purpose, and tied about the women's necks, &c. with which they feemed infinitely pleased: We'were struck with the greatest astonishment at the fight of people of such a gigantic flature, notwithstanding our previous notice with our glasses from the ship; their number was increafed by the time we got on shore to about five hundred, men, women, and children. The men and women both rid in the fame manner: the women had a kind of belt close to their skin round the waist, which the men had not, as theirs were only flung over their shoulders, and tied with two little flips (cut from the skin) round the neck. At the time of the commodore's motion for them to retire farther up the beach, they all dismounted, and turned their horses loose, which were gentle, and flood very quietly. The commodore, having disposed of all his prefents and fatisfied his curiofity, thought proper to retire, but they were vafily anxious to have him go up into the country to eat with them; (that they wanted him

to go with them to eat, we could very well understand by their motion, but their language was wholly unintelligible to us.) There was a very great fmoke to which they pointed, about a mile from us, where there must have been several fires; but some intervening hills prevented our feeing any thing but the smoke. The commodore returned the compliment, by inviting them on board the ship, but they would not favour him with their company, fo we embarked and returned to the ship. We were with them near two hours at noon-day. within a very few yards, though none had the honour of shaking hands but Mr. Byron and Mr. Cummings; however, we were near enough and long enough with them to convince our fenses so far as not to be cavilled out of the very existence of those senses at that time, which some of our countrymen and friends would absolutely attempt to do. They are of a copper colour, with long black hair, and some of them are certainly nine feet, if they do not exceed it. The commodore, who is very near fix foot, could but just reach the top of one of their heads, which he attempted, on tiptoes, and there were feveral taller than him on whom the experiment was tried. They are prodigious flout, and as well and proportionably made as ever I faw people in my life. That they have some kind of arms among them is, I think, indisputable, from their taking methods to convince us they had none at that time about them. The women, I think, bear much the fame proportion to the men as our Europeans do; there was hardly a man there lefs than eight feet, most of them considerably more; F 3

the women, I believe, run from $7\frac{1}{2}$ to 8. Their horses were stout and bony, but not remarkably tall; they are, in my opinion, from 15 to $15\frac{1}{2}$ hands. They had a great number of dogs, about the size of a middling pointer, with a fox nose. They continued upon the beach till we got under way, which was two hours after we got on board; I believe they had some expectations of our returning again; but as soon as they saw us getting off, they betook themselves to the coun-

The country of Patagonia is rather hilly, though not remarkably fo. You have here and there a ridge of hills, but no very high ones. We lay some time at Port Defire, which is not a great way to the northward of the streights, where we traversed the country many miles round; we found firebrands in different places, which convinced us there had been people, and we suppole them to have been the Patagonians. The foil is fandy, produces nothing but a coarse harsh grafs, and a few small shrubs, of which, Sir John Narborough remarked; he could not find one of fize enough to make the helve of a hatchet, which observation we found very just. It was some time in December we made this vifit to our gigantic friends. I am debarred being so particular as I could wish, from the loss of my journals, which were demanded by their lordinips of the admiralty, immediately upon our return; but if any article is omitted which you are defirous of being acquainted with, I beg you will take fome means of letting me know it; for I will most readily communicate every circumstance of the matter, that fell under my obfervation, as it is with the greatest pleasure and respect that I subscribe myself,

SIR,
Your very humble fervant,
CHARLES CLARKE.

Account of a locked jaw, and paralyfis, cured by electricity: by Dr. Edward Spry, of Totness, in a Letter to Charles Morton, M. D. Sec. R. S.

Read Feb. 19, Atharine Smel-1767. lidge, of Ditford, a girl aged eighteen, took, at the accidental death of a friend, a great fright, and the next day (Easter-day, 1765) at his funeral, fell ill of very severe convulsive fits, which lasted, with slight intermisfions, upwards of a month.

From the first attack, she never spoke, though otherwise sensible; soon after her jaws became quite sixt, so that she was obliged to be fed with thin panada, and the like, strained between her teeth, being not able to have them opened but a very little way, even by a wedge made for that purpose. She became likewise paralytic from her hip down on the right side.

Jan. 10, 1766, the confulted me, when I found her incapable of supporting herself without assistance; her leg and thigh of the right side very torpid with a loss of motion, and much more flaccid than the other, though not emaciated. She was incapable of uttering the least articulate found, or even of having her teeth so far separated by the speculum oris, as to admit my little singer between them.

The maffeter and temporal muscles, from their contraction, felt vastly

tenfe

tense and rigid, being particularly painful on our pressure thereon, or endeavour to open her mouth; the genio-hyoidei muscles appeared alike circumstanced, and the platysmamyoides on the right side very often

greatly convulsed.

Matters thus circumstanced, after every usual method judiciously administered by Mr. Guddrige of Brent, her furgeon, to little avail, I had but finall hopes from medicine to therefore recommended electricity; on which account, the. having no opportunity of its being done in the country, came to her lodgings, taken in town for that purpole, on January 15, when, she being somewhat inclined to be plethoric, and her menses not hitherto interrupted, I ordered fourteen ounces of blood to be taken off. and the next day gave her a few flight (the feathered gnomon rifing not above the horizontal) electrical shocks on the leg of the diseased fide; she immediately felt an agreeable fenfation therein.

This process was daily repeated, with a gradual increase of the vis electrica, sometimes plus, sometimes minus, electrifying her for fix or seven days, by which time she became much stronger, and capable of walking alone tolerably well.

I now (the being, as to her jaw, and speech, as at first) several times full-charged her with the electric matter, discharging it alternately from the masseters, her temples, and under the chin; immediately on her parting with which, she, involuntarily, shook her head, making her usual noise, in endeavouring to speak.

The next day, I fixed the conductor round her temples and throat, and gave flight shocks, by touching fometimes her chin, other times her teeth or cheeks, with the communicant wire. This she disagreeably, though advantageously, felt, her jaws hereby admitting their being opened a little.

The next day, I (the gnomon being near erect) increased the shocks considerably, by which, tho's she very discontentedly bore them, she became capable of opening her mouth to the width of an inch, and of articulating an imperfect, though with difficulty an intelligible, sound.

The next day (the index quite perpendicular) the very reluctantly received feveral funart shocks, and at last unexpectedly (the air being very electric) to such a degree, as to deprive her of her senses; she becoming thereon, and remaining for half an hour, strongly convulsed.

The next day, after the first shock, she spoke so as to be tolerably well understood, telling us that the shocks were frequently vastly severe for her to bear; but that, as she was fully sensible of the advantage she had already received thereby, she would gladly submit to my will, in hopes of a further advantage.

She was even now incapable of bringing her tongue without her teeth, and of moving it without great difficulty, complaining it feemed very large, and heavy.

On infpecting her mouth, which fhe was able to open to almost its usual width, I discovered nothing particular, but an extraordinary turgescence, without induration, of the sublingual glands.

After this she received about twenty shocks daily on her tongue, and other parts, for a fortnight, by which time all her complaints were

F 4 removed,

removed, and she returned home quite well, and has remained so

ever fince.

N. B. In the first week's experiments, the shocks were confined between her hip and foot of the right fide; after that, on various parts, as judged requifite: her tongue, at its tip, became very red and tender after the first electrization, its papillæ appearing very prominent; and its subjacent glands foon lessened their bulk, her mouth running greatly with faliva: her pulle, with a shock or two, generally quickened twelve or fourteen times per minute. She, after grown tolerably well, immediately, on having a fmart electrical stroke, frequently became, for some small time, as paralytic as ever on her right fide: and fometimes thereon had a return of her fits, the going off of which were attended with profuse sweats. Her blood appeared of a good texture, otherwise than giving off a little more than its due proportion of latex.

On the formation of islands, by Alexander Dalrymple, Esquire. Communicated by C. Morton, M. D. S. R. S.

Read July 2, THERE is not 1767. a part of natural history more curious, or perhaps to a navigator more useful, than an enquiry into the formation of islands. The origin of islands in general is not the point to be discussed; but of low statisfiands in the wide ocean; such as are most of those hitherto discovered in the vast South-sea.

These islands are generally long and narrow; they are formed by a narrow bar of land, inclosing the fea within it; generally, perhaps always, with fome channel of ingrefs at least to the tide; commonly with an opening capable of receiving a canoe, and frequently sufficient to admit even larger veffels.

The origin of these islands will explain their nature. What led me sirit to this deduction was an observation of Abdul Roobin, a Sooloo pilot; that all the islands, lying off the north-east coast of Borneo, had shoals to the eastward of them.

These islands being covered to the westward by Borneo, the winds from that quarter do not attack them with violence. But the northeast winds, tumbling in the billows from a wide ocean, heap up the coral with which those seas are filled. This, obvious after storms, is perhaps at all other times imperceptibly effected.

The coral banks, raifed in the fame manner, become dry. These banks are found of all depths, at all distances from shore, entirely unconnected with the land, and detached from each other: although it often happens they are divided by a narrow gut without bottom.

Coral banks also grow, by a quick progression, towards the furface; but the winds, heaping up the coral from deeper water, chiefly accelerate the formation of these into shoals and islands. They become gradually shallower; and, when once the sea meets with refistance. the coral is quickly thrown up by the force of the waves breaking against the bank; and hence it is that, in the open sea, there is scarce an instance of a coral bank having fo little water that a large ship cannot pass over, but it is also so shallow that a boat would ground on it.

I have

I have feen these coral banks in all the stages; some in deep water, others with sew rocks appearing above the surface, some just formed into islands, without the least appearance of vegetation, and others from such as have a few weeds on the highest part, to those which are covered with large timber, with a bottomless sea, at a pistol-shot diffance.

The loofe coral, rolled inward by the billows in large pieces, will ground, and the reflux being unable to carry them away, they become a bar to coagulate the fand. always found intermixed with coral: which fand, being easiest raised, will be lodged at top. When the fand bank is raifed by violent storms. beyond the reach of common waves. it becomes a resting place to vagrant birds, whom the fearch of prey draws thither. The dung, feathers, &c. increase the foil, and prepare it for the reception of accidental roots, branches, and feed, cast up by the waves, or brought thither by birds. Thus islands are formed: the leaves and rotten branches, intermixing with the fand, form in time a light black mould, of which in general, these islands consist, more fandy, as less woody; and when full of large trees, with a greater proportion of mould.

Cocoa nuts, continuing long in the fea without losing their vegetative powers, are commonly to be found in such islands; particularly as they are adapted to all soils, whether fandy, rich, or rocky.

The violence of the waves, within the tropicks, must generally be directed to two points, according to the monfoons.

Hence the islands formed from coral banks must be long and narrow, and lie nearly in a meridional direction. For even supposing the banks to be round, as they seldom are when large, the sea, meeting most resistance in the middle, must heave up the matter in greater quantities there than towards the extremities: and, by the same rule, the ends will generally be open, or at least lowest. They will also commonly have soundings there, as the remains of the bank, not accumulated, will be under water.

Where the coral banks are not exposed to the common monsoon, they will alter their direction; and be either round, extend in the parallel, or be of irregular forms, according to accidental circumflances.

The interior parts of these islands, being sea, sometimes form harbours capable of receiving vessels of some burthen, and, I believe, always abound greatly with fish; and such as I have seen, with turtle-grass and other sea-plants, particularly one species called by the Sooloos Gammye, which grows in little globules, and is somewhat pungent, as well as acid, to the taste.

It need not be repeated, that the ends of those islands only are the places to expect foundings; and they commonly have a shallow spit running out from each point.

Abdul Roobin's observation points out another circumstance, which may be useful to navigators; by consideration of the winds to which any islands are most exposed, to form a probable conjecture which side has deepest water; and from a view which side has the shoals, an idea may be formed which winds rage with most violence,

An account of some very large Fossili Teeth, found in North America, and described by Peter Collinson, F.R.S.

Read Nov. 26, Perfuade myfelf 1767. It will not be unacceptable to this learned Society, to receive the best intelligences I can collect of the teeth, and bones of elephants, found in North America, in the year 1766, which are now offered for your inspection.

George Croghan, Esquire, who is a deputy of Sir William John-Ion, the King's superintendant of Indian affairs in America, in the course of his navigation down the great river Ohio, after passing the Miame river, in the evening came near the place where the elephants bones are found, about four miles fouth-east of the Ohio, and about fix hundred miles distant from and below Pitsburgh, from the nearest fea-coast at least seven hundred miles. Next morning he met with a large road, which the buffaloes had beaten, wide enough for two waggons to go a-breaft, leading strait into the great licking-place, to which the buffaloes and all the species of deer resort, at a certain feafon of the year, to lick the earth and water from falt fprings, that are impregnated with nitreous particles; whether to cleanse their stomachs, or for what other purpose, is submitted to the sentiments of the Society.

Esquire Croghan had been here fome years before, and gave some account of the monstrous bones, and teeth, found at this place, called by the Indians The Great Buffaloes Lick; but being now more at leifure, he carefully examined all its furrounds, and discovered under a

great bank, on the skirts of the Lick, five or fix feet below the surface, open to view, a prodigious number of bones and teeth, specimens of which now lie before the Society, belonging to some of the largest fized animals; by the quantity, he computes there could not be less than thirty of their skeletons.

By their great teeth, or tusks, of fine ivory, some near seven feet long; every one that views them, I believe, will not hesitate to conclude they

belong to elephants.

It is very remarkable, and worthy observation, none of the molares, or grinding teeth of elephants, are discovered with these tusks; but great numbers of very large pronged teeth of some vast animals are only found with them, which have no resemblance to the molares, or grinding teeth, of any great animal yet known.

As no living elephants have ever been feen or heard of in all America, fince the Europeans have known that country, nor any creature like them; and there being no probability of their having been brought from Africa, or Afia; and as it is impossible that elephants could inhabit the country where these bones and teeth are now found, by reason of the severity of the winters, it seems incomprehensible how they came there.

I conclude, many of this learned Society are not unacquainted with the fosfil elephants teeth annually found in Siberia, lodged in the banks of the great river Oby, and other rivers of that country.

On the fystem of the deluge, it has been conjectured, that, as the extensive kingdom of Siberia lies behind the native country of the elephants in Asia, from west to

cast,

east, and to the north, by the violent action of the winds and waves, at the time of the deluge, these great floating bodies, the carcases of drowned elephants, were driven to the northward, and, at the subsiding of the waters, deposited where they are now found. But what system, or hypothesis, can with any degree of probability, account for these remains of elephants being found in America, where those creatures are not known ever to have existed, is submitted to this learned Society.

Nov. 4, 1767.

P. S. The Bishop of Carlisle prefented to the Royal Society, on the 27th of February, 1766, some fossil teeth and bones from Peru, which have some analogy with the beforementioned, not so recent, but much more petrissed; the pronged teeth are like to agate.

A list of the teeth and bones sent over by George Croghan, Esquire, February 7, 1767, from Philadelphia.

To Lord Shelburne.

Two of the largest tusks, or teeth, one whole and entire, above six seet long, the thickness of common elephants teeth of that length.

Several very large forked or pronged teeth; a jaw-bone, with

two of them in it.

To Doctor Franklin.

Four great tulks, of different fizes.

One broken in halves, near fix feet long.

One much decayed, the center looks like chalk, or lime.

A part was cut off from one of these teeth, that has all the appearance of fine white ivory.

A joint of the vertebræ.

Three of the large pronged teeth;

one has four rows of fangs.

Besides the above, Captain Owry, an officer who served in the country during the last war, now living at Hammersmith, hath a small tusk, as if of a calf elephant, the surface of a fine shining chefunt colour, and a recent look; and a great pronged tooth, larger than any of the above, which were also brought from the same licking place.

Sequel to the foregoing account of the large Fossil Teeth. By P. Collinfon, F. R. S.

Read Dec. 10, N my observa-1767. Itions on the long teeth and grinders, at the last meeting of this Society, I forebore giving my sentiments on these remains of great animals found at the Great Lick, near the river Ohio, being willing the Society should determine for themselves.

As I perceived one of the long teeth, or tusks, was channelled or ribbed, near the larger end, I was in some doubt, if peculiar to the elephant. To fatisfy myself, I went to a warehouse, where there were teeth of all forts and sizes for sale; on examining them, I found as many ribbed or channelled, as plain and smooth, so that now, I have no dissiculty to pronounce them, agreeing in all respects, with the elephants teeth from Africa and Asia.

But as the biting or grinding teeth, found with the others, have no affinity with the molares of the

elephant,

elephant, I must conclude, that they, with the long teeth, belong to another species of elephant, not yet known; or else that they are the remains of some vast animal, that hath the long teeth, or tulks, of the elephant, with large grinders peculiar to that species, being different in fize and shape from any other animal yet known. I had one of these grinders, that weighed near four pounds, with as fine an enamel on it, as if just taken out of

the head of the creature.

The elephant is wholly supported by vegetables; and the animal to which these grinding teeth belong, by their make and form, feemed defigned for the biting and breaking off the branches of trees and shrubs for its sustenance; and if I may be allowed to conclude from analogy, that the great heavy unwieldy animals, fuch as elephants, and the rhinoceros, &c. are not carnivorous, being unable, from want of agility and swiftness, to purfue their prey, so are wholly confined to vegetable food; and for the fame reason, this great creature, to which these teeth belong, whereever it exists, is probably supported by browling on trees and shrubs, and other vegetable food.

Of the Increase and Mortality of the Inhabitants of the Island of Madeira. By Dr. Thomas Heberden, F. R. S.

Read Nov. 26, WHEN I confider the number of people in the Madeira, and

the state of the inhabitants, I know no place more proper for forming an estimate of the increase and mortality of mankind, than this island; for the number of persons is upwards of 60,000, all of whom may be supposed to live and die in the fame place where they received their existence; the accession of strangers and the egression of the natives being fo equally inconfiderable, that if the one doth not exactly counterbalance the other, the difference may justly be neglected, as of no consequence in the general calculation.

This has excited my curiofity: and, by my interest with the vicargeneral of this diocese, I have procured a furvey from house to house in each of the respective parishes; from which, and the parish registers, I have deduced the adjoined

account.

An Hypothesis.

The number of persons in this island, in the year 1743, was 48,234 of feven years old and upwards, Now, supposing the minors were in the same proportion then, as in this present year, the total of the inhabitants was 53,057. Therefore, by the rule of anatocifm, they have increased at the rate of 1.0082 per cent, per annum; and by the same rule do double in 84 years 4 months and 25 days.

From an exact furvey, made in the beginning of the year 1767, the number of inhabitants on the island

of Madeira, was as follows:

Persons of seven years old and upward 58669 Persons under seven years of age 5945 Total 64614 Christened

* No. 1. of the tench certainly had a much larger number of eggs; but being extremely distended with spawn, and unluckily let fall before it was brought to me, the enveloping skin in which the eggs were contained was broke, which made it difficult to determine some circumstances relating to this sish; it however had the number of eggs I have set down, at the lowest way of reckoning, and I be-

lieve many thousands more.

I have taken no notice of feveral fractions in the number of eggs contained in a grain in many cases, choosing to fall rather below than to exceed the truth, in all the fish I have given an account of in this table. I have been scrupulously exact in all particulars, excepting what are contained in the second column, which gives the weight of the fish I examined, in which the utmost nicety was not necessary: some few might weigh a little more or a little less; but all were nearly of the weight set down, and much the greatest part exactly so.

Copy of part of a letter, from Fleming Martin, Efq; chief Engineer at Bengal, dated 1st October, 1765.

N regard to the intense and uncommon heat in this climate; it has been for some time past al-

most insufferable.

The thermometer was feldom under 98, and the quickfilver rose at certain times of the day to 104 degrees, by the best adjusted instrument; nay, I have been assured from gentlemen, that in the camp 500 miles distant, the thermometer often stood at 120; but such a disference, I imagine, was occasioned by the badness of the instrument.

However, it is certain, that nothing could exceed the intense heat we felt day and night, during the month of June. May and July were little inferior at times, but afforded fome intermission; otherwise a very great mortality must have attended this fettlement, though we were not without instances of fatal effects in the month of June, when some few individuals, in found health, were fuddenly feized, and died in the space of four hours after; but, confidering the malignity of the climate, we have not lost many, and I believe the generality of people are not so intemperate as some years past they used to be; though, from what I have feen, the best conflitutions, in the most moderate perfons, are a poor match against a fever or other disorders in this country.

I have been as free from fickness, as any other person in the settlement; but I cannot say that I have enjoyed myself in that degree as to be an exception; for no man here is without complaints, and life and

death are so suddenly exchanged; that medicines have not time very frequently to operate before the latter prevails. This is generally the case in malignant severs, which are here termed pucker severs, meaning (in the natives language) strong severs.

The rains have fet in fince the 4th of June. We call this the unhealthy feafon, on account of the falt petre impregnated in the earth, which is exhaled by the fun, when the rain admits of intervals. Great fickness is caused thereby, especially when the rains subside which generally happens about the middle of October. The air becomes afterwards rather more temperate, and, till April, permits of exercife, to recover the human frame that is relaxed and worn out by the preceding feafon; for in the hot periods every relief is denied, except rifing in the morning, and being on horse back by day break, in order to enjoy an hour, or little more, before the fun is elevated: it becomes too powerful by fix o'clock, to withstand its influence; nor can the fame be attempted that day again till the fun retires, fo that the rest of the twenty-four hours is passed under the most severe trials of heat. In fuch a feafon it is impossible to sleep under the suffocating heat that renders respiration extremely difficult; hence people get out into the virando's and elsewhere for breath, where the dews prove cooling, but generally mortal to fuch as venture to fleep in that air. In short this climate foon exhausts a person's health and strength, though ever so firm in conflitution, as is visible in every countenance, after being here twelve months. I have been lately inform-

ed;

ed, by an officer of diffinction, who was formerly engineer at this place, that he being fent out to furvey a falt lake in the month of September, he found the fulphureous vapours so stagnated and gross, that he was obliged to get up into the tallest trees he could find, to enjoy the benefit of respiration, every now and then; he added, that he constantly had recourse to smoaking tobacco, (except during the hours of fleep) to which, and to swallowing large quantities of raw brandy, (though naturally averse to strong liquors) he attributed his fafety. However, on his return, he was feized with an inveterate fever, of the putrid kind, which he miraculoufly furvived; though others, who attended him on the furvey, and had lived many years in the climate, were carried off, at the same time, by the like fever.

Of the Small Birds of Flight; from the British Zoology.

IN the futurbs of London, (and particularly Shoreditch) are feveral weavers and other tradefmen, who, during the months of October and March, get their livelihood by an ingenious, and we may fay, a fcientific method of bird-catching, which is totally unknown in other parts of Great-Britain.

The reason of this trade being confined to fo fmall a compass, arifes from there being no confiderable fale for finging birds, except in the metropolis: as the appararatus for this purpole is also heavy. and at the same time must be carried on a man's back, it prevents the bird-catchers going to above three or four miles distance.

This method of bird-catching must have been long practised, as it is brought to a most systematical perfection, and is attended with a

very confiderable expence.

The nets are a most ingenious piece of mechanism, are generally twelve yards and a half long, and two yards and a half wide; and no one on bare inspection, would imagine that a bird (who is fo very quick in all its motions) could be catched by the nets flapping over each other, till he becomes eye witness of the pullers seldom fail-

The wild birds fly (as the birdcatchers term it) chiefly during the month of October, and part of those of September and November: the flight in March being much less confiderable than it is at Michaelmas. It is to be noted also, that the feveral species of these birds of flight, do not make their appearance at the same time, but at different periods during the months of September, October, and November; for instance, the pippit + begins his flight every year about Michaelmas, when they are caught in the greatest numbers: to this the woodlark fucceeds, and continues his flight till towards the middle of October; and it is very remarkable, though both these species of birds are most easily caught during their flight, yet when that

† A finall lark; but which is much inferior to other birds of this species in point of finging.

^{*} These nets are known in most parts of England by the name of day-nets, or clap-nets; but all we have feen are far inferior in their mechanism to those used near London.

is over, no art can seduce them into the nets. When the woodlark's second flight begins, which is in February, they are as easily caught as before: the other birds are not quite so punctually periodical in their flight; the greenfinch does not begin his till the frost sets in.

The birds, during those months, fly from day break to twelve at noon, and there is afterwards a small flight from two till night; though this is so inconsiderable, that the bird-catchers always take

up their nets at noon.

It may well deferve the attention of the naturalist, whence these periodical slights of certain birds can arise. The vernal slight seems to be owing to the influence of the season of love: they are then in search of sit places to indulge their passion, and secure retreats for their nests and younglings: on the contrary, the autumnal slight, which is most numerous, consists in great part of the parents conducting the new sledged young to those places where there is found provision, and a proper temperament of air during the winter season.

It may not be improper to mention another circumstance, to be observed during their passage, viz. that they say always against the wind; (except the chassinch, who slies across the wind; that is, if the wind is south, it slies from the west; if north, from the east) hence, there is great contention amongst the bird-catchers who shall gain the wind; which, if (for example) it is westerly, the bird-catcher, who

lays his nets most to the east, is fure almost of catching every thing, if his call-birds are good: a gentle wind to the fouth-west generally produces the hest front

produces the best sport.

The bird-catcher, who is a fubflantial man, and hath a proper apparatus for this purpose, generally carries with him five or fix linnets, (of which more are caught than any other finging bird) two goldfinches, two greenfinches, one woodlark, one redpoll, and perhaps a bullfinch; a yellowhammer, titlark. and aberdavine; these are placed at finall distances from the nets in little cages. He hath, befides, what are called flur-birds, which are placed within the nets, are raifed upon the flur*, and gently let down at the time the wild bird approaches them: these generally consist of the linnet, the goldfinch, and the greenfinch: these birds are secured to the flur, by what is called a brace †; a contrivance that fecures the birds without doing any injury to their plumage.

It having been found that there is a superiority and ascendency between bird and bird, from the one being more in song than the other; the bird-catchers contrive that their call-birds should moult before the usual time. They, therefore, in June or July, put them into a close box, under two or three folds of blankets, and leave their dung in the cage to raise a greater heat; in which state they continue, being perhaps examined but once a week, to have fresh water: as for food, the air is so putrid, that they eat

little

* A moveable perch to which the bird is tied, and which the bird catcher can raife at pleasure, by means of a long string sastened to it.

[†] A fort of bandage, formed of a flender filken string, that is fastened round the bird's body, and under the wings, in so artful a manner, as to hinder the bird from being hurt, let it flutter ever so much in the raising.

fittle during the whole state of confinement, which lasts about a month. The birds frequently die under the operation *; and hence the value of a stopped bird rises greatly.

When the bird hath thus prematurely moulted, he is in fong, whilst the wild birds are out of fong, and his note is louder and more piercing than that of a wild one; but it is not only in his note he receives an alteration, the plumage is equally improved; the black and yellow in the wings of the goldfinch, for example, become deeper and more vivid, together with a most beautiful gloss, which is not to be seen in the wild bird: the bill, which in the latter is likewife black at the end, in the stopped bird becomes white, and more taper, as do its legs: in short, there is as much difference between a wild and a stopped-bird, as there is between a horse which is kept in body-cloaths, or at grafs.

When the bird-catcher hath laid his nets, he disposes of his call-birds at proper intervals. It must be owned, that there is a most malicious joy in these call-birds, to bring the wild ones into the same state of captivity; which may likewise be observed with regard to decoy ducks.

Their fight and hearing infinitely excels that of the bird-catcher. The inftant that the † wild birds are perceived, notice is given by one to the rest of the call-birds, (as it is by the sirst hound that hits on the scent, to the rest of the pack)

after which, follows the same fort of tumultuous ecstacy and joy. The call-birds, while the bird is at a distance, do not fing as a bird does in a chamber; they invite the wild ones, by what the bird-catchers call short jerks, which when the birds are good, may be heard at a great distance; the ascendency, by this call or invitation, is so great, that the wild bird is stopped in its course of flight, and if not already acquainted with the nets ‡, lights boldly within twenty yards of, per-haps, three or four bird-catchers, on a fpot which otherwise it would not have taken the least notice of; nay, it frequently happens, that if half a flock only are caught, the remaining half will immediately afterwards light in the nets, and share the fame fate; and should only one bird escape, that bird will suffer itfelf to be pulled at, till it is caught, fuch a fascinating power have the call-birds.

While we are on this subject, of the jerking of birds, we cannot omit mentioning, that the bird-catchers frequently lay considerable wagers, whose call-bird can jerk the longest, as that determines the superiority. They place them opposite to each other, by an inch of candle, and the bird who jerks the oftenest before the candle is burnt out, wins the wager. We have been informed, that there have been instances of a bird's giving a hundred and seventy jerks in a quarter.

* We have been lately informed by an experienced bird-catcher, that he purafues a cooler regimen in ftopping his birds, and that he therefore feldom lofes one: but we suffect that there is not the same certainty of making them moult.

† It may be also observed, that the moment they see a hawk, they communicate the alarm to each other by a plaintive note; nor will they then jerk, or call,

though the wild birds are near.

A bird, acquainted with the nets, is by the bird-catchers termed a sturper, which they endeavour to drive away, as they can have no sport whilst it continues near them.

of an hour; and we have known a linnet, in such a trial, persevere in its emulation till it swooned from the perch: thus, as Pliny says of the nightingale, "victa morte finit fape vitam, spiritu prius desi-

" ciente quam cantu *.

It may be here observed, that birds when near each other, and in fight, seldom jerk or sing. They either fight, or use short and wheedling calls; the jerking of these call-birds, therefore, sace to face, is a most extraordinary instance of contention for superiority

in fong.

It may be also worthy of observation, that the female of no fpecies of birds ever fings: with birds, it is the reverse of what occurs in human kind: among the feathered tribe, all the cares of life fall to the lot of the tender fex: theirs is the fatigue of incubation; and the principal share in nursing the helpless brood: to alleviate these fatigues, and to support her under them, nature hath given to the male the fong, with all the little blandishments and soothing arts; these he fondly exerts (even after courtthip) on some spray contiguous to the neft, during the time his mate is performing her parental duties.

To these we may add a few particulars that fell within our notice during our enquiries among the bird-catchers; such as, that they immediately kill the hens of every species of birds they take, being incapable of singing, as also being inferior in plumage; the pippets

likewise are indiscriminately destroyed, as the cock does not sing well: they sell the dead birds for three-pence or sour-pence a dozen.

These small birds are so good, that we are surprized the luxury of the age neglects so delicate an acquisition to the table. The modern Italians are fond of small birds, which they eat under the common name of Beccosicos: and the dear rate a Roman tragedian paid for one dish of singing birds + is well known.

Another particular we learned, in conversation with a London bird-catcher, was the vast price that is sometimes given for a single song-bird, which had not learned to whistle tunes. The greatest sum we heard of, was sive guineas for a chassinch, that had a particular and uncommon note, under which it was intended to train others: and we also heard of sive pounds ten shillings being given for a call-bird linnet.

A third fingular circumstance, which confirms the observation of Linnœus, is, that the male chaffinches fly by themselves, and in the slight precede the semales; but this is not peculiar to the chaffinches: when the titlarks are caught in the beginning of the seafon, it frequently happens, that forty are taken and not one semale among them: and probably the same would be observed with regard to other birds (as has been done with relation to the wheat-ear) if they were attended to.

An

* Lib. x. c. 29.

[†] Maxime tamen infignis est in hac memoria, Clodii Æsopi tragici histrionis patina sexcentis H. S. taxata; in quo posuit aves cantu aliquo, aut humano sermone, vocales, Plin. lib. x. c. 5x. The price of this expensive dish was 68431. ros, according to Arbuthnot's tables. This seems to have been a wanton caprice, rather than a tribute to epicurism.

An experienced and intelligent bird-catcher informed us, that fuch birds as breed twice a year, generally have in their first brood a majority of males, and in their second, of females, which may in part account for the above observation.

We must not omit mention of the bullfinch, though it does not properly come under the title of a finging-bird, or a bird of flight, as it does not often move farther than from hedge to hedge; yet, as the bird fells well on account of its learning to whiftle tunes, and fometimes flies over the field where the nets are laid: the bird-catchers have often a call-bird to enfnare it, tho' most of them can imitate the call with their mouths. It is remarkable with regard to this bird, that the female answers the purpose of a call-bird as well as the male, which is not experienced in any other bird taken by the London bird-catchers.

It may perhaps furprize, that, under this article of finging-birds, we have not mentioned the nightingale, which is not a bird of flight, in the fense the bird-catchers use this term; though it certainly is a bird of passage. The nightingale, like the robin, wren, and many other finging-birds, only moves from hedge to hedge, and does not take the periodical flights in Octoher and March. It is indeed much doubted, whether, during those months, it is to be found in this island. The persons who take these birds make use of small trap-nets, without call-birds, and are considered as inferior in dignity to our bird-catchers, who will not rank with them.

The nightingale being the first of finging-birds, we shall here infert a few particulars relating to it, that were transmitted to us fince the description of that bird was

printed.

Its arrival is expected by the trappers in the neighbourhood of London, the first week in April; at the beginning none but cocks are taken, but in a few days the hens make their appearance, generally by themselves, though sometimes a few males come along with them.

The latter are diffinguished from the females, not only by their fuperior fize, but by a great fwelling of their vent, which commences on

the first arrival of the hens.

They do not build till the middle of May, and generally chuse a quickfet to make their nest in.

If the nightingale is kept in a cage, it begins to fing about the latter end of November, and continues finging, more or lefs, till June.

A young canary - bird, linnet, fky-lark, or robin, (who have never heard any other bird) are faid best to learn the note of a nightingale.

They are caught in a net-trap; the bottom of which is furrounded with an iron ring; the net itself is rather larger than a cabbage-net.

When the trappers hear or fee them, they firew fome fresh mould under the place, and bait the trap with a meal-worm from the baker's

mob.

Ten or a dozen nightingales have been caught in a day, and fell immediately for a shilling a-piece. The largest price for one that has been long kept in a cage, and sings well, is a guinea.

The following article, taken from the first volume of Medical Transactions lately published by the royal college of physicians, is so interesting to the public, particularly the inhabitants of this metropolis, that we make no doubt but it will be very acceptable to our readers.

Remarks on the pump-water of London, and on the methods of procuring the purest water. By William Heberden, M. D. Fellow of the College of physicians, and of the Royal Society.

[Read at the College, June 22, 1767.]

SEVERAL pump-waters which not of them, contain powder of lime-stone, and the three mineral acids of vitrol, nitre, and sea-salt; besides which there is an oiliness, which discolours these waters, giving them a remarkably yellowish cast, when compared with pure distilled water.

The spirit of vitriol changes as much of the lime-stone, as it can faturate, into selenite: the other two acid spirits dissolve a portion of the lime-stone, and make it intimately mix with the water, so as not to be separated from it by boiling heat; but the unneutralized lime-stone, as soon as the water is near boiling, begins to appear like a white powder, and gradually falls down, forming a crust in all the yessels in which pump-water is constantly boiled.

The proportion of these ingredients is not only different in the different wells of this city, but even in water of the same well at different times. Without troubling the college with a detail of all my examinations, I shall only observe in general, that the greatest quantity of all of them together, which I have ever found, has been about twenty

grains in a quart of water, and the least has been more than ten. The proportions likewise of these ingredients to one another vary confiderably; in one trial, that part of the lime-stone, which is uncombined with any of the acids, appeared to be a little less than the part which was united with them; but, except in this one instance, I have constantly found the quantity of lime-stone, uncombined with any acid, to be at least equal to all the other contents, and fometimes half as much more in the fame well, and in different wells to be double or even treble of the felenite and of the nitrous and marine falts. Neither is the quantity of the acids constant: however, that of the vitriolic is ufually the least, and that of the nitrous much the greatest, so as to be always at least double, and sometimes nearly treble of the other two.

It might be expected that all thefe difagreeable substances should remarkably taint this water; and yet the London pump-water is by many esteemed for its goodness and purity. But however it may be esteemed, it unquestionably differs from pure water in its tafte, and colour, and touch, as well as in many observable effects. Flesh boiled in it turns red, on account of the predominance of the nitrous acid; and it occasions, in a firong degree, all the other well-known changes in certain bodies peculiar to hard waters. Tea and coffee, made with it, are by most palates readily distinguished from these liquors when made with foft water; and the difference will as easily be perceived by the touch, if the hands be washed in pump and foft water.

It must, I believe, wholly be refolved into the power of custom,

that

that the inhabitants of London are fo fatisfied with this peculiar tafte of their water, which is, as I have often been a witness, much complained of by those who come hither from foreign countries, as very disagreeable to their palates, and fometimes as offensive to their stomachs. Custom makes the Greenlander fond of the taste of train-oil: and its power is, no doubt, as great in reconciling the drinkers of bad water to its ill taste. There is a town in North-America, where the spring-water is brackish, the inhabitants of which, when they visit any of the other provinces, chuse to put falt into their tea or punch, in order, as they fay, to make it taste as it should do.

But though custom can reconcile our palates to the taste of lime-stone. spirit of vitriol, spirit of falt, and aqua-fortis, it may well be questioned whether it can as easily make health confident with the effects of these rough and by no means unactive substances. They have been by many physicians suspected, when found in water, of occasioning pains in the stomach and bowels, glandular tumours, costiveness, where the fimple lime-stone prevails; and diarrhœas, where much of it is united with acids; and the uninterrupted drinking of fuch waters, for a long time, may probably be the cause of many other disorders, especially to the infirm, and to children. Hence a change of place may often be of as much use to weak persons from the change of water, as of air.

It has been a received opinion, that the use of waters much impregnated with lime-stone, or any stony matter, subjects the drinkers to the stone or gravel; but whatever other mischiefs these waters may have to answer for, they are innocent of this. For the calculous concretions in the kidnies and bladder, are all of an animal origin, totally differing from all fossilitiones in every thing, except the name: and the pretended experience of the effects of certain stony waters, in breeding the stone, which is often appealed to, may upon the best authorities be rejected as false.*

The putting of alum into bread raifed not long ago a general alarm in London, and it was thought important enough to be the subject of a parliamentary enquiry. Now alum is frequently used as a medicine, upon a supposition undoubtedly of its mending the health, and hasbeen given daily, for a long time together, in greater quantities than were ever suspected to be eaten in' bread, nor did I ever yet hear of any ill effects from it. There is no reason, which I know, for believing that the lime-stone and mineral acids are not as hurtful as alum, and there is no experience to prove them so innocent; but whoever drinks a quart of London pump-water in a day, may possibly take twice as much of these ingredients, and will always take morethan the greatest quantity of alum which is faid to have been ever mixed with a pound of bread; into which I have been affured that the bakers often used to put less, but never more, than nine grains.

Some obscure notion of the unwholesomeness of pump-water induces many persons to boil it, and let it stand to grow cold; by which it will indeed be made to part from most of its unneutralized lime-stone and selenite, but, at the same time,

G 4

^{*} Acad. Royale des Scienc. 1700. Hist. p. 58. Perrault Vitruve. 1. viii. c. 5.

it will become more firongly impregnated with the faline matter, and therefore it will be worfe.

If a small quantity of falt of tartar were added to the water, it would readily precipitate both the loofe lime-stone, and likewise that which is united to the acids: ten or fifteen grains would generally be enough for a pint, but the exact proportion would readily be found, by continuing to add it by little and little, till it ceased to occasion white clouds. This is an easy way, not only of freeing the water from its lime-stone, but also of changing the saline part into nitre and fal fylvii, both which we know by long experience to be innocent.

But the best way of avoiding the bad effects of pump-water would be not to make a constant use of it; and in a place so well supplied with river-water as London, there is very little necessity to drink of the springs, which, in fo large a city, befides their natural contents, must collect many additional impurities from cellars, burying-grounds, commonfewers, and many other offenfive places, with which they undoubtedly often communicate; fo that it is indeed a wonder, that we find this water at all tolerable. One fpring in this city never fails to yield a portion of volatile alkali in distillation, which probably is owing to some animal substances, with which it is tainted in its passage under ground.

The Thames water has a share of all these impure ingredients; but, as it is a much larger body of water, it is proportionably less infected by them. It is observable, that all the river-water of England is soft, though most of the springs

afford a hard water, which will not grow foft by being exposed to the air, or by time, as I have found by fome which I had kept near twenty This makes it probable, that rivers are only the great channels by which the rain-water is immediately carried off; which fo greatly exceeds in quantity, that which foaks into the ground and bursts out in springs, that the qualities of this last, contracted under ground, are lost and annihilated in the much greater portion of pure rain-water, with which it is mixed in rivers.

There is an inconvenience attending the use of Thames and New river water, that they often are very muddy, or taste very strongly of the weeds and leaves. latter fault is not eafily remedied: but they would foon be freed from their muddiness, if kept some time in an earthen jar. If the water given to very young children were all of this kind, it might perhaps prevent some of their bowel-diforders, and fo contribute a little to leffen that amazing mortality among the children which are attempted to be brought up in London.

The inhabitants of Egypt think the water of the Nile fettles fooner, if the infide of the vessel, in which they let it stand, be rubbed with powdered almonds, which is therefore, as Prosper * Alpinus tells us, their constant practice. I have tried this, and could not find it of any use.

Alum is very successfully used by the common people in England for the parifying of muddy water. Two or three grains of it, dissolved in a quart of thick river water, makes the dirt very soon collect infor flocks, and flowly precipitate. Filtering would immediately make the water fo prepared fit for use. The very small proportion of alum will hardly be supposed to make the water unfit for any common

purpofes.

Rain or snow water is much preferable to river, or to any other natural water; but there are almost insuperable difficulties in collecting large quantities for common use, without its being as much altered and defiled, by the manner of saving it, as it is when found in rivers.

The method of procuring pure water, by carriage from any confiderable diffance, will always be attended with such an expence, that very few can or will make use of it even for the little which they want to drink.

The purest of all waters might be obtained by distillation; and in countries where fuel is cheap, it would at no great expence supply those, who have the worst water, with far better than is used in those places where it is supposed to be the best. This method would be particularly useful in some English fettlements in foreign countries, where the waters are so bad, that, while our countrymen are making their fortunes, they are ruining their health; which might be effectually remedied by the means here proposed.

All the fresh water, with which nature supplies us, is indeed only distilled by the heat of the sun; but then the vessels, as I may say, used in this distillation, are not always so clean and proper as might be wished. The vapours rise up thorough an atmosphere loaded with particles from all forts of bodies,

and the rain falls down thorough the same, and afterwards, running along the earth or finking into it. dissolves all the faline matters with which it happens to meet, and by their means many other substances; by which it is often rendered naufeous to the tafte and fmell, and apparently unfit for use. Its effects frequently prove it to be impure, though the fenses be not able to inform us of it; so that experience foon taught mankind the importance of an attention to their health. in this particular: and accordingly the oldest medical writer is very full in his directions for the choice of wholesome waters: and Vitruvius judged, that without them even a book of architecture would be im-

It being, therefore, a matter of fome importance to drink pure water, if any one be defirous of procuring it by that most efficacious and univerfally practicable method of distillation, it may be useful for him to attend to the following obfervations. I the rather mention these, as it is a very desirable thing to have pure distilled water kept in the apothecaries shops, for the purpose of making up those medicines. which cannot be made up with any other. The fimple waters of the shops add much to the nauseous taste of many draughts, without at all improving their virtues. It is indeed generally true of all medicines. that they will be less unpalatable in proportion as they are more taftelefs.

The first running of distilled water has a disagreeable musty taste, as if there were some volatile putrid particles, which went off as soon as the water was heated. I once suspected that this was owing to the

worm's

worm's having contracted fome mustiness, which was washed off by the first running; but, upon trial, I found it not owing to this cause. This taste is not taken away, and does not feem to be much lessened, either by time or ventilation, or by having its air exhaufted by the airpump. On this account, if the still hold twenty gallons, it will be neceffary to throw away the first gal-Ion. All which is distilled afterwards, though free from this mustiness, will yet have at first, in common with other distilled liquors, a difagreeable empyreumatic or burnt tafte. This is eafily diftinguished by every palate in fresh distilled rum, brandy, fimple and compounded waters. The purer the water is, the less there will be of this empyreuma, and hence perhaps it happens, that pump-water diffilled has more, and retains it longer, than what is diffilled from riverwater. But the purest is not free; fo that even distilled water, which has flood till it has loft its empyreuma, will have it again on being re-distilled.

The empyreuma will go off entirely by keeping, and this is the easiest method of getting rid of it. In a month's time it will generally be gone: but if water, which is distilled on the same day, be received into different bottles, they will not all equally lose the empyreuma in equal times. This difference depends upon fome circumstances in the management of the distillation, which farther experience will discover, but which I have not yet found out. It may be, that the fire being greater, and the water boiling at one time more violently than at another, may occasion this inequality of empyreuma in

the feveral parcels of water of the fame distillation: for water distilled in the gentle heat of Balneum Mariæ has remarkably less.

Another method of freeing distilled water from its burnt taste, is by ventilating it in the manner described by Dr. Hales, by which most of that taste will be carried off in a few minutes.

The boiling of distilled water in an open vessel will instantly take off the empyreuma. So that it may, as foon as it is distilled, be applied to any purposes which require its being boiled in an open vessel.

Distilled water must be kept in persectly clean glass or stone bottles, with glass stopples, or metal covers, and then, having in it no principle of corruption, it is incapable of being spoiled, and will keep just the same for ever: but the least particle of any animal or vegetable substance will spoil a great quantity, and therefore the still and bottles should be kept wholly for this use.

Most pump-water is as incapable of changing, and of being spoiled by keeping, as distilled water: for though it be loaded with various foreign particles, yet it seldom has any, or at most but a small proportion of a vegetable or animal nature, and therefore it will always remain the same. This property of water is not fo much attended to as it ought to be by failors, who usually supply their ships with riverwater taken up near great cities, and then keep it in wooden casks: the necessary consequence is, that it foon putrefies, and most probably contributes very much to the occasioning of those putrid distempers with which failors are fo apt to be afflicted. Pump or spring water would be greatly preferable; and

if they could keep this in glass or ftone bottles, or earthen jars, they would find it, after being carried round the world, just the same as

when they fet out.

The superior purity of distilled waters, above all others, makes it easily distinguishable from them by a variety of tests. The tenderest of these is sugar of lead, which instantly makes clouds in the purest of all other waters, but makes no change in that which has been distilled.

It is generally believed, that the fwelled throat, which is endemial in a flight degree in feveral parts of England, as well as fo remarkably near the Alps, is owing (though not to fnow-water, yet) to fome bad quality of the waters of these respective places. I have reason to fuspect, that the common swellings of the lymphatic glands fometimes owe their diseased state to the water, which the patient drinks. In these cases, as well as in many chronical pains of the stomach and bowels, a course of distilled water might be as beneficial, as the most celebrated mineral waters are in any other diforders, and might prove no inconsiderable addition to the Materia Medica.

As to the wholefomeness of distilled water for general use, there can hardly be any doubt of it, if we recollect that all the fresh water in the world has been distilled. But if any one think there may be a difference between natural and artificial distillation, I need only quote the example mentioned, I think, by Tournefort of one Francis Secardi Hongo, who made distilled water his constant drink, without the addition of wine, or any strong liquor, to the last, and lived with

remarkably good health to the age of 115 years.

On the extraordinary degree of heat which men and animals are capable of supporting. Translated from the last wolume of Histoire de l'Academie Royale des Sciences, &c.

OERHAAVE, in his Chemistry, relates certain experiments made with great accuracy by the celebrated Fahrenheit, and others, at his defire, on this subject. in a fugar baker's office; where the heat, at the time of making the experiments, was up to 146 degrees of Fahrenheit's thermometer. sparrow, subjected to air thus heated, died, after breathing very laboriously, in less than seven minutes. A cat refifted this great heat somewhat above a quarter of an hour, and a dog about 28 minutes. discharging, before his death, a confiderable quantity of a ruddycoloured foam, and exhaled a stench fo peculiarly offensive, as to throw one of the assistants into a faintingfit. This dissolution of the humours. or great change from a natural state. the professor attributes not to the heat of the flove alone, which would not have produced any fuch effect on the flesh of a dead animal; but likewife to the vital motion, by which a still greater degree of heat, he supposes, was produced in the fluids circulating through the lungs, in consequence of which the oils, falts, and spirits of the animal became fo highly exalted.

Messieurs Du-Hamel and Tillet having been sent into the province of Augomois, in the years 1760 and 1761, with a view of endeavouring to destroy an infect which

confumed the grain of that province, effected the same in the manner related in the memoirs for 1761, by exposing the affected corn, with the infects included in it, in an oven, where the heat was fufficient to kill them, without injuring the grain. This operation was performed at Rochefoucault, in a large public oven, where, from œconomical views, their first step was to affure themselves of the heat remaining in it, on the day after bread had been baked in it. This they did, by conveying in a thermometer on the end of a shovel, which, on its being withdrawn, indicated a degree of heat confiderably above that of boiling water: but M. Tillet, convinced that the thermometer had fallen several degrees, in drawing to the mouth of the oven, and appearing under some embarrassment on that head, a girl, one of the attendants on the oven. offered to enter, and mark with a pencil the height at which the thermometer flood within the oven. The girl fmiled, on M. Tillet's appearing to hefitate at this strange proposition, and entering the oven, with a pencil given her for that purpose, marked the thermometer, after staying two or three minutes, standing at 100 degrees of Reaumur's fcale, or, to make use of a scale better known in this country, at near 260 degrees of Fahrenheit's. M. Tillet, who does not feem, on this occasion, to have been disposed cario bumano ludere, began to express an anxiety, very commendable in an experimental philosopher, for the welfare of his female affiftant, and to prefs her return. This female falamander however affuring him, that she felt no inconvenience from her fituation, remained there

10 minutes longer; that is, near the time when Boerhaave's cat parted with her nine lives, under a much less degree of heat; when the thermometer standing at 288 degrees, or 76 degrees above that of boiling water, the came out of the oven, her complexion indeed confiderably heightened, but her respiration by no means quick or laborious. After M. Tillet's return to Paris, thefe experiments were repeated by Mons. Marantin, Commissaire de Guerre, at Rochefoucault, an intelligent and accurate observer, on a second girl belonging to the oven; who remained in it, without much inconvenience, under the same degree of heat, as long as her predecessor, and even breathed in air heated to about 425 degrees, for the space of five minutes.

M. Tillet endeavoured to clear up the very apparent contrariety between thefe experiments, and those made under the direction of Boerhaave, by fubjecting various animals, under different circumflances, to great degrees of heat. From his experiments, in some of which the animals were fwaddled with clothes, and were thereby enabled to reful for a much longer time the effects of the extraordinary heat, he infers, that the heat of the air received into the lungs was not, as was supposed by Boerhaave, the only or principal cause of the anxiety, laborious breathing, and death of the animals on whom his experiments were made; but that the hot air, which had free and immediate access to every part of the surface of their bodies, penetrated the fubflance on all fides, and brought on a fever, from whence proceeded all the symptoms: on the contrary, the girls at Rochefoucault, having

their

their bodies in great measure protected from this action by their clothes, were enabled to breathe the air, thus violently heated, for a long time, without great inconvenience. In fact, we fhould think too, that the bulk of their bodies, though not thought of much con-Tequence by M. T. appears to have contributed not a little to their fecurity. In common respiration, the blood, in its paffage through the lungs, is cooled by being brought into contact with the external inspired air : In the present experiments, on the contrary, the vesicles and vessels of the lungs, receiving at each inspiration an air heated to 300 degrees, must have been continually cooled and refreshed, as well as the fubcutaneous veffels, by the successive arrival of the whole mass of blood contained in the interior parts of the body, whose heat might be supposed, at the be--ginning of the experiment, not to exceed 100 degrees. Not to mention that M. Tillet's two girls may not possibly have been subjected to fo great a degree of heat as that indicated by the thermometer; which appears to us to have always remained on the shovel, in contact with the hearth.

It is observable, that none of the animals which suffered under M. Tillet's experiments, exhaled any disagreeable odour: M. Tillet therefore supposes, that the dog, from whom so great a stench proceeded, in the set of experiments made by Fahrenheit, laboured under some internal disorder, and had within him some latent principle of corruption, which was, as it were, developed by the extraordinary heat. If we might venture to hazard our opinion, after those of Dr. Boer-

haave and M. Tillet, we should observe, in the first place, that, among the animals used in the experiments related by Boerhaave, the dog only exhibited the phænomenon in question; and that, in those of M. Tillet, that animal was not employed. We should think therefore, that the horrid stench complained of, neither proceeded from any decomposition or putrescency of the humours, effected by the extraordinary heat, co-operating with the vital action of the vessels in the fluids of the animal, as is supposed by Boerhaave; nor that it was caufed by any general or accidental vice of the humours, in the individual dog who was the subject of the experiment, as is suggested by M. Tillet; but that it may more naturally be supposed to arise from the feetid humour which is known to be secreted from the glandula odoriferæ seated near the anus of that animal; the fecretion of which may be supposed to have been increased, as well as its natural offensiveness greatly heightened, by the action of the heat on the living animal.

Before we quit the subject of this memoir, we cannot, salva conscientia, help interceeding with natural philosophers, in behalf of our fellow creatures of the brute creation, at whose expence the philosophic appetite for knowledge, in matters of pure curiofity (for fuch we must esteem the present) is often most unfeelingly gratified. In the prefent instance, though we have no material objection to Mr. Tillet's first experiments, as we fee no great harm in an experimental philosopher's giving two willing girls a sweat, in his own peculiar manner, with a view to the propagation of natural knowledge; yet we

cannot think fo well of those which follow, nor look on our ingenious academician as quite fo innocently employed, in putting to torture, and to death, the poor innocent rabbits, pullets, and finches, which were the victims of them: and this merely to have the pleafure of knowing how high Monf. Reaumur's thermometer would stand on the occasion: for we cannot be of opinion with Mr. T. that experiments of this kind may possibly be of use in medicine; nor are we quite clear how far they are justifiable, on that supposition.

Letter from Professor Ammon to Sir Hans Sloane, dated Jan. 20, 1739.

HE cold of last December has been so very extraordinary in these regions, that I think it worth while to communicate to you the degrees of it as I observed it with two different thermometers.

December 1, at five in the morning, the wind S. E. the mercury in Farenheit's thermometer, was fallen 21 degrees below O, which was the greatest cold observed in Ice-

land in the year 1709.

In M. de l'Isle's thermometer it fell to 195, which is 45 deg. below the freezing point. In this last thermometer the degree of boiling water is at O, which agrees with Farenheit's deg. 211, from whence counting downwards, the degree of water which begins to freeze is 150, answering to 31 deg. of Farenheit's. By this observation you see what a terrible change animal bodies must undergo, when we exchange the warmth of our stoves for the severity of fuch an extreme cold air. In my stove the degrees of heat is commonly 125 after de l'Isle's, or 61 after Farenheit's thermometer; fo that the difference of the warmth of my room, and the external air, was 70 deg. according to de l'Isle's, and 82 according to Farenheit's thermometer.

But what is this in comparison to the degree of cold observed at Kerenskoi-Ostrog, on the river Lena, not far from Jackusch, where the mercury fell to 275 in de l'Isle's thermometer. This, I believe, is the greatest cold which hath till now been observed, or produced by art. Farenheit, with fnow and spirit of nitre, could not make the mercury descend lower than 40 deg. below O in his thermometer, as it is related by Boerhaave, who thought this deg. of cold to be fo extremely great that no animal could endure it.

At Kerenskoi-Ostrog, the mercury fell to 155 in Farenheit's, which agrees with 275 deg. in de l'Isle's; nevertheless, animals of all kinds have furvived this cold. It is never good to draw consequences from things not yet confirmed by experience.

Altho' the countries through which the great river Lena passes are exposed to such an extreme cold air, there are notwithstanding the finest, the most rare, and most curious plants to be found in them, of any in all Siberia.

Signed AMMON.

A curious and interesting account of a substance, not before attended to, which the BRES collect and turn to honey. Extracted from a memoire read before the Society of Sciences at Montpellier, by the Abbé Boissier

de

de Sauvages, entitled, Observations fur l'Origine du Miel.

I T was formerly the opinion of naturalists, that the bees do not collect honey in the form we fee it; the liquor they collect being digested in their stomachs, where both its nature and confistence are changed. But this opinion feems to be founded on erroneous principles; and it is now believed, that the bees have no other share in the making of honey than simply collecting it; because the honey is, when properly diluted, subject to vinous fermentation, a property not found in any animal fubstance.

The flowers of many forts of plants afford a quantity of honey, or faccharine juice, which the bees collect and carry to their hives; but besides this liquor, the Abbé Boussier acquaint us, that he has feen two kinds of honey dews, which the bees are equally fond of, both deriving their origin fro n vegetables, though in a different man-

The first kind, the only one known to husbandmen, and which passes for a dew which falls on trees, is no other than a mild fweet juice, which, having circulated through the vessels of vegetables, is separated in proper refervoirs in the flowers, or on the leaves, where it is properly called the honey-dew: fometimes it is deposited in the pith, as in the fugar-cane, at other times in the juice of fummer fruits, when ripe. Such is the origin of the manna, which is collected on the ash and maple of Calabria and Briancion, where it flows in great plenty from the leaves and trunks of these trees, and thickens into the form in which it is usually feen.

"Chance, fays the abbé, afforded me an opportunity of seeing this juice and its primitive form on the leaves of the holm-oak: these leaves were covered with thousands of fmall round globules, or drops, which, without touching one another, feemed to point out the pore from whence each of them had proceeded. My taste informed me that they were as fweet as honey: the honey-dew on a neighbouring bramble, did not resemble the former, the drops having run together; owing either to the moisture of the air which had diluted them. or to the heat, which had expanded them. The dew was become more viscous, and lay in large drops, covering the leaves; in this form it

is usually seen.

" The oak had at this time two kinds of leaves; the old, which were strong and firm, and the new, which were tender, and newly come forth. The honey-dew was found only on the old leaves, though these were covered by the new ones, and by that means sheltered from any moisture that could fall from above. I observed the same on the old leaves of the bramble, while the new leaves were quite free from it. Another proof that this dew proceeds from the leaves is. that other neighbouring trees not furnished with a juice of this kind, had no moisture on them; and particularly the mulberry, which is a very particular circumstance, for this juice is a deadly poison to filkworms. If this juice fell in the form of a dew, mist, or fog, it would wet all the leaves without distinction, and every part of the leaves, under as well as upper. Heat may have some share in its production: for though the common heat promotes only the tranf**fpiration**

piration of the more volatile and fluid juices, a fultry heat, especially if resected by clouds, may so far dilate the vessel, as to produce a more viscous juice, such as the ho-

ney-dew.

the fecond kind of honeydew, which is the chief resource of bees after the spring flowers and dew by transpiration on leaves are past, owes its origin to a small infect called a vine-fretter: the excrement ejected with some force by this insect makes a part of the most delicate honey known in nature.

"These vine-fretters rest during feveral months on the barks of parricular trees, and extract their food by piercing that bark, without hurting or deforming the tree. These insects also cause the leaves of some trees to curl up, and produce galls upon others. They fettle on branches that are a year old. The juice, at first perhaps hard and crabbed, becomes, in the bowels of this infect, equal in sweetness to the honey obtained from the flowers, and leaves of vegetables; excepting that the flowers may communicate some of their essential oil to the honey, and this may give it a peculiar flavour, as happened to myself by planting a hedge of rofemary near my bees at Sauvages; the honey has tafted of it ever fince, that shrub continuing long in flower

"I have observed two species of vine-fretters, which live unsheltered on the bark of young branches: they have a smooth skin, and those without wings seem to be the females, which compose the greater bulk of the swarm; or perhaps the young in their caterpillar state, before they are changed into sies; for each swarm has, in its train, two or

three males with wings: thefe live on the labour of the females, at least I always faw them hopping carelessly on the backs of the females, without going to the bark to feek for food

on different parts of the fame tree, entirely covering the bark; and it is remarkable that they there take a position which to us appears to be very uneasy; for they adhere to the branch with their head downwards, and their belly upwards.

"The leffer species is of the colour of the bark upon which it feeds, generally green. It is chiefly diffinguished by two horns, or strait, immoveable, fleshy substances, which rise perpendicularly from the lower fides of the belly, one on each side. This is the species which live on the young branches of brambles and elder.

"The former of these species is double the fize of the latter, and is that which I have now more particularly in view, because it is that from which the honey proceeds.

that from which the honey proceeds. These insects are blackish; and instead of the kind of horns which distinguish the other, have, in the same part of the skin, a small button, black and shining like jet.

of holm-oak, made me suspect that fomething very interesting brought so many of them thither. I knew that it was not the season for expecting honey-dew, nor was it the place where it is usually found, and was surprized to find the tust of leaves and branches covered with drops which the bees collected with a humming noise. The form of the drops drew my attention, and led me to the following discovery. Instead of being round like drops which

which had fallen, each formed a finall longish eval I foon perceived from whence they proceeded. The leaves covered with these drops of honey were fituated beneath a fwarm of the larger black vine-fretters: and on observing these insects, I perceived them, from time to time, raife their bellies, at the extremity of which there then appeared a fmall drop of an amber colour. which they instantly ejected from them to the distance of some inches. I found by tailing some of these drops which I had catched on my hand, that it had the fame flavour with what had before fallen on the leaves. I afterwards faw the fmaller species of vine-fretters eject their drops in the same manner.

This ejection is fo far from being a matter of indifference to these infects themselves, that it seems to have been wifely instituted to procure cleanliness in each individual, as well as to preferve the whole fwarm from destruction; for pressing as they do one upon another, they would otherwise soon be glued together, and rendered incapable of

ftirring.

"We may now with fome probability account for the feeming odd fituation in which they rest. Their belly is about twenty times larger than their head and breast. If the infect was placed in a contrary direction, it could not, without extreme difficulty, raise its heavy belly, fo as to project it far enough outward to discharge the drop over its companions; whereas, when the head is lowest, much less effort is necessary to incline it forward; and even in this fituation the infect feems by its flutterings to collect all its strength. When the winter's cold and rains come on, these vinefretters place themselves wherever they are least exposed; and as they then take but little nourishment. and but feldom emit their drop, they feem not to mind whether the hèad or tail be uppermost.

"The drops thus spurted out fall upon the ground, if not intercepted by leaves or branches; and the foots they make on frones remain some time, unless washed off by rain. This is the only honeydew that falls; and this never falls from a greater height than a branch where these insects can cluster.

"It is now easy to account for a phænomenon which formerly puzzled me greatly. Walking under a lime-tree in the king's garden at Paris, I felt my hand wetted with little drops, which I at first took for fmall rain. The tree indeed should have sheltered me from the rain, but I escaped it by going from under the tree. A feat placed near the tree shone with these drops. And being then unacquainted with any thing of this kind; except the honev-dew found on the leaves of fome particular trees, I was at a loss to conceive how so glutinous a fubstance could fall from the leaves in fuch fmall drops; for I knew that rain could not overcome its natural attraction to the leaves, till it became pretty large drops; but I have fince found that the limetree is very subject to these vinefretters.

"Bees are not the only infects that feast on this honey, ants are equally fond of it. Led into this opinion by what naturalists have faid. I at first believed that the horns in the leffer species of these vinefretters, had at their extremity a liquor which the ants went in fearch of: but I foon discovered

that what drew the ants after them came from elewhere, both in the larger and the leffer species, and that no liquor is discharged by the horns.

"There are two species of ants which fearch for these infects. The large black ants follow those which live on the oaks and chefnut: the leffer ants attend those on the elder. But as the ants are not like the bees provided with the means of fucking up fluids, they place themselves near the vine-fretters, in order to feize the drop the moment they fee it appear upon the anus: and as the drop remains fome time, on the fmall vine-fretters, before they can cast it off, the ants have leifure to catch it, and thereby prevent the bees from having any share: but the vine-fretters of the oak and chefnut being stronger, and perhaps more plentifully supplied with juice, dart the drop instantly, fo that the larger ants get very little of it.

"The vine-fretters finding the greatest plenty of juice in trees about the middle of summer, afford also, at that time, the greatest quantity of honey; and this lesses as the feason advances, so that in the autumn, the bees prefer it to the slowers then in season.

"Though these insects pierce the tree to the sap in a thousand places, yet the trees do not seem to suffer at all from them, nor do the seaves lose the least of their verdure. The husbandman therefore acts injudiciously when he destroys them." Noned the most effectual in cases of canine madness, on eleven persons bitten by a mad wolf.

Warsaw, Sept. 26, 1767.

Dear Sir,

In the middle of April 1767, feventeen people, and a great many cattle, were bitten in our neighbourhood by a mad wolf. One of these, an officer, was brought hither the same day, and the usual treatment was administered to him by very able physicians and surgeons; besides which, he took the bark very copiously, with camphire He continued well till the seventh week, when he became hydrophobious, and died in four days.

Eleven of the others applied to me on the ninth day. Their wounds were all deeply fcarified, diligently washed and fomented with vinegar, falt, and theriaca, and kept open till the 80th day, in those who lived fo long. Every two weeks they were blooded largely, and were purged every week with falts and jalap. Their diet was mostly vegetable, and their drink whey and water. They all eat as much as could be got of the herbs matrifylva and anagallis flore phæniceo, and they all took often of the pulvis palmarij. -The muscus cinercus terrestris could not be got; or elfe that would have been prescribed also. - Besides the general treatment,

Two were rubbed daily with 3i Unguenti Neapolitani, and had their purges with calomel.

Two took every day of vinegar ziv, and of tinest papaweris ziii, also at night Rob Sambuci zs. One took each day of camphire, gr. xvi. with falt petre iv, and at night zs. of Rob. Sambuci.

Extract of a letter from Dr. Wolf, of Warfaw, to Henry Baker, F. R. S. giving an account of trials made with different medicines, rec-

Two took moschi gr. xxiv. with

Other two took spir. Salis ammonlasi cum calc. viv. parati, from

40 to 60 drops:

And the last two took falis tartari cristallini Di, made by the instalization of solutio salistartari, with a little spirits sale ammoniaci.

One of the first two (who used the unquent. Neapolit.) was seized with the fit of hydrophoby on the 22d day, immediately after being well purged with calomel. He was blooded copiously, plunged abundantly in cold water, and several clysters were administered without effect. Two pounds of oil, and as much of drink, were poured down by force: also saponis turtari 3i, and moschi 3 s, were given in three doless. He then began to drink freely, but died the third day.

His companion then left off the use of mercury, and took of the seum animale Dippelii 80 drops in a day, till he had taken 3vi of the oil, which was all I had, and then went on with spir. Sal. ammoniaci cum alcali vinosi, 100 drops in a day.

One of those who took the vinegar fell sick the 33d day. He was immediately blooded, and vomited with ipecacuanha. This man was too strong to make experiments on by force; he refused every thing, and died the third day. His companion, an old man, began to be seized in the same manner; his blood stank intollerably, which in no other was observed: he was purged with salts, took the morfulae balfami Peruviani, and drank lemonade: He recovered, and used afterwards spir. Salt ammoniaci, every day 100 drops.

The man who used the campbire

fell fick the 33d day. He was thrice copiously blooded, was plunged forcibly into the coldest water for the space of two hours, and was nearly drowned. He was clystered with effect. He himself forced down, with incredible aversion and labour; a great deal of drink; by which he vomited more than fifty times abundance of frothy slime. He took several ounces of oil, and several bolusses of opium and castor, ana, gr. iv. without effect, and died the 4th day.

A girl who used the musk with cinnabar fell ill the 62d day, and died the third day after. No farther attempt was made to save her life, she being then at a distance. Her companion, a pregnant woman, then left off the musk, and took instead thereof, spire saks ammoniaci vino-

Jus.

· A woman, who had taken not thing, was feized with the hydrophoby on the 40th day. She fuffered terribly in the night, but less in the day-time: Besides the usual fymptoms, she had great pa'n and fwelling in her belly. In the space of two days, the drank about two bottles of brandy, but nothing elfer I ordered her to mix the brandy with as much oil; and to take every day two bolusses of opium and castor, by which she grew better. She took, at the last, two doses of turpethum minerale gr. iv. in a bolus, which vomited and purged her, and she recovered.

After the 80th day, all the remaining people took thrice the turpethum minerale, except the pregnant woman, and they afterwards continued their alcaline medicines till the 100th day.

Now you fee, my dear Sir, that the bark, the mercury, the acids, the camplire, the must, the feeding on the most famous herbs, the sweating, the cura antiphlegistica, are no specifics. I don't know what to say to the alcalies. The danger is not yet over, and there are still four people, who used nothing, in as good health as my patients.

Of the cattle, eight died nearly with the fame frightful raging as the men; the others were killed. None of those five persons who died quite lost their right senses; but they were all talking without intermission, praying, lamenting, despairing, curfing, fighing, spitting a frothy faliva, screaching, sometimes belching, reaching, but rarely vomiting. Every member is convulfed by fits, but most violently from the naval up to the breast and cesophagus. The fit comes every quarter of an hour. The fauces are not red, nor the mouth dry. The pulse is not at all feverish, and when the fit is over nearly like a found pulse. The face grows pale, then brown, and during the fit almost black; the lips livid. The head is drowsy, and the ears tingling; the urine

limped.—At last, they grow weary; the fits are less violent, and cease towards the end. The pulse becomes weak, intermittent, not very quick; they sweat, and at last the whole body becomes cold. They compose themselves quietly as to get sleep, and so they expire. The blood let out a few hours before death appears good in every respect.

A general observation was, that the lint and dressings of the wounds, even when dry, were always black, and even when the pus was very good in colour and appearance.

I have formed no theory at all of this terrible disease; perhaps the serum grows frothy. The duodenum is surely the first and the most affected; but may be, as well from some irritation of the brain, as from sharp serous liquors in the duodenum. For if this was the cause, how could the disease begin after a strong purgation, and continue after a copious vomiting? Wherefore the irritation sits in the brain, or the whole mass of serum is insected.

I am, &c. Wolf, M. D.

PROJECTS.

Directions for the Management of Bees; from Mr. Wildman's Treatife on that Subject.

Of HIVES.

STRAW hives, as far as regards the bees, are preferable to any other habitations, because the straw is not so liable to be heated by the rays of the fun at noon, to which they are generally exposed, and is a better fecurity against the cold than any kind of wood or ether material. Their cheapness renders them of an easy purchase, even to the cottager, which is of great advantage in an article, the production of which in a confiderable quantity depends on its being cultivated by the multitude, as must be the case here, if a quantity of wax is collected fufficient to make it an object of utility in a commercial view. I might also have mentioned the greater quantity of honey produced: for when it is obtained in the plenty, I flatter myfelf the instructions given in this work will enable men to do; they will then have in their own hands a material which will yield them wine, in flavour equal to many imported, and in wholesomeness much fuperior.

As I propose that the management of bees in hives shall be altered from what is now practised, so the fize and form of my hives are different from those now in common use. I say, now, because I take to myself some share of honour, that without any communication with the Count de la Bourdonnaye in Britany, nearly the same thought has occurred to us both.

My hives are feven inches in height, and ten in width. The fides are upright, so that the top and bottom are of the fame diameter. A hive holds nearly a peck. In the upper row of straw there is a hoop of about half an inch in breadth, to which are nailed five bars of deal, full a quarter of an inch in thickness, and an inch and quarter wide, and half an inch afunder from one another; a narrow short bar is nailed at each fide, half an inch distant from the bars next them, in order to fill up the remaining part of thecircle: fo that there are in all feven bars of deal, to which the bees fix their combs. The space of half an inch between the bars allows a fufficient and easy passage for the bees from one hive to another. In order to give greater steadiness to the combs, fo that upon moving the hive, the combs may not fall off, or incline out of their direction, a flick should be run through the middle of the hive, in a direction directly across the bars, or at right angles with them. When the hives are made, a piece of wood should be worked into the lower row of fraw, long enough to allow of a door for the bees of four inches in length, and half an inch in heighth. H 3

The proprietor of the bees should provide himself in several flat covers of straw, worked of the same thickness as the hives, and a foot in diameter, that so it may be of the same width as the outfide of the hives. Before the cover is applied to the hive, a piece of clean paper of the fize of the top of the hive should be laid over it, and a coat of cow-dung, which is the least apt to crack of any cement easily obtained, should be laid all round the circumference of the hive. Let the cover be laid upon this, and made fast to the hive with a packing-needle and packthread, fo that neither cold nor

vermin may enter.

Each hive should stand single on a piece of deal, or other wood, fomewhat larger than the bottom of the hive: that part of the stand which is at the mouth of the hive, should project some inches for the bees to rest on when they return from the field. This fland should be supported upon a single post, two and a half feet high; to which it should be screwed very securely, that high winds or other accidents may not blow down both stand and hive. A quantity of foot mixed with barley-chaff should be strowed on the ground round the post, which will effectually prevent ants, flugs, and other vermin from rising up to the The foot and chaff should from time to time be renewed as it is blown or washed away: though as it is sholtered by the stand, it remains a considerable time, especially if care be taken that no weeds rife through it. Weeds indeed should not be permitted to rise near the hive, for they may give shelter to vermin which may be hurtful to the bees.

The flands for bees should be

four yards afunder; or if the apiary will not admit of so much, as far as under as may be, that the bees of one hive may not interfere with those of another hive, as is sometimes the case, when the hives are seated near one another, or on the same stand: for the bees mistaking their own hives, light sometimes at the wrong door, and a fray ensues, in which one or more may lose their lives.

The person who intends to erect an apiary, should purchase a proper number of hives at the latter end of the year, when they are cheapest. The hives should be full of combs, and well stored with bees. The purchaser should examine the combs, in order to know the age of the hives. The combs of that season are white, those of a former year are of a darkish yellow: and where the combs are black the hives should be rejected, because old hives are most liable to vermin and other accidents.

If the number of hives wanted were not purchased in the autumn, it will be necessary to remedy this neglect after the feverity of the cold is past in the spring. At this seafon, bees which are in good condition will get into the fields early in the morning, return loaded, enter boldly, and do not come out of the hive in bad weather; for when they do, this indicates that they are in great want of provisions. They are alert on the least disturbance; and by the loudness of their humming we judge of their strength. They preferve their hives free from all filth. and are ready to defend it against every enemy that approaches.

The fummer is an improper time for buying bees, because the heat of the weather fostens the wax, and

thereby

thereby renders the combs liable to break, if they are not very well fecured. The honey too being then thinner than at other times, is more apt to run out at the cells, which is attended with a double disadvantage. namely, the lofs of the honey, and the daubing of the bees, whereby many of them may be destroyed. A first and strong swarm may indeed be purchased; and if leave can be obtained, permitted to stand in the fame garden till the autumn; but if leave is not obtained, it may be carried away in the night after it has been hived.

I suppose that in the stocks purchased, the bees are in hives of the old construction. The only direction here necessary is, that the first swarm from these stocks should be put into one of my hives; and that another of my hives should in a few days be put under the old stock, in order to prevent its swarming a-

gain.

Of the Management of Bees in Hives.

Have already mentioned that the fwarms are put into one of my hives, which has a cover fitted to it. A good fwarm will foon fill one of these hives, and therefore another hive may be put under it the next morning. The larger space allowed the bees, will excite their induffry in filling them with combs. The queen will lay fome eggs in the upper hive; but so soon as the lower hive is filled with combs, she will lay most of them in it. In little more than three weeks, all the eggs laid in the upper hive will be turned to bees, and if the season is favourable, their cells will be foon filled with honey.

So foon as they want room, a third hive should be placed under the two former, and in a few days after the end of three weeks from the time the fwarm was put into the hive, the top hive may be taken away at noon of a fair day; and if any bees remain in it, carry it to a little distance from the stand, and turning its bottom up, firiking it on the fides, the bees will be alarmed, take wing, and join their companions in the fecond and third hives. If it is found that they are very willing to quit it, it is probable that the queen remains among In this case the bees must be treated in the manner that shall be directed, when I give directions for taking the honey and wax without killing them. The upper hive now taken away, should be put in a cool place, in which no vermin, mice, &c. can come at the combs, or other damage can happen to them, and be thus preserved in re-

So foon as the hives feem to be again crouded, and the upper hive is well flored, or filled with honey, a fourth hive fhould be placed under the third, and the upper hive be taken off the next fair day at noon, and treated as already directed. As the honey made during the fummer is the beft, and as it is needless to keep many full hives in flore, the honey may be taken out of the combs of this fecond hive for use.

If the feafon is very favourable, the bees may still fill a third hive. In this case a fifth hive must be put under the fourth, and the third taken away as before. The bees will then fill the fourth for their winter store. As the honey of the first hive is better than the honey collected so late

H 4

as that in the third, the honey may be taken out of the combs of the first, and the third may be preserved with the same care as directed for that.

In the month of September the top hive should be examined, and if full, it will be a fufficient provision for the winter: but if light, that is, not containing twenty pounds of honey, the more the better, then in the month of October, the fifth hive should be taken away, and the hive kept in referve should be put upon the remaining one, to fupply the bees with abundant provisions for the winter. Nor need the owner grudge them this ample store, for they are faithful stewards, and will be proportionally richer, and more forward in the fpring and fummer, when he will reap an abundant profit. The fifth hive which was taken away should be carefully preferved during the winter, that it may be restored to the fame stock of bees, when an additional hive is wanted next fummer: or the first swarm that comes off may be put into it. The combs in it, if kept free from filth and vermin, will fave much labour, and they will at once go to the collecting of honey.

It is almost needless to observe, that when the hives are changed, a cover, as already directed for the first, should be put upon every upper hive: and that when a lower hive becomes an upper hive, the door of it should be shut up, that so their only passage out shall be by the lower hive; for otherwise the queen would be apt to lay eggs in both indiscriminately. The whole of the above detail of the management of one hive, may be extended to any number: it may be proper to keep a register to each set, because, in

be better pleased at receiving their own labours, than that of other stocks.

If in the autumn the owner has fome weak hives, which have neither provision nor numbers fufficient for the winter, it is adviseable to join the bees to richer hives: for the greater number of bees will be a mutual advantage to one another during the winter, and accelerate their labours much in the fpring. For this purpose, carry a poor and a richer hive into a room, a little before night: then force the bees. out of both hives into two separate empty hives, in a manner that shall be hereafter directed; shake upon a cloth the bees out of the hive which contains the fewest, search for the queen, and as foon as you have fecured her with a fufficient. retinue, bring the other hive, which contains the greater number, and place it on the cloth on which the other bees are, with a support under one fide, and with a spoon, shovel the bees under it. They will foon afcend; and while under this impression of fear, will unite peaceably with the other bees: whereas had they been added to the bees of the richer hive, while in possession of their castle, many of the new-comers must have paid with their lives for their intrusion.

It appears from the account of the management of bees in my hives, that there is very little art wanting to cause the bees to quit the hives which are taken away, unless a queen happens by chance to be among them. In that case the same means may be used as are necessary when we would rob one of the common hives of part of their wealth. The method is as follows:

Remove

Remove the hive, from which you would take the wax and honey, into a room, into which admit but little light, that it may at first appear to the bees as if it was late in the evening. Gently invert the hive, placing it between the frames of a chair, or other steady support, and cover it with an empty hive, keeping that fide of the empty hive raifed a little, which is next the window, to give the bees fufficient light to get up into it. While you hold the empty hive fleadily fupported on the edge of the full hive, between your fide and your left arm, keep striking with the other hand all round the full hive from top to bottom, in the manner of beating a drum, fo that the bees may be frightened by the continued noise from all quarters; and they will in consequence mount out of the full hive into the empty one. Repeat the firokes rather quick than firong round the hive, till all the bees are got out of it, which in general will be in about five minutes. It is to be observed, that the fuller the hive is of bees, the fooner they will have left it. As foon as a number of them have got into the empty hive, it should be raised a little from the full one, that the bees may not continue to run from the one to the other, but rather keep ascending upon one another.

So foon as all the bees are out of the full hive, the hive in which the bees are must be placed on the stand from which the other hive was taken, in order to receive the absent bees as they return from the fields.

If this is done early in the feafon, the operator fhould examine the royal cells, that any of them that have young in them may be faved. as well as the combs which have young bees in them, which should on no account be touched, though, by fparing them, a good deal of honey be left behind. Then take out the other combs, with a long, broad, and pliable knife, fuch as the apothecaries make use of. The combs should be cut from the sides and crown as clean as possible. to fave the future labour of the bees. who must lick up the honey spilt, and remove every remains of wax: and then the fides of the hive should be feraped with a table-spoon, to clear away what was left by the knife. During the whole of this operation, the hive should be placed inclined to the fide from which the combs are taken, that the honey which is fpilt may not daub the remaining combs. If fome combs were unavoidably taken away, in which there are young bees, the parts of the combs in which they are should be returned into the hive. and fecured by flicks in the best manner possible. Place the hive then for fome time upright, that any remaining honey may drain out. If the combs are built in a direction opposite to the entrance, or at right angles with it, the combs which are the furthest from the entrance are to be preferred; because there they are best stored with honey, and have the fewest young bees in them.

Having thus finished taking the wax and honey, the next business is to return the bees to their old hive; and for this purpose place a table covered with a clean cloth, near the stand, and giving the hive in which the bees are a sudden shake, at the same time striking it pretty forcibly, the bees will be

shaken

shaken on the cloth. Put their own hive over them immediately, raised a little on one side, that the bees may the more easily enter, and, when all are entered, place it on the stand as before. If the hive, in which the bees are, be turned bottom uppermost, and their own hive be placed over it, the bees will immediately ascend into it, especially if the lower hive is struck on the sides to alarm them.

As the chief object of the bees, during the spring and beginning of the summer, is the propagation of their kind, honey, during that time, is not collected in such quantity as it is afterwards: and on this account it is scarcely worth while to rob a hive before the latter end of June; nor is it safe to do it after the middle of July, lest rainy weather may prevent their restoring the combs they have lost, and laying in a stock of honey sufficient for the winter, unless there is a chance of carrying them to a rich pasture.

When we have reviewed the various means made use of both by the antients and moderns in taking honey, it appears somewhat surprifing, that a method fo fimple as the above did not occur to them; and especially that M. de Reamur did not think of extending to general use what he had frequently practifed in the course of his experiments. It feems he did not reflect on the effects of the fear impressed on the bees by the continued noise, and how subservient it renders them to our wills; indeed to fuch a degree, that, afford them but a quiet retreat, they will remain long attached to any place they are fettled opon, and will become fo mild and tractable, that they will bear any handling which does not hart them,

without the least shew of resentment. On these occasions their only desire seems to be a wish to avoid such another disturbance as has reduced them to their present forlorm state. A person who has familiarized himself to bees can by means of the passion of fear thus impressed upon them, and by that dexterity in the management of them which can only be acquired by practice, I say, such a person can, in this situation, manage the bees as he

pleafes. Spectators wonder at my attaching the bees to different parts of my body, and wish much to be posfessed of the secret means by which I do it. I have unwarily promised to reveal it, and am therefore under a necessity of performing that promife: but, while I declare that their fear and the queen are my chief agents in these operations, I must warn my readers that there is an art necessary to perform it, namely practice, which I cannot convey to them, and which they cannot speedily attain; yet till this art is attained, the destruction of many hives of bees must be the consequence; as every one will find on their first attempt to perform it.

Long experience has taught me, that as foon as I turn up a hive, and give it fome taps on the fides and bottom, the queen immediately appears, to know the cause of this alarm; but soon retires again among her people. Being accustomed to see her so often, I readily perceive her at the first glance and long practice has enabled me to seize her instantly, with a tenderness that does not in the least endanger her person. This is of the utmost importance: for the least instant done to her brings immediate

de-

destruction to the hive, if you have not a spare queen to put in her place; as I have too often experienced in my first attempts. When possessed of her, I can, without injury to her, or exciting that degree of resentment that may tempt her to fling me, flip her into my other hand, and, returning the hive to its place, hold her there, till the bees, missing her, are all on wing, and in the utmost confusion. When the bees are thus diffressed, I place the queen wherever I would have the bees to fettle. The moment a few of them discover her, they give notice to those near them, and these to the rest; the knowledge of which foon becomes fo general, that in a few minutes they all collect themfelves round her; and are fo happy in having recovered this fole fupport of their flate, that they will long remain quiet in their fituation. Nay, the fcent of her body is fo attractive of them, that the flightest touch of her, along any place or substance, will attach the bees to it, and induce them to purfue any path the takes.

My attachment to the queen, and my tender regard for her precious life, makes me most ardently wish that I might here close the detail of this operation, which I am afraid, when attempted by unskilful hands, will cost many of their lives; but my love of truth forces me to declare, that by practice I am arrived at so much dexterity in the management of her, that I can, without hurt to her, tie a thread of filk round her body, and thus confine her to any part in which she might not naturally wish to remain: or I fometimes use the less dangerous

way, of clipping her wings on one fide.

I shall conclude this account in the manner of C. Furius Crefinus, who, being cited before the curule edile, and an affembly of the people, to answer to a charge of forcery, founded on his reaping much larger crops, from his small spot of ground, than his neighbours did from their extensive fields, produced his strong implements of husbandry, his well-fed ozen, and a hale young woman, his daughter; and, pointing to them, faid, "These! Romans, are my instru-" ments of witchcraft: but I can-" not shew you my toil, my sweats, " and anxious cares *." So may I say, "These, Britons! are my " instruments of witchcraft; but I " cannot shew you my hours of at-" tention to this subject, my an-" xiety and care for these useful " infects; nor can I communicate " to you my experience, acquired " during a course of years."

An improved method of cultivating the Turnip-Cabbage, fent by Mr. Reynolds, of Adisham in Kent, to the Society for the Encouragement of Arts, &c. dated the 13th of May, 1768.

NE pound of the feed was with fome difficulty procured from a noted feedfman in Helland, who informed Mr. Reynolds, that it was the growth of Russia; adding, that both the Swedes and Russians assured him, it would stand the frost of their fevere climates.

Sixteen perches of ground, confifting of a gentle hazle mould, had been for fome time prepared by three good ploughings. This land was firred on receiving the feed, which made a fourth ploughing. The feeds were fown on the 15th of April, 1767. As there was room fufficient for the growth of the plants, there was no necessity for planting them out, till the weather was fuitable for the purpose.

Two acres of the field into which the plants were transplanted, had been the year before in fallow, two acres in oats, and one in rye; the whole field confitting of five acres. In order to fee what effect dunging would have thereon, a certain part of this field was thick folded with sheep's dung, the fold passing through the whole field lengthwise: by which means it covered part of every different foil; the other parts were left unfolded. This was done in order to fee the different effects the doing might have one way or the other, upon each foil; the field cholen for this purpole having in it different foils intermixed with each other, viz. clay, or brick-earth, frong cledge, flint-gravel, or stoney ground, gentle loam, hazle mould, and a small patch of crumbly chalk of a very irregular figure; furrounded with woods, and, of course, well sheltered from cold winds.

Knowing that all the cabbage tribe required deep earth to root in, three acres were ploughed of different depths, viz. of ten, twelve, and thirteen inches. This was done quite through the whole field lengthwife, by which means the plough passed through all the different foils in one furrow, thick and thin, oats, rye, fallow, all together. This was performed about the middle of December, 1766.

This fecond ploughing was crofs-

ways; which we called balking (a term used for striking surrows ten rows to the rod.) This was performed in January, 1767. The third ploughing was done in the same manner, towards the end of March, 1767. This we call splitting of balks: previous to this last, the balks were harrowed down dry.

The fourth and last ploughing, was towards the end of May following, lengthways, exactly of the same depth with the first ploughings. In this manner were the ploughings (which were performed drý) completed; and thus did the land lie, till within two or three days of planting: then it was well dressed (a term for harrowing and rolling, that the ground might be fusficiently sine to receive the plants; and which should be performed sooner, if the weather be suitable, least it should prove too dry in transplanting)

The transplantation was begun at the latter end of June, 1767. It was performed in rows across the field; some at two seet intervals, some at two seet two inches, and others at two seet four inches.

In the first, the plants were two feet apart in the rows: in the fecond, they were twenty-two inches; and in the third, they were twenty apart: some few of two feet, and others of eighteen inches. Four acres were planted in this manner: and besides, by way of trial, several rows of common cabbage, two forts of brocoli, favoys, and Siberian borecole, commonly called Scotch kale, were planted: thefe with fome coleworts, fown in the broad way, completed the field. The plantings were performed as fast as the plants advanced in big-

ness s

ness: so that a few days intervened between the feveral plantings; yet the whole was finished before the end of luly. Frequent showers often followed, and all grew to admiration. But a little time discovered, that we had but a fmall forinkle of the common turnip cabbage among the whole; not more than an hundred plants per acre, one with another, throughout the plantations. Finding, however, that there were among them a new species of plants, which nobody here knew any thing of, and liking their countenance, they were treated in the best manner possible. The common cabbage, the two brocoli's, the favoys, and Siberian borecole, together with the fprinkle of common turnip-cabbage, were all treated alike, with these new guests; save only that the former were planted further apart. Mark the event! none but the borecole. and these new comers survived the frost. Every individual plant befides, were destroyed thereby. An instance this of the superiority of the new species over the other forts, particularly in its being impenetrable by the frost!

We made use of a kind of trowel, instead of a dibble, for the purposes of planting. This instrument penetrates eafily into the ground the depth required, the planter pulling the earth after him, and then placing the plant up to the foot-stalk of the leaves behind the trowel in a floping direction towards the mark in the line, made use of for planting, before the trowel was drawn out of the ground: the plant being thus placed, the planter then trod the earth close with his foot; whence the ground, by hard pressure, sunk a little lower than the furface, and was thence enabled to preferve the

rain more effectually to the roots of

Two men worked at one line. which was worked at the distance defigned for the arrangement of the plants. A number of plants were laid at each end by the drawer of them: the planters dropped the plants at the marks, till they met at the middle of the line; then returned back, planting at the same time; each man getting at the same time to the end of the line, in order to remove it the required distance: and fo proceeded. The stones, clods. or bits of chalk, were brushed away, with the trowel at the mark; for that none of them, nor any dry. earth, entered the ground with the plant, this method has been found to be far the best of any in planting of the cabbage tribe, and madder also.

In a short time after the planting, the hand-hoe was applied to the plants in the rows; which nourished them greatly. The horse-hoe was made use of for the intervals three feveral times, according as the weeds advanced; the last hoeing was in February last. The earthing them up gradually by horse-hoeing, proved very useful, as they were thereby well fcreened against the froits. This likewise prevented any ill effects from the crows, or rooks, which are great enemies to this plant, by picking holes therein, and thereby occasioning a decay or rottenness. Two kinds of horse-hoes were made use of, a strong and a plate-hoe; the former, about fifteen inches wide, for the first hoeing; the latter about a foot. Both were made to fit one and the fame woodwork. The hand-hoe was fix inches and a half wide.

One horse and man hoed four

acres in a day, the intervals only; the hand-hoe did the rest, as occa-

fron required:

The effects were, that the clay, or brick-earth foil, did not turn out to be so good by one half, as some of the other; nay was the worst in all the field.

The stiff cledgy land was but little better; the plants on it weighed fomething more than the other.

The stony-flint, gravel, gentle loam, and hazle-mould, were but little different from each other: the

latter rather preferable.

The plants on one perch indifferently chosen, where the deep ploughing was performed, being taken up the 15th of February, weighed 254 pounds. Those of another taken up in the fame manner, on the 26th of March, weighed

393 pounds.

A third drawing, from the same quantity of ground, on the 26th of April, weighed 476 pounds. The number of plants which produced these, were fixty-eight, and no more; vet that on the crumbly exceeded this, by four pounds; the weight being 480 pounds, and the number of plants the fame, viz. fixty-eight. A vast return! It was, however, wrong to take up the plants fo foon; for what were drawn in February, would now maintain twice as much flock, as they did at that time; they being, this 13th of May, 1768, as good as ever. Turnips grow thick, when going to feed, there do not. The sheep spoil none, but eat them up, both root and branch, with great gladness of heart. A circumstance of no small weight is; their thriving best on dry ground; because they are better sed off on such foils, than on those that are cold and wet.

In order to gain as much experience as possible in the cultivation of these roots, an acre in another piece of ground was prepared, on a fmall part of which was laid two cart-loads of good dung and mould; mixed together; which was foread, as in the usual manner for corn, before the first ploughing. Then the ploughings were performed in the same manner, as in the first five acres, at twelve inches deep: after this, two cart-loads more of the fame dung were laid on at another place, on the furface of these ploughings; the field being a poor, thin; chalky foil. Nor had it been manured in the memory of man, except what it received from these deep

ploughings only.

Here some of the plants were planted, at two feet intervals, and eighteen inches apart in the rows. This trial was made merely through curiofity, no advantage being expedted from it. Yet the growth on this poor ground, was every where alike: no distinction could be made between that part manured with the dung and mould, and that which was not manured at all. And, what is ftill more extraordinary, the produce of this, when taken up, was equal to that of any one acre in the other field. The plants, from one perch thereof, weighed, on the 15th of February, 284 pounds. This proves, that no dung is required in the cultivation of this plant, deep ploughing or tillage being alone fufficient.

The horned cattle are fond of the

herbage of this plant.

They may be eaten off more than once if required, half an acre beat ing, on the 13th of May, feeding off with fix milch cows and a bull; for the second time. The milk and

butter

butter are found to be exceeding Full-grown freep should not be put in before the plants are defigned to be totally confumed: for they fall immediately upon the roots, which occasions the plants to rot: but lambs will not. Half an acre was eaten off by them twice; the first time in November, 1767, and the second in January, 1768, when the weather was very fevere. The lambs liked their entertainment: and sheep will thrive well upon these plants only; which they will not do on turnips. A happy difcovery, that fuch good food can be had in great plenty by industry only, from foils where little or nothing could be expected; and even at a feafon of the greatest scarcity.

Mr. Reynolds adds, that from the flourishing appearance of his plants, he has great reason to hope, that he shall have this year a considerable quantity of the seed to dispose of, besides what he shall want for his

own use.

REMARKS.

It is not necessary to pay any particular regard to soil, for the turnip-rooted cabbage; they will grow sull as well on poor lands, as on those which are wet, strong, and stiff; and that too without any sort of dung or manure whatever, provided the ploughings are duly performed.

Dry lands, or fuch as can be made fo, are most like to succeed. Yet let it be observed, that the last summer was uncommonly wet, which might greatly favour the poor dry land, and injure the stiff, cold, and cledgy.

The ten inch ploughings were

equal to those of twelve and thirteen, on every soil in the field, except the flint-gravel, and crumbly
chalk: on these two soils the plants
were best, where the deeper ploughings of twelve and thirteen inches
were performed; but the common
ploughings throughout the whole
piece, did not produce, one with
the other, more than two thirds of
what the deep ploughed grounds
amounted to. Hence the necessity
of ploughing deep, in order to cultivate this plant successfully, as
common ploughings will not do.

The foldings in this field feemed to be ufeless; no marks appearing from the dung in the least degree; the unfolded parts being equal to those which were folded; deep ploughings are, therefore, fufficient

without dung.

The greatest weight of food was on the two feet intervals, and eighteen inches in the rows. This distance is, therefore, recommended. If planted nearer, there will not be proper room for the horse-hoe; on which much of the success depends.

The ground may be flocked in winter, if necessify requires; though this must be left to the owner's dif-

cretion.

Maiming certainly checks their growth; for the feedling plants in their natural state, were found much superior to the others that were eaten off.

The winter herbage will undoubtedly pay the expences of planting. The feeding of the lambs on the chalky foil, proves it to be worth, at leaft, fifteen shillings per acre.

That the plants kept improving daily, from the time of planting, to the time of fpending them, was demonstrable from both fields; the

weight

weight being near double on the 27th of April, to what it was on the 15th of February. A circumflance that should be properly regarded!

As the flies will be apt to fall upon, and destroy the young feedling plants, the following remedy

should be used:

Mix the intended feed with long topped raddish-feed, which the flies much admire: the raddish leaves being quick growers, will entertain these insects until the other seedplants get out of their way: but if they are very numerous, run a light roller over them, night and morning, while the dew remains. This will lick most of them up, if duly performed; for a little moisture causes both them and the earth to flick to the roller; by which means the enemy will be removed, and the young plants no ways injured by it. A large field will require two or three rollers to perform this effectually, the smallest not less than twelve inches diameter.

N. B. One pound of raddish-seed is sufficient for ten or twelve pounds of turnip-cabbage; but cabbage and caulissower require more, especially the latter.

Method of raifing Melons, without earth, dung, or water; communicated to the Society of Arts, by Mr. Reynolds.

REPARE a bed of cast off Tanner's bark, four feet deep, fix feet wide, and twelve feet in length: cover it with four lights: no rain or water is to be admitted, for either of them would retard the fweating of the bed. This bed is to be prepared about a month before the feeds are fown. March is a proper feafon for this purpose, for

private ule.

When the bed becomes warm, which generally happens in about twenty days, a few melon-feeds are put into warm milk, in an earthen veffel, which is preffed down into the bark bed, where it is to remain thirty-fix hours, in order to promote the vegetation of the feeds. Then, at equal distances, open four holes in the bed, each nine inches in diameter, and five inches deep. Having in readiness about a peck of pounded bark, saw-dust like, put fome of it at the bottom of the holes, to the thickness of three inches: on this bark, place fome of the feeds, pressing them down a little with the finger: then cover these seeds with two inches more of the powdered bark, pressing the whole down with the hand.

When the plants are advanced to a proper fize, make choice of the best, and take the others away at pleasure, giving them a proper pruning, and as much warm air as possible during the summer.

I have for feveral years, fays Mr. Reynolds, in this manner raised as good melons as can be defired; and I think the fruit is better tasted than what is raised on stinking dunghills, and perhaps wholesomer. In this method we are not annoyed by worms, snails, or insects of any kind. Hot-beds of this kind may be extended to other plants.

Curious Experiments for preventing the waste of Honey, and preserving the lives of Bees, during the winter-By a Gentleman near the banks of

the Tweed. From the Repository for Select Papers on Agriculture, &c. Numb. II.

Have tried several experiments for preserving the lives of bees during the winter, and though, in general, with little fuccefs, yet I think I have reason to continue, and to advise others to follow what I practifed last winter: the method is very fimple, and not expensive: for it is no other than keeping the bees in a cold and dark place.

My reason for trying this experiment was, my having observed that a certain degree of cold brought upon the bees a stupor; and that the fame degree of cold continued, kept them in the same state till they were brought into a warmer lituation, which immediately reftor-

ed their life and vigour *.

With this view I kept two hives, thut up in a dark cold out-house, from the middle of September laft, to the middle of April, without ever letting them fee light: upon their being fet out in the warmer air, they recovered immediately, and shewed an appearance of more strength, than the hives did which had been kept out in the usual way. This appearance of strength continued during the fummer, and they multiplied faster than I had ever opferved them to do before. They were rather later in fwarming this year, than in some former summers, but this was the case with many hives in this neighbourhood; and

even though this should always happen, vet I think other advantages will do more than over-balance it. Could I go into the country, early in the fpring, to look after the bees myfelf, I would bring them into the open air fome weeks fooner. carefully attend to the changes of the weather, and shut up the doors of the hive on a bad day: but this degree of care can scarcely be expected from fervants and pardeners. who have many other things to attend to.

I intend to have four hives put up this feafon, in the coldest dark place I can find; and as an icehouse is the steadiest and greatest cold we have, one or two of my friends, who have ice-houses, have promifed to put a hive upon the ice. By all accounts, the cold in Siberia does not kill the bees there, and in Russia, where the winters are extremely fevere, bees produce much honey: fo I think there is not any danger to be feared from any degree of cold we can expose the bees to.

If fuccess continues to attend this experiment of keeping the bees afleep all the winter and foring, without confuming their honey, a great point will be gained: especially as Mr. Wildman has taught us to take the honey without killing the bees: for by what I have obferved in this country, our bees are lost chiefly by being tempted to go out by a clear fun in the fpring; though, perhaps, a frosty wind blows

^{*} Mr. White fays, in confirmation of Gedde's observation, that " bees which frand on the north-fide of a building, whose height intercepts the fun's beam's " all the winter, will waste less of their provisions, almost by half, than others " which stand in the sun; for seldom coming forth, they eat little, and yet in " the spring are as forward to work and swarm, as those which had twice as much honey in the autuma before." See the Rev. Mr. White's Method of preferving Bees, third edition, price is. VOL. XI. and

and chills them, so as to prevent their being able to return to the hive; or an early warmth induces the queen to say eggs, and a number of young bees are bred, which consume the little provision left, before the fields can afford any supply.

The following curious method of rearing Turkeys to advantage, is tranflated from a Swedish book, entitled Rural Oeconomy.

MANY of our housewives, fays this ingenious author, have long despaired of success in rearing turkeys, and complained, that the profit rarely indemnifies them for their trouble and loss of time: whereas, continues he, little more is to be done, than to plunge the chick into a vessel of cold water, the very hour, if possible, but at least, the very day it is hatched, forcing it to swallow one whole pepper-corn; after which let it be returned to its mother. From that time it will become hardy, and fear the cold no more than a hen's chick. But it must be remembered, that this useful species of fowls are also fubject to one particular disorder while they are young, which often carries them off in a few days. When they begin to droop, examine carefully the feathers on their rump, and you will find two or three, whose quill part is filled with blood. Upon drawing these the chick recovers, and after that requires no other care, than what is commonly bellowed on poultry that range the court-yard.

The truth of these affertions is too well known to be denied; and as a convincing proof of the succefs, it will be fufficient to mention, that three parifhes in Sweden have, for many years used this method, and gained several hundred pounds by rearing and selling turkeys.

A very cheap and lasting Varnish, proper for pales and coarse woodwork.

AKE any quantity of tar, and grind it with as much Spanish brown as it will bear, without rendering it too thick to be used as a paint or varnish; and then lay it on the pales, or other woodwork, as soon as convenient, for it soon hardens by keeping.

This mixture must be laid on the wood by means of a large brush, or house-painter's tool: and the work should then be kept as free from dust and insects as possible, till the varnish be thoroughly dry. It will, provided the wood on which it is laid be fmooth, have a very good gloss, and prove an excellent prefervative of it against the weather, or moisture of any kind: on which account, as well as its being cheaper, it is far preferable to paint, not only for pales, but also for weatherboarding, and all other kinds of coarfe wood-work, exposed to the weather. Where the gloffy brown colour is not liked, the work may be made of a greyish brown, by mixing a fmall portion of whitelead and ivory-black with the Spanish-brown.

Processes for dying Leather Red and Yellow, as practised in Turkey; with directions for preparing and tanning the skin, as communicated by Mr. Philippo, a native of Armenia, who received from the Society for the Encouragement of Arts, Sc. one hundred pounds, and also the gold medal of the Society, as a reward for discovering this secret.

ARTICLE I.

First preparation of the Skins, both for Red and Yellow Leather, by dressing them in lime.

ET the skins, dried with the hair on, be first laid to soak in clean water for three days: let them then be broken over the flesh fide, put into fresh water for two days longer, and afterwards hung up to drain half an hour. Let them now be broken again on the flesh fide. limed in cold lime on the fame fide, and doubled together with the grain fide outward. In this state they must be hung up within doors over a frame for five or fix days, till the hair be loose; which must be then taken off, and the skins returned into the lime-pit, for about three weeks. Take them out, and et them be well worked flesh and grain, every fixth or feventh day during that time: after which, let them be washed ten times in clear water, changing the water at each washing. They are next to be prepared in drench, as below mentioned.

ARTICLE II.

Second preparation of the Skins for both the Red and Yellow Dyes by drenching.

After fqueezing the water out of the skins, put them into a mixture of bran and water, warm as new milk, in the following proportions. viz. about three pounds of bran for

five skins, and water sufficient to make the mixture moderately fluid. which will be about a gallon to each pound of bran. In this drench let the skins lie three days; at the end of which time they must be well worked, and afterwards returned into the drench two days longer. They must then be taken out and rubbed between the hands; the water squeezed from them, and the bran scraped off clear from both fides of the skins. After this they must be again washed ten times in clear water, and the water fourezed out of them.

Thus far the preparatory process of all the skins, whether intended to be dyed red or yellow, is the same; but afterwards those which are to be dyed red, must be treated as follows:

ARTICLE III.

Preparation in Honey and Bran of the Skins that are to be dyed red.

Mix one pound of honey with three pints of luke-warm water, and fir them together till the honey is diffolved. Then add two double handfuls of bran; and taking four skins (for which the above quantity of the mixture will be fufficient) work them well in it one after another. Afterwards fold up each skin feparately into a round form, with the flesh side inwards, and lay them in an earthern-pan, or other proper vessel; if, in the summer, by the fide of each other; but in the winter on the top of each other. Place the vessel in a sloping position, so that such part of the sluid as may fpontaneously drain from the skins, may drain from them. An acid fermentation will then rife in the liquor, and the skins will swell

confiderably. In this state they must continue for seven or eight days; but the mossure that drains from them, must be poured off, once or twice a day, as occasion may require. After this a further preparation in falt is necessary; and which must be performed in the following manner.

' ARTICLE IV.

Preparation in Salt, of the Skins to be dyed red.

After the skins have been fermented in the honey and bran, as abovementioned, let them be taken out of that mixture on the eighth or ninth day, and well rubbed with dry common fea falt, in the proportion of about half a pound to each skin; the falt must be well rubbed and worked with them. This will make them contract again, and part with a further confiderable quantity of moisture; which must be squeezed out by drawing each skin separately through the hands. They must next be scraped clean on both fides from the bran, fuperfluous falt, and moisture that may adhere to them. After which, dry falt must be strewed over the grain side, and well rubbed in with the hand. They are then to be doubled with the flesh side outwards, lengthways from neck to tail, and a little more

dry falt must be thinly strewed over the flesh side, and rubbed in; for the two last operations about a pound and a half of falt will be fufficient for each skin. They must then be put, thus folded on each other, between two clean boards, placed floping, breadthways; and a heavy weight laid on the upper board, in order gradually to press out what moisture they will thus part with. In this state of pressure, they must be continued two days or longer, till it is convenient to dye them, for which they will then be duly prepared.

ARTICLE V.

Preparation of the Red Dye, in a proper proportion for four skins.

Put eight gallons of water into a copper, with feven ounces of shenan *, tied up in a linen bag. Light a fire under the copper, and when the water has boiled about a quarter of an hour, take out the bag of shenan, and put into the boiling fluid or lixivium, 1st, two drams of alum; 2dly, two drams of pomegranate bark; 3dly, three quarters of an ounce of turmeric: 4thly, three ounces of cochineal; 5thly, two ounces of loaf-fugar. Let the whole mixture boil about fix minutes, then cover the fire, and take out a quart of the liquor,

* Shenan is a drug much used by dyers in the East; and may easily be procured at any of the ports of Syria and Africa, in the Levant. It is the Eastern jointed cali, called by botanits selicornia; and grows in great plenty in those and other parts of the East. There is a lesser species of the selicornia on our coast, which, from its great affinity with the shenan, might be presumed to have the same qualities. On some trials, however, it has not appeared to answer the intention of the shenan; but it will be prudent to pursue the examination of this surther, as some unknown circumstances in the collecting or using the English selicornia, might occasion the miscarriage. But be this as it may, the Eastern shenan may, at all events, be easily procured in any quantity, at a very trifling expence, by any of the captains of Turkey ships, at Aleppo, Smyrna, &c.

putting

putting it into a flat earthern pan. and when it is as cold as new milk. take one skin, folded lengthways, the grain fide outwards, and dip it in the liquor, rubbing it gently with the hands. Then taking out the skin, hang it up to drain, and throw away the supersluous dye. Proceed in the same manner with the remaining three skins; repeating the operation on each skin feparately, eight times, squeezing the Ikins by drawing them through the hands before each fresh dipping. Lay them now on one fide of a large pan, fet floping, to drain off as much of the moisture as will run from them without pressure, for about two hours, or till they are cold: then tan them as below directed.

ARTICLE VI.

Tanning the Red Skins.

Powder four ounces of the best white galls, in a marble mortar, fifting it through a fine fieve. Mix the powder with about three quarts of water, and work the skins well in this mixture for half an hour or more, folding up the skins four-fold. Let them lye in this tan twentyfour hours, when they must be worked again as before; then taken out, fcraped clean on both fides, from the first galls, and put into a like quantity of fresh galls and water. In this fresh mixture they must be again well worked for three quarters of an hour; then folded up as before, and left in the fresh tan for three days. On the fourth day they must be taken out, washed clean from the galls, in feven or eight fresh quantities of water, and then hung up to dry,

ARTICLE VII.

Manner of dressing the Skins after they are tanned.

When the skins have been treated as above, and are very near dry, they should be scraped with the proper instrument or scraper on the slesh fide, to reduce them to a proper degree of thickness. They are then to be laid on a smooth board. and glazed by rubbing them with a smooth glass. After which they must be oiled, by rubbing them with olive oil, by means of a linen rag, in the proportion of one ounce and an half of oil for four skins: then they are to be grained on a graining board, lengthways, breadthways, and cornerways, or from corner to corner.

ARTICLE VIII.

Preparation with Galls, for the Skins to be dyed yellow.

After the four skins are taken out of the drench of bran, and clean washed as before directed in the fecond article, they must be very well worked, half an hour or more, in a mixture of a pound and a half of the best white galls, finely powdered, with two quarts of clean water. The skins are then to be separately doubled lengthways; rolled up with the flesh fide outwards, laid in the mixture, and close pressed down on each other. in which state they must continue two whole days. On the third day let them be again worked in the tan; and afterwards scraped clean from the galls, with an ivory or brass instrument (for no iron must touch them.) They must then be put into a fresh tan, made of two pounds of galls finely powdered,

with about three quarts of water, and well worked therein fifteen times. After this they must be doubled, rolled up as before, and laid in the fecond tan for three days. On the third day a quarter of a round of white fea falt must be worked into each skin; and the Ikins doubled up as before, and returned into the tan, till the day following, when they are to be taken out, and well washed fix times in cold water; and four times in water lukewarm. The water must be then well fqueezed out, by laying the skins under pressure, for about half an hour, between two boards. with a weight of about two or three hundred pounds laid upon the uppermost board, when they will be ready for the dye.

ARTICLE IX.

Preparation of the Yellow Dye, in the proper proportion for four skins.

Mix fix ounces of caffiari gehira*, or dgehira, or the berries of the eaftern rhamnus, with the fame quantity of alum, and pound them together till they be fine, in a marble or brass mortar, with a brass pestle. Then dividing the materials, thus powdered, into three equal parts of four ounces each, put one of those three parts into about a pint and a half of water. in a china or earthern vessel; and ftir the mixture together. Let the fluid stand to cool, till it will not fcald the hand. Then fpreading one of the skins flat on a table, in a warm room, with the grain fide

uppermost, pour a fourth part of the tinging liquor, prepared as above directed, over the upper or grain side, spreading it equally over the skin with the hand, and rubbing it well in. Afterwards do the like with the other three skins, for which the mixture first made will be sufscient.

This operation must be repeated twice more on each skin separately, with the remaining eight ounces of the powder of the berries, and alum, with the abovementioned due proportions of hot water, put to them

as before directed.

The skins, when dyed, are to be hung up on a wooden frame, without being folded, with the grain side outwards, about three quarters of an hour to drain, when they must be carried to a river or stream of running water, and well washed therein fix times, or more. After this, they must be put under prefure for about an hour, till the water be well squeezed out, afterwards the skins must be hung up to dry in a warm room.

This being done the skins are to be dressed and grained as before directed for those dyed red, except the oiling, which must be omitted.

Proposals, by Dr. Lind, for preventing a want of fresh water, and a scarcity of provisions at sea.

I N the year 1761, the Doctor was fo fortunate as to discover, that fea water, simply distilled, without the addition of any ingredient,

afforded

^{*} The cassiani gehira is the berries of an Eastern rhamnus, or buckthorn tree, and may be had at Aleppo, and other parts of the Levant, at a small price. The common Avignon, or yellow berries, may be substituted, but not with so good an effect; the cassari gehira being a stronger and brighter yellow dye, both for this use, and also that of colouring paper hangings, &c.

afforded a water as pure and wholefome as that obtained from the best

This, like many other useful difcoveries, was claimed from the author by another person, was also faid to have been formerly known. and met with various objections. The two first the Doctor clears up, and, having removed the objection, endeavours to point out a few fimple contrivances for distilling of sea water, for the benefit of those who may be in want of fresh water at fea. and who shall imprudently neglect to carry out a still-head.

When sea water is boiled in a close covered pot or vessel, it may be observed, that the steam arising from it is converted into fresh water on the infide of the cover of the pot. From a pot of thirteen inches diameter, by frequently removing the cover, and pouring off the water collected upon it, a quarter of a pint of fresh water may be procured in an hour. The cover of the pot should be at least five or fix inches above the furface of the fea water, to prevent its boiling up to it.

Let us suppose a ship at sea to be in distress for want of water, having eight men on board, and that the pot for boiling their provisions can contain five gallons and an half, being twelve inches in diameter; by the following simple contrivance, with only a tea-kettle, a musket, and a cask, one gallon of fresh water may be procured every three hours, which is a pint for each

man.

File off the handle of the teakettle, and fix the head of it, when inverted, into a hole made for that purpose in the cover of the pot. Take the barrel of the musket out of the stock, and, after unskrewing

the breeching pin, put it through two holes bored for its reception in the cask, with a proper descent. Infert the spout of the tea-kettle into the upper end of the barrel. and after stopping up the holes in the cask, and filling it with sea water, there will be a complete fill, and a refrigeratory, or cooler, to condense the steam. All the joinings and places from whence the steam could escape, ought to be luted for stopped up with a paste. composed of equal parts of chalk and meal, moistened with a little falt water; and the tea-kettle, with the cover of the pot, should be kept down by weights, to prevent the steam from forcing them up.

If the cask should be thought too near the fire, the tube may be prolonged by the barrel of another musket, or by a wooden pipe. the barrel of another musket be used, whose bore is not large enough to receive the extremity of the former, one end of it should be heated in the fire, and dilated with a marline-spike. If a wooden pipe be used, it should not be bored with a hot iron, as I have found by experience, that the burnt wood would impart a permanent disagreeable

taffe to the diffilled water.

If we may suppose a ship at sea to have no tea-kettle on board, then let the wooden hand-pump, with which the water or beer is pumped out of the casks, be cut through obliquely, and joined fo as to form an acute angle. One end of this tube should be fixed in the hole made in the cover of the pot, the other should be fastened to the gunbarrel. From this apparatus, nearly the same quantity of water may be procured as from the former, by means of the tea-kettle,

It may justly be supposed that the coppers used for boiling the provisions will, in every ship, contain the proportion of above two quarts of water for every person on board, which will be sufficient to yield, in distillation, the proportion of three pints of fresh and wholesome water

From the improvements made in distillation, by the ingenious Dr. Hales, published in the year 1757, it appears, that three pints of water could be procured in five minutes, that is, fifty gallons in twelve hours, from a fmall cylindrical still of Mr. Durand's, by the addition of fix pewter plates, fet edge-ways în its head. This still was only 15 inches in diameter at the widest part, and held fix or feven gallons. A still 22 inches wide, containing 30 gallons, would yield in distillation, 100 gallons in the space of 12 hours; and a still, 32 inches in diameter, would give 200 gallons in the fame time, attended only with the small expence of a bushel and an half of coals, or of a proportionable quantity of any other fuel. Hence three chaldrons of coals are more than fufficient to fupply 400 men, which is the complement of a fixty gun ship, for two months, with half a gallon of water per day for each person.

From what has been faid it is evident, that no person at or near the sea, can suffer death from an absolute want of water, if they will only take the precautions which pru-

dence and felf-preservation would feem to dictate.

That this subject deserves the most serious attention, will sufficiently appear from the following extract of a letter fent to Dr. Lind, from the Havannah, dated 1st September, 1762: "Before the fur-" render of this place, our distress " for want of water became inex-" pressible: I would have given, " with pleasure, half a guinea for " a pint of fuch distilled sea water, " as I have frequently drank at " your table. Numbers of our " men died, from a real want of "water, and many more from " drinking water which was un-"wholesome and poisonous."-Would not a few stills, fent from Jamaica, have faved the lives of these men?

The Doctor having thus used his endeavours to provide all persons at or near the sea with good water, his attention is next directed towards securing them against the dreadful calamity of famine, for which purpose he offers the following considerations.

The powder of falep, and portable foop, dissolved in boiling water, form a rich thick jelly, capable of supporting life for a considerable length of time; as appears from the daily instances of persons having been supported for many months, by a much less nourishing diet, boiled rice, and even by gum Arabic * alone.

An ounce of each of these articles

* Hassequist, in his voyages to the Levant, informs us, that a caravan from Ethiopia to Egypt, having expended all their provisions, lived for two months on gum Arabic dissolved in water; this gum having luckily been part of their merchandise. The gum Senega, or Arabic, not only serves as a sustanance for whole negroe towns, during a scarcity of other provisions, occasioned sometimes by a failure of their crops of millet and rice; but the Arabs, who twice a year collect this gum in the inland forests, on the north-side of the river Niger, have no other provisions to live upon for some months.

distolved

diffolved in two quarts of boiling water, will convert it into a thick jelly, which will be fuftenance furficient for one man a day, and, as being a mixture of both animal and vegetable food, must prove more wholesome and nourithing than double the quantity, or a gallon of rice cake, made by boiling rice in water.

This last, however, failors are often obliged folely to subfist upon for several months, especially in voyages to Guinea, when the bread and flour are exhausted, and the beef and pork, having been salted in hot countries, become spoiled,

and unfit for use.

But as a nourishment, the inferiority of rice to falep, is not only from its conveying less nourishment, in double the bulk, but also from the great confumption of fuel, and more especially of water, in the long boiling, necessary to render it fit for use; whereas salep will form a paste with cold water, and is not too falt when mixed even with fea water. Salep, when mixed with cold water, requires only ten times its weight of water, to form it into a paste or cake, and, if mixed with more, a separation of the redundant water will enfue. This paste, with the addition of a little vinegar, will ferve to allay both hunger and thirst, and will keep good for feveral days. When the falep is mixed with cold fea water, it should not be allowed above

fix times its weight of water; and this quantity is just sufficient to render it palatable, it being of itfelf a very infipid powder.

From what has been faid, may justly be deduced the following pro-

pofals:

As the calamity of famine at fea, may fometimes proceed from the avarice of the masters of merchant ships, who, from a lucrative view, have taken on board too small a quantity of provisions; if the masters were obliged, by the articles of agreement with their men, to pay a stipulated allowance of money for any desciency that might happen in their provisions, during the voyage, as is done in the royal navy, would it not tend greatly to prevent the frequency of this distress?

As two pounds of falep, with an equal quantity of portable foop, will afford a wholefome diet to one perfon for a month, would it not be expedient for every fhip to carry to fea a quantity of these articles, in proportion to the number of the men, lest from unavoidable accidents the other provisions might be exhausted during the voyage?

As falep and portable foop contain the greatest quantity of vegetable and animal nourishment, that can be reduced into so small a bulk, would not these articles be extremely beneficial, when through fire, shipwreck, or other accidents, the crew are obliged to have re-

course to their boats *?

As

^{*} Supposing a boat furnished with eleven gallons of water, two pounds of falep, and two pounds of portable beef-soop for each man, it is probable none in it will die of hunger or thirst, for at least a month; during which time, the daily allowance of each person will be more than a quart of water, eleven ounces of a strong salep-passe, and an ounce of portable soop. The soop should be allowed to melt in the mouth; and in that small quantity, if properly made, are contained the nourishing juices of above three quarters of a pound of bees.

As these two articles, when kept dry, will remain good for several years, would they not also prove serviceable in besieged towns, and in the long marches of armies; as every soldier could then carry a fortnight's subsistence for himself, without any inconvenience, to be used in case a supply of other provisions should be stopped.

Dr. Lind does not here offer to the public, an alimentary paste or powder, to superfede the necessity of fupplying our fleets and armies with other food; nor will the difcovery of freshening sea water, render the common precautions of guarding against the want of that necessary support of life, less needful and expedient: the intention of all these proposals being solely to prevent mankind, in many particular situations of distress, from suffering a cruel and untimely death, under the excruciating tortures of hunger and thirst.

In cases of great extremity, the salep may be mixed with the sea water, and will still be equally wholesome. All this will be attended with only a trifling expence, as the salep is commonly sold at four shillings and sixpence per pound,

and the portable foop at half a crown.

One necessary precaution, which ought never to be omitted in a ship at sea is, always to have a cask of water either in the boat, or in some convenient place upon the deck, from whence it may be easily conveyed into the boat, as in cases of sire, and of many other disasters at sea, it is often impossible to go down into the hold for water. The same precaution is equally necessary with respect to the sale pand portable soop.

ANTIQUITIES.

Received October 10, 1767.

A letter from Edward Wortley Montague, E/q; F. R. S. to William Watson, M. D. F. R. S. containing some new observations on what is called Pompey's Pillar, in Egypt.

SIR,

Read Nov. 19, There fend you a 1767. I a few lines, which I believe will appear extraordinary, as every traveller that has been at Alexandria has mentioned the famous pillar of oriental granite, which is about a mile without the walls of that city, as erected, either by Pompey, or to the honour of Pompey. As I differ in opinion from them all, and think this famous pillar was erected to the honour of Vespasian, you certainly will expect to hear on what foundation I found so extraordinary a conjecture, as so new a one may appear to you.

By my menf. the capital of the pillar is 7. The shaft 66 13 British 7. The base 5 93 tini.

The pedestal 5 92 tini.

Height from the Ground 92 0 Its diameter 9 1 re

As foon as I faw this furprizing pillar, I was convinced that, if it had been erected in Pompey's time, Strabo, or some of the ancients,

would have mentioned it: I therefore determined to examine it narrowly. I perceived too that the pedestal was of a bad and weak masonry, composed of small and great stones of different forts, and absolutely unable to sustain so great a weight; I therefore eafily concluded fuch pedestal not originally belonging to the pillar. I attempted to get out a stone, which I did without trouble, and discovered the pedestal to be hollow. After fome time, I mean during the course of many days, I made an opening wide enough to enter it; when within it, you will judge how much I was furprized to find this prodigious mass of granite stood, as on a pivot, on a reversed obelisk, as I then believed it was, only five feet square. Curious to know the length of the obelisk, I began to move the earth on one of its fides; but my furprize increased much when I found, after moving a few inches of the foil, that the obelish was not entire, this pivot being only four feet and one inch thick. It is feated on a rock; the stone is of an extreme hardness, and almost a petrification, or rather conglutination, of many different stones, but all vitrescent. I never met with any stone of this kind any where, except with one fmall piece on the plain of the Mommies: I broke a piece of it, which Lord Bute has: a fmall piece too of the pillar was fent, that gentlemen may be convinced it is of red granite, and not a composition as some have imagined.

This part of the obelisk is covered with hieroglyphicks, which are reversed, a plain proof the pillar was not erected whilst they were held facred characters.

Convinced, therefore, that it was not of the antiquity one would fuppose it, from being called of Pompey, I visited it several times to see if it might not be possible to find out something that would give room for a reasonable conjecture, in honour of whom, or at what time, it was erected. From the infcription I could discover nothing: it is on the west face of the base; but so much injured by time, and I may fay too by malice, for the mark of an instrument are plainly discovered effacing it, that one can but imperfectly make out fome Greek characters, so imperfectly indeed that no one word can be found.

At length, observing that the cement, or mortar, which closes the small feparation of the shaft from the base, was quite destroyed in one part, I was curious to fee if any thing was made use of within, to fasten or tie the shaft to the base; I faw there was: being defirous to know if it was lead, and if fo, if it was not of that pure, and of which we still meet with fome few medals, I endeavoured with a pretty large hanger to cut off a fmall piece of the grapple: there was a great number of lizards which had taken shelter there, and which run out on my introducing the hanger. I then difcovered a dark spot, at the distance of more than a foot, within the circumference of the pillar; which, by striking it with the hanger, I found was fomething stuck fast to the base: after striking it several times, I detached it from its place, and it proved a medal of Vespasian

in fine order. AVT. KAIS. SF-DA. ΟVΕΣΠ.... The reverse is, Victoria gradiens; Dextra spicas, sinif. palmam.

This medal was shewn to the Royal Society.

The reversed hieroglyphicks are a proof that this amazing monument was not erected before Pompey's time; and, as there is no mention of it in Strabo, or any one of the antient writers that I have met with, it feems plain it was not known before the time of Vefpafian. This medal could not by any accident, I think, have been introduced above a foot within the circumference of the shaft; therefore I suppose it was placed there when the pillar was erected, which from thence I conclude to have been done to the honour of that emperor; and perhaps on his restoring the cripple to the use of his limbs.

If you think this paper worth it, you will please to communicate it to the Royal Society, and that of

the Antiquaries.

The pillar is exactly shewn, with the pivot it stands upon, with a reference to the spot the medal was found upon, in the view of it that I have fent to England.

I beg you will affure the Society of my respect, and how happy I shall be to execute any of their com-

mands.

And I hope you will rest perfuaded of the true confideration with which

I am, Dear Sir, Your most humble servant, Ed. W. Montagu. Zante, May 7, 1767.

Of the Chemistry of the Ancients.

From an elaborate and ingenious work lately published, entitled, An Inquiry into the Origin of the Discoveries attributed to the Moderns.

By the Rev. Mr. Dutens.

F we will be guided by the great-est number of etymologists, there needs no deep research to demonstrate the antiquity of chymistry. Its name feems to declare its origin. It is agreed almost by all, that it was first cultivated in Egypt, the country of Cham, of whom it is supposed primarily to have taken its name Xnusia, Chemia, five Chamia, the Science of Cham *. But without entering here into a philological discussion, I shall content myfelf with confidering whether the ancients were chymists, and to what degree; and hope to make it appear, that they not only knew all of that art that we do, but had fuch infight in it as we have not at prefent.

The first instance that occurs, for ascertaining the antiquity of the fcience, is of a very remote date. Nobody, I think, will disallow that Tubal-Cain, and those who with him found out the way of working in brass and iron, must have been able chymists. In reality it was impossible to work upon these metals, without first knowing the art of digging them out of the mine, of excavating them, and of refining and separating them from the ore; all which are chymical operations, and must have been at first invented by those who excelled in the art, however afterwards they might be put in practice by the meanest artizans. Those who are engaged in the working of copper-mines, for instance, and know that the metal itself must pass above a dozen times through the fire, before it can acquire its proper colour and ductility, will eafily enter into this sentiment. It appears to me needless to bring together here all the paffages of heathen historians, which speak of Vulcan in the same manner as the facred author does of Tubal-Cain; and to shew the reader from the resemblance, and as it were identity of names, that all of them relate to one and the fame person. That would be to digress too far. It is enough to observe that those authors represent Vulcan as skilled in operating upon iron, copper, gold, filver, and all the other bodies capable of fustaining the action of fire.

I likewise pass over whatever carries in it the air of fable: fuch as the flory of the golden fleeces; the golden apples that grew in the gardens of the Hesperides; the reports of Manethon and Josephus with relation to Seth's pillars, whence deductions have been made in favour of the translation of metals. I come to facts more real and established; and, for the fake of chronology, shall still adhere to the sacred text in contemplating an action of Mofes, who, having broken the goldencalf, reduced it into powder, to be mingled with water, and given to the Israelites to drink; in one word, rendered the gold potable; an operation fo difficult, that it is intirely impracticable to most of the chymists of our days, and owned by'

* In the rosth psalm, Egypt is called, "The land of Cham." According to Bochart, the Coptes still call themselves Chemi, or Chami; and Plutarch, in his Iss and Osiris, speaking of a district of Egypt, names it Chamia quasi Chimia. Another etymology is assigned to this word, by deriving it from the Arabian 2nux, occultare; chymistry being an occult art.

Boer-

Boerhaave to be of fo exalted a kind, that it is unknown at prefent even to the most skilful. Yet it must be admitted, that it hath been looked upon by some able chymists as still practicable*, who at the fame time acknowledge it to be a most remarkable proof of Mofes's eminent skill in all the wisdom of Egypt. For how, without the aid of chymistry, could Moses have disfolved the golden calf, and that too without applying corrofives, which would have poisoned all who had afterwards drank of the waters? Yet this is to be done, and in a short time too, though there be but one way of doing it. Frederic the third, king of Denmark, curious to put this operation in practice, engaged fome able chymnis of his time to attempt it. After many trials they at last succeeded, but it was in following the method of Mofes, by first of all reducing the gold into fmall parts by means of fire +, and then pounding it in a mortar (along with water to be fure) till it was fo far diffolved as to become potable. This fact cannot be called in queflion, nor has it any thing fupernatural in it. We know that Mofes was instructed in all the learning of the Egyptians, among whom the fciences were cultivated with all manner of faccels, and from whom the most eminent philosophers of Greece derived their knowledge.

That they were not unworthy of the reputation they acquired, might be shown from this fingle article of chymistry.

How they formed that cement, which they applied in rearing those monuments which still subsist, remains a fecret yet to us unknown: though it be past all doubt, that they prepared it in a chymical way, fo hidden however to us, that we daily lament the lofs of it. The numberless nummies which still endure, after so long a course of ages, ought to afcertain to the Egyptians the glory of having carried chymistry to a degree of perfection attained but by few. In their mummies alone there is fuch a feries and contexture of operations, that forme of them still remain unknown. notwithstanding all the attempts of forme of the ablest moderns to recover them. The art of embalming bodies, for example, and of preferving them for many ages, is absolutely loft; and never could have been carried fo far as it was by the Egyptians, without the greatest skill in chymistry. All the essays to restore this art have proved ineffectual; nor have the reiterated analyses made of mummies, to difcover the ingredients of which they were composed, had any better success. Some moderns have attempted, by certain preparations, to preferve dead bodies intire, but all to

† Sennertus de Consens. & Discord. informs us, that the Hebrew word put fignifies not only to burn, but to calcine, melt, and reduce to an extremely fine powder, by whatever means it be done,

^{*} Fr. Antonius Londinensis.—Borichius de Sapientia Ægyptiarum & Chemicorum, p. 293, 294, 306, 410, et 415. speaks of the Tincture of Gold.—The famous Joel Langelotte affirms in his works, that gold may be entirely dissolved by attrition alone; and the ingenious Homberg assures us, that by pounding for a long while certain metals, and even gold itself, in plan water, those bodies have been so entirely dissolved as to become potable. Boerhaave. Elem. de Chimie, p. 604. Vid. et Dickensoni Physicam Vet. & Nov. lib. 20.

no purpose. The mummies of Lewis de Bils, who was regarded as eminent in that way, are already in a state of corruption *. There were also, in those mummies of Egypt, many things befide, which fall within the verge of chymistry: fuch as their gilding +, fo very fresh, as if it were but of fifty years standing; and their stained filk, so vivid in its colours, though after a feries of thirty ages. In the Mufeum at London there is a mummy covered all over with fillets of gramated glass, various in colour, which fliews that this people, at that time, understood not only the making of glass, but could paint it to their liking. It may be remarked here, that the ornaments of glass, with which that mummy is bedecked, are tinged with the fame colours, and fet off in the fame tafte, as the dyes in which almost all other mummies are painted; fo that it is probable, that this kind of ornaments, being very expensive, was referved for personages of the first rank only; whilst others, who could not afford this, contented themselves with an imitation of it in painting.

It would be easy to make a more extensive enumeration of the particulars of the chymical process which altogether concurred to the composition of a mummy; but I proceed now to take notice of their manner of painting upon linen, which, if I mistake not, is still a secret to us. After having drawn the outlines of their design upon the piece of linen, they filled each

compartment of it with different forts of gums, proper to absorb the various colours; fo that none of them could be distinguished from the whiteness of the cloth. Then they dipt it for a moment in a caldron full of boiling liquor, prepared for the purpose; and drew it thence, painted in all the colours they intended. And what was very remarkable, the colours neither decayed by time, nor moved in the washing; the caustic, impregnating the liquor wherein it was dipt, having penetrated and fixed every colour intimately through the whole contexture of the cloth. This fingle instance is sufficient to give us a very high conception of the progress that chymistry had made among the Egyptians, though their history affords a thousand others of the kind, not to be wondered at among a people fo very active and industrious, where even the lame. the blind, and the maimed, were in constant employment; and so little fubject to envy, that they inscribed their discoveries in the arts and sciences upon pillars reared in holy places, in order to omit nothing that might contribute to the public utility. The emperor Adrian atteffs this first part of their character, in a letter written to the conful Servianus, upon prefenting him with three very curious cups of glafs, which, like a pigeon's neck, reflected, on whatever fide they were viewed, a variety of colours, reprefenting those of the precious stone called obsidianum, which some

* Lewis de Bils (Bilsius) of Copenhagen. Gabriel Clauder, physician to the duke of Saxony, an. 1679.—Tobias Andreas Epist. ann. 1682.—Act. Erudit. Lipsens. ann. 1683. mens. Julio, p. 270.—Conringius de Sapientia.

[†] The antients also understood gilding with beaten or water gold.—As in-aurari argento vivo, legitimum erat. Plin. Hist. Nat. lib. 33. c. 3. Vitruv.

commentators have imagined to be cats-eye, and others the opal.

This art of imitating precious stones, was not peculiar to the Egyptians; the Greeks, who indeed derived their knowledge from those great mafters, were also very skilful in this branch of chymistry. They could give to a composition of crystal, all the different tints of any precious stone they wanted to imitate. Pliny, Theophrastus, and many others, give fome inflances of this; but they most remarkably excelled in an exact imitation of the ruby, the hiacynth, the emerald, and the fapphire, called by Theo-

phrastus xvayor duroqui.

I infift not upon what Diodorus Siculus fays, that some of the Egyptian kings had the art of extracting gold from a fort of white marble; nor upon what Strabo reports of their manner of preparing nitre, and the confiderable number of mortars of granit that were to be feen in his time at Memphis, which to be fure were intended for chymical purpofes: but I cannot in filence pass over their hatching of eggs of hens, geefe, and other fowls, at all seasons, and in different ways, renewed of late by Mr. de Reaumur, who follows a method which, by the testimony of Diodorus Siculus, Aristotle, and Flavius Vopiscus, had for its inventors the Egyptians.

Chymithry being a principal branch of medicine, it will not be amiss to mention fome particulars, wherein the Egyptians have contributed to the perfection of that science. I set aside the history of Æsculapius, who was instructed by Mercury or Hermes, and I come to facts. Their . pharmacy depended much upon chymistry; witness their manner of extracting oil, and preparing opium, for alleviating of acute pains, or relieving the mind from melancholy thoughts. Homer feems to have had this last in view, when he introduces Helen as ministring to Telemachus a medical preparation of this kind. They also made a composition or preparation of clay or fuller's earth, adapted to the relief of many diforders, particularly to render the fleshy parts dry, and thence to cure the dropfy and the hemorrhoids. They knew all the different ways of composing falts, nitre, and alum, fal cyrenaic or ammoniac, fo called from being found in the environs of the temple of Jupiter Ammon. They made use of the litharge of filver, the rust of iron, and calcined alum, in the cure of ulcers, cuts, boils, defluxions of the eyes, pains of the head, &c. and of pitch against the bite of serpents. They fuccessfully applied caustics, They knew every different way of preparing plants, or herbs, or grain, whether for medicine or beverage. Beer, in particular, had its origin among them *. Their unquents were of the highest estimation, and most lasting; and their using remedies, taken from metallic fubitances, is so manifest in the writings of Pliny and Dioscorides, that it would be needless, and indeed tedious, to enter upon them here. Dioscorides especially often makes mention of their metallic preparations, fuch as burnt lead, ceruse, verdigrease, and burnt antimony; all which they

made

^{*} Diodor. Sic. lib. 1. p. 17. 31. et 211. Conficitur et in Ægypto potus ex Hordeo, quem Zythum vocant, odoris et saporis jucunditate v non multura cedens. Vid. et Plin. lib. 13. c. 5. Herodot. in Euterpe. Ofror en und der. Dioscor. lib. 2. c. 109 et 110.

made use of in their plaisters, and other external applications. It should be observed here, that I have had nothing in view but the pharmacy of the Egyptians, otherwise I might have made mention of the Theriac, that famous composition of Andromachus the physician of Nero, which has at all times been in high estimation, and is now in as much repute as ever. What little I have advanced respecting the medicinal chymistry of the ancients, must suffice upon this occasion; the Greeks and Romans prefenting a field too vast, to be comprised in a tract of this kind. Hippocrates especially, the cotemporary and friend of Democritus, was remarkably assiduous in the cultivation of chymistry. A learned man has composed an intire book on the extensive comprehension he had of it, whereby it appears that he not only underflood the general principles of it, but was an adept in many of its most useful parts. Passages are quoted from Plato, that are now received as axioms in chymistry. Galen knew that the energy of fire might be applied to many useful purposes, and that by the instrumentality of it many fecrets in nature were to be discovered, which otherwise must for ever lie hid; and he gives many inflances of this in feveral places of his works. Dioscorides hath transmitted to us many of the mineral operations of the ancients, and in particular that of extracting quickfilver from cinnabar, which is in effect an exact description of distillation-

Ohservations on the nature and confruction of the burning Glasses, inwented by Archimedes, to set fire Vol. XI. to the Roman Fleet, at the Siege of Syracuse. From the same.

HE fertile genius of Archimedes illustriously appears, not only in those works of his which have been handed down to us, but also in the admirable descriptions which the authors of his time have given us of his discoveries in mathematics and mechanics. Some of the inventions of this great man have appeared so far to furpass human ability and imagination, that fome celebrated philosophers have called them in question, and even gone fo far as to pretend to demon-Brate their impossibility. The following chapter will produce many proofs of what I here advance: meanwhile, I intend in this to examine into the fubject of the burning glasses, employed by Archimedes to fet fire to the Roman fleet at the fiege of Syracufe. Kepler, Naudeus, and Descartes, have treated it as a mere fable, tho' the reality of it hath been attested by Diodorus Siculus, Lucian, Dion, Zonarus, Galen, Anthemius, Eustathius, Tzetzes, and others. Nay, fome have even pretended to demonstrate by the rules of catoptrics the impossibility of it, notwithstanding the affeveration of fuch respectable authors, who ought to have prevented them from rejecting fo lightly a fact fo well supported.

Yet all have not been involved in this mittake. Father Kircher, attentively observing the description which Tzetzes gives of the burning glasses of Archimedes, resolved to prove the possibility of this; and having, by means of a number of plain mirrours, collected the sun's rays into one socus, he so augmented the solar heat, that at last by in-

K

creating

creasing the number of mirrours, he could produce the most intense de-

gree of it.

Tzetzes's description of the glass Archimedes made use of is indeed very proper to raise such an idea as Kircher entertained. That author fays, that "Archimedes fet fire to Mar-"cellus's navy, by means of a burn-" ing glass composed of small square " mirrours, moving every way up-"on hinges; which, when placed "in the fun's rays, directed them " upon the Roman fleet, fo as to " reduce it to ashes at the distance " of a bow-fhot." 'Tis probable Mr. de Buffon availed himself of this description, in constructing his burning glass, composed of 168 little plain mirrours, which produced so considerable a heat, as to fet wood in flames at the diffance of two hundred and nine feet; melt lead, at that of one hundred and twenty; and filver, at that of fifty.

Another testimony occurs, which leaves not the least doubt in this case, but resolves all in favour of Archimedes. Anthemius of Tralles in Lydia, a celebrated architect, able sculptor, and learned mathematician, who in the Emperor Juflinian's time built the church of Sta Sophia at Constantinople, wrote a small treatise in Greek, which is extant only in manuscript, intitled Mechanical Paradoxes. That work, among other things, has a chapter respecting burning glasses, where we meet with the most complete description of the requisites that Archimedes, according to this author, muit needs have been possessed of, to enable him to fet fire to the Roman fleet. He begins with this inquiry, "How in any given place, "at a bow-shot's distance, a con-" flagration may be raifed by means

" of the fun's rays?" And immediately lays it down as a first principle, "That the fituation of the " place must be such, that the rays " of the fun may be reflected upon "it in an oblique, or even opposite "direction, to that in which they " came from the fun itself." And he adds, "that the affigned distance "being fo very confiderable, it " might appear at first impossible to " effect this by means of the reflec-"tion of the fun's rays; but as the " glory Archimedes had gained by " thus fetting fire to the Roman vef-" sels, was a fact universally agreed " in, he thought it reasonable to ad-" mit the possibility of it, upon the "principle he had laid down." He afterwards advances farther, in this inquiry, establishing certain necessary propositions in order to come at a folution of it. "To find out "therefore in what position a plain "mirrour should be placed to car-" ry the fun's rays by reflexion to a " given point, he demonstrates that "the angle of incidence is equal to "the angle of reflexion; and hav-" ing shewn that, in so just a posi-"tion of the glass, the sun's rays "might be reflected to the given " place, he observes that by means. " of a number of glasses restecting " the rays into the fame focus, there "must arise at the given place the " conflagration required, for in-" flaming heat is the refult of thus "concentrating the fun's rays: " and that when a body is thus fet " on fire, it kindles the air around "it, so that it comes to be acted " upon by the two forces at once. "' that of the fun, and that of the " circumambient air, reciprocally " augmenting and increasing the " heat; whence," continues he, " it necessarily results, that by a pro-

per number of plain mirrours duif y disposed, the sun's rays might be reflected in such quantity into " a common focus, at a bow-shot " distance, as to set all in slames " around it. As to the manner of " putting this in practice," he fays, it might be done by employing many hands to hold the mirrours in the described position; but to * avoid the confusion that might "thence arise, twenty-four mirrours at least being requisite to " communicate flame at fuch diftance, he fixes upon another me-"thod, that of a plain hexagon " mirrour, accommodated on every if fide by leffer ones, adhering to it " by means of plates, bands, or "hinges, connecting them mu-" tually together, so as to be moved " or fixed at pleasure in any direc-"tion. Thus having adapted the " large or middle mirrour to the " rays of the fun, fo as to point "them to the given place, it will " be easy in the same manner to dis-" pose the rest, so that all the rays of together may meet in the same " focus; and by multiplying com-" pound mirrours of this kind, and " giving them all the fame direction, there must thence infallibly " refult, to whatever degree of in-" tenfeness, the conflagration re-" quired at the place given. " better to succeed in this enterre prize, there should be in readi-"ness," he adds, "a considerable " number of those compound mirrours to act all at once, from four "at least, to seven." He concludes his differtation with observing, " that all the authors who " mention the burning machine of "the divine Archimedes, never " speak of it as of one compound " mirrour, but as a combination

" of many." So large and accurate a description is more than fufficient to demonstrate the possibility of a fact, fo well attested in history, and by fuch a number of authors, that it would be the highest degree of arrogance and conceit, to refuse our suffrage to such invincible testimony. Vitellion, who lived about the 13th century, speaks of a work of Anthemius of Tralles. "who had composed a burning e glass consisting of twenty-four " mirrours, which conveying the rays of the fun into a common fo-"cus, produced an extraordinary degree of heat." And Lucian speaking of Archimedes, says, "that at the fiege of Syracuse he re-"duced, by a fingle contrivance, "the Roman ships to ashes." And Galen; that " with burning glaf-" fes he fired the ships of the ene-" mies of Syracuse." Zonaras also fpeaks of Archimedes' glasses, in mentioning those of Proclus, " who," he fays, " burnt the fleet " of Vitellius at the fiege of Con-"flantinople, in imitation of Ar-" chimedes; who fer fire to the Ro-" man fleet at the flege of Syracuse." He intimates that the manner wherein Proclus effected this, was by launching upon the enemies veffels, from the furface of reflecting mirrours, fuch a quantity of flame as reduced them to ashes. Eustathius, in his Commentary

upon the Iliad, fays, that "Archi"medes, by a catoptric machine,
"burnt the Roman fleet at a bow"fhot's diffance." Infomuch that
there is fcarce any fact in history
warranted by more authentic testimony; fo that it would be difficult
not to furrender to fuch evidence,
even altho, we could not comprehend how it were possible for AraK. a chimedes

chimedes to have constructed such glaffes; but now that the experiments of father Kircher and Mr. de Buffon have made it apparent, that nothing is more easy in the execution, than what some gentlemen have denied the possibility of; what ought they to think of the genius of that man, whose inventions, even by their own accounts, surpass the conception of the most celebrated mathematicians of our days, who think they have done fomething very extraordinary, when they have shewed themselves capable of imitating in some degree the sketches of those great masters, of whom, however, they are very unwilling to be thought the disciples?

Again, it appears that the ancients were acquainted with refracting burning glasses; for we find in Aristophanes's Comedy of the Clouds, a passage which clearly treats of the effects of those glasses. The author introduces Socrates as examining Strepfiades about the method he had discovered for getting clear for ever of his debts. He replies, that " he thought of making While of a burning glafs, which he * had hitherto used in kindling his "fire; for," fays he, "fhould " they bring a writ against me, I'll " immediately place my glass in the s fun, at some little distance from "the writ, and fet it a fire." Where we fee he speaks of a glass which burned at a distance, and which could be no other than a convex glass Pliny and Lactantius have also spoken of glasses that burnt by refraction. The former calls them balls or globes of glass, or chrystal, which, exposed to the fun, transmit a heat sufficient to set fire to cloth, or corrode away the dead flesh of those patients who

stand in need of caustics; and the latter, after Clemens Alexandrinus, takes notice that fire may be kindled, by interposing glasses filled with water between the sun and the object, so as to transmit the rays to it.

Our author, in another chapter, gives the following inflances as a farther illustration of the great ge-

nius of Archimedes.

Archimedes alone would afford fufficient matter for a volume, in giving a detail of the marvelous difcoveries of a genius to profound, and fertile in invention. feen in the preceding chapters, that fome of his discoveries appeared so much above the reach of men, that many of the learned of our days found it more easy to call them in doubt, than even to imagine the means whereby he had acquired them. We are again going to produce proofs of the fecundity of genius belonging to this celebrated man; and in how high a degree of excellence he possessed this inventive faculty, may eafily be judged of by the greatness of those events which were effected by it. Leibnitz, who was one of the greatest mathematicians of this age, did justice to the genius of Archimedes, when he faid, "That if we were better ac-" quainted with the admirable of productions of that great man, " we would throw away much lefs " of our applause on the discove-

"ries of eminent moderns."

Wallis alfo, in speaking of Archimedes, calls him "a man of "admirable sagacity, who laid the foundation of almost all those inventions, which our age glo-"ries in having brought to per-"fection." In reality, what a glorious light hath he diffused over the mathematics, in his attempt to

fquare

fquare the circle; and in discovering the square of the parabola, the properties of spiral lines, and the proportion of the sphere to the " cylinder, and the true principles " of flatics and hydroftatics?" What a proof of his fagacity did he give in discovering the quantity of filver, that was mixed along with the gold, in the crown of king Hieron; whilst he reasoned upon that principle, " that all bodies immerged in water lose just so much of their weight, as a quantity of " water equal to them in bulk weighs?" Hence he drew this confequence, that gold being more compact must lose less of its weight, and filver more; and that a mingled mass of both, must lose in proportion to the quantities mingled. Weighing therefore the crown in water and in air, and two masses, the one of gold, the other of filver, equal in weight to the crown; he thence determined what each loft of their weight, and fo refolved the problem. He likewise invented a perpetual screw, valuable on account of its being capable to overcome any refistance; and the screw that still goes by his own name, used in elevating of water. He of himfelf alone defended the city of Syracuse, by opposing to the efforts of a Roman general, the refources he found in his own genius. By means of many various warlike machines, all of his own construction, he rendered Syracuse inaccessible to the enemy. Sometimes he hurled upon their land-forces stones of such an enormous fize, as crushed whole bodies of them at once, and put the whole army into confusion. And when they retired from the walls, he still found means to annoy them; for with catapults and baliftæ he overwhelmed them with arrows innumerable, and beams of a prodigious weight. If their vessels approached the fort, he feized them by the prows with grapples of iron, which he let down upon them from the wall, and rearing them up in the air; to the great aftonishment of every body, shook them with fuch violence, as either to break them in pieces, or fink them to the bottom. And when the Romans thought of sheltering themselves from his pursuit, by keeping at a distance from the haven, he borrowed fire from heaven, and, aided by his own ingenuity, wrapt them in fudden and inevitable conflagration, as we have feen a little higher.

The fuperior knowledge he had in sciences, and his confidence in the powers of mechanism, prompted him once to fay to king Hieron, who was his patron, admirer, and friend, "Give me but some other " place to fland upon, and I'll fet " the earth itself in motion;" and when the king, amazed at what he had faid, seemed to be in hesitation; he gave him a firiking proof of the possibility of what he had advanced, by launching fingly by himself a ship of a prodigious size. He built likewise for the king an immense galley, of twenty banks of oars, containing spacious apartments, gardens, walks, ponds, and all other conveniences fuitable to the dignity of a great king. He constructed also a sphere, representing the motions of the stars, which Cicero esteemed one of the inventions which did the highest honour to human genius. He perfected the manner of augmenting the mechanic powers, by the multiplication o wheels and pullies; and, in fhort, carried mechanics fo far, that the works he produced of this kind, even furpass imagination."

K 3 Extract

Extract from an Inventory of the Goods, Chattels, &c. of Thomas Kebeel, Serjeant at Law, appraised by Valentine Mason, General Appraiser unter the most Reverend Father in God the Lord Cardinal and Archbishop of Canterbury. 6' Julij, 15° Hen. VII. 1500.

* * This curious Appraisement shews the Price of Silver, Gold, Corn, Cattle, Houshold Goods, &c. at the Time when it was made; and is in Truth a valuable Acquisition to Antiquaries.

An Explanation of Egyptian Hieroglyphics. From the French.

FTER Hermes, and the Egyptian priests who succeeded, had, by long study and speculation, formed a system of theology, and natural philosophy, in which God, the supreme cause of all, was the universal soul diffused through the whole creation, they endeavoured to express the divine attributes and operations of the Deity, in the works of nature, by the properties and powers of living animals, and other natural productions, as the proper symbols of such amazing causes,

In order to chuse the most proper fymbols, and, at the fame time, the most expressive of the divine attributes, and of the effects of Divine Providence in every part of the universe, they studied with great application and care, not only the peculiar properties of those animals, birds, and fishes, herbs and plants, which Egypt produced, but also the geometrical properties of lines and figures; and by a regular connection of these in various orders, attitudes, and compositions, they formed the whole system of their theology and philosophy, which was hidden under hieroglyphic figures and characters, known only

to themselves, and to those who were initiated into their mysteries.

In this fystem their principal hero-gods, Ofiris and Isis, theologically represented the Supreme Being, and universal nature; and phyfically fignified the two great celestial luminaries, the fun and moon, by whose influence all nature was actuated. In like manner, the inferior heroes represented the fubordinate gods, who were the ministers of the supreme spirit; and physically they denoted the inferior mundane elements and powers. Their fymbols represented, and comprehended under them, the natural productions of the Deity: and the various beneficial effects of Divine Providence, in the works of creation: and also the order and harmony, the powers and mutual influence of the several parts of the universal system.

This is the fum and fubstance of the Egyptian learning, fo famed in ancient times throughout the world. And in this general fystem, the particular history of their herogods was contained, and applied to physical causes, and theological fcience. The hieroglyphic fystem was composed with great art and fagacity; and was fo univerfally efteemed and admired, that the most learned philosophers of other nations, came into Egypt on purpose to be instructed in it, and to learn the philosophy and theology conveyed by these apposite symbols.

In this hieroglyphic fystem the hero-gods not only represented, and were symbols of the Supreme God, and subordinate deities; but they had each their animal symbol, to represent their peculiar powers, energy, and administration: and their sigures were compounded of

one part or other of their fymbols, to express more sensibly the natural effects of divine energy attributed to them.

Thus Ofiris, when he reprefented the power and all-feeing providence of the Supreme Being, had a human body with a hawk's head, and a sceptre in his hand, and decorated with the other regalia, or enfigns of royalty. Under the same form also he represented the fun, the great celestial luminary; and, as it were, the foul of the world; his fymbol now was a bull, and the scarabæus, or beetle, which expressed the fun's motion, by rolling balls of dung, containing its feed, backwards, or from east to west, his face being towards the east. The symbolic bull was likewife of a particular form and make, to denote the various influences of the fun.

Ofiris was also delineated sometimes with a bull's, and fometimes with a lion's head, to represent the heat, vigour, and influence of the fun, especially in the inundation of the Nile, when the fun was in the celestial sign Leo: and likewise to express the solar influence in all the productions of nature. And it is also observable, that the bull and lion were parts of the Jewish cherub's fymbol; and as the one was the head of the wild, and the other of the tame beafts, they reprefented, in conjunction, the animal creation; while the other two parts, namely, the eagle and human figure, reprefented the aerial, rational creation.

If is was formed with many breafts, to reprefent the earth, the universal mother, and with a cornucopia in her hand, denoting the nutritive and productive powers of nature; her fymbol was a cow, part black and part white, to represent the

enlightened and dark parts of the

Pan had the horns and feet, and fometimes also the head of a goat, which was his symbol, to shew the generative power of nature, over which he presided. At the same time, he symbolically represented universal nature, the cause of all things.

Hermes had a dog's head, which was his fymbol, to denote his fagacity in the invention of arts and feiences; especially in his watchful diligence in the culture of religious rites and facred knowledge: at the fame time he symbolically reprefented the Divine Providence, was Worshipped as the chief counfellor of Saturn and Ofiris; he who communicated the will of the gods to men, and by whom their fouls were conducted into the other world. He was likewise represented by the ibis, and with the head of this bird, which was, at the same time, his fymbol, to fignify his conveying literature to the Egyptians, which they believed was done under the form of this bird, and confined to their nation only, as the ibis was known to live no where but in Egypt.

Ammon represented the deity called Amun, and his symbol was a ram. He was also delineated with a ram's head and horas, to denote the creative power of God, and his beneficial and diffusive influence through the works of nature, making every thing fruitful, to produce and multiply its kind; and cherishing and preserving them by the warmth of the sun, and an internal vital heat and vigour.

The universal foul itself was beautifully represented by a winged

globe, with a ferpent emerging from it. The globe denoted the infinite divine effence, whose center, to use the expression in the Hermetic writings, was every where, and circumference no where. The wings of the hawk represented the divine all-comprehensive intellect: and the serpent denoted the vivifying power of God, by which life and existence are given to all things.

Typhon represented the most powerful damon, or evil genius, who was continually at war with Ofiris and Isis, the most benevolent geniuses of Egypt. His symbol was an hippopotamus, or river horse, a very treacherous and cruel animal.

Orus was a principal deity of the Egyptians; and according to his hieroglyphic forms and habits, fignified fometimes the fun, and fometimes the harmony of the whole mundane fystem. At the same time, being the offspring of Ofiris and Ifis, he was always represented young. He also represented the order and fitness of the several parts of the external fensible world, formed by the wisdom of Divine Providence, expressed by Isis; and by the intellect, power, and goodness of the fupreme God, represented by Ofiris: Hence, and also because Ofiris and If is represent physically the fun and moon, who, by their diffusive light, heat, and influence, preferve the visible system, Orus was called their offspring.

To express the hieroglyphic mean of Orus, as representing the world, he was represented with a staff, upon the top of which was the head of the upupa, to signify, by the variegated feathers of that bird, the beautiful variety of the creation. In one of his hands he held a lituus,

to denote the harmony of the fyitem; and a gnomon in the other, to shew the perfect proportions of its parts. Behind him was a triangle infcribed in a circle, to fignify that the world was made by the unerring wisdom of God. He had also sometimes a cornucopia in his hand, to denote the fertility and productions of the earth.

Harpocrates was described holding one of his fingers on his lips, to denote the mysterious and inestable nature of God, and that the knowledge of him was to be fearched after, with profound and filent meditation, and, at the same time, that they are not to be uttered or

divulged.

Upon the whole, almost all the Egyptian deities and fymbols centered in two, namely, Ofiris and Isis, who represented, under various hieroglyphic forms, both the celeftial and terrestrial fystem, together with all the divine attributes, operations, and energy, which created, animated, and preferved them.

The Egyptians likewife concealed their moral philosophy under hieroglyphic fymbols; but these were not the subjects of the hieroglyphics delineated on obelifks. as hieroglyphic and fymbolical figures were very ancient in Egypt, and first invented, at least formed into a system there; so they were thence carried into other countries, and imitated in all religious mysteries, as well as in political and moral fcience.

The preceding fymbolical figures making the substance of hieroglyphics, and all belonging to Ofiris, his family, and contemporaries, they were probably formed into a fystem soon after the death of those hero-gods, by some who had been instructed in the art of hierogly= phics, by Hermes, the inventor of The first he formed himself, them. and the others were probably added by his learned fuccessors, who had been instructed by him in all his mysterious learning.

This hieroglyphic fystem was, in its beginning, more simple, and less compounded than afterwards; for it had been improving for several ages before it appeared on the obelisks of the temples. And hence we may infer the time of the first Egyptian hieroglyphic fymbols ; for, in all probability, they were not older than the time of the famous Hermes, who flourished in the reign, and fome time after the death of Ofiris.

The hieroglyphic fymbols were, in early times, carried into Greece, and gave the first occasion to the fables of the poets, with regard to the metamorphofes of the gods, which they improved from inventions of their own; and from the knowledge of them, the Greeks ascribed peculiar arts and inventions to their gods, whose names they first received from Egypt.

Observations on the domestic arts and utenfils of the ancients. Extracted from a New Translation of Obser+ vations made in a Tour through Italy, by the Chevalier de la Condamine.

I Departed from Rome for Naples the fooner, that I might get thither before the fetting in of the great heats: however, I loft the opportunity of being a witness to the eruption of Vesuvius. The first object ject of my curiofity was, therefore, the fubterraneous city of Herculaneum, buried in the ashes of that volcano near seventeen hundred years ago, and discovered at the beginning of this century: although it has not attracted the public attention till within these sew years.

The most precious monuments it has hitherto produced, worthy of our attention, is, doubtless, the manuscripts on the papyrus of Egypt, but black and almost calcined, nearly in the condition as if they had been taken out of an oven: they have, however, found out the art of unrolling them, and passing the leaves upon a thin skin, they being luckily written but on one fide. They are now at work in transcribing these manuscripts, which will take up no long time; it is prefumed they will be also translated and explained. They are all Greek, and the characters of those I saw very distinct. I could read feveral words, and even lines without any difficulty.

What struck me most after the manuscript, was the great number and variety of family utenfils and houshold furniture, many of them very much refembling our modern ones; those which have been hitherto preferved, are mostly of me-Among other things of this kind, I faw filver cups carved, with their lids, in the manner of our coffee-pots. But these particulars have already afforded matter for feveral treatises; nor are antiquities my object. I shall, therefore, confine myself to a few reflections on the state of certain mechanic arts among the ancients, and of their progress among the moderns.

There have been found antique drinking-glasses of various fizes

and shapes, and also bottles, which proves that the ancients could both melt and blow glass; and even that they had a fort white enough for windows. Had they advanced a ft p further, they might have found the means of flattening blown glass as we do, and making it into pannels, and then they could not have been a long time in want of one of the greatest conveniences the moderns enjoy, almost without perceiving it; I mean glass windows and doors, which let in day-light, at the fame time that they fecure us from the injuries of the air; which procure us in the heart of our houses, the diversified spectacle of nature, and transform the winds, the frosts, and the tempests, into a magnificent moving picture.

The Romans were still more ignorant of running glass in sheets, and making mirrours of it. By a previous art the glass must have been made colourless, as well as transparent, in imitation of crystal, and then plained and polished, before they could devise a way of obstructing its transparency, by a fheet of tin impregnated with quickfilver. They had not, indeed, the art of tinning metals, though gold and filver they could apply very well; for the statue and horse of Marcus Aurelius in the Capitol were gilt, and the kitchen utenfils found at Herculanum, are often filvered, but never tinned. It is the contrary as to their folders, they being all of tin, which, on account of the weakness of the metal, have mostly given way.

I should not forget the piece of galon or tissue, found in the sub-terraneous city: it is of pure gold wire, and woven like a piece of

filk and stuff. They had not then fallen upon the lucky thought of substituting a silver wire gilt, instead of a gold one, as beautiful altogether, less heavy, and at a far caster expence; so it was impossible they should even dream of flatting fuch gilt wire, and rolling it about sik thread. The Romans could not any ways foresee, that a time would come, when a single ounce of gold would be sufficient to gild a silver wire a hundred leagues long.

Among great numbers of precious stones set in rings, found at Hercu-Ianum, I could not hear of one diamond. There are very few in being, which are known to be antiques; no doubt because they are bought up and dispersed as soon as they are found. Although from fome passages of Pliny and St. Isidorus, one would be apt to judge, that the ancients made use of fragments of diamonds to grave upon hard stones, and even to work the diamond itself; yet it does not appear that they had made any great progress in the art of perfecting the natural facettes, and to multiply and polish them with their own powder. I never faw any ancient diamonds with any other than their native points, just as they came out of Nature's hands, except being divefted of their fourf. The coloured stones found at Herculanum are fet in gold, but very clumfily. I faw fome rings of amethysts, and among them, stones of an oblong shape, about fifteen lines long, but very flender, and cut smooth, drop fathion, emeralds, feveral graved onyxes, cornelians, &c.

If we may be fairly faid to have furpassed the ancients in the practice of some particular arts, it is not, however, in that of cutting and working hard stones. I have admired some of their small vases of red crystal, the mouths of which are fo narrow, that their bellies could not have been hollowed as they are, without great labour and patience; and I doubt much if any of our modern artists could, with all their improvements, have fucceeded better. There is not, perhaps, an art of greater antiquity than this. I faw, in the collection of Baron Stoch, a celebrated antiquarian at Florence, a cornelian fit for fetting in a ring, whereon were engraven the feven heroes of the old Theban war, with the name of each in Greek characters. There is not known to be any where an engraved jewel of higher antiquity, being supposed to be of the time of the Trojan war. The origin of the art is far more ancient, for it was common in Egypt before the departure of the Israelites, some of whom were lapidaries, and engravers of fine stones, as appears from Exodus.

The rules of decency are feldom transgressed in the public monuments of antiquity. The same cannot be faid of those which were destined for particular uses, and the furniture of houses especially. The Pagan religion laying no restraint on debauchery, we find that the various ornaments of their family moveables, whether painted, carved, or engraved, inflead of the grave and ferious, which our veneration for antiquity is apt to fuggest, too frequently exhibits obscene objects, or foolish whims of a capricious imagination. I once happened to be present when a brass tripod just then discovered, was brought to the

cabinet

vabinet of antiquities at Portici, and looked upon as a greater curiofity than had been yet found; it was no less remarkable for the exquisiteness of the workmannip, than for the lascivious attitudes of three fatyrs, which supported the fire-pan. I had just then been confidering a monument of another kind t it was a little filver haunch, weighing about three ounces, on which was delineated a dial; the hour lines, their numbers, and the

initial letters of the twelve months being neatly engraven, and the tail of this animal, of which this haunch reprefented a thigh, ferving for the ftyle. I had no opportunity of finding for what latitude this dial was made; which would, indeed, have been difficult, as the radius was fo fmall. Some judgment may, perhaps, be formed of it, when all the monuments found at Herculanum are described and published.

MISCELLANEOUS ESSAYS.

THE greatness of the following undertaking; the utility it will be of to the learned; and the new light it will throw upon the facred writings; are so evident, that we should hold ourselves inexcuseable, if we neglected to lay this short state of it before our readers. It is with pleasure we observe, that the liberal and generous assistance which this work meets with in the execution, does as much honour to the age in general, as Dr. Kennicott's making the laborious and arduous attempt, does to our country in particular.

Some account of Dr. Kennicott's undertaking, to collate the different manuscripts, and the hest printed editions, of the Hebrew Bible.

HE scheme proposed by him was, to compare with some one printed edition, all the manuscripts of the Hebrew Bible, which are preserved in England, Scotland, and Ireland; at least all those which should be found worth collating, as being older than the invention of printing. The manuscripts of this kind, which, after much enquiry, were discovered by Dr. Kennicott in our country, at the end of the first year, (1760) amounted to 110. These, therefore, were collated; but in a manner very different from the collation of other manuscripts. For as the mistake of one single letter might make a great difference

in the meaning of an Hebrew word; and fince many fingle letters might be mistaken, if the collation was to be made by pronouncing whole words; it was necessary, in this case, to pronounce and compare every single letter. And the method fixed upon, was for one person to read the printed copy letter after letter, while another person, at the same time, inspected the manuscript, and wrote down every variation, whether of whole words, or of letters only.

Laborious and almost impracticable as it must appear, in general, to go through with fo very minute an examination of 110 MSS of for large a book as the Hebrew Bible: yet was this work undertaken upon. a plan still more extensive, namely, to procure, in the mean while, collations of as many of the best foreign MSS, as the fubfcription would allow; and as could be collated within that time, which might be taken up in examining the MSS in our own country. And, because many persons might be prevented from subscribing to this work, from a notion that it would be endless, Dr. Kennicott thought it proper to assure the public, that he believed it would be finished in ten years. He also stated the nature of the subscription, as being only during pleafure; so that every person might drop his subscription. whenever he doubted of a proper progress being made, or for any

other

other reason, or for no reason at all. But as a proper progress in so vast a work was the great point to be ascertained; in every year, to the subscribers, the Doctor effectually secured this point, by chusing to print, at the end of every annual account of his work, the certificate, as to his progress, which the delegates of the press at Oxford had agreed should be produced to them, from the Hebrew Professor

in that university.

Having premifed these necessary matters, as to the general plan, I proceed now to the printed state of this work, in each of the years that are past; extracting from each a short account of the progress and encouragement; and adding a few out of the many curious articles with which thefe annual states abound. The first state was printed at the end of the year 1760; but of that state I have no copy; however, I have been told that it related chiefly to the nature of such a work, and the expediency of its being undertaken; together with an account of the Doctor's having collated part of two very antient MSS, which belong to the Bodley Library. I apprehend likewise, that a list of subscribers for this first year was printed on a separate paper; and that the money fubferibed was near 5001.

At the end of the second year,

At the end of the second year, 1761, an account both of the progress, and of the subscription, was printed in a little pamphlet, as has been done annually ever since. In this account we see an amazing field opening in consequence of the Doctor's enquiries, and a correspondence which he began with the learned in various parts of Europe, particularly at Rome, where

cardinal Passioni, then at the head of the Vatican, offered him the use of all the Hebrew MSS in that famous library: the cardinals Spinelli and Albani, likewise are mentioned as very zealous advocates for this work. The chief places abroad, where collations were already begun, or enquiries were making after MSS of the Hebrew Bible, were Rome, Florence, Turin, Spain, Paris, Holland, and Hamburgh; and the other places were Constantinople, Warsaw, Venice, Naples, Bologna, Mantua, Pavia, Genoa, Lisbon, Geneva, Utrecht, Erfurth, Berlin and Stockholm. At the end of this fecond year, the number of manuscripts discovered at home was encreased from 115 to 119; of which, ten were now collated by the Doctor himself, assisted by three, and sometimes four gentlemen.

The Oxford delegates having thought proper, that (for the greater fecurity from fire, &c.) transcripts of the collations should be deposited in the Bodleian library: transcripts of the collation of these ten MSS were now placed there, under the Doctor's own seal, and that of the librarian. In this year's state we have the following concise, but very interesting account of the nature and tendency of this work.

ture and tendency of this work.

"The expediency of such an
"undertaking must be evident to
"all those, who will attend to the
"following particulars:—That
"the design of it is to do the
"fame justice to the text of the
"Old Testament, which has been
"done, with universal applause,
"to the text of the New Testa"ment, and to that of almost all
"other antient writings;—that
"the Hebrew text, tho of such
L 2 "great

ereat importance, has been hi-" therto printed agreeably to the " latest and worst MSS-that there " are as yet happily preferved mul-" titudes of older MSS; free from " many of those later corruptions, " which difgrace that extensive part " of divine revelation: and MSS, "which contain readings more " agreeable to the context, to the " ancient versions, and also to the " New Testament-and therefore, " that it must be exceedingly de-" firable, that as many as possible " of the various readings in these " valuable MSS (now perishing by " age) be speedily collected; and " afterwards accurately published " together (at the bottom of " every page, in a new edition of " the present Hebrew text) for the " information of the learned, and " the benefit of the public."

The state for this second year concludes with the certificate from Dr. Hunt the Royal Professor of Hebrew; and with a lift of the following fubscribers: - The King (2001. per. ann.) the Universities of Oxford, Cambridge, and Dublin: the archbishops of Canterbury, York, and Cashel; with twenty bishops, English and Irish: 11 lay lords: 7 deans; 9 deans and chapters: eight colleges: and one hundred and ten other subscribers: amounting in the whole to 9051. If then the reader was before furprized, that any man could be found, hardy enough to undertake a work of fuch infinite fatigue; he must now be equally surprized that fo many public spirited men could be found to patronize the undertaking: fo that the patronage, as well as the work, was quite beyond example.

As to the third year, 1762, I

may be shorter; because some articles, having been already enlarged upon, need only be just mentioned. The number of MSS now difcovered at home, was 121. And at home were in this year collated two MSS, fent from Rotterdam; and also nine large volumes, lent to the Doctor at Oxford, by the university of Cambridge; and for these collations he had five or fix affiftants. Abroad, feveral ancient and valuable MSS were now under examination; at Rome, Turin, Florence, Zuric, Hamburg, Berlin, and Paris. The fubscription was nearly the fame as the year before; about 9001. The Professor's certificate was (after it's introduction) in the following words:-" I do hereby " accordingly certify, for the fa-" tisfaction of the faid delegates, " and of fuch other persons as have " encouraged this work by their " fubscriptions, that the several " parts of the collation (made dur-"ing the third year) have been " laid before me. And my opi-"nion is, that Dr. Kennicott hath " made a very competent progress " in the faid collation; and indeed " advanced farther in it than could " have been reasonably expected. " And, upon confidering feveral " of the various readings, which " he has already discovered in the " Hebrew MSS; I think this work " will be of very confiderable fer-" vice to facred literature."

The only article I shall add here is, that among many other honours done to this work, this year's state mentions one, which no other work relating to the Bible could ever boast of since the reformation; namely, it's being warmly recommended both by Rome and Geneva. And as nothing can be more cu-

rious

rious or more pleafing, to every man of a liberal and comprehensive mind, than to fee the proofs of this fingularly joint recommendation, I shall here present the reader with the two certificates.

The Certificate from Rome.

"L'enterprise d'une nouvelle " editione de la Bible, qui doit de " faire à Oxford sur tous les ma-" nuscrits Hebraïques, qui peuvent " fe trouver dans les plus célébres " Bibliotéques, a trouvée ici au-" tant d'approbateurs, que de per-" sonnes qui en ont entendu parler. Buisson, Secretaire.

At the end of the fourth year, 1753, it appears that the number

of Biblical Hebrew MSS, known in Great Britain and Ireland, amounted to one hundred and twenty four. Of these thirty-two had now been collated; and the original collations of eighteen, having been fairly transcribed, were deposited in the Bodleian Library. Among the other MSS, collated this year, were fix belonging to the British Museum; the trustees of which had manifested their regard to Dr. Kennicott's undertaking, by making an order, that all their Hebrew MSS should be taken with him to Oxford, and collated there. Accordingly out of their twenty fix MSS, fix were delivered to him in 1763, which were carefully and faithfully returned within the year.

One of these six MSS, was the Samaritan Pentateuch, givén by archbishop Usher, to Sir R. Cotton; a copy, which is exceedingly valuable, being almost the only compleat one in Europe, uniformly written by the fame hand; and it is above 400 years old. This, and a Bodleian MS of the fame kind, were collated, by our learned and indefatigable author, with the Samaritan text in the London Polyglot; and from this collation it appears that the Samaritan text in that Polyglot (in other respects worthy of great commendation) is very inaccurately printed; but that these two MSS will correct many of the errors there found; and, likewife several errors found in the Paris Polyglot. is a point of great importance, and which requires particular attention, in justice to the Samaritan Pentateuch itself; for it can be no wonder, that some very learned men have judged it to be very erroneous, when that printed copy, on which fuch judgment has been (at least in

England) generally formed, is found to be printed fo incorrectly. Those MSS, therefore, are defervedly to be held precious; as they will greatly correct the printed text of that Pentateuch, without the affiftance of which, it is presumed that the Hebrew Pentateuch will never be restored to its original purity. In favour of the Samaritan Pentateuch. Dr. Cudworth, that ornament to learning and to our country, has given a remarkable testimony. For in a treatife of his, entitled, " The "Union of Christ and the Church," commenting on a text which is expressed in the printed Hebrew differently from the quotations of it in the New Testament, he observes thus: " But lastly, that which is most of " all confiderable; altho' thefe " Hebrew copies, which now we " have received from the Jews, read " it otherwise; yet that incompara-" ble antiquity of the Samaritan " Pentateuch, which feems to be " truer in many places than our " copies are, hath it as it is four " feveral times quoted in the New "Testament." To this authority, may be added that of Sir If. Newton, which is very favourable to a collation of the Hebrew MSS, by afferting the corrupt state of the text as printed: for there are to be feen, in that great man's hand-writing, feveral corrections of the printed Hebrew, some of which exactly coincide with the corrections made by the learned father Houbigant.

With the fix MSS from the British Museum, Dr. Kennicott collated in this year four belonging to the Bodleian; two lent from the library of the dean and chapter of Westminster; one, very elegant, and containing the whole Bible, sent by the University of Aberdeen; two

from

from Trinity College, Dublin; and one transmitted from Lekkerkirk near Rotterdam. In these sixteen MSS a great number of various readings were discovered, and several of them are of confiderable confequence; particularly, in the MSS from Lekkerkirk. In the text of this MS is found the very word (fignifying All) in Deuteron. xxxvii. 26. (printed in the Samaritan text) which makes fo material a part of St. Paul's quotation, Gal. iii. 10, and is so necessary to the Apostle's argument, that our English translators have thought themselves obliged to infert it, though it is not inferted in the printed Hebrew. this lift of MSS, our eminent collator has added a very ancient MS of the Hebrew Pentateuch, promised to be sent him by the learned Professor Schultens at Leyden; which Professor had, also, employed persons to collate, under his own inspection, the MS of the Samaritan Pentateuch in the library at Ley-

In order that the feveral collations, which were making abroad, might be carried on upon the fame plan, and with the fame attention to all the necessary circumstances which were observed at home, Dr. Kennicott printed, this year, and fent to the foreign collators, a large sheet describing the whole method upon which he proceeded.

At Rome, the loss that had been fustained by the deaths of the Cardinals Passionei and Spinelli, was made up by the patronage of the Cardinals Albani and Torregiani; the former of whom assured the Doctor that every Vatican MS, which he had mentioned, should be at the service of his work. It was countenanced, likewise, by the

prelate Monfig. Marefoschi, secretary to the college de Propaganda Fide, who performed many fervices to the collator, Professor Constan-The reverend fathers Xavier Vasquez and Augustino Giorgi, of the Augustinian convents; the college of the Maronites; and Sig. Abbate Ballati, did, also, readily grant the use of their MSS, on this occasion. The second commission, fent by our learned author to Rome, was for the collation of feventeen MSS; twelve in the Vatican, and five in the other libraries before mentioned: and the Professor, after having collated fome of these MSS. transmitted to him the following notice. "In Codicibus mox lau-" datis, plures atque eas quidem " magni Momenti variantes Lec-" tiones me invenisse lætaberis; et " quod tibi gratissimum fore con-" fido, in Codice Bibliothecæ An-" gelicæ ea Danielis et Esdræ Ca-

" pita, quæ Chaldaice tantum " fcripta vulgo reperiuntur, tum " Chaldaice tum etiam Ebraice

" fcripta deprehendi."

In Spain, a catalogue of the MSS of the Hebrew Bible, in the Efcurial, was procured by the Nuntio at Madrid, follicited by Cardinal Spinelli; and was fent, a little before his Eminence's death. The fame Cardinal had earnestly requested his friend the Nuntio to procure catalogues of the Hebrew MSS, quotquot vel in Regiis vel in publicis Hispaniarum Bibliothecis afferwantur: and the Escurial catalogue was accompanied with a promise, that catalogues of the MSS in the other public libraries of Spain should soon after be sent likewise. The learned and reverend Francifco Perez Bayer, canon and treasurer of the great church at Toledo, did,

L4

alfo, favour Dr. Kennicott with an account of the feveral valuable Hebrew MSS in his own library; together with exact specimens of the character, in which each MS is written; which specimens are exceedingly elegant and curious. The oldest of his MSS was written in

At Turin; fix of the most valuable of the royal MSS were collated, by order of the King of Sardinia; and a fecond collation was carrying on at Florence. Sir Horatio Mann did, likewise, recommend the defign to Count Firmian, governor of the Milanese; applied to him for a catalogue of the Hebrew MSS in the Ambrofian library at Milan; obtained leave to have them collated; and procured the learned Henrico a Porta to undertake the collation of them. This professor drew up an excellent account of these MSS, and one of them is the ancient Samaritan Pentateuch. which Montfaucon wished to have

The other places where collations were this year successfully profecuted, were Hamburgh, Berlin, Dresden, and Paris; at which last city, Professor Ladvocat, and his pupils, resused to accept any pecuniary gratification. In a letter to Dr. Kennicott, the professor observes, that "they had no such "custom in the Sorbonne; and that both he and his young peotic ple thought themselves extremely happy, in being able to contribute to a work so useful, and e-

" the facred fcriptures."

There is not any quarter of the world, from which our learned collator was not ardently defirous to procure the knowledge and the use of Hebrew MSS; and yet he did

not pretend that it would be possible to obtain collations of half the Hebrew MSS already known in Europe only. " Even that, fays he, will foon be pronounced impossible; when it is confidered, that the MSS of the whole, or parts of the Hebrew Bible, which are already known, (exclusive of those in our own three kingdoms) are—in Italy 117, -Germany 87, -France 70, -Holland 32,-Spain 20,-Swifferland, Denmark, and Sweden 10-total, already known abroad 336. This fum, added to that of the MSS at home, amounts to 460; which will probably be extended to 500. And, how very defirable would it be, if it were possible to comprize in this work the various readings of the whole 500 MSS! —if it were possible to make it at once perfect in its kind-without leaving the Old Testament still subject to appendix after appendix, and addition upon addition; as hath been the case with the New Testament, and is the case at this very day. For there are yet many MSS uncollated of this fecond part of holy scripture; notwithstanding the 30 years labour of Dr. Mill, who published the various readings of near one hundred MSS-tho' Kuster and Bengelius have each added the various readings of twelve other MSS-and tho' Wetstein has made ample additions to all the former editors.

The subscription in this year was increased by a legacy of 50 l. to the

fum of near 950 l.

We now proceed to the fifth year of the undertaking, (1764) during which eighteen Hebrew MSS, and one MS of the Samaritan Pentateuch were collated at home. With regard to this number, compared with other numbers, it is observed,

that

that a few MSS may contain larger parts of the Bible than many MSS; and yet the nineteen MSS contain above 116,000 verses. But this was by no means the whole of the work that was performed in the year; for the collations of twenty-fix MSS were, likewise, fairly transcribed, and the originals of them deposited in the Bodleian library.

With respect to foreign countries, Dr. Kennicott had the honour of the following letter, which was sent at the command of THE KING OF DENMARK, by his principal secretary of state, the Baron de Bern-

ftorff.

" Reverend Sir,

" The King being informed of " the learned work, which you are " fparing no pains to accomplish, "viz. that of restoring by the help " of ancient manuscripts the ori-" ginal text of the divine writings " of the Old Testament; his Ma-" jesty thinks fit to assist you by all possible means, in order to pro-" mote a defign fo truly useful to " religion and learning, and con-" fequently fo much deferving the " greatest encomiums. In this " view I am honoured with his " royal commands, to acquaint " you, Sir, with the arrival of " fome ancient copies of the He-" brew Bible lately purchased in " Egypt for the Royal Library; " and fent hither by some gentle-" tlemen, who are actually mak-" ing a voyage into Arabia Felix, " by his Majesty's orders, " receive here inclosed a short ac-" count of the condition of these " valuable remains of antiquity. " The King intends with pleafure " to give you leave to make use of "them. It depends only of you, Reverend Sir, to appoint some ff able person here; who may exa" printed copies: in order to ga-"ther out of the former fuch va-" rious readings, as may occur "therein. I hope, you will be " perfuaded before hand, that the " person, employed by you to this " purpose, will meet with all ima-" ginable readiness to facilitate his " task. And I beg, you will be " fure of my best wishes for the " fuccess of your arduous under-" taking, that cannot fail to im-" mortalize your name; and, what " to a man of your religious way " of thinking must be of infinitely " more value, will draw down upon " you God Almighty's bleffing. " I am,

" mine, and, if you think it proper,

collate these manuscripts with

"With great esteem and fincerity, "Reverend Sir,

"Your most obedient humble fervant,

COPENHAGEN, BERNSTORFF."

Next to the preceding, the greatest favour that was granted, abroad, to the work, in this year, was by the Count de Firmian, governor of the Milanese, and by the Marquis Olivera, president of the senate at Milan; in which city are preferved twelve very valuable Hebrew That Henrico a Porta, Oriental Professor in the University. of Pavia, might be enabled to refide at Milan, in order to collate them, the governor and the fenate were pleased to pass the two following orders, -that "the residence " of the professor at Pavia be dif-" penfed with;" and, that " he " be allowed to read his lectures at

Collections of various readings were, in this year, transmitted from Rome, Turin, and Berne; the use of two Hebrew MSS was granted

" Milan."

at Zurich; a collation was undertaken at Vienna; and it was continued to be carried on at Paris and other places, formerly mentioned.

Whilst Europe thus liberally offered the treasures of her numerous MSS, and Africa, likewife, contributed her share, enquiries were, not unsuccessfully, making in Asia. A curious MS is preserved at Aleppo, which contains the whole Hebrew Bible, and is of very high antiquity. Nay, Dr. Kennicott extended his enquiries to America; it being imagined that some MSS may possibly be sound amongst the Jews, even in that quarter of the world.

The doctor concludes his narrative for 1764, with expressing his sense of the honour done to his undertaking, by the learned academy at Manheim; theirs being the sirst subscription, with which the work has been favoured, in any foreign

country.

The subscription in this year a-

mounted to about 920 /.

In the fixth year, (1765) we find that the number of MSS before known in Great Britain and Ireland, was increased with five others, two of which contain the whole Bible. The chief business of this year was the collation of feven MSS, and part of another MS, making thirteen volumes; besides which, transcripts of the collations of 17 MSS at home, and of the same number abroad, were deposited in the Bodleian library. While the work was thus fuccefsfully advancing, it was apprehended, that it would be very defireable, if fome use could likewise be made of the best editions already printed. Accordingly, the edition of Van der Hooght was collated with that of Michaelis, printed at Hall, in 1720;

because in this last edition, the variations are already collected from the printed bibles of Bomberg, Buxtorf, Stephens, the Antwerp and London Polyglotts, and feveral other editions. It was thought proper, also, to make a collation of the beginnings of all the chapters, in the three editions of V. Hooght, Michaelis, and the London Polyglott, as the different beginnings of feveral chapters, in different editions, have occasioned much trouble in referring to particular verses in the Hebrew Bible. The variations growing exceedingly numerous, Dr. Kennicott was under a necessity of inventing some method fingular in its kind, to answer fo fingular an occasion, as the regular and uncrouded arrangements of all these variations, under their refpective chapters and verfes. took care, therefore, to have bound up in thirty folio volumes, (interleaved) a copy of the printed Hebrew Bible, pasted upon writing paper, with only two verses in each page; the vacant space under each verse being left for all the variations of the MSS in that verse, to be there inferted; and this, according to the numerical order of the MSS, when catalogued and numbered in the prolegomena, to be prefixed to the whole work. No inference, however, is to be drawn, from this preparatory Bible, with regard to the number of volumes which the work will make hereafter; because it was necessary to provide a space that would be fufficient for every exigency.

Abroad, our learned and indefatigable collator, continued to meet with his ufual encouragement and fuccess. He received, this year, a fecond letter from the baron de

Bern-

Bernstorff, principal fecretary of state to the King of Denmark, giving an account of the measures taken in that country to promote the doctor's grand undertaking. Collations were likewife carried on at Erfurt, Vienna, Cologn, Florence, Milan, and Rome. At Berlin, befides the collation of a celebrated MS, directions were given for collating a Hebrew printed Bible, of a remarkably old edition. This was the copy from whence Luther made his version, and it contains several hundred variations from the Hebrew Bibles fince printed. baron de Bernstorff's letter is not the only one which adorns the report for the year 1765. Dr. Kennicott had, also, the honour of receiving very polite letters from Cardinal Albani, and the Duke de Nivernois; and fingular marks of favour were shewn him by the Elector Palatine, the Earl of Hertford, Sir Joseph Yorke, and other eminent or learned persons. The account for this year is concluded with part of an elogium upon the work and its patrons, that was delivered in a public oration, at Hall, in Saxony, by Dr. Semler, professor of divinity in that university. The subfcription for 1765 amounted to about 880 l.

In the feventh year of the undertaking, (1766) thirteen MSS were collated at home, transcripts of eleven of which, were deposited in the Bodleian library; and, likewife, nineteen transcripts of the collations of foreign MSS. The MSS at home and abroad, now collated, amounted to one hundred and thirty; which may be prefumed to be more than ever were made use of, to afcertain the true text of any other book in the world. The number, however, will be much greater,

when the whole work is compleated. A collation was also begun this year, of a very ancient and curious printed Hebrew pentateuch, which, by the command of his majesty, was lent to Dr. Kennicott, from the royal library; and another collation was finished of a printed copy, in the Eton College library; of more value than feveral of our prefent MSS. In foreign parts, MSS were collated at Copenhagen, Paris, Cassel, Zurich, Milan, Carlsrueh, the palace of the Margrave of Baden-Durlac, and at the monaflery of St. Blase, in the Black Forreft.

But what principally in the year 1766 distinguished this valuable undertaking, was a discovery most nearly connected with the nature of it, and of great importance in itfelf; a discovery which unfolded a new, yet decifive argument, in proof of the expediency, or rather the necessity of the doctor's work; and, therefore, we shall give it at large, in our learned author's own

"The learned, fays he, through Europe, have been long divided into two general classes, as to their opinions of the printed Hebrew text of the Old Testament; some insisting upon the absolute integrity of that text, others holding it to be in fome instances corrupted. The men of this latter class were subdivided in their sentiments; for while some thought the corruptions few and of little moment, others thought them many and of great confequence. In this, however, they almost all agreed, that, whatever was the real number, or nature, of the corruptions in the printed text, that text could receive little or no correction from the Hebrew MSS; because the Hebrew MSS now extant, were but few;

and these sew were modern; and all of them entirely, or nearly, the same with one another and with the text as printed. But this opinion, however prevalent till within a sew years path, has been so effectually consuted by the evidence produced from these MSS, that the common opinion (it is presumed) now is—that the Hebrew MSS, yet extant, are wery many; and that some differ greatly from others, and

from the printed text.

" Now amongst all these variations of opinion, it has been taken for granted by all parties, that the text of the Hebrew Bible, as now PRINTED, is one and uniform; entirely, or nearly, the same in all the editions of it; wherever, and by whomfoever, it has hitherto been published. And upon this imaginary fameness of all the printed copies has been founded the famous notion, formerly afferted by many, and even now by a few, that the printed Hebrew text is terfect and uncorrupted. Whereas, on the contrary; if that very text. as it is now printed, be at last found to vary much from itself, and some copies differ greatly from others; then can there be nothing more abfurd, than the notion of all the printed copies being pure and genuine: then can nothing be more clear, than that, whenever one printed copy differs from another, this or that copy must be corrupted: and lastly, nothing can be more certain, than that, in case these differences be many and considerable, it must be our duty to examine (or cause to be examined) as many as possible, of the oldest and best MSS, in order to determine, with a degree of exactness proportioned to the importance of the subject, which of the printed editions are wrong, and which right where they are found to differ. And, in order to such determination, the best method, (which indeed is proposed to be here taken) seems to be—to republish the Hebrew text, exactly as it now stands in one of the best amongst the common editions; and to subjoin at the bottom of each page (so far as relates to each page) all the various readings, which shall have been collected either from the MSS, or

the printed copies.

The many and confiderable differences here meant, as found in the printed copies themselves, are (not typographical errors, or variations amongst the several modern editions, but) fuch as remarkably diftinguish the modern copies from the most antient. It had been before difcovered, in the course of this work. that the older the MSS are, the more they differ from the modern printed text, and the more they agree with the ancient versions and the quotations in the New Testa-And it is now found, that ment. the oldest printed copies differ greatly from the latest; and agree more with the oldest and best MSS. It is to the enquiries of the present year, that the learned are indebted for this discovery, as to the merit and value of the OLDEST PRINTED COpies; and the proof arises from the joint authorities of the four following editions,"

The first of the editions here mentioned by Dr. Kennicott, is the Eton copy, already described, which, for greater exactness, was collated twice. It was printed as early as 1487, and is probably the only copy in the world of this edition. The fecond old edition was printed in 1494, of which edition was Luther's copy, spoken of in the account for the last year.

The

The third and fourth copies are the FIRST edition that ever was printed of the whole Hebrew Bible, being printed in 1488; and a pentateuch, in 1492: which books are preferved in the library of the Margrave of Baden-Durlac. A multitude of material various readings are found in these four editions; and it is observable, that though they very much agree, yet they still vary enough to shew, that they were not printed from one another, but from different MSS.

Dr. Kennicott closes his account for 1766, with earnestly requesting the learned, to favour him with any notices that may yet be want-ing, in order to a more compleat discovery of the state of the oldest editions, and with laying before his readers a table of fuch editions of either the whole, or parts of the Hebrew Bible, as were printed before the famous editions of Cardinal Ximenes at Complutum, in 1517, and of Felix Pratenfis at Venice, in 1518.

Two diplomas are subjoined to the state of the collation for this year, one conflituting Dr. Kennicott a Fellow of the Royal Society at Goettingen, and the other appointing him a member of the Electoral Theodore Palatine Academy, at Manheim. The fubfcription for 1766 was about 1000 l.

The following article upon history, written by Voltaire, is translated : from a work lately published at Paris, entitled, L'Esprit de L'Encyclopedie.

HE history of events is divid-ed into facred and profane. Sacred history is a feries of those divine and miraculous operations, by which God was formerly pleafed

to govern the Jewish nation, and by which he now exercises our faith. But I shall not touch upon this re-

spectable subject.

The first foundations of history are the tales which are told by parents to their children, and transmitted afterwards from one generation to another; they are only probable in their origin, and lose a degree of probability every fucceeding generation. In process of time, fable gains, and truth lofes ground; and hence it is that the origin of every nation is abfurd. Thus the Egyptians were governed by gods during many ages; they were afterwards governed by demigods; at last they had kings during eleven thousand three hundred and forty years, and the fun, during this period, had changed his course four different times. The Phenicians pretended to have been fettled in their country during the space of thirty thousand years : and these thirty thousand years were filled with as many prodigies as the E-We know gyptian chronology. what strange and ridiculous absurdities are to be met with within the ancient history of the Greeks; the Romans too, though a grave and ferious people, have wrapt the hiftory of their early ages in fable. This people, so modern in comparison of the Asiatic nations, was five hundred years without historians, Accordingly, it is not at all furprifing that Romulus was the fon of Mars, that he was nurfed by a wolf, that he marched at the head of twenty thousand men from the village of Rome, against twenty-sive -. thousand of the village of the Sabines, that he was afterwards made a god, that Tarquin the elder cut a flint with a razor, &c. &c.

The first annals of all our modern dern nations are equally fabulous, prodigious, and improbable; things ought to be related merely as proofs of human credulity; they belong

to the history of opinions.

There is but one way of knowing, with certainty, any thing concerning ancient history, and that is to fee whether there are any incontestible monuments of it remaining: we have only three in writing; the first is the collection of astronomical observations which were made at Babylon during nineteen hundred fuccessive years, sent by Alexander into Greece, and made use of in Ptolemy's Almagest. feries of observations which reaches 2234 years before our common æra, proves incontestibly that the Baby-Ionians were a people several ages before; for arts and sciences are the work of time, and that indolence which is natural to man, leaves them thousands of years without any other knowledge but that of nourishing themselves, guarding against the inclemencies of the seafons, and cutting one another's throats. Let us judge of this by the Germans and English in the days of Cæfar, by the Tartars at present, by one half of Africa, and by all the nations we have found in America, excepting, in fome respects, the kingdoms of Peru and

The fecond monument is the eclipfe of the fun which was calculated at China 2155 years before our common æra, and univerfally acknowledged by aftronomers. The fame must be faid of the Chinese as of the Babylonians; they were unquestionably, before this, a vast political body; but what places them above all the nations on earth, is this, that for a thousand years, there has been no change in their

laws, their manners, nor in the language which is spoken among them by their men of letters.

The third monument, much inferior, indeed, to the other two, is the Arundel marbles—and these are the only monuments which antiquity has to boast of.——

What we call antient history, though in reality it is very modern, reaches no farther back than about three thousand years; before this period, we have nothing but a few probabilities, and these probabilities are preserved in two profane books alone, the Chinese chronicle, and the history of Herodotus. The antient Chinese chronicles relate only to the Chinese Empire, which is feparated from the rest of the world. Herodotus is more interesting for When he read the nine books of his history to the Greeks, he charmed them by the novelty of his enterprize, by the beauty of his stile, and, above all, by his fables. Almost the whole of what he relates upon the faith of foreigners, is fabulous; what he himself saw is true. We learn from him, for example, the amazing opulence and splendour of Asia Minor, which at present is reduced to the greatest poverty. He saw at Delphi those wonderful golden presents which were fent thither by the Kings of Lydia, and he spoke to those who knew Delphi as well as he did himfelf. Now what length of time must have elapsed, before the Kings of Lydia could accumulate fo much fuperfluous treafure, as to enable them to make fuch confiderable prefents to a foreign temple?

But when Herodotus relates the tales he heard, his book is only a romance like the Milesian fables. He tells us of a certain King called Candanles, who shewed his Queen

naked

maked to his friend Gyges, and that this Queen, out of modesty, left Gyges no other choice but that of killing her husband, and marrying her, or of being put to death him-He tells us of a Delphian oracle, who, in the fpirit of divination, declares that at the very time he was speaking, Croesus, at the distance of a hundred leagues, was ordering a tortoise to be boiled in a brazen vessel. Rollin, who repeats all fuch stories, admires the knowledge of the oracle, the modesty of Candaules's Queen, and fagely obferves upon this occasion, that young people should not be allowed to bathe publicly. Time is so valuable, and history so wide a field, that we ought to be faved the trouble of reading fuch fables and fuch mora-

The history of Cyrus is quite diffigured by fabulous traditions. It is very probable that Cyrus, at the head of a warlike people, actually conquered Babylon, which was enervated by effeminacy and voluptuousness. But we do not even know what King it was who reigned at Babylon at that time; fome say one, others say another: Herodous tells us, that Cyrus was killed in an expedition against the Massagetæ, and Xenophon, in his moral and political romance, says that he died in his bed.

In this darkness of history, we only know that, from time immemorial, there had been vast empires, and tyrants, whose power was founded upon public wretchedness, that superstition governed mankind, that dreams were looked upon as admonitions from heaven, and that peace and war depended upon them.

When Herodotus, in his history, comes nearer his own times, he is

better informed and more to be depended upon. Before those grand enterprizes of the Persians against the Greeks, we have nothing, indeed, but idle tales, wrapt up in childish fables. Herodotus becomes the model of historians, when he describes the prodigious preparations that were made by Xerxes in order to subdue Greece, and afterwards Europe. He informs us how all those different nations were armed, that accompanied this monarch; not one is forgotten from Arabia and Egypt to the northern extremities of the Caspian sea. We see with amazement that this Prince possessed as extensive a territory, as the whole Roman Empire: he had all that now belongs to the Great Mogul, on this fide the Ganges, all Persia, all the country of Usbecs, all the empire of the Turks, excepting Romania. We see by the extent of his dominions, with what injustice declaimers both in verse and profe treat Alexander, the Avenger of Greece, as a madman, for fubduing the empire of the enemy of the Greeks. He went to Egypt, Tyre, and India, because Egypt, Tyre, and India belonged to that power which destroyed Greece.

Herodotus had the fame merit that Homer had: he was the first historian, as Homer was the first epic poet; and both of them seized the peculiar beauties of an art till then unknown. It is a glorious sight which Herodotus entertains us with, that of an Emperor of Asia and Africa transporting an immense army, upon a bridge of boats, from Asia to Europe, taking possession of Thrace, Macedonia, Thessay, Upper Achaia, and entering Athens, which was abandoned and forsaken. The reader little expects

to fee the Athenians, without city. without territory, put the famous fleet of the great King to flight, returning home victorious, obliging Xerxes to carry back, in the most ignominious manner, the wretched remains of his army; and afterwards forbidding him, by treaty, to fail upon their feas. This fuperiority of a handful of men, brave and free, over a whole empire of flaves, is perhaps the most glorious event in the annals of time. When we read modern history, a victory gained in modern times puts us in mind of a fimilar one gained in ancient times; we compare a modern hero with an ancient one, and this perhaps is the only advantage we can derive from the knowledge of those remote times.

Thucydides, who fucceeded Herodotus, gives us only the history. of the war of Peleponnesus, a country no larger than a province of Frances or Germany, but which produced men, in all the different walks of merit, worthy of immortal fame; and as if intestine war, the most terrible of all calamities, gave new fire and force to the human mind, it was at this time that all the arts flourished in Greece. They begun to be carried to perfection at Rome likewife, during the civil wars, in the times of Cæfar; and in the fifteenth and fixteenth centuries of the common æra, they revived during the troubles of Italy,

After this war of Peleponnesus, comes the famous age of Alexander, a Prince worthy of having had Arishotle for his master, who built more cities than others destroyed, and who gave a new face to human affairs. In his time, and in that of his successors, flourished Carthage, and the Roman republic begun to

fix the attention of all the neighbouring nations. The rest of the world is buried in barbarity; the Celts, the Germans, and all the nations of the north, are unknown.

The history of the Roman empire is what most deserves our attention, because the Romans were our matters and our legislators. Their laws are still in force in the greatest part of our provinces; their language is still spoken, and long after the fall of their empire, was the only language in which the laws of Italy, Germany, Spain, England, Poland, and France, were written.

When the Roman empire was dismembered, in the west, a new order of things arose, and this is what is called the history of the middle age, a barbarous history of barbarous nations, become Christian, indeed, but not in the least im-

proved.

While Europe is thus thrown into confusion, in the seventh century, the Arabians make their appearance, who till then were shut up in their desarts. They extend their power to Asia, Africa, and Spain; the Turks succeed them, and establish the seat of their empire at Constantinople, about the middle of the fifteenth century.

Reflections on modern bistorians, and the uncertainty of bistory. By M. Voltaire.

Owards the end of the fifteenth century a new world is discovered, and soon after the politics of Europe and the arts afsume a new form. The art of printing and the restoration of the sciences furnish us with faithful histories, instead of ridiculous chronicles shut up in cloisters since the days of Gregory of Tours. Every nation

nation of Europe had its historians. Ancient poverty is converted into superfluity; there is scarce a city that is not defirous of having its own history. We are overwhelmed with trifles. The man, who is defirous of real instruction, is obliged to onfine himself to great events, and to difregard little ones; fuch a perfon, in the multitude of revolutions, feizes the spirit and genius of ages, and the manners of nations. Above all, he must fix his attention on the history of his own country, study it, be master of it, enter minutely into it, and content himself with a general view of other nations. Their history is no farther interesting than as it is connected with his own, or on account of the great things they have performed. The first ages after the fall of the Roman empire are only, as has been already observed, barbarous adventures under barbarous names, excepting the age of Charlemagne. The north is favage till the fixteenth century: the quarrels of the emperors of Germany and the popes spread desolation over Italy during fix centuries. All is confusion in Spain till the reign of Ferdinand and Isabella. France, till Lewis the Eleventh, is a prey to intestine calamities, under a weak government. Daniel alledges that the early times of France are more interesting than those of Rome; but he does not confider that the weaker the beginnings of a vast empire are, the more interesting they are, and that we take pleafure in feeing the fmall fource of a mighty torrent, which has overwhelmed half the globe.

The utility of hillory confifts in the comparison which statesmen and citizens may make of the laws and manners of other countries with

VOL. XI.

those of their own: this comparison excites modern nations to vie with one another in arts, commerce, and agriculture. Great errors committed in past ages are of great consequence to future ages; and the crimes and calamities occasioned by absurd quarrels cannot be too frequently repeated, or represented in too strong colours; for it is certain, that, by renewing the memory of fuch quarrels, the return of them

is often prevented.

But the great use of modern his flory, and the advantage it has over ancient history, arises from its shewing that, ever fince the fifteenth century, whenever a prince became too powerful, a confederacy was formed against him. This system of the balance of power the ancients had no idea of; and hence we may account for the aftonishing success of the Romans, who, having formed a militia superior to that of other nations, fubdued them, one after another, from the Tiber to the Euphrates.

The uncertainty of history.—Times are generally distinguished into fabulous and historical; but the historical times themselves should be distinguished into truths and fables. I do not mean those fables which are now acknowledged as fuch; the prodigies, for example, with which Livy has embellished or spoiled his history, are out of the question. But, in regard to what is generally believed, are there not many reafons for doubting? If we confider that the Roman republic was five hundred years without historians, that Livy himself laments the loss of the annals and other monuments, which were almost all destroyed when the city was burnt; pleraque interiere; if we reflect that in the first three hundred years of Rome

the art of writing was little known, raræ ter eadem tempora literæ; we thall find reason to entertain doubts concerning all those events which are out of the ordinary course of human affairs. Is it probable that Romulus was obliged to carry off the Sabine women by force? Is the history of Lucretia probable? Can we readily believe, upon the faith of Livy, that king Porfenna was filled with admiration of the Romans, because a fanatic wanted to affaffinate him? Is it not more reafonable, on the contrary, to believe Polybius, who wrote two hundred years before Livy, and who tells us that Porfenna subdued the Romans? Are we to credit the account which is given of the punishment which the Carthaginians inflicted upon Regulus? If it had been true, would not Polybius, who lived at the time, have spoken of it? But he fays not one word of the matter; and does not this afford reason to fuspect that the story was invented long after, in order to render the Carthaginians odious? Open Moreri's dictionary at the article Regulus, and you fee him affirming that the punishment of this Roman is mentioned by Livy. Now that part of Livy's history which relates to this affair happens to be loft, and, instead of it, we have only the fupplement of Frenshemius, fo that Moreri only quotes a German of the feventeenth century, instead of a Roman in the days of Augustus.

Are public monuments, annual ceremonies, and medals, historical proofs? One is naturally disposed to believe that a monument, erected by a nation in order to celebrate an event, shews the certainty of that event. If such monuments, how-

ever, were not raifed by cotemporaries, if they celebrate improbable events, they prove nothing but a defire to confecrate a popular opinion.

The rostral column, erected in Rome by the cotemporaries of Duilius, is unquestionably a proof of the naval victory gained by Duilius. But does the statue of the augur Navins, who divided a sint with a razor, prove that Navius performed this prodigy? Are the statues of Ceres and Triptolemus, in Athens, undoubted proofs that Ceres taught the Athenians agriculture? Does the samous Laocoon, which is still entire, prove the truth of the history of the Trojan horse?

Ceremonies and annual feftivals established by a whole nation are no better proofs of the originals to which they relate. Almost all the Roman, Syrian, Grecian, and Egyptian festivals were founded upon silly and ridiculous tales, as well as the temples and statues of their ancient heroes. They were monuments of credulity consecrated to

error.

A medal, even a cotemporary one, is not always a proof. How many medals have been struck by flattery upon occasion of battles which were far from being decifive, though dignified with the title of victories? In the war of the English against the Spaniards, in the year 1740, was there not a medal flruck; to shew that Carthagena was taken by admiral Vernon, at the very time that this admiral was raising the siege of it? Medals are only unquestionable vouchers, when the event is attested by cotemporary authors; the proofs, in this case, support each other, and establish the truth.

Are harangues to be inferted in history, and characters to be drawn? If, upon an important occasion, a General or a Statefman has spoken in a striking and remarkable manner, characteristical of his genius and that of the age he lived in, his fpeech ought undoubtedly to be inferted word for word; fuch speeches are perhaps the most useful parts of history. But why make a man fay what he never faid? We might almost as well attribute actions to him which he never performed; this is nothing but an imitation of one of Homer's fictions. But what in a poem is a mere fiction, is in an historian a lye. Several of the ancients, indeed, adopted this method; but this only proves that feveral of the ancients were fond of displaying their eloquence, though at the expence of truth.

Characters very often shew a greater defire to fhine than to infruct: cotemporary writers, indeed, have a right to draw the characters of those statesmen with whom they negociated, or of those generals under whom they served. But how much is it to be feared that the pencil will be guided by passion? The characters in Clarendon are drawn with more partiality, gravity, and wisdom, than those we read with so much pleasure in Cardinal de Retz.

But to be defirous of painting the antients, to attempt unfolding the inmost recesses of their breasts, to look upon events as characters, by means of which we may clearly read the very fecrets of their hearts, is an enterprize of a very delicate nature, and in many writers a mere puerility.

Cicero lavs it down as a maxim, that an historian should never dare to tell a falshood, or conceal a truth.

The first part of this precept is incontestible: we must examine the other. If a truth can be of any advantage to a state, your silence is highly blameable. But if you are writing the history of a prince who has trusted you with a fecret, are you to reveal that fecret? Are you to tell posterity what it would be criminal in you to tell in confidence to any individual? Must the duty of an historian prevail over a still higher duty? Suppose you had been witness to a frailty which had no influence on human affairs, are you to reveal this frailty? If fo, history would degenerate into fatire.

Concerning the style and manner of writing history. - I shall say very little upon this subject, as so much has been already written upon it. We know that the ftyle and manner of Livy,—his gravity, and his fage eloquence, are well fuited to the majesty of the Roman republic; that Tacitus is an admirable painter of tyrants; that Polybius excels in laying down the maxims of war; and Dionysius of Halicarnassus in

writing of antiquities.

But in copying after these great masters, the moderns have a more difficult talk than they had. expect from modern historians more detail, facts more clearly proved, greater precision in dates; more attention to customs, laws, manners, commerce, finances, and agriculture. It is with history as with mathematics and natural philosophy, the career is wonderfully enlarged.

It is expected that you write the history of a foreign country in a different manner from that of your own. If you are writing the history of France, you are not obliged to describe the course of the Seine or the Loire; but if you are writing M 2

the history of the Portuguese conquests in Asia, you must give the topography of the discovered countries. You must lead your reader by the hand along the coasts of Africa and Persia, you must acquaint him with the manners, the laws, and customs of countries new to Europe. If you have nothing to tell us, but that one barbarian fucceed another barbarian on the banks of the Oxus, what benefit does the public derive from your history ? The method which is proper for a history of your own country, is not proper for writing an account of the discoveries of the new world. The history of a city is very different from that of a great empire, and the life of an individual must be written differently from the history of Spain or England.

These rules are sufficiently known; but the art of writing hittory well will ever be very uncommon. We know that the style of history must be grave, pure, various, and agreeable; there are laws for writing history, as there are for every other species of composition: we have precepts in abundance, but

we have few great artists.

Of the Augustan Age in England.

HE history of the rife of lan-guage and learning is calculated to gratify curiofity, rather than to fatisfy the understanding. An account of that period only, when language and learning arrived at its highest perfection, is the most conducive to real improvement, fince it at once raifes emulation, and directs to the proper objects. age of Leo X. in Italy is confessed to be the Augustan age with them.

The French writers feem agreed to give the fame appellation to that of Lewis XIV, but the English are yet undetermined with respect to themselves.

Some have looked upon the writers in the times of queen Elizabeth as the true standard for future imitation; others have descended to the reign of James 1. and others flill lower, to that of Charles II. Were I to be permitted to offer an opinion upon this subject, I should readily give my vote for the reign of queen Anne, or some years before that period. It was then that taste was united to genius, and, as before, our writers, charmed with their strength of thinking, knew that then they were fure to pleafe with their strength and grace united. In that period of British glory, though no writer attracts our attention fingly, yet, like stars lost in each others brightness, they have cast such a lustre upon the age in which they lived, that their minutest transactions will be attended to by posterity with a greater eagerness than the most important occurrences of even empires, which have been transacted in greater obfcurity.

At that period there feemed to be a just ballance between patronage and the press. Before it, men were little esteemed, whose only merit was genius; and fince, men who can prudently be content to catch the public, are certain of living without dependence. But the writers of the period of which I am speaking, were sufficiently esteemed by the great, and not rewarded enough by bookfellers to fet them above independence. Fame consequently then was the truest road to happiness: a sedulous at-

tention

tention to the mechanical business of the day makes the present never-

failing resource.

The age of Charles II. which our countrymen term the age of wit and immorality, produced fome writers that at once ferved to improve our language and corrupt our hearts. The king himself had a large share of knowledge, and some wit; and his courtiers were generally men who had been bred up in the school of affliction and experience. For this reason, when the fun-shine of their fortune returned, they gave too great a loofe to pleafure, and language was by them cultivated only as a mode of elc-gance. Hence it became more enervated, and was dashed with quaintnesses which gave the public writings of those times a very illiberal air.

Lestrange, who was by no means fo bad a writer as some have reprefented him, was funk in party faction; and, having generally the worlt fide of the argument, often had recourse to scolding, pertness, and, confequently, a vulgarity that discovers itself even in his more liberal compositions. He was the first writer who regularly enlisted himself under the banners of a party for pay, and fought for it, through right and wrong, for upwards of forty literary campaigns. This intrepidity gained him the esteem of Cromwell himself; and the papers he wrote, even just before the revolution, almost with the rope about his neck, have his usual characters of impudence and perseverance. That he was a standard-writer cannot be disowned, because a great many very eminent authors formed their stile by his. But his standard was far from being a just one; tho',

when party confiderations are fet afide, he certainly was possessed of elegance, ease, and perspicuity.

Dryden, though a great and indisputed genius, had the same cast as Lestrange. Even his plays difcover him to be a party-man, and the fame principle infects his stile in subjects of the lightest nature; but the English tongue, as it stands at present, is greatly his debtor. He first gave it regular harmony, and discovered its latent powers. It was his pen that formed the Congreves, the Priors, and the Addiions, who fucceeded him; and had it not been for Dryden, we never should have known a Pope, at least in the meridian luftre he now difplays. But Dryden's excellencies, as a writer, were not confined to poetry alone. There is in his profe writings an ease and elegance that have never yet been fo well united in works of taste or criticism,

The English language owes very little to Otway, though, next to Shakespeare, the greatest genius England ever produced in tragedy. His excellencies lay in painting directly from nature, in catching every emotion just as it rifes from the foul, and in all the powers of the moving and pathetic. He appears to have had no learning, no critical knowledge, and to have lived in great diffress. When he died, (which he did in an obscure house near the Minories) he had about him the copy of a tragedy, which it feems he had fold for a trifle to Bentley the bookfeller. I have feen an advertisement at the end of one of Lestrange's political papers, offering a reward to any one who should bring it to his shop. What an invaluable treasure was there irretrievably loft, by the ig-

M 3 noranc

norance and neglect of the age he lived in!

Lee had a great command of language, and vast force of expression, both which the best of our succeeding dramatic poets thought proper to take for their models. Rowe, in particular, feems to have caught that manner, though, in all other respects, inferior. The other poets of that reign contributed but little towards improving the English tongue, and it is not certain whether they did not injure rather than improve it. Immorality has its cant as well as party; and many shocking expressions now crept into the language, and became the transient fashion of the day. The upper galleries, by the prevalence of partyspirit, were courted with great affiduity, and a horfe-laugh, following ribaldry, was the highest instance of applause; the challity as well as energy of diction being overlooked, or neglected.

Virtuous sentiment was recovered, but energy of stile never was. This, though difregarded in plays and party-writings, fill prevailed amongst men of character and business. The dispatches of Sir Richard Fanshaw, Sir William Godolphin, Lord Arlington, and many other ministers of state, are all of them, with respect to diction, manly, bold, and nervous. Sir William Temple, though a man of no learning, had great knowledge and experience. He wrote always like a man of fense and a gentleman, and his stile is the model by which the best profewriters, in the reign of queen Anne, formed theirs. The beauties of Mr. Locke's stile, though not fo much celebrated, are as striking as that of his understanding. He never fays more nor less than he

ought, and never makes use of a word that he could have changed for a better. The same observation holds good of Dr. Samuel Clarke.

Mr. Locke was a philosopher; his antagonist Stillingsleet, bishop of Worcester, was a man of learning, and therefore the contest between them was unequal. The clearness of Mr. Locke's head renders his language perspicuous, the learning of Stillingfleet's clouds his. This is an inflance of the fuperiority of good fense over learning, towards the improvement of every

language. There is nothing peculiar to the language of archbishop Tillotson, but his manner of writing is inimitable; for one who reads him wonders why he himself did not think and speak in that very man-ner. The turn of his periods is agreeable, though artless, and every thing he fays feems to flow spontaneoully from inward conviction. Barrow, though greatly his superior in learning, falls short of him in

other respects.

The time seems to be at hand when justice will be done to Mr. Cowley's profe as well as poetical writings: and though his friend Dr. Sprat, bishop of Rochester, in his diction falls far short of the abilities for which he has been celebrated, yet there is fometimes an happy flow in his periods, and fomething that looks like eloquence. The stile of his fuccessor Atterbury has been much commended by his friends, which always happens when a man distinguishes himself in party; but there is nothing extraordinary in it. Even the speech which he made for himself at the bar of the house of lords, before he was sent into exile, is void of eloquence,

though it has been cried up by his friends to such a degree that his enemies have suffered it to pass uncensured.

The philosophical manner of lord Shaftesbury's writing is nearer to that of Cicero than any English author has yet arrived at; but perhaps, had Cicero wrote in English, his composition would have greatly exceeded that of our countryman. The diction of the latter is beautiful; but fuch beauty as, upon nearer inspection, carries with it evident fymptoms of affectation. This has been attended with very difagree-able confequences. Nothing is fo easy to copy as affectation, and his lordship's rank and fame have procured him more imitators in Britain than any writer I know; all faithfully preferving his blemishes, but, unhappily, not one of his beauties.

Mr. Trenchard and Dr. Davenant were political writers of great abilities in diction, and their pamphlets are now flandards in that way of writing. They were followed by dean Swift, who, though in other respects far their superior, never could arise to that manliness and clearness of diction in political writing, for which they were so justly

famous.

They were all of them exceeded by the late lord Bolingbroke, whose strength lay in that province; for, as a philosopher and a critic, he was ill qualified; being destitute of virtue for the one, and of learning for the other. His writings against Sir Robert Walpole are incomparably the best part of his works. The personal and perpetual antipathy he had for that family, to whose places he thought his own abilities had a right, gave a glow to his stile, and an edge to his

manner, that never has yet been equalled in political writing. His misfortunes and disappointments gave his mind a turn which his friends mistook for philosophy, and at one time of his life he had the art to impose the same belief upon some of his enemies. His Idea of a Patriot King, which I reckon, (as indeed it was) amongst his writings against Sir Robert Walpole, is a master-piece of diction. Even in his other works his stile is excellent; but where a man either does not or will not understand the subject he writes on, there must always be a deficiency. In politics he was generally mafter of what he undertook; in morals, never.

Mr. Addison, for a happy and natural stile, will be always an honour to British literature. His diction indeed wants strength, but it is equal to all the subjects he undertakes to handle, as he never (at least in his sinished works) attempts any thing either in the argumentative

or demonstrative way.

Though Sir Richard Steele's reputation, as a public writer, was owing to his connections with Mr. Addison, yet, after their intimacy was formed, Steele sunk in his merit as an author. This was not owing so much to the evident superiority on the part of Addison, as to the unnatural efforts which Steele made to equal or eclipse him. This emulation destroyed that genuine flow of diction which is discoverable in all his former compositions.

Whilst their writings engaged attention, and the favour of the public, reiterated but unsuccessful endeavours were made towards forming a grammar of the English language. The authors of those efforts went upon wrong principles. In-

M 4 Read

stead of endeavouring to retrench the absurdaties of our language, and bringing it to a certain criterion, their grammars were no other than a collection of rules attempting to naturalize those absurdaties, and bring them under a regular system.

Somewhat effectual, however, might have been done towards fixing the standard of the English language, had it not been for the spirit of party. For both whigs and tories being ambitious to stand at the head of so great a design, the queen's death happened before any plan of an academy could be resolved on.

Mean while the necessity of such an institution became every day more apparent. The periodical and political writers, which then fwarmed, adopted the very worst manner of Lestrange, till not only all decency, but all propriety of language, was lost in the nation. Lesly, a pert writer, with fome wit and learning, infulted the government every week with the groffest abuse. His stile and manner, both of which were illiberal, was imitated by Ridpath, De Foe, Dunton, and others of the opposite party; and Toland pleaded the cause of atheism and immorality in much the same strain; his subject seemed to debase his diction, and he ever failed most in one, when he grew most licentious in the other.

Towards the end of queen Anne's reign, some of the greatest men in England devoted all their time to party, and then a much better manner obtained in political writing. Mr. Walpole, Mr. Addison, Mr. Mainwaring, Mr. Steele, and many members of both houses of parliament, drew their pens for the whigs; but they seem to have been over-

matched, though not in argument, yet in writing, by Bolingbroke, Prior, Swift, Arbuthnot, and the other friends of the opposite party. They who oppose a ministry have always a better field for ridicule and reproof than they who defend it.

Since that period our writers have either been encouraged above their merits or below them. Some, who were possessed to the meanest abilities, acquired the highest preferments; while others, who seemed born to restect a lustre upon their age, perished by want and neglect. More, Savage, and Amherst, were possessed of great abilities, yet they were suffered to feel all the miseries that usually attend the ingenious and the imprudent, that attend men of strong passions, and no phlegmatic reserve in their command.

At prefent, were a man to attempt to improve his fortune, or encrease his friendship, by poetry, he would soon feel the anxiety of disappointment. The press lies open, and is a benefactor to every fort of literature but that alone.

I am at a loss whether to ascribe this falling off of the public to a vicious tafte in the poet, or in them. Perhaps both are to be reprehended. The poet, either drily didactive, gives us rules which might appear abstruse even in a system of ethics; or, triflingly volatile, writes upon the most unworthy subjects. Content, if he can give mutic instead of fense; content, if he can paint to the imagination, without any defires or endeavours to affect; the public therefore with justice discards fuch empty found, which has nothing but jingle, or, what is worfe, the unmufical flow of blank verse, to recommend it. The late method

also,

alfo, that our news-papers have fallen into, of giving an epitome of every new publication, must greatly damp the writer's genius. He finds himself, in this case, at the mercy of men who have neither abilities nor learning to diftinguish his merit. He finds his own compositions mixed with the fordid trash of every daily scribbler. There is a fufficient specimen given of his work to abate curiofity, and yet fo mutilated as to render him contemptible. His first, and perhaps his fecond work, by this means finks, among the crudities of the age, into oblivion. Fame, he finds, begins to turn her back; he therefore flies to Profit, which invites him, and he inrolls himself in the lists of dulness and of avarice, for life.

Yet there are still among us men of the greatest abilities, and who, in some parts of learning, have surpassed their predecessors. Justice and friendship might here impel me to speak of names which will shine out to all posterity; but prudence restrains me from what I should otherwise eagerly embrace. Envy might rise against every honoured name I should mention, since scarce one of them has not those who are his enemies, or those who despise

him, &c.

A description of the Paraclete.

The following entertaining letter, being part of the correspondence of two ingenious gentlemen, we insert for the amusement of our readers; which, besides the other agreeable circumstances it contains, gives a particular account of the burying-place of the celebrated Abelard and Eloile; a spot ne ver seen nor men-

tioned, till now, by any English traveller.

Begin and end this trifling work of mine, with your name; the only circumstance, which, perhaps, may make it agreeable to our mutual friends and acquaintance; and, indeed, I can with justice say with Milton, that in every thing you are

"My earliest visitation—and my last at ev'n."

Your kind attendance on me from Geneva to Lyons, and your kinder fojourn there, till my baggage arrived, and my fpirits were recruited, would, in any one elfe, have been efteemed a capital act of good nature; but the frequency of fuch actions in yourfelf, make it appear an habit, which many think you can't diveft yourfelf of; therefore, a lefs complement to each individual. Yet am I not of this lift; and acknowledge every favour of your's as a peculiar one to myfelf.

Tired with much land-journeying, and the weather being too warm for a person with a slow sever on his spirits, I, in a few days after your departure, found I could reach Paris by water, through the means of that fine canal of Briarre, which joins the great rivers Loire and Seine, and gives our common enemy, in the midst of an expensive and hazardous war, that fecurity of an inland navigation, fo much wished for and wanted in England. And could veffels (as you have so often and fo' well observed) discharge their cargoes at Milford, or Briftol, many losses to our trade would be happily prevented by fuch inland navigation up to our very metropolis—as are those of Briarre, aforefaid, Orleans, and others of less note; by which means, Marfeilles, in the Mediterranean, and the city of Rouen, in the British channel, communicate. Thus, by the canal of Languedoc (a work rather more stupendous!) another part of the fouth of France is united with Bourdeaux, and so opens into the bay of Biscay. What says Pope on a similar occasion?

"These are imperial works, and worthy kings."

But, previous to my water-route to Paris, I took the coche d'ean to Chalons, on the Seine—having formerly passed this said city with the usual inatt ntion of my countrymen, and with the ill-fortune of no kind friend to give me intelligence that the real tomb of Abelard was at a Benedictine convent, dedicated to St. Marcell, up the avenue which adorns the banks of the Soane, within an English mile of the city—though his body was removed to the Paraclete, in pity to the sufferings of the soil-fated Eloisa.

The prior was an Englishman, as they stile it—though a native of Ireland—none of those idle distinctions reigning abroad, which so often breed discontentathome—and however the said nation may set, their face to a political union yet it is no reason that there should not be an union in the hearts of one common race of children, under the best of parents, of monarchs, and of men.

The prior was, unfortunately, at Paris; but, in his absence, the pere * * * did the honours of his superior in particular, and of the convent in general, in a very masterly manner.

The fraternity is not numerous; but their estates, as I heard, are very considerable. By these means,

the hospitality seems amazing, on a bare view of so small a convent.

As I went in the morning, the church was of course open—I saw the tomb, in question, immediately. He is in a recumbent posture; and the sculpture exceeds that of the then age, in general: I mean in France: for Italian genius, in the chissel way, had not, as now, set her foot on this side the Alps; as the numerous sine monuments since that time, have discovered, by the general encouragement of sovereigns.

Abelard was on a vifit, or perhaps, a kind of disputing match, being common in those days, to this convent. His real home being now, the famous Chartreuse, among the mountains of the Beaujolois, from whence a wine issues, little inferior to Burgundy; and at prefent rising in value—thanks to the English! who find it, as being strong, more suitable to their palates than many others.

There is a fine veftibula at this convent of Benedictines, on the first sloor; where, by means of the windows being brought to the very ground, the view of the said mountains (Beaujolois) is very striking. The several doors of the monks open into this vestibula; and, as they often pass and repass to their several apartments, the view is more pleasing; as, otherwise, it would be only what the painters call still-

After two days, I took the coche d'eau, returning to Lyons; and, then, regulated my route for a water excursion to Paris.

At a few miles from Lyons, I met the Loire; I had before been down all that portion of it which ftretches from Orleans to Nantz:

and

and which, perhaps, is the most stately of all river expeditions.

There is a levée (or, artificial caufeway) from the faid first city to the latter, made in the reign of Louis the Grand. For several hundred miles is the traveller never out of fight, either of city, town, village, chateau, or convent. Many of these castles are bastiles. And I remember being on that road, when, according to annual custom, the several state-prisoners were changing their quarters, in close carriages, with a guard; which annual change better conceals the faid prisoners from any intelligence of, or communication with, their friends or relations.

But, to return; my passage down the Loire to the embouchere of the canal, into it, was agreeable enough, being about three easy days. The dutchy of Berry lying on the left, as you descend the river, affords many amiable views; and, I observed, they have found a coal in the said province, not inferior to ours, which they transport to Paris, by way of the canal in question.

I arrived at Briarre the day previous to the common-boat fetting off. These vessels are, often, 300 seet in length, but narrow, for the convenience of passing each other; the said canals being little wider than for two to go by easily; by which means a greater depth of water is preserved; which if spread wider, would not always (especially in dry and thirsty weather) be so easily maintained.

The natives are fo expeditious at the feveral locks, that, at a village called Roigny, where, by means of an hill, the faid canal drops near an 100 feet, the boat had passed near a dozen locks, in as many minutes almost—so careful are they, as in Holland, of delaying trade.

The banks are well planted; and the paths fo pleafing, that many of us were often on foot, a head of the boat, in order to fee gentlemen's feats, and convents, which lay in the neighbourhood; and which we fhould otherwife have loft fight of, by being under the banks of the faid canal; and, at the locks, we were fure of catching our boat, and having (as is the expression) the horse in our hand.

In all these boats, which go night and day, (in summer, at least) there is a vivandier on board, who supplies you with hot or cold eatables, wine, fruit, &c. indeed, every thing requisite for a journey. You have small cabins, sufficiently large to repose, sitting; and, to avoid, at times, the noise of so much company; which, though, according to their several ranks, they discover the whole kingdom in miniature, are, at intervals, rather ennuyant.

On my arrival at Paris, I was so charmed with this water-conveyance, that, in a few days, I embarked to see the Paraclete; being at the head of the Seine, almost, and within two miles of a town called Nogent fur Seine—there is another Nogent upon the Marne—the second great river falling to Paris—

—It was on a funday morning, early, I embarked on this fecond water expedition—I was uneafy at finding the whole boat fo filled! even the decks being fo crammed as not to admit almost of another perfon.—But, on passing the king's lodge and gardens at Choisy, Ifound we lost near five parts in fix of our company, who paid a trifle to be carried there for their Sunday's recreation.

creation, as we should to Richmond.

It is for the convenience of hunting in the forest on the opposite side the river, that his majesty so delights in this retreat; and, as every one knows not this circumstance, we are apt to think this place, at first view, beneath the dignity of a French monarch—

—That expression reminds me of a bon-mat of Louis XIV. who, when his arms were superior (at least the vanity of that nation taught them to believe as much) being interrogated by his minister, why he did not make a point of expunging from the titles of a king of Great Britain, that of his being king of France? answered, with a smile—"I care not who is king of France—" fo long as I am king in it."

—I avoid describing any part of this river, on falling down from where the canal enters at Montargis, because I resolved to mount it again. However dark and unsightly the faid river appears at Paris, believe me, that above it, scarce any thing can be more delightful for near two

hundred miles.

The banks are fringed with many fine houses and parks.—Many of the farmers general have their estates on this river; and, as no money is wanting in their pockets, you may easily imagine every ornament to the eye, and every improvement in

agriculture.-

—You pass by the forest of Fontainbleau, which stretches a considerable way on the banks of the river.—Indeed, as on the Loire, you are seldom out of the sight of some chateau de campaigne—some convent, or pleasant town.—And, though the bridges (as at Melun and other towns) are not of any

fuperior architecture, yet are they pleasing coups d'œuil in a passage of this kind.

In the evening of the fecond day, having travelled all night, we arrived at Nogent fur Seine,—I found the river was not navigable, for large boats, above twelve miles further, being merely a ftream.—We are now, two hundred miles (by water) from Paris—which I take to be the leffer half of the said river to its embouchure at Cherburg.

—The boats are fo regular, that passengers wait in meadows to get a cast, some few miles, to visit their friends—and this variety was pleasing enough; as, almost every half hour we saw new faces, and discharged others; some of whom, as in all large bodies, may be understood best by what Jaques (in As you like it) says to Orlando, "I "beg we may be better strangers."

—On my landing at Nogent fur Seine, it was very natural to wish a little exercise, after a boat confinement of near three days; and, on asking how far off the convent of Paraclete was situate, the captain answered, "That man in the pursup le livery is servant to the abbess; is come here for letters, parcels, and other like commissions from Paris, as usual on the arrival of our boat; and he will conduct you there."

The moon shope very bright; and, it being near the vintage, I do confess I never had a more elegant evening walk.—I soon found, as the clock struck ten on our approach to the convent, that it would be impossible to reconnoitre any thing that night; but my walk was so far of service, besides exercise, that the servant had taken care to spread the report, of a gentleman who was

come

come from England, purposely, as he thought and said, on a pilgrimage to the Paraclete; so that next morning I found every thing prepared to receive a stranger, according to all the laws of convents; which are often hospitals (bospitaliers) as abounding in all the acts

of hospitality.

As inns took their rife in all protestant countries on the dissolution of monasteries, I have been lately much diffatisfied at feeing a collection of travels, wrote letter fashion; where perpetual complaint is made of the vile accommodations all through France and Italy-the land of monastic hospitality.—As this gentleman acknowledges he was not so rigid but to do at Rome what Rome does, by kneeling as his holiness passed, rather than be singular; sure he could never be afraid of having his tenets changed, by entering the doors of convents; which, ever, open wide to travellers-more particularly gentlemen of erudition, like himself .-- And you, fir, may remember what princely entertainment we received at the abbey of Afflengin, near Bruffels, of which the primate of all the Austrian Netherlands is superior.

Dr. Pococke, afterwards a bishop, frequently mentions what hearty reception he met with in the course of his long—long travels—where, had he been unknowing of mankind, and attached to trisses, he might have wanted, if not convenient food, yet, at least, intelligence, (that intellectual diet) but that he preferred even a poor convent to any house of entertainment.

But, to return—You may imagine, even the environs of the Paraclete gave me pleasure; though I could not be admitted till next day.

—The little river Ardusson glittered along the valley; and, as vineyards produce, generally, many glow-worms, no wonder the nightingales were inhabitants, as that is their favourite food.—And it may be an hint to frail beauty, that the brightness of the said reptile is a sure step to its destruction.

As I knew Mr. Pope's elegant production by heart (I am aware that many will fay I might have spent my time better—but, to this I can answer in the words of Cæsar's courtiers, who said of their master, that his memory was so strong as to forget nothing but injuries) I amused myself by repeating slowly, the said poem, as I returned to Nogent, being little more than a good English mile; and it

held, by this economy, just to the town's end.

Though fo early at the convent next morning, I found an elegant fummer breakfast provided in the Pere St. Romain's apartment, who was then officiating at matins.—I rather chose to enter the church: and was surprized to find the great altar due west, contrary to all rules of church-building; and only countenanced by one in Lombard-street, which is north and fouth.

On my flanding up at the Grille, (which separates the choir from the church) one of the sisters (whose office is to receive alms, and hear messages of business to any individual of the convent; so practised in all nunneries) asked me if I wanted any particular person—I told her my errand was only to see the church—on which she retired to her stall, and devotion.

The Pere St. Romain having finished the service, and undrest himself (I observed, while he laid by his robes in the facrifty, he repeated very fast, certain forms alluding to the quitting all garments in the grave) took me by the hand into his apartment, where I found another chaplain; yet neither so polite or learned as himself: his fame, even at Paris, being concurrent with what I found during my whole stay.

After the usual refreshment, he faid, that the abbess being in her eighty-second year, seldom rose till noon; but that she begged I would stay till I saw her—for she was my countrywoman, though early called to be a convert from England: and was allied to the extinct families of

Lifford and Stafford.

She was aunt to the prefent duke de Rochfaulcault, fifter to the great cardinal; and being fifth in succeifion, abbess of that convent, pleased herself to hope it would become a kind of patrimony; and that his majesty (it being a royal abbey) would graciously bestow it on that name whenever she was called away; which she hourly expected and daily wished.

As a further proof of this, the arms of the Rochfaulcault family are over each gate-way; and, on any reparation, or new erection on the premisses, the said method is al-

ways practifed.

Before dinner, St. Romain walked with me round the demesse. Mr. Pope's description is ideal; and, to poetical minds, easily conveyed: but I saw neither rocks, nor pines, nor was it a kind of ground which ever seemed to encourage such objects; on the contrary, it was in a vale: and mountains, like the Alps, generally produce views of this kind.

I can't but fay too, that the line
"See in her cell fad Eloïfa
fpread,"

Should be near her cell. The doors of all cells open into the common cloifter. In that cloifter are, often, tombs; and fine may well be supposed to have quitted her cell (more especially in that warm part of France) for air, change of place, and refreshment.

The fuperstructure of the Paraclete is not the same as we can imagine the twelfth century to have produced; but the vaulted part, as the arches are all pointed, may most

likely be fuch.

Adjoining is a low building, now inhabited by a miller, which has fome marks of real antiquity; and St. Romain concurred with me in the fentiment. It feems to have been the public hall where Abelard might have given his lectures; for, in the wall, on each fide, are fmall apertures, fo horizontal, that it has ftrong appearances of benches; which never rife theatrically in these

buildings abroad. After dinner, I had the honour of an hour's conversation with the abbess, who declared, that during thirty-two years refidence there, in that character, she never had seen an Englishman; but that she believed, once an equipage, which she had reason to take was an English one. stopped on the lawn, before the great gate, entering the quadrangle; but before the could fignify her defire of feeing, and, of courfe, entertaining the faid company, they were departed, with the but too usual post-haste of my countrymen, who had just pencilled the upright of a building, which contented them; though not

a stone

a stone of it was out of the quarry, perhaps, in the days of Abelard and Eloisa.

The community knew little of the affecting part of the flory, which occasioned that inimitable fine poem of the immortal Mr. Pope's, entitled, "An epistle from Abelard

" to Eloifa."

When the abbefs gave me leave to fee the interior parts of the convent, I remember fome country clergy, who had dined with us, made a push to be admitted, when she made answer, "ce n'est pas utile;" by which I found, that the superior has a discretionary power to admit even our sex, when necessary; such as physicians, surgeons, artificers of all kinds, and strangers, who come to fearch after antiquity, and are in pursuit of any knowledge.

The remains of these, so very unfortunate lovers, Abelard and Eloisa, whose bodies are still entire, are deposited in a nich in the abacial vault: but, as it was by torch-light, I could ill remark more than that Eloisa appeared much taller than Abelard. A small plinth of brick or stone, preserved them from being trampled on: and the vault being small, seemed much crowded.

Before I arrived at this mansion of the dead, they shewed me all the vaulted part of the former church and private chapel, which were now well filled with wine: magazines of this kind are often erected, even for fale, where convents are not wealthy enough in lands, or public flock, to fupport themselves. And in countries where wine is not the manufacture, they have refort to boarders, or penfioners, to maintain themfelves; the value of money being altered, as in all countries. this convent are only twenty-two fifters.

I shall trouble you, fir, with no other particulars; they may eafily be gueffed at. What transcripts of infcriptions, and ceremonious papers, in the register of the convent, I had from St. Romain, I left with my late friend Dr. Birch .- His death prevented my ever obtaining them again—not that I fet any value on them—and, indeed, had they been fuch, should not have refused, as I had obligations to him, to the late Dr. Stukely, and Dr. Sharpe, for electing the duke Gallean, prince of the empire, and lord fleward of the court at Manheim. a fellow of the royal fociety at my first request.

The Pere St. Romain concluded his benevolence by attending me part of the way to Troyes, one of the capitals of Champagne; and from whence the Troyes-weight ori-

ginally was named.

I shall conclude this to yourself, fir, with a line of Milton's, which will better prove how cagerly we all wish to see you in England—after so long a delay!

"Thou, to mankind, be good and friendly fill—

" And oft' return."

I am, fir, with all gratitude, Your most affectionate, &c.

Letter of M. de Voltaire, to M. Paulet, on the subject of his scheme, for the suppression of the Small-pox. Translated from the French.

Chateau de Ferney, near Geneva, April 22, 1768.

Believe, fir, that Don Quixote, never read more books of chivalry, than I have read of physic: I am by nature weak, and infirm, and refemble those who are engaged in an ancient family law-suit, and are continually turning over treatises on law and equity, without ever being able to finish their own process. It is now near seventy-sour years that I have maintained, as well as I am able, my suit against nature: I have gained one great point, seeing that I am still alive; but I have lost all the rest, for I have lived in a continual series of indisposition.

Of all the books I have ever read there is no one with which I have been more interested, than with your's. I am greatly obliged to you for bringing me acquainted with Le Rhafer. We were highly ignorant, and wretchedly barbarous, when those Arabs sirst rubbed off their rust. We came late to the knowledge of every fort of science, but we have regained the lost time: of this, your book is, above all, a strong instance. I have received great instruction from it, but have still some small scruples with regard to the smallpox. I have always taken it to be a native of Arabia the Defert, and coufin German to the leprofy, which belongs of right to the Jews, the most infected people that ever inhabited this unhappy globe.

If the small-pox were a native of Egypt, I do not see how the troops of Marc Anthony, Augustus, and his successors, could avoid bringing it to Rome. Almost all the Romans had Egyptian domestics, Verna Canopi. They never had any Arabians. The Arabs remained, almost always, in their peninsula, till the time of Mahomet. It was at that time that the small-pox began to be known. These are my reasons, but I mistrust them, as you are of a different

opinion.

You have convinced me, Sir, that, in this case, extirpation would be far preferable to inoculation. The difficulty is to know how to put the bell about the cat's neck. I do not think the princes of Europe as disposed to enter into a league, offensive and de ensive, against this scourge of human kind. But if you should obtain any arrets against the small-pox, I beg also, though quite disinterested, that you will prefer a petition against her elder sister.

I do not know which of these two damsels has done the most mischies to mankind, but the eldest sister appears to me a hundred times more ridiculous than the other. It is so enormous an absurdity in nature, to posson the very sources of generation, that I do not seem to know whereabout I am, when I am making the eulogy of this good mother. Nature is, doubtless, very amiable, and very respectable, but she has a parcel of cursed infamous children.

I can readily conceive, that if all the powers of Europe were to agree together, they might by their united force, diminish in some degree, the empire of these two sisters. There are at this time more than twelve hundred thousand men who mount guard in full peace. Now, if these were employed to extirpate those two poisons, which desolate the human race, they would be at least good for fomething. They might be even made to encounter the fcurvy, the purples, and the other favours of that kind, which nature has bestowed upon us. You have in Paris a hotel dieu, where reigns an eternal contagion; where the fick, heaped together, reciprocally communicate to each other, pestilence and death. You have the flaughterhouses in narrow and impassible

placés.

places that diffuse a cadaverous thench, sufficient to infect a whole quarter of the town. The exhalations of the dead, kill the living in your churches; and the charnel houses of the Innocents, or of Saint Innocent are still witnesses, how much we exceed in barbarity, the Hottentots and the Negroes.

We have been for a long time, ignorant of, and infentible to, the public good. We have made, from time to time, some efforts, but they have been the efforts of a day. Refolution, a sufficient number of men, and quantity of money, are still wanting to carry every great design into execution. All mankind are guided by private interest: every one for himself, is every man's motto. The more mankind are insensible to their greatest interest, the higher esteem I have of your patriotic ideas.

I have the honour to be, &c.

VOLTAIRE,
Gentleman of the Chamber in
ordinary to the King.

A League against the Small-pox.

· Paris, July 10, 1768.

THERE are two grand problems to be refolved, which are in-- terefting to humanity, viz. First, If it be more advantageous to have the fmall-pox, or not to have it at all. It is evident that there is no occasion that mankind should become sick, in corder to arrive at the greatest age. The Savages and the Hottentots are able to give us the folution of this problem. The words, fermentation, ebullition, germination, irrevocable deflination, &c. are barbarous terms, . unworthy of our age, and transmitted to us by a people still more harbarcus.

VOL. XI.

The fecond problem confifts in knowing, whether it be possible or not, entirely to preserve ourselves from the small-pox. In order to resolve this, we must establish certain truths.

1. The finall-pox is a stranger, and new to our climates; it is not hereditary; and, as no one carries about with him the seeds of it, it is not necessary to be attacked by it.

2. There are still nations to whom

it is not known.

3. There is a people who have been preferved from it for almost a century.

4. There are in Europe, about a third part of the people that are not

attacked by it.

5. It does not attack, in general,

any but children.

6. It disappears in some towns of itself, for several years together.

7. It is contagious like the

plague.

8. There are only the pus or matter, and the fourf or feab, the true feeds of the diforder, that can communicate it, either by touching the fourf, or by swallowing it with the aliments.

9. These feeds of the small-pox attach themselves to all forts of bodies, such as surniture, linen, cloaths, &c. &c. which can communicate the disorder even a year afterwards, when those bodies are handled or even touched, especially in the spring, when the pores are most open.

10. The fmall-pox communicates itself like the plague, which attacks all ages. The progress of the plague may be stopped. We have a recent instance at Marseilles, where it has been lately stifled in the Lazaretto

of St. Roch.

11. It has been proved that there are certain perfumes, which are

N capable

capable of difinfecting fuch furniture as has been exposed to their

vapour.

If the fmall-pox attacks in general only one class of the human species, that is to fay, children; and if there are only two thirds of that class that are infected by it in Europe; if we only fear this diforder in two principal feafons, the fpring and autumn; if there be no need of caution, but from the moment the smallpox is at maturity, till the scabs have entirely disappeared, which is but a very fhort interval; if, notwithflanding our negligence and blindness, the small-pox disappears of itfelf; it is evident that, by taking the least precautions it ought to difappear entirely from our climates. The whole art confists in not touching a fick person who has the scurf upon him, and which is never done with impunity, tho' you have had the fmall-pox ten times. Every time that any one has the imprudence to embrace a person that is recovering from the diforder, but still has the fcurf upon him, he will feel an itching in his cheeks, which will be followed by eruptions, or elfe a complete attack of the fmall-pox. I appeal to the experience of all those who have been exposed to accidents of this nature. Therefore nothing can be more stupid, nothing more barbarous, than to fuffer children to go abroad with the fourf upon them; for they go to spread the diforder in every quarter of the town; and this negligence amongst us, plainly proves, moreover, that we do not understand this disorder; and, what is worse, that we will not understand it.

We have feen in France a bishop, named M. l'Allemand, who had the small-pox for seven years successively, and always in the month of May. If any intelligent person had said to him, My lord, when your small-pox is in scurf, do not read, do not touch any body without washing it in vinegar, without disinfecting it by persume, or without dipping it in boiling water; purify your body as the Jewish priests purified theirs; wash yourself with a decoction of juniper berries; he would have rendered him a great service, and have preyented him from dying of a disorder of which he did not know the cause.

It is faid, that the town of Eu has been afflicted for a long time with a contagious malady, doubtlefs fome purple fever, or the fearlet fever; they need but read the Hiffory of the Small-pox, and make use of the means they will there find, if they would rid themselves of that contagious disorder with which they are afflicted. There still reigns in Picardy a fatal disorder, which is the scallet fever, febris scarlatina, and which attacks children only; it is as contagious as the small-pox, and leaves behind it the feeds that

make it perpetual.

One may apply to the scarlet fever, what we find in the History of the Small-pox. It is not two months fince it was carried from St. Quentin to a neighbouring village, named Cuetre, by means of an apron that had been used by one of the fick people, and which a washer-woman imprudently put before her child before it had been washed. This disorder now spreads itself in Picardy, without any attempt being made to prevent it; perhaps, because they are ignorant that it is contagious: fo it is that errors become habitual, and fatal. There is no diverting mankind from their wretched

wretched prejudices; and when we endeavour to prove that the extirpation of the small-pox is possible, we meet with people who would prove it to be impossible; but, do they not thereby prove their own ignorance, and the abuse they make of that power which is given them to be useful to mankind? Can there be a stronger proof that they do not understand the small-pox? While a certain writer, who is a physician, was spreading about Paris a miserable pamphlet, to tell us that the plague at Marseilles is epidemic, or peculiar to the country, the magistrates of that city, who happily did not pay any attention to his doctrine, have confined it within the lazaretto of St. Roch.

It is infufferable to fee mankind deceive themselves in so serious an' affair, and to lead all the world into an error: but we shall be yet a long time barbarians; we shall never imitate our fathers, who destroyed the leprofy. To what purpose is it that we have good books and good ob-Tervations, if nobody makes use of them? When a flave who made his escape from Marseilles was spreading the contagion, by means of a cloak that he carried about with him, in Provence and Languedoc, certain authors employed themselves with writing sublime differtations on the cause of the plague; which they deduced from certain occult qualities in the air. In the mean time, the flave was arrested, the cloak was burned, lines were formed, and the plague disappeared. In order to preferve mankind from the smallpox, we endeavour to investigate its nature; certain persons cry out, "It is impossible." Let the blind and the deaf cry, who fay that the use of linen has destroyed the leprosy,

whilst the monuments of its destruction still exist in almost all the towns in France; whilst our annals, our archives are filled with laws and arrets concerning lepers. Let them still fay to the great children, that we carry about with us the feeds of a disorder that was unknown in Europe before the time of Mahomet, and which is not hereditary; let them still seriously affert that fear gives this diforder to children, who have no fear: let them believe that an irrevocable decree, which no man alone is able to reverse, condemns mankind to the small-pox; let them believe in dreams, and in the miracles of inoculation that spreads the feed of the disorder every where; let them join the lamentable complaints of those who say that a fence round the bed stifles the fick; but let us imitate the good fense of our forefathers. Instead of establishing magazines of the small-pox that must one day be destroyed, as the English do; instead of bringing a large quantity of this plague together, as into a focus, let us rather do like the Tartars, who shut up the first man who is attacked by the fmallpox, which they regard, with reason, as a kind of plague. Let us purify our bodies, our cloaths, our linen, every thing that is infected, and the fmall-pox will become more rare; will disappear in our villages, and in the country, in spite of the clamours of those who are interested to keep it among us, notwithstanding the discernment of those who cry, "It is impossible." Because the plague is constantly in Egypt and at Constantinople, countries of prejudice and barbarism, are we to conclude that we ought not to defend ourselves against it, when it attacks us in France? It is always a confi-N₂

derable advantage gained, to make it less frequent, and in time we shall learn to deliver ourselves from it intirely; whereas every thing is to be feared from inoculation, which makes the diforder more frequent.

Let us take an extract from that arret of the king's council of state, in 1720, by which the contagion of Marseilles was stopped. Let us follow the precepts of Homer, who charmed the Greeks by giving them useful counsel; by inviting them at the beginning of the Iliad to purify themselves, by throwing into the fea every fort of impurity that they had in their camp.' Let us attend to the wife laws of Moses, who commands the leper to be separated from the rest of mankind, and that every thing which he has touched shall be purified. Let us confult our annals, we shall there find that the renowned Achilles de Harlay, banished the plague from Paris, at a time that most of our provinces were infected by it; and when one who had the infection in 1688, infected a whole house in the street de la Parcheminiere, one arret, iffued in time, and well executed, drove away the contagion, and caused the disorder totally to disappear. I will venture to affert that the fate of the small-pox is in the hands of the magistrates. There would be even fome glory in compelling a diforder to difappear that might disappear of itself: neighbouring nations would be forced to imitate us; but that infallible, precious, and invaluable advantage that would attend it, is fo strong a motive as ought to determine the nation, and all the true friends of human nature. In the mean time, we exhort all individuals to use the proper precautions against this contagion, and to fly

all those who carry about with them the fourf of the small-pox, and those who collect them together. Sooner or later, truth shall take place, and shall triumph.

PAULET. Physician of the Faculties of Paris and Montpellier.

An applauded Dialogue, wrote in the manner of Plato, by M. Voltaire.

NE day, as young Madétes was taking a walk towards the Pyræneans, he happened to meet Plato, whom he had never before feen. Plato perceiving fomething very promifing in his aspect, entered into conversation with him. and foon difcerned that he had good parts. Madétes had been trained up in the Belles Lettres, but he knew nothing of geometry or aftronomy: and frankly owned himfelf

to be an Epicurean.

My good fon, fays Plato, Epicurus was a very honest man, and he lived and died like a philofopher. His pleasure, so variously defined, confisted in shunning excesses of every kind. Friendship he recommended above all things to his disciples, and never was precept better observed. I wish I could fpeak fo well of his philosophy as of his manners. Are you thoroughly versed in the doctrine of Epicurus? Madétes answered ingenuously, that he never had studied it. All I know, fays he, is, that the Gods do not concern themselves in any thing, and that the principle of all things is in the atoms, whose arrangement is of themselves, in such fort, that they have produced this world just as we see it.

PLA-

PLATO.

So then, my fon, you do not believe that there is an intelligence which has prefided over this universe, in which there are such a number of intelligent beings. pleafed to give me your reason for adopting this philosophy.

MADETES.

Because I ever hear it extolled among my friends and their mistresses, when I take a supper with them; I am exceedingly reconciled to their atoms. I grant I understand nothing about them; this doctrine, however, appears to me as plaufible as any other, and 'tis necessary to profess some opinion when one begins to keep good company. I greatly wish, indeed, to be better instructed, but hitherto it has seemed easiest to me to think without

knowing any thing.

Plato replied; if you defire to enlighten your understanding, I am a magician, and will shew you some things which are very extraordinary: Only be so good to give me your company to my country house, not above five hundred paces distant, and possibly you may not repent of your compliance. Madétes was transported to follow him. When they were arrived, Plato shewed him a skeleton, and the young man flarted back with horror at the new spectacle. Plato addressed him in the following words,

Confider well this ghaftly figure, which feems the reverse of nature, and judge of my art, from the feveral operations I am going to perform upon this uncouth affemblage,

fo loathsome to your view.

Observe, in the first place, this kind of bowl which feems to crown the despicable frame. At the word of command, I will cause a soft

medullary substance to pass into the cavity of this bowl, distributed into a thousand minute ramifications. which I will cause imperceptibly to descend through this long kind of staff with several knots on it, which you fee affixed to the bowl, and terminating pointed in a cavity. To the top of this staff is annexed a tube, through which I cause air to enter by means of a valve inceffantly playing; and, prefently after, you will fee the whole fabric fet itself in motion.

As for those other shapeless pieces, which you would take for rotten wood, devoid of use, strength, or elegance, I shall, at a word fpeaking, cause them to be put in motion by a fort of cords of an inconceivable structure. In the midst of these cords, I will place an infinite number of canals filled with a certain liquor, which, by passing through strainers, will be changed into feveral different liquors, and run through the whole machine twenty times in an hour. The whole shall be covered with a white foft fine fluff. Every part of the machine shall have a particular constant motion. Between these femi-circles, which feem good for nothing, I shall place a refervoir, fomewhat of the shape of a pineapple, which shall contract and dilate itself every moment with an amazing force. It will alter the colour of the liquor, which shall pass. through the whole machine. Not far from this, I shall place a bag with two openings, not unlike the vessel of the Danaids, which will be continually filling and emptying itfelf.

Moreover, this machine will be fo amazing an elaboratory for chymistry, so profound a work of me-

N 3 chanics

chanics and hydrostatics, that those who shall have studied it the most thoroughly, will never be able to comprehend it. In it, very fmall motions will produce prodigious force, and it will be impossible for human skill to imitate the artifice which will direct this automaton. But it will still more furprize you, that this automaton, by approaching another figure, not very unlike it, will form a third figure. These machines will have ideas, they will reason, and talk as you do; they will be capable of measuring the heavens and the earth. However, I shall not shew you this rarity, unless you promise me that when you have feen it you will allow that I have great knowledge and power.

MADETES.

If it be as you have faid, I will acknowledge that you know more than Epicurus, and than all the philosophers of Greece.

PLATO.

Well then, all I have promifed you is performed already. You are this very machine, and even thus were you formed, though I have not shewn you the thousandth part of the springs which constitute your existence; all which springs are proportioned to one another; all reciprocally affift each other: Some of them preserve life, others give it, and the species perpetuates itfelf through ages, by an infcrutable artifice. The meanest animals are of a no less admirable structure, and the celestial orbs move in space with a still more sublime mechanism. Judge, after this, if an intelligent being has not formed the world, and if your atoms do not fland in need of this intelligent cause.

Madétes was quite aftonished, and

asked the magician who he was Plato gave him his name. The young man fell upon his knees, adored God, and loved Plato as long as he lived.

A Letter from M. de Voltaire, to the Russian ambassador at Paris.

I See by the letters with which her Imperial Majesty and your excellency honour me, how greatly your nation is rifing, while I am afraid that in some respects ours is beginning to degenerate. The empress deigns herself to translate that chapter of Belisarius, which some collegefellows traduce at Paris. We should be overwhelmed with shame and fcorn, if all the men of worth, of whom there is a great number in France, did not strongly stand up against the egregious scandal of the times. Folly, ignorance, and envy, there will always be in any country; but then there will also be in it science and good taste. I dare even aver to you, that, in general, our principal military, and as to what concerns the counsel, our counfellors of state, and the masters of requests, are more enlightened than they were in the shining age of Lewis the Fourteenth. Great talents are still rare; but science and reason are more common than they.

I fee with pleasure that there is forming in Europe an immense republic of cultivated understandings. The light dissured and communicates itself on all sides. I have things come to me from the north that associated as the end of th

proclaim

proclaim the approach of this great change, as the croaking of the crows forebode fair weather.

I know nothing of the book of M. de la Riviere, which you do me the honour of mentioning to me; but can hardly believe that the author, while avoiding the faults into which M. de Montesquieu may have fallen, has gone beyond him in those points, in which that shining genius is in the right. I shall fend for his book; and in the mean while congratulate the author on his being so near such a sovereign and empress, who patronizes all the talents in foreigners, and whose cherishment gives birth to them in her own dominions. But it is you whom I especially congratulate on reprefenting her fo worthily at Paris.

I have the honour to be, &c.

Translation of a letter from M. Voltaire to the Chevalier Vansommer at London.

SIR,

Y OU know, without doubt, that peace is made at Geneva. It is always the refult of war. After tilting at one another for some time, men always return to conditions of peace, in expectation of some new rupture. Man is a little sovereign; he loves peace on account of his own tranquility; but he has a strong propensity to war, to disturb the tranquility of others.

Europe ought to admire the prudence of the Genevese competitors, and their regard for humanity during the consusions of war: not one drop of blood has been shed by them. We cannot say the same of Neuschatel: a bloody scene has been acted there. Gaudot, the at-

torney-general, has fallen by the fword of affaffins. His corpfe, pierced with wounds, could fcarce obtain a burial. But peace is not re-established by the death of that unfortunate magistrate. The cantons of Lucerne, Fribourg, and Soleure have furnished a body of men which guards the town: General Lentulus is encamped at Anet: the Chevalier de Planta, a Major in the fervice of the King of Prussia, is gone to that monarch: and I doubt not but that Prince will strongly refent the outrage, which has been done to him in the person of the attorney-general. The repose of Neuschatel will not be re-established without strangling two or three of the ringleaders, The humane citizen groans at be ing under a necessity to serve against the murderers. But, by mischance, fuch is the condition of humanity. that one evil can feldom be remedied but by two others, and those again by a great many more. Mankind is propense to revenge, and oftentimes the perfecutor himself is perfecuted in his turn. One half of the world is incessantly at war with the other: there is no fuch thing as a truce between them. To conciliate their affections, it must be laid down as a preliminary article; "That every one should renounce " his particular interest;" but this is an impossibility: For then mankind would cease to be men, and become, a chimera, which has no reality.

Old Clement is at war with young Ferdinand. Rome and Naples cannot agree, and the Pope makes use of his worn-out arms against a Prince who has bayonets and musclets. France, Spain, and Portugal join their arms with the latter,

N₄ and

and prove by an argument ad hominem, that Clement dotes, and that he ought to submit, so as to recall his bull, which is the shame of the Vatican. But the fovereign pontiff regards it as a point of confcience, and intends, by his obstinacy, to join the crown of martyrdom to the tiara of the pontiff; as if God loved the jesuits well enough to grant the palm to their grand admiral!

If, from the fields of Rome, we turn our eyes towards the North, we shall see Poland a prey to domestic dissentions. One part of the nation in arms against the other: the patriot, under the title of confederate, destroying the patriot; and all this for the glory of God, and the honour of religion! as if that holy religion had not abolished both facrificers and victims. But what ought equally to engage the rights of humanity, is, that a foreign power enters in arms, and forces a nation, which is free, and governed by its own laws, to receive those which it imposes, with bayonets fixed. What would the English say, if the King of France should come at the head of a hundred thousand men to impose laws upon England? Would he meet with a favourable reception from that nation, so jealous of its rights and liberties? Would they not fay to him, after throwing a few barrels of powder in his face, "Sir, why " do you meddle with us? have " you any thing to do here? get " back again into your own king-" dom; you are no legislator in " ours. Shew your despotism at home, and leave us to enjoy our " liberties." But the Poles are weak, and Catherine has frong reasons to produce on her side; witnefs the Bishop of Cracow, who was confined at Schlusselbourg in the same apartment as the Czar Peter III. finished his career in.

VOLTAIRE.

Account of a canvass for a lectureship; extracted from a pamphlet lately written with great spirit and humour upon that subject, entitled, A Letter to a Bishop.

TOUR Lordship I believe may remember the time when my poor uncle died, which obliged me to quit the university, and seek my fortune in town, where I had not been above three weeks before I strolled one Sunday afternoon into church in the city, and, after fervice, heard the clerk, by order of the vestry, declare the lecturethip of the parish vacant, and invite the clergy, however dignified or diffinguished, to be candidates for it, and to give in their names by the ensuing Sunday. No fooner did I hear this church serjeant thus beating up for recruits, than I immediately refolved to inlift; and accordingly the next day, waited on the worshipful Stentor abovementioned, who took down my name and place of abode: on my defiring him at the fame time to acquaint me with the best method of proceeding, which I was an utter ftranger to, he advised me as a friend, to apply as speedily as possible to Mr. ----, a cheesemonger in ----- lane, who was then first church-warden, a leading man in the veftry; and a person, he assured me, on whom the election would in a great measure depend. I took honest Amen's advice, and by nine the next morning, not I must own without without fome reluctance, dreffed myself as well as I could, and waited on Mr. Church-warden. foon as he faw me enter the shop in my canonicals, (for I had hired an excellent new gown and cassock behind St. Clement's on the occasion) he made me a very low bow, gave me the title of doctor, and imagining, no doubt, that I was come to bespeak cheeses for the country, begged to know my honour's commands; to which I replied in an humble tone, and looking extremely disconcerted, that I came to wait on him on account of the lectureship of the parish, and begged the favour of his vote and interest, &c. Your Lordship I am sure would have smiled to see the sudden alteration of his features and behaviour: he dropped all the tradefman's obsequiousness, and in a moment assumed the magisterial air and dignity of a churchwarden: turned aside to a woman who was just then asking for a pound of Cheshire, and without addressing himself to me, cried out, " This is "the fourth parfon I have had with " me to-day on the fame errand :" then, staring me full in the face : " Well, young man, fays he, you " intend to be a candidate for this " fame lecture: you are all to " mount the roftrum, I suppose, " and merit will carry it: for my " part I promise nobody, but re-" member: I tell you beforehand I " am for voice and action, fo mind " your hits." When he had faid this, he immediately turned upon his heel, and went into the counting-house. I took my leave in an awkward manner, as you may fuppofe, being not a little chagrined at his infolence; and as I went out of the shop, overheard his lady obferving from behind the counter,

that I was a pretty forig of divinitv. but looked a little sheepish, and had not half the courage of the gentleman that had been recommended... to her husband by Mr. Squintum.

The instant I quitted the sion of the Cheshire-cheese, I laid aside all thoughts of further folicitation, and resolved to return to college, and live on making fellow-commoners exercises, rather than subject myself any more to fuch mortifying indignities. Good God! thought I to myself, is this the fruit of my studies? this the reward of all my toil and labour in the university & to have the important point whether I shall eat or starve, at last determined by a cheesemonger, who declares for voice and action!

In fnite, notwithstanding, of this resolution, (for resolutions, your Lordship knows, are much easier made than kept) I was obliged in less than fix months, having during that time taken it into my head to fall in love and marry, to repair once more to the great city, and put into the ecclefiaffical; lottery: where, by the bye, as in most other lotteries, you buy fo dear, meet with fo few prizes, and run fo much hazard, that none but desperado's ought to venture in them; there's my Lord, I renewed my folicitations, and experienced all the miferies and misfortunes, all the infults and indignities, which the pride and infolence of the rich, both laity and clergy, inflict on their dependent brethren : the difficulties which I met with in fearch of a lectureship, for that was any fummum bonum, are inconceivable: and I can affure your Lord hip; that, triffing as the emoluments are of this preferment, all the perfections of human nature united are scarce

fusicient

fufficient to a man, without personal interest, to insure his success. The variety of diffresses which I encountered from the different tempers and dispositions of the gentlemen and ladies (for fo I was obliged to call them) who had votes in the parish, the mean and abject flattery which I was forced to make use of, with the many frequent affronts and disappointments I underwent, would fwell half a melancholy volume. Without enumerating the necessary accomplishments generally expected on these occasions of drinking hard with the husbands, and faying foft things to their wives; in more parishes than one, my Lord, where I have been a candidate, to fmoak your half dozen of pipes, and drink two bottles at a fitting, are infinitely more necessary perfections than any which you could bring with you from the university; and it is a maxim with many good citizens, that unless you are what they call a d-d honest fellow, you can never be a good preacher, or an orthodox divine; in short, my Lord, and to be ferious, unless a poor clergyman is every thing that he ought not to be, he can never be what is every man's wish, independent.

To this we shall add the author's thoughts on the manner in which

lectureships are paid.] 😘 🎉

I know a little too much of the world, my Lord, to expect that a parson should be paid like a first-rate player, a pimp, or a lord of the treasury, whose incomes I believe are pretty near equal; but at the same time cannot help thinking, that a labourer in the vineyard is as well worthy of his hire, as a journeyman carpenter, mason, &c. and has as good a right to two pound

two on a Sunday as he has on a Saturday night; and yet not one in a hundred of us is paid in that

proportion.

The lecturer's box generally goes about with the rest of the parish beggars a little after Christmas; and every body throws in their charity, (for it is always confidered in that light) as they think proper. Were I to tell your Lordship how many paltry excuses are made to evade this little annual tribute by the mean and fordid, how very little is given even by the most generous, and to what an inconfiderable fum the whole generally amounts, the recital would not afford you much entertainment, and, for aught I know, might even give you fome fmall concern.

You cannot imagine, my Lord, with what an envious eye we poor lecturers have often looked over a waiter's book at a coffee-house. where I have feen fuch a collection of guineas and half guineas as made my mouth water: to give less than a crown, would be to the last degree ungenteel, for the immense trouble of handing a dish. of coffee, or a news-paper; whilst the poor divine, who has toiled in the ministry for a twelve-month and half, worn out a pair of excellent lungs in the unprofitable fervice. shall think himself well rewarded with the noble donation of balf a

But to illustrate my subject, I will give your Lordship another story: there is nothing like painting from the life on these occasions: suppose yourself then, my Lord, an eye-witness of the following scene, which passed not long since in a certain part of this metropolis.

Enter the church-warden and o-

verieer

verfeer into the shop of Mr. Prim the mercer .- Well, Mr. Twift. what are your commands with me? -We are come to wait on your honour with the lecturer's-book, Sir, -a voluntary subscription of the inhabitants of the parish of St. -for the fupport of -Well, well, you need not read any further? what is it ?-Whatever you pleafe, Sir .- Aye, here's another load, another burthen: dy'e think I am made of gold? there's the poors rates, the doctor's rate, the window rate, the devil's in the rates I think: -however, I can't refuse you; but I'll not give another year-here, Buckram, reach me half a crown out of the till-Your fervant, madam .-

[A lady comes out of a back parlour, walks through the shop, and gets into a chair.]

Aye, there's another tax—a guinea for two box tickets, as fure as the benefit comes round, for my wife and daughter, besides chair-hire.

[Twist shakes his head.] O master Prim, master Prim! had not you better now have given us a guinea for the doctor and his four children, and referved your half crown for the lady, who if I may judge from her garb and equipage, does not want it half so much as the poor parson; but you will be in the fashion, so give us your mite; set down, Mr. Prim two and sixpence.—Sir, good morrow to you.—Gentlemen, your servant.—

Such, my Lord, you fee, is the force of fashion, and such the influence of example, that a constant church-goer, and one perhaps who fancies himself a very good Christian, shall throw away one pound one with all the pleasure imaginable

for an evening's entertainment at the theatre, and at the fame time grudge half a crown for two and fifty discourses from the pulpit, which if he turns to his arithmetic book, he will see amounts to about —three farthings a sermon—and a sober citizen too, as Lady Townly says, sye! sye!

The following speeches are said to have been taken down at one of the great speaking or disputing clubs in this metropolis. As these are places where all persons have admittance at a very moderate expence, it is not to be wondered at, if there is a great diversity in the manners and characters of the speakers.

Quest. F happiness be in our power, in what state of life is it most easily acquired?

First Speaker.

Mr. President—Where is that there thing called happiness to be found?— that's the question, or at least the meaning of it.—Where!—You don't know.—No.—How should you till you're told it? Let me alone and I'll resolve you. Why, Sir, every where. Where is that there thing called happiness to be found?—that's the question. You don't know.—No to be sure, how should you? Let me alone, and I'll resolve you. Why, Sir, no where.

Every where and no-where!— Very strange this, you'll be apt to fay. But so it is, Sir.—No-where and every-where; every-where and no-where;—that's my notion. Now, Sir, this in my mind is plain enough of itself; but, for the satisfaction of the gentlemen present, I'll go about to prove it to you; and in order for to do so, Mr. President, I'll ask you

two or three questions.

Do you know who I am that's fpeaking here -No, you don't. How should you ? Let me alone and I'll resolve you. I am a man that's my own master, and worth a good round fum - I won't fay how much—that's not to the question, and I an't before a court. So enough faid, let that pass. Well! and what was I before, in old times? when you were a fniveling boy going to school, Mr. President, what was I then, pray?-You don't know. No to be fure, how should you? Let me alone, I fay, and I'll refolve you. Why I was a fervant, not worth a fhilling, not worth a groat. No, I lye there: I was worth ten pound and a few shillings in the worst of times. But let that pass. I an't before a court. So enough faid.

Well, Mr. Prefident, now to come to the question. Where is that there thing called happiness so be found? Is it in a fingle life or a married life? Is it in a high station or a low station? Is it in sickness or in health? In riches or in poverty? Is it in blacking of shoes at the corner of a street, or in lolling at case in a fine gilt coach? No, Sir, it isn't; where is it then ?-You' don't know. No, how should you? Let me alone and I'll resolve you. Why, Sir, it's in all these and in none of these. It may be with 'em, it may be without 'em. It has nothing at all to do with 'em. Happiness is here—here, Sir, (laying his hand on his breast) in a contented mind and a good conscience -that's my notion.

Why, Sir, what did I fay?— What did I fay?—Why I faid, Mr. Prefident, that I was a fervant once. Yes, 'tis true enough—I was; I'm not asham'd to own it. I waited at table, brush'd my master's cloaths, comb'd his wigs. All very true. Well, what then? Why I was happy then: very happy. Well! then I came to have fervants under me, that waited at my table, comb'd my wigs, brush'd my cloaths: that's my case now. Well! I'm happy now, very happy.

I was a fingle man when I was young and at fervice. Well! I was happy—very happy. I took a wife afterwards. Well! I was happy then (as happy, that is, as a married man can be)—Well! after formeyears she died—died of a surfeit—then I was a fingle man again. Well! I was happy then, very happy, exceeding happy, never happier

in my life.

Well! at that there time I had a house full of children. I was happy then, liked to fee the little fidgeting things with their monkey tricks, was very happy....They're all dead now but one, and that one's dead, too, that was poor Simmy, he died t'other day of the gripes .- I cried for him too.—But enough faid, let that pass. I've ne'er a child now, Well! I'm happy now, very happy. I was formerly that when I hadn't above ten pound and a few shillings in the whole world. Well! I was happy then. Now I'm worth —I won't fay how much—but I believe I could buy and fell any three in this room.—No offence, I hope —the prefent company, you know, is always excepted. But I think I could—I think fo-that's my notion. Well! what then? Why I am happy now, very happy, exceeding happy, never happier in my life.

There's the thing.—I had it here, Mr. President, (laying his hand on

his

his breaft) I was content with what I had, and never wish'd for what I hadn't. When any thing that was good came to me-your humble fervant, faid I. I was thankful: thankful, d'ye see, when I got out of service, when I fet up shop and so recovered my liberty: thankful, d'ye fee, when my wife went the way of all fleth, and I recovered my liberty a fecond time-was my own man again. But never pined, never grieved, always contented, that's my notion. Never owed no man a shilling, paid every man his own, lived upon what I had-little or much—all's one for that. 'I'here's happiness for you! every-where and no-where, no-where and everywhere, as I faid at first: in no particular station, and yet in every 'station: because it is in a man's own heart, in a man's own mind, and that follows him every-where.

What is he that gave you this here question, Where is that there thing called happiness to be found? You don't know what he is. No, how should you? Let me alone and I'll refolve you. Why the man that gave you that there question is -no matter what he is. I was going to call him a fool—and why? because he is one, and a d-d fool too. But may-be he's present, therefore I won't do no fuch thing. So let that pass. I have no mind to affront no-body. But let every body do as I do, and then they'll do right: let 'em be peaceful and quiet, and contented and happy in their own minds, and they'll never go to ask such foolish questions: they'll find it within-that's my notion. (Some porter!-bring some porter here!) And so here's your health, Mr. Prefident, and let the next speaker better what I have said if he can.

Second Speaker.

Mr. Prefident-Stranger as I am in this affembly, ignorant of its rules, unufed to speak in public, and unprepared for the prefent queftion, which I only heard fince my coming in, I shall stand in need of all your indulgence, while I deliver. as I can, a few thoughts that have just occurred to me upon it. I shall not pretend, Sir, to display such aftonishing powers of oratory as the last speaker; to prove white black, and black white, in the same breath, is a talk which I confess myself unequal to. As old Lear favs in the play on another occasion, -aye and no too was no good divinity, - To might some superficial observers be ant to fay in the present case,—are and no too is no very good reasoning; but far be it from me to make any fuch application of the passage. Exalted geniuses, it is allowed, thould not be restrained by rules: if we go but a step farther, and free them from the trammels of common fense, ho objection will lie against the last excellent speaker; on the contrary, he will claim all our admiration. Yet, though I honour, respect, and admire him. I shall not presume to follow his footsteps, but, conscious of my inability to reconcile and demonstrate contradictions, I shall be humbly content to go on in the plain high road of fense and argu-

The question under consideration, Mr. President, as well as I can recollect, amounts to this, If happiness be in our power, what state of life is it most easily acquired in?

Happiness has always been allowed to depend chiefly upon opinion; that content (which is only another name for happiness) is feated in the mind,—is a truth of to long

standing

flanding that I shall not waste either my own time or yours in attempting to prove it, but lay it down as a fundamental point. Taking this, therefore, for granted, our next step must be to enquire what good, or what apparent good, is the most generally sought after by mankind, as in possession of that happiness, either real or ideal, (which, as I observed, are much the same in the end) it will most probably be found to consist.

One of our most famous poets is of opinion, that the universal paffion of mankind is the love of fame, and has so ingeniously made out his position, that for me to add any thing to the elegant arguments, by which he supports it, would be only superfluous. I suppose I need not mention that the author I hint at is the celebrated doctor Young, whose fatires, entitled The Love of Fame, or universal Passion, are in every body's hands, and generally admired. But, though fame be what all men pant for, the objects of fame and the means to obtain it are as various as the countries spread over the globe, or the languages spoken in them. In one country military prowefs, in another learning, in a third eminence in the polite arts, in a fourth commerce,—present the furest road to fame. In each of these, then, that particular state of life which puts it most in a man's power to acquire the fame that all aspire to, must, by putting him in possession of his favourite wish, be to him the most eligible, the most happy.

Now what is it that we pant after in this country!—Liberty. What is the favourite wish and solace of our hearts?—Liberty. What is the furest road to fame in this country? —To fignalize one's felf in the cause of liberty. He, therefore, who has the best opportunity of fignalizing himself in the cause of liberty, is the likeliest man to be happy in his own mind, and that particular station in life which gives the greatest and most striking opportunities of signalizing one's zeal in that glorious cause, must of course (in this country at least) be the state in which happiness is most likely to be found.

At first view one would be apt to imagine that this must be some very exalted station, such as those of statesman, general, or senator.-No fuch thing.—There is a profession greatly inferior to these, yet at the same time genteel and repu-table, in which opportunities of this kind are, if not more frequent, at least infinitely easier to seize, and much more striking when laid hold of. A printer, Sir, who wishes to shew his regard, his veneration for liberty, has nothing to do but print a bold pamphlet, and put his name at the bottom of the titlepage; - frait he is fued with an attachment, after which, if he refuses to put in bail (which he will do if he acts confistently) he goes of courfe to Newgate. Now here the man makes a fort of voluntary recantation of liberty (it being all his own feeking) abandons his house, forfakes his family, quits his friends, gives up for a time all his nearest and dearest connections, and, what is more precious to him than all, his liberty: he does all this, I fay, voluntarily, and exhibits himself to his fellow-citizens in confinement with a view of shewing them the horror of it, in the fame manner that the ancient Lacedemonians brought before their youth a number of flaves made purposely drunk,

in order to inspire them with abhorrence and detestation of that vice.

I mean not to compare the Printer with the flave: the flave, perhaps, took as much delight in fwilling the ftrong liquor given him, as the Printer could take pleafure in getting himfelf into close lodgings at the king's expence: but as the act of the latter is more deliberately planned, and his motive infinitely more exalted, he is undoubtedly the greater character of the two, and more

deferving of applause. But I have not yet brought the Printer to the fummit of glory within his reach. There is a farther honour, an higher distinction, which he can likewife aspire to, that is fuperior, beyond measure superior, to any thing I have yet mentioned, -the Pillory. Newgate, Sir, is only his Palace-the Pillory is his Throne. When in that eminent flation, furrounded by admiring crouds, what must his sensations be? What delight must be feel at this public exhibition of his patriot 'm, of his love for his expiring country? When his first joyful transports give place to reflection, and he confiders what fervice his being there does to the nation of which he is a member, what must be his comfort, his happiness!—It is beyond conception, and one should be in his enviable fituation to feel it.

I shall perhaps be asked what service is done to the nation by this champion of its liberties exhibiting himself in the situation I have mentioned and taking the proper measures to bring himself to it. I answer the greatest service possible. He alarms their sears, awakes them from their lethargy, and persuades, or at least endeavours to persuade them, that they are the most mi-

ferable of flaves at a time when, as the Poet fays, they, Good easy people, thought full surely their happiness was a ripening, and that they were the freest and most blessed nation under heaven. To know we are difeased is the first step towards recovering our health; and do we not, therefore, owe the highest obligation to him who discovers our political fickness, and warns us of it, in order that we may take proper measures to shake it off? And what are the meafures proper to be taken in fuch a case?—they are the simplest in the world. Only imitating the example of Jack Cade, of pious and glorious memory, taking forcibly out of their houses a few obnoxious men (the higher their rank the better) striking off their heads, and new-modelling the government.

Is there any doubt but that so numerous, so respectable, so considerate, and so sensible a body of people as a mob is usually composed of, would in a few moments change much for the better even such a form of government as ours, which has been so many centuries in contriving, and in arriving to its present state of glory, maturity, and splendor?

I think I have sufficiently shown how desirable the lot of a Printer is.

This subject is fruitful, and I have something yet to offer on it; but as I find I have already trespassed on your time, I shall defer giving you the remainder of my thoughts till another opportunity.

Mr. President,—This here question about happiness and the like o'that, seems to me to be mighty easy to decide. The last gentleman that spoke has said a great deal a-

bout

bout poets and liberty, and about printers and flaves (whereby I fuppose he means the negers in the plantations) - and about Newgate and the pillory, and mobs and government, and telling folks they are fick and then cutting off their headsand the like o'that.

All that he has faid may be very good and very fine for what I know, but it's out of my latitude; I don't rightly understand it, and for that reason I don't think it worth my while to answer it. So I shall give -you my own mind upon the matter, without any method, or reason, or the like o'that, for them I look upon to be only puzzling, and think em entirely useless on any such occasion; for when a man is sure he's faying the true thing, and has got the right fow by the ear, what fignifies wasting time in bringing arguments to prove what's as clear as the fun at noon-day?

Now, Mr. Prefident, as Lintend to flick close to the question, I shall begin by observing as to what makes us free and the like o'that: -- why it's the being able to do whatfomever we have a mind to do. And in like manner as to what makes us happy, and the like o'that:—why it's the being able to have whatfomever we've a mind to have :that's what it is ;—and who fomever fays to the contrary knows nothing : at all about the matter.

Now every fool knows, for to be "fure every body here does, that the only way to have every thing that a body has a mind to have is to have a great deal of money; fo I fay that happiness consists in baving a every large fortune;—that's what it proofs, and the like o'them, as I

Then, as to this-here other part an argument—what do they ferve of the question, What state of life for but to puzzle and perplex?

is it easiest found in?—Why I'll tellyou a piece of my mind about that too. But first I must argue the case a little. I faid that liberty confisted in doing whatfomever we have a mind to do. Now there's that in it to be fure, but there's more than that in it too; for it confifts moreover in doing nothing that we have no mind to do, fo there should be no force or constraint upon us, or the like o'that. Now it's the fame thing in happiness;—there must be no force, no constraint in it. be quite happy we must not be obliged to do nothing that we have no mind to do.

Now what is the thing that we have all of us the greatest mind not to do?—Why to work, and to flave, and to take trouble, and the like o'that-that's what it is.-We'd all wish to do nothing, if we could : help it? wou'dn't we? Then the happiest state in the world to be fure (as happiness confists in ease and plenty) is that where we have the most money and the least to do for it. So for my part I think a Bishop the happiest station I know of. He gets a power of money every year, and what does he for it?-Nothing at all. I know if I had been brought up for fuch a fort of life, and had ferved my prenticeship to it, as I have to a trade, Ed be a Bishop before all trades,—because then I might take my eafe, and have no trouble in life. That's my mind, Mr. Prefident. I am for eafe and plenty. Other gentlemen may get up, and -give you fine words and the like o'that, but it's what I don't pretend

Reasons and method, and

faid before, have nothing to do in

the truth's the truth: plain fense for me.—I am an honest free-born Englishman, and pay scot and lot, and have been churchwarden, and served all the parish-offices in my time,—and so I have;—and so—and so—and so—and so—and so—I have told you all my mind.—I have told you all my mind.—that's all, Mr. President.—You may knock me down;—I have said my fay;—I have nothing more to offer.

Second Speaker again.

Mr. Prefident.—As the last speaker has formally given up all pretence to reason, method, and argument, telling you that he despites them all as so many ridiculous and troublesome constraints, I shall not attempt to make any remarks, or give any sort of answer to what he has advanced, for sear of offending him by a manner so opposite to his own, and which he seems to hold in such utter contempt.

I have an unfortunate veneration, Sir, for reason, and have all my life endeavoured to make it the rule I should go by in every thing, but especially in the discussing of any speculative point: -- now, as the worthy gentleman has disclaimed it. it would not be fair in me to attack him with a weapon which he professes never to use:-for fear, therefore, of opposing him in fo unbecoming and unmanly a manner, I shall not attack him at all; but, leaving what he has faid to the judgment of the company, proceed with the fame train of argument which I just now submitted to your confideration.

I flatter myfelf that I have fatisfied you how defirable the lot of a Printer is. Indeed in fuch a light does it appear to me; that I should almost be led to pronounce happi-

VOL. XI.

ness confined to that particular profession, were there not another the members of which have lately exerted themselves in so signal a manner in the cause of liberty, as to contend in honour with it.

I mean the coal-heavers. The late struggles of this virtuous body of men for freedom have drawn on them the eyes of the whole nation, and so enviable does this make them feem in my eyes, that, as the Conqueror of the world cried out when he saw the noble independent spirit of the great Cynick philosopher, Was I not Alexander I would wish to be Diogenes; so would I say in the present case, If I could not be a Printer, I would wish to be a Coalbeaver.

It has been faid that in very great attempts it was glorious even to fail; the mere aiming at the accomplishment of them being a fure indication of a vast and enlarged mind. Now, if this of the coalheavers was not a great attempt, I confess I know not what is; it was no less than the overturning of all law, an idea so bold and spirited, that, though they have not been able to carry it into execution, great praise is due to them for having only endeavoured at it.

Noble generous spirits abhor the remotest idea of constraint; laws we know were made only for the bad; beings of such an exalted mould as these, who like Zanza might be called, Souls of fire and children of the sun, could not brook such a restraint on their inclinations; nor, as their inclinations were so noble, did they stand in need of any.

Spurning, therefore, with indignation every fervile fentiment of law, decency, justice, and even humanity, they enlisted under the

O glorious

giorious standard of unlimited freedom, and so set the rest of their countrymen the great example of returning to a state of much more uncontrouled liberty, than the state of nature has ever been represented.

If, in this struggle, some have been plundered of their substance, others maimed and miserably mangled, others again deprived of life, this only enhances the merit of these affertors of freedom; it shews that no consideration could impede their progress; that, like bim, who was emphatically called the last of the Romans, and his brave colleagues, they were resolved to wade in blood up to the elbows, and to break throvevery band of society, even the most facred, in order to effect their noble purpose.

What pity that they have not been able to carry this great defign into execution! Then might we indeed boaft of liberty in the wideft extent of the word, looking down with mingled pity and contempt on the nations around us, who were ftill under the flavish yoke of go-

vernment and laws.

Indeed, that we shall soon be in this state of absolute uncontrouled liberty, we have some reason to hope, as the spirit of the people seems at present to turn a good deal that way.—Whenever this happens, we shall indeed have no trade, no arts, no manufactures,—but in exchange for these fancied ideal blessings, we shall have a real good,—Liberty.—Liberty unconfined, unlimited.—Liberty in its fullest extent.—And, possessing this, can we be otherwise than happy?

But I fear to trespass on the patience of my indulgent auditors. I flatter myself I have clearly shewn that in the two prosessions of Printer and Coalbeaver, the greatest love for liberty either had or might be displayed; and, as Fame is the sure attendant on every act wherein this spirit appears, and is at the same time the thing we have the greatest desire for, I hope I have convinced you (as the obtaining what we desire must be happiness) that these two states in life, of Printer and Coalbeaver, are those in which happiness is the most easily acquired.

Among the extravagant projects with which the papers were continually crowded, in confequence of the late high price of provisions; the extirpation of horses, and a total prohibition to the eating of weal, seemed to hold the principal place, and to have the greatest stress laid upon them. These absurdates gave rife to the following letter and petition, in which they are exposed with great humour.

To the Printer of the St. James's Chronicle.

Optat Ephippia Bos- Hor.

SIR,

Have found myfelf equally furprifed and concerned, on reading feveral papers, concerning an exact calculation of the number of horses now kept in England, and of the amazing consumption of hay and oats for their sustenance only. It is really a melancholy and a terrible consideration to reslect (at this time of dearness and scarcity, when human provender is so hard to be come at) how much land stands appropriated solely for the production of horse provender!

I hope my brother sportsmen will.

forgive

forgive me-but I cannot help obferving, that horses certainly make us the most slender and disproportionate returns, for their food and keeping, of any animals in the whole creation. If sheep consume part of the fruits of the earth, they repay us ten-fold, in our food and cloathing, by mutton and wool. If we give oxen credit for their fhare of the produce of land, they also reimburse us with interest upon interest, in beef and milk, not forgetting butter. Horses alone confume the vegetable gifts of Providence, and remunerate us with nothing but kickings, friskings, plungings, f-rt-ngs, and fcamperings, diflocated necks, and broken limbs.

From this train of reasoning I am led to look with great applause upon those patriots, who have lately, in feveral papers, (and I believe fometimes in your's) endeavoured to discourage the breeding of horses, and have attempted to recommend oxen for the univerfal purposes of draught, instead of an animal, who monopolifes fo much provender, and contributes fo little to human

fustenance.

But at the same time that I commend these patriots, I am afraid, that as they profess no farther aim than at the destruction of draughthorses, they will never reach the bottom of the malady, nor in any confiderable degree relieve the prefent distress-No, Sir, I fear we shall never see corn and meat at the proper price, until we can prevail with a H-nw-y, an Omega, or an R. W. or fome other indefatigable and long-winded champions, to brandish their pens, and to convince the sportsmen and sportswomen, of our distant counties, that oxen and cows are equally proper to carry

them as to draw them; and that being fo mounted, all their pleafurable excursions, their journeys, and even their most extensive chaces, may be as well, if not better performed, than at prefent. If country gentlemen can but be perfuaded to change their mares and geldings, for cows and oxen, (for I would not by any means be understood to recommend bulls, or, at least, as rarely as stone-horses under the prefent equestrian constitution) then I shall begin to form reasonable hopes. I vow I cannot fee any reason why they may not be confidered as fairly qualified to frand candidates for the vacant stalls of those many hunters, whose death (by the late contagion) I look upon as a providential warning, and a hint to us to adopt a better animal into their places. I have ruminated on the subject, and have made many observations on the comparative powers of the two animals, oxen and horses, and I find superabundant reasons for giving the preference to the former. In the first place, oxen are indefatigable; fecondly, they would carry you through a flough, or bog, with twice the purchase and momentum of the strongest horse; thirdly, by the command of a dexterous elevation of their hinder-quarters, they are enabled (in leaping) to clear any five-barred gate beyond a horse; and laftly, (which I lay more stress on than any of the former) they are fo perfectly fure-footed, that I don't know that I ever faw them stumble heartily, at least not beyond their power of recovery; whereas, if I were called upon to give the definition of a horse, I would call him, " animal caducum; ani-" mal ultra vires pronum;" or " animal in terram naturaliter ten-

0 2 " dens." " dens." Observe the generality of horses, when on full speed, and you cannot help taking notice, that their motion plainly indicates a downward tendency, as if they carried in their foreheads some latent. principle of gravitation towards the centre: they certainly have a natural propenfity to kils their common mother and nurse, the earth: and this feems to be a species of devotion, which they would perform every minute, if the rider did not, by holding hard against their bore downwards, and by the weight of his own body, (operating upon the principles of the lever, or the fulchrum of the steel-yards) as it were, crane up and purchase the tumbling animal into an horizontal direction. But here, indeed, to be just, I am constrained to admit, that those few horses, who have had the happiness of an academical education, are generally taught to avoid this fault, by being fet upon their haunches.— So far it is true, but (as I learnt in Lily's grammer) " naturam expel-" las furca, licet usque recurret." That horses (well dressed and trained under the furca of the ridingschool) cannot fall forwards, I allow; but alas! what then? They learn to rear up, (recurrere) and are very apt to come down backwards. It is as broad as it is longand if you that the door upon either nature, or a cat, they will bounce out at the window. if you attempt, by artificial manœuvres, to prohibit or debar horses from their natural right of stumbling, depend upon it they will indemnify themselves, by practifing some correspondent evolution, perhaps twice as dangerous to the rider, as their primitive natural one, Now both these difficulties are

effectually furmounted by the use of oxen, who always step within their own power, and this without being artificially fet upon their haunches; and even supposing, that (by making hunters of them) we fhould give up fomewhat in the article of speed, we should be made ample amends in the article of fecurity. I need not add, that the horns themselves would be of pretty confiderable use and comfort, especially at fome of your very rough leaps, where the rider may be thrown upon the neck; for, in that case, by catching, or (as they fay in the north) by clicking fast hold of the horns, and by a spring backwards, he may recover his faddle. And under this article I can't help making a remark in regard to the fair fex, those dear creatures, whose preservation and accommodation we are always confulting, (as to be fure we ought). It is, I fay, very observable, that we rarely venture them on horseback, without a saddle particularly constructed, and provided with fomething like an artificial pair of horns. The meaning of this piece of caution—(for I can by no means agree with Ifaac Voscius, that any fatirical allusion is couched therein, of that fex being the fountain of horns, as a Kis faid to: be the fountain of honour; nor with his observation upon the horned crescent of the huntress Diana) but the meaning of this piece of caution, I take to be this; that supposing the fair huntress should unfortunately (herself) lose her seat, her husband, and her friends, will have this fatisfaction at least, that (whatever becomes of her person) part of her petticoats must ever keep company with her horse wheresoever he goes, and most

most probably will be in at the death.

Now, in oxen, wife nature hath been admirably careful to provide this fecurity, by furnishing them with large natural horns, far beyond those artificial stuffed pummels, and which, by being so much sharper, must consequently take a furer hold of any loose garments, and thereby most effectually prevent a total separation or divorce between the huntress and the hunter.

The last consideration that occurs to me, is (I think) quite decifive in favour of oxen. Every one knows, that a very confiderable portion of the sportsman's pleasure arises from a kind of posthumous recapitulation of the chace, and from descanting (at table) upon the prowefs of the beaft that carried him: now this conversation can never be introduced with fo great a degree of propriety, as when you are actually regaling on a firloin of the very hunter whose exploits you are recording; and where the fuperior tenderness and flavour is chiefly owing to the exercise and activity, which you are celebrating; I am fully perfuaded, that I shall live to fee the day, when hunterbeef will be held as great a delicacy as hunted venison. But, after all, I conclude with great deference to sportsmen-I dictate nothing-I only recommend the experiment; I only ask for one fair trial-for I will venture to hazard this prediction, "that whoever will conde-" feend to hunt upon this plan but " once, will never go out a hunt-" ing afterwards in any other man-" ner whatfoever."

I am, Sir, your's, &c.

BOSPHIEUS.

To a GREAT CORPORATION.

The petition of the Calves of Effex, and other counties adjacent to the metropolis.

Most humbly sheweth,

HAT the calf kind have, in all ages, been the true friends of man; and as such have, on innumerable occasions, laid down their lives for his fervice.

That the favourite maxim of your petitioners, is the fame with that of the fine young gentlemen of the town: a foot life and a merry one, is their common profession; with this remarkable difference, however, that the said young gentlemen, not being void of all fear of death, like your petitioners, are yet doing something every day to hasten it. An inconsistency which a calf would blush at!

Your petitioners do not make this comparison, so favourable to themfelves, from a principle of vanity, but with a view to confirm the doctrines of Pythagoras, Æsop, and Rorarius, and to establish a just opinion of their own rationality; whereby they hope to obtain the attention of your worships.

Your petitioners, however, confefs, that they are more addicted to ruminating than to thinking; and they are confirmed in their indolence with respect to the latter, by the doctrine of that great philosopher Jean Jaques Rousseau, who, with incredible fagacity, hath found out, that thinking is an unnatural state in man; and your petitioners beg leave to add, a fortiori, in a cast.

But a case hath arisen, which must rouse the most indolent: They O 3 man

mean the petition of your worships to parliament against the use of veal. Your petitioners beg leave to affure you, that they have a due sense of the benefits derived to them from the fagacity of man. Were it not for the provident care of the farmer, millions of the calf kind never would have had any existence; and the few which, without his aid, would have come into life, would have found it a miserable shifting state of war. Exposed, perpetually, to the cruel teeth and claws of fiercer and more active animals, how wretched would their condition have been! How different from that of your petitioners!

They are not fo irrational as to pretend, that the friendly care of the farmers is perfectly pure and difinterested. What human friendship is so? But your petitioners reap material benefits from it, such as it is. To it they owe their living in the peaceable enjoyment of all their wishes. To it they owe the knowledge of but one disease, the butcher's knife. What a trisse compared to those which afflict mankind!

But if the scheme of your worships, to suppress the use of veal, should pass into a law, from that moment the farmer, having no hopes of making a profit of the good plight of your petitioners, would, courtier like, abandon them to that poverty of flesh, which is incident to a state of mere nature. And if another cruel propofal were to take place also, that of sending your petitioners to the plough, when fit for it, their lives would be protracted, not only in leanners, but in flavery. Every friend to revolution principles, and the protestant fuccession, like your worships, must

confess, that life on such terms would not be worth preserving.

And your petitioners beg leave to submit it to the consideration of your worships, that the slesh of calves cannot become beef, but in a course of years; and, therefore, that the prohibition of yeal at present, far from occasioning a greater quantity of meat in the market, would on the contrary, create a deficiency; which, your petitioners presume, must be far from your intentions.

Your petitioners, therefore, flatter themselves, that if your worships will duly consider their reasons, you will at length see, that the clause relating to veal in your petition to parliament, has a tendency to raise obstacles to the propagation, and impediments to the happiness of the calf kind, and is consequently inconsistent with the just rights of vetulcity; and that the faid clause is also inconsistent with the first principles of commerce, and inconsistent with your own views.

Your petitioners, therefore, humbly hope, that your worships will procure the faid clause to be erased, cancelled, or, by some other means, withdrawn from the fight of mankind.

And your petitioners shall ever Baa!

To the Printer of the St. James's Chronicle.

Ridentem dicere verum

SIR,

A S el-n time is now approaching, and many new memb rs will undoubtedly make their appearance

pearance in the next f-ff-n of p-t, it cannot be wholely nugatory to endeavour, at least, (with what fuccess heaven knows!) to explain to the future noviciates, what I never yet knew accurately defined, wherein p-y bufiness confifts. Definitions in general, as far as I have had occasion to observe them, are so clogged and confused, by a variety of terms, that the mind cannot without difficulty retain the combination: he, therefore, who can establish any thing like precision in these matters, and can reduce as many cases as possible to a fingle expression, may deserve, perhaps, at least, as well of the public (without vanity beit spoken!) as Dr. Grey by his Memoria Technica. Whether I have fucceeded in this coup d'essai, must be left to the impartial public; if I have, it may be a temptation to extend my plan, if not, I have, at least, Phaeton's confolation when he broke his neck -Magnis tamen excidit ausis.

If I am not mistaken then, the whole of p—y business may be comprised within one simple, obvious termination, with the addition only of a proper antecedent syllable or two, pro re nata—as for

example.

Pose
Impose
Dispose
Interpose
Propose

Propose Expose Repose or other of

Under one or other of these denominations, our whole st—e may, I think, fairly be ranged. As to pose—the great stock and root of all the rest, I must of necessity exclude that, because I consider it as the general denominator for the

c—nfl—nt body of the k—gd—m, and, more restrictively, for that part of them, who are every day in p——t time kicking their heels at the l—bby d—r, and posing themselves to guess what can be doing within side.

Its derivatives are branched into four grand divisions, or eight subdivisions, which you pleafe.

In the first and second sub-division, are comprehended all e-v-l and m-y of --s, all pl--n, p-n-rs, w-ys and m--ns m-n, and g--v-t retainers of every kind; having the game always in their own hands, you will generally sind them men of great temper, coolness, and persuation, they are very fond of talking about taxes, loans, fund-securities, and the like: the sum total of their business consists in trying, when they can, to impose on your senses, and dispose of your pockets. Their motto is -Pro rege sape.

In the third fub-division, you will meet with a clamorous fet of people indeed, diametrically the reverse of the former. They are always in a passion, real or affected, ufually remarkable for strength of lungs, and will make the h. echo again with-liberty, property, landedinterest, and so forth. These always oppose, right or wrong, because a m——r is in their dictionary a fynonimous word for a k-e. In this number you will either find c-nt-y g-n of ancient family, and great fortune, who live in the extremities of the k-m, keep open house, excellent cellars, noble stud, and a large kennel; or else, a few adv-nt-rs of quick parts, and no fortune, who talk themselves into notice, and then are p--d either to hold their tongues, or elfe to contradict every word

word they faid formerly. These have a motto too—Pro republica semper—but it has been dropped so often, that it is become now almost a jest. As to those of the fourth sub-division, the—deposers—they made a figure once, for two or three reigns before the revolution, but since then have dwindled away, and are not to be met with anywhere at present, unless, perchance, it be in a pr-w-nc-l off—bly.

As it is necessary for general safety, that adversaries should now and then find mediators; under the fifth and fixth sub-divisions you will meet with some of that character. These are almost always gentlemen of fense and discernment, easy in their circumstances, unambitious in their views, not actuated by hopes or fears, difinterested lovers of their country, without prejudices for or against particular men, or particular measures. It is their bufiness to interpose good offices, and propose the most likely means for accommodation in matters of difference. They take for their motto -Medio tutissimus.

The 8th and last sub-division, confisting of such as repose, may be termed the for lorn hope of the r-p-ve

expele themselves.

body. These are heavy-armed troops, and what business they do,

is executed at a fingle stroke, and always at a dead lift. They seldom exert themselves beyond a decisive monosyllable; at other times, it is not unusual to see them resting upon their arms. The two last are distinguished by this motto—tros rutulusive.

If this my little enchiridion should be approved, I hope a sufficient number of copies will be printed off, and put into the hands of the d-r k-p-rs, to be distributed to the new m-rs as they go in. It may be easily concealed in their hats, and conned over as they sit, without loss of time.

Your's,

Feb.1,1768.

DIDASCALUS.

Anecdote of two Frizeurs.

SIR,

HAVING seen some pretty lively remarks in the news-papers, on the present fashionable way of dressing ladies heads, I take the liberty to fend you some advertisements which appeared in the Dublin Univerfal Advertiser about twelve years ago. Signior Florentini, and M. St. Laurent, were the two rival frizeurs, and had practifed fome years with pretty equal fuccess and reputation. The Frenchman, however, by his talent at agreeable fatire, with which he entertained every lady under his hands, at the expende of her absent acquaintance, during the time of his operation, had manifestly gained a great ascendant over the Italian. This induced Florentini to make a bold effort to raise his own reputation, and ruin his rival, whose great character character he envied, and whom he wished to be undone.

Advertisement I.

"Signior Florentini, having taken into confideration the many inconveniences which attend the method of hair-dreffing, formerly used by himself, and still practised by Mr. St. Laurent, humbly proposes to the ladies of quality in this metropolis his new method of fuccoowing the head in the most fashionable taste, to last, with very little repair, during the whole session of parliament. Price only sive guineas.

FLORENTINI."

" N. B. He takes but one hour to build up the head, and two for baking it."

Answer, by St. LAURENT.

"Whereas dere have appear von fcandaleuse avertisement of Signior Florentini, moch reslectin on Mr. St. Laurent's capacite for hair-dressing; he defy said Signior Florentini to tell any inconvenience dat do attend his methode, oderwise he shall consider said Florentini as Boute-seu and calumniateur.

St. LAURENT."

Florentini, who was not fo good at English as the other, replied by

his interpreter:

"Whereas Mr. St. Laurent has challenged Signor Florentini to produce an inftance where his (St. Laurent's) method of hair-dreffing is inconvenient to the ladies; he begs to observe, that three rows of iron pins, thrust into the skull, will not fail to cause a constant itching, a sensation that much distorts the seatures of the face, and disables it so, that a lady by degrees may lose the use of her face; besides, the im-

mense quantity of pomatum and powder, laid on for a genteel drefsing, will, after a week or two, breed Mites, a circumstance very disagreeable to gentlemen who do not love cheese, and also does afford a feetid smell not to be endured: from which, and other methods too tedious to mention, Signior Florentini apprehends his new method is entirely free, and will admit of no reasonable exception whatever.

FLORENTINI."

St. LAURENT replies.

" Hah! hah! hah! Dere is no objeshon den to Signior Florentini's vay of frizing de hair of fine ladie? I shall tell him yon, two, three. In de forst place, he no consider, that his fuccow vill be crack, and be break by de frequent jolts to vich all ladies are so sobject, and dat two hour baking vill spoil de complekshon, and hort de eves. And as to his scandaleuse aspershon, dat my method breed a de Mite. fo odious to gentleman who don't love de cheese. I say 'tis false and malitieuse; and to make good vat I say, I do invite all gentlemen of qualitie to examine de head of de countess of ____, (vich I had de honour to drefs four week ago) next Monday at twelve o'clock, through Monfieur Closent's great mikroscope, and see if dere be any Mite dere, or oder ting like de Mite vateer."

"N. B. Any gentleman may fmell her ladyship's hede fen he

please."

The controversy ended in a duel; but no hurt, as the combatants behaved like flash and fribble; bur, whatever was the cause, it is certain the monstrous fashion soon ceased; and in a sew months the ladies heads recovered their natural proportion,

and

and became a piece of themselves. Yours, &c.

From the Public Advertiser.
In quowis wehiculo. Rock & cæteri.

HE rage for carriages is so great at present, and the town and its avenues so full of them, that some speedy method should be taken to stop them, less the landlords both of the old and new buildings should some day be surprized and ruined, by hearing that their tenants, to a man, had drove off, which, though not quite so ungenteel, will be sull as fatal to them as if they had walked off. The latter indeed is not likely to happen, as every man, who pretends to the smallest share of taste, has almost forgot how to use his

legs.

Formerly, middling folks, particularly tradefmen, were contented with the walk of life allotted to them; even when they married (at which time persons usually make a flash) they aimed at no more than putting their best leg foremost, and wished only to be thought upon as good a footing as their neighbours. But now fure the devil has possessed them all; or have they first run mad, and are next out-running the constable, for which purpose they have all whipt into carriages? In vain has the legislature endeavoured to put a stop to their career by clogging their wheels, and sticking up a turnpike at every hundred yards distance, more particularly on those roads where our citizens are accustomed to dust themselves as often as it is confiftent with fome decent fhew of attention to business. Those indeed who are quite abandoned are reduced to make use of the sabbathday for their excursions; so that the late regulation for double tolls on that day appears to have been very wifely intended to have put a spoke in their wheels, and one would have thought, in spite of the weakness of their intellects, might have brought them to the use of their understandings.—If they suffer themfelves to be thus carried away, people of the country, who may pay occasional visits to this metropolis, will be induced to think that there are no citizens but such as belong to the ward of Cripple-Gait.

How are they degenerated, how changed fince those happy days, in which the prudent and unsbaken citizen, so far from allowing himself to be carried, was feen trudging along, on a Sunday's evening, fweating under the load of his wife's favourite child, while she, poor woman, with her usual attention to her hufband's head, followed as fast as she well could without discomposing the calve's tail perriwig committed to her charge. That this was once the case, the vainest puppy of them all cannot deny; for Hogarth, pleased with the scene, has transmitted it to posterity in everlasting black and white. The degeneracy, of which I complain, is wholly on the part of the male; for, notwithstanding he is of late grown so faving of his legs, the female, semper eadem, has never swerved from that attention to his head for which she has ever been famed; nor has the carriage of the husband been obferved to make any alteration in that of the wife: it is therefore for the men I write, and fincerely befeech them, as they love liberty, to stand upon their own feet, nor any longer fuffer themselves to be run away with by any headstrong brute

or brutes, to whose caprice, the moment they step into a carriage, they submit their persons, and who in the end will gallop away with their properties. To be brief, Sir, I am of opinion, that a tradesman has no more occasion for a carriage than a cat has for a pair of pattens; and I should be happy indeed, if you could think of any means to persuade them to step out of their coaches or chaises into themselves.

All the nations we read of, that from a state of freedom have fallen into flavery, have brought that difgrace upon themselves by luxury. That carriages are strong symptoms of luxury, is not to be disputed; and I think I know some men yet, who look upon them but as stately prisons. The freest people are certainly those who never knew the use of them, and are most likely to stand their ground. We have a late instance in our own country, where the only few who feem to be poffessed of the genuine and uncontroulable spirit of freedom, I mean the voters for Mr. Wilkes, almost to a man, walked on foot to Brentford, to poll for that bonest gentleman; and many of them, I dare fay, dread the thoughts of being conveyed in a carriage as much, nay more, than they would the pillory.

I fear, Sir, we owe the so common use of carriages to the physicians. They are the first persons we know of, excepting lords and esquires, whose legs failed them; but then, Sir, they have heads (your wit will sneer now and say, so have their canes;) but I am serious:—These wise men have driven themselves into good fortunes; but daily experience shews us, that those of other callings, who attempt that method of getting on, have driven themselves

felves not only out of their fortunes, but even out of house and home.

The gestation of tradesmen generally proceeds from a false conception, or at best ends in a miscarriage; I wish therefore that the lordmayor, Sir John Fielding, or Mr. Wilkes, would take this matter into confideration, and perfuade thefe unthinking people, at least to lay by their whimsies till better times, or till the scheme urged by your correspondent of Wednesday last takes place, namely, that of opening the two-forked streets to Blackfriars-bridge; for, unless a clear way is made for them to get off, they will, as he observes, never be able to pass the Fleet.

> I am, SIR, Your humble Servant, JOHN TROTT.

To the Printer of the Public Advertiser.

Rumford, Jan. 2, 1768.

SOME time ago I observed in one of the papers an article of news, informing us, that Mr. --and Mr. - (two respectable artificers, who hold places in the board of works) intended offering themfelves candidates for two certain boroughs at the next general elec-I own I was at first a little alarmed for a friend of mine, who ferves at present for one of those boroughs; but, upon a further enquiry, I have learned that my friend is made easy, and gives up quietly to his antagonists. He assures me that it is a fettled thing (upon the late coalition of parties taking place) that the following personages are to be strongly supported on their canvassing for the following places.

As my friend hath obliged me with an exact copy of the lift, I take this opportunity of transmitting it to you, in preference to any other person whatsoever. If you think it dangerous, pray by no means meddle with it: but if you should look upon the present season of festivity as a kind of Saturnalia (when the Romans allowed all fort of gambols to plead privilege) you may make an holiday-paper of it, if you please.

A letter from a gentleman on his travels, giving an account of the republic of St. Marino.

Thave been visiting the smallest of all republics. I diffinguished at some distance, and not without difficulty, at the top of a very high mountain, a town, the houses and larger buildings of which feemed to be rather a fairy vision, than any thing in reality. Venice appears, as one advances towards it, as if rifing out of the fea; St. Marino feems built among the clouds. It is not a strange thing here to see mountains, whose tops are above the clouds in their ordinary fituation: it is the case with that on which Marino stands; and the whole town is on that part of it which is in general fo encompassed. I never faw fo strange a prospect. That it was a town was indifputable. It was a very clear day in which we approached it, otherwise, I suppose, at this distance we should

not have seen it at all; but for this advantage one should scarce have seen it from this place. Another singularity on these elevations is, that they retain the snows; the weather was warm and the country open in the lower parts, but we found it winter at St. Marino; snow lay all about the town.

They have the advantage of good cellars, the coolest perhaps in the world; and nature feems in fome degree to have provided against the cold of the fituation, by giving them good wine to put in them. The fides of their mountain are a very happy foil for vineyards, and the wine excellent. Though the good lady has given them wine, she has left them to provide themselves with water: there is not a fpring, lake, or pond, in all the place. Is not this a document to them to drink a liquor that is properer for so bleak a fituation? But when will men listen to the dictates of nature and reason? They are at infinite pains

to fave up the rain water and the meltings of the fnow, and are furnished in sufficient plenty, though not with any very sweet liquor, of this kind.

You heard me call Marino the smallest republic in the world; you will agree with me that it is so, when I tell you this mountain, and three or four little hills scattered about its soot, are the whole territories. When they are in a humour to boast, as Italians commonly are when they talk of the power and riches of their country, they tell you, that in the dominions of their republic you may count four thousand four hundred fouls: but they romance in this; it is impossible they should be so

many.

Rome was once no bigger than this: but St. Marino never will be any bigger. See the confequences of being born under favourable or unfavourable stars. Perhaps there are better reasons: to be honest is the way to flarve: robbery and murder are the short cuts to eminence. Rome had its origin from a band of outlaws, foldiers, thieves and ravishers: they were men desperate enough to attempt any thing, and there was nothing but force and rapine to establish them. They continued the principle on which they fet out, and became a people of foldiers. When they had enough for their necessities; they began to hunger and thirst after glory, and never rested while there was any thing in the world that other people called their own. Religion is the greatest enemy to rising in the world: it was a great while before the Romans were troubled with it at all, and when they were, they never gave it leave to interfere with the nobler calls of ambition. Religion was the foundation of this little republic; and as the people feem still, like the old Romans, to inherit the spirit of their fathers, they never will increase their territories.

The founder of this republic, now elevated to the rank of a faint, was in his life-time a stone-cutter. He retired to this mountain in the latter part of his time, and betook to the life of an hermit. There was no difficulty in getting some occasion of a miracle from the hand of a religious of this kind. It is a country of superstition; and every thing concurs, not only in the believing, but in the giving rife to, fuch accounts, and in the propagating them. He was at one time, they tell you, walking on the fide of the mountain where a poor Vigneron was rolling down a stone from a broken rock, to make up a breach in an inclosure: the venerable father faw him toiling, and compassionated him: "You " will foon be released from all this " pain, my fon," faid he; "have " comfort." It happened that the fellow had been used to be often afflicted with the cholic; whether a fit was at that time leaving him, or what was the particular incident, we are not at this time to know: nec scire fas est omnia; but hearing the consolation from so venerable a mouth, he placed great confidence The father had the repute of a person of great sanctity: he had only meant, that death should: one time release him from such fatigue: but the fellow, to whom custom had rendered this familiar, and who would not have wished to be eased from it on fuch conditions, imagined that he spoke of his disorder. Whether nature or faith performed the cure, we know not, but it was in-

stan-

Hantaneous. The man ran to his companions lower down the hill; he told them, the holy man had known his difeafe, without speaking a word about it, and had cured him by only crossing his hands over him. The miracle was believed, and reported every where. The fellow, likely enough, had his fits afterwards, but they came too late; the reputation of the faint was up, and the return of his disorder would be attributed to his fins.

The story made a considerable noise; people flocked about the hermit who had the power of miracles: and the princess of the country, to shew her zeal for the glory of her religion, gave him the mountain on which he had performed the miracle as his own for ever. The people who attended him from this time. built the town, and as they left it fo it stands, a memorial of piety, but never to be made any bigger. It is not easy to express to you the veneration which is paid to him by the people, and they expect as much from strangers: they attribute the duration of their commonwealth to his protection. They hardly allow the Virgin Mary a place above him among the faints. As to all the rest, they prefer St. Marino by many deorees. Their best church is dedicated to him, and his remains are buried in it. They have his statue over the great altar, and pay him divine honours. It is among their laws, that speaking difrespectfully of him is blasphemy: it is punished in the fame manner.

The inhabitants of St. Marino recount, with a peculiar kind of pride, the vicifitudes of the fortune in the other states of Italy; and, while they tell you in what manner, and at what time they chang-

ed their feveral masters, add, with a triumphant air, that St. Marino has stood secure during all these changes and shocks of fortune; the piety of its inhabitants, and the power of its protector and sounder have preserved it.

There is, to fay nothing of their protection from this fainted mason. another, and a very firong cause of it: the town, you have heard me fay, flands on the top of a very high mountain: it is not only a high, but a very steep and craggy one, and there is but one road, and that a narrow one, by which they are accessible. They look upon this as their real fecurity, though they chuse to attribute it to another cause: and are so careful to preserve this to themselves, that they have a law, and a very fevere one, against any of their citizens coming into the town by any other way, left it should by degrees make a path over some other part of the mountain. Liberty is very dear to those who enjoy it in a land of flavery; the people of St. Marino know the fweets of it. and would preferve it at any hazard. It is hard to fay what could force them in their fituation, with no way to come at them but this fingle path; and they are foldiers from their infancy. All that are of an age to bear arms are exercised, and ready at a moment's call; and they have distinguished themselves in a particular manner as foldiers, in those wars in which they have been engaged as auxiliaries. They affifted Pius the Second against one of the lords of Ramini; and he acknowledges his fuccesses to be, in a great measure, owing to their bravery, and rewarded them nobly. They do not at present seem ambitious of enlarging their territory, and they are right : " right; by enlarging they might lofe it. It was once fomewhat more extensive; reaching half way up a neighbouring hill, but at present it is reduced to its antient limits. These they will always be able to preserve; for who is it that will think it worth while to make an attempt upon a place, rendered by nature almost inaccessible; desended by a fer of resolute, and even desperate people, sighting their own immediate cause, and not worth having if they should get it?

Some account of the Grifgris and Mumbo Jumbo, superstitions practifed in many of the interior countries of Africa.

F all the superstitions in vogue in several of the interior councries of Africa, the most general and remarkable are the Grifgris and Mumbo Jumbo; the former of which, Le Maire fays, are certain Arabic characters, mixed with necromantic figures, drawn by the Marbuts, (the priefts fo called) on paper. Labat affirms, that they are nothing more than scraps of the alcoran in Arabic; but this Barbot denies, and confirms his opinion by positive proofs; for having brought over to Europe one of these Grisgris, and shewn it to a number of persons deeply skilled in the Oriental learning, none of them could find the least trace of any character they understood; yet, after all, this might be owing to the badness of the hand-writing, and the words are probably of the Mandingo language, though the characters are an attempt to imitate the Arabic. The poorest negro never goes to war without his Grifgris, as a charm against wounds; and, if it proves

ineffectual, the Marbut transfers the blame on the immorality of his conduct. Those cheats invent Grifgris against all kinds of dangers, and in favour of all defires and appetites; by virtue of which, the possessions may obtain or avoid whatever they like or dislike. They defend them from florms, enemies. diseases, pains, and misfortunes; and preferve health, long life, wealth, honour, and merit, if we credit the Marbuts. Certain it is, that those priests find all the benefit of the boasted virtues of their Grifgris; no clergy in the globe being more revered, honoured, or wealthy, according to the ideas of wealth they entertain here; and no wonder, as they impoverish the people by the exorbitant price they exact for their knavish charms, a Grifgris being frequently valued at three flaves, and four or five oxen.

Such of these pious ornaments as are intended for the head, are made in the form of a cross, reaching from the forehead to the neck behind. and from ear to ear; nor are the arms and shoulders neglected. Sometimes they are planted in their bonnets in the form of horns; at other times they are made like ferpents,lizards, or fome other animal, cut out of a kind of paste-board: In a word, they are of forms as various as the purpofes for which they are intended. There are not wanting Europeans, and otherwise intelligent feamen and merchants, who are in some degree infected with this weakness of the country, and believethat the negro forcerers have an actual communication with the devil; and that they are filled by the malignant influence of the evil spirit, when they fee them diffort their features and muscles, make horrid grima-

CCS.

ces, and at last imitate all the appearance of epileptics; A notion not confined to the negroes of Africa, but thoroughly believed, about the beginning of the last century, by several of the learned of Europe, and borrowed by them from the antients, who believed that perfons afflicted with this terrible malady were possessed with a 71 Delor, a quid divinum, or spirit. Here, indeed, it is counterfeited, but so artfully, that it is next to impossible to detect them, and hence they gain great credit with the natives.

To these charms and necromantic arts they add the other bugbear of Mumbo Jumbo, which is intended, chiefly among the Mandingoes, to keep their women in obedience and submission. This is no other than a large idol, which the women are simple enough to believe, or cunning enough to pretend, they take for a human favage, who watches all their actions, and can even penetrate into their most fecret thoughts. The husband gets behind this statue in the night, and makes a dreadful bellowing, which they suppose issues from the idol; and of this some of them make a very artful use; for, perfuading their husbands that they firmly believe in the attributes given to the Mumbo Jumbo, their conduct is intirely committed to his care; the husband takes his pleasure abroad, and the women enjoy the fociety of their gallants, free from all alarms and discoveries. Some of them, are, however, fimple enough to credit what their husbands affert, and then they try to bribe over the idol to favour them. Moore relates, that this part is acted by a negro, and commonly by the favourite Vol. XI.

flave of his master; hence he acquires an absolute dominion in the family over the women, in consequence of his function; and over the master, from an apprehension that ill usage will make him reveal the secret of so much consequence to the support of the husband's authority, and preservation of the women's honour.

In the year 1727, the King of Jagra had a woman, whose curiofity could only be equalled by his weak fondness, in discovering to her the whole mystery of the Mumbo Jumbo, for which she had long eagerly follicited; but, with the indifcretion usual in her fex, the was scarcely in possession, when she hastened to reveal it to all the other women. The report foon came to the ears of the chief negro Lords, who were before but ill affected to the King's person, and now shocked with a weakness of such consequence to them all. They therefore affembled to deliberate on the necessary meafures, in an affair so critical; and not doubting but their women would throw off their allegiance, and live in a perpetual state of rebellion and infidelity, if the terror of the Mumbo Jumbo was once removed, they determined upon a very bold step, which they executed with equal re-They assumed that air of folution. authority peculiar to persons who take upon them a religious office, or act in a religious cause; and, going to the palace, ordered the King to come before the idol or Mumbo Jumbo. The weak Prince, not daring to refuse the summons, obeyed, and, after being feverely cenfured by the bugbear, he was ordered to produce all his women. No fooner had they made their appearance,

pearance, than they were instantly affaffinated by order of the Mumbo Jumbo, and thus this almost fatal discovery was suppressed, before it made its way out of the King's family.

Such as are initiated in the myftery of the Mumbo Jumbo take a folemn oath not to reveal it to the women, or any other negroes who are not of the fociety. They cannot be admitted before a certain age; the people swear by that idol, and no oath is observed with more folemnity and respect: In a word, every village has its lodge, or Mumbo Jumbo, which we can compare to nothing so aptly as the respectable fraternity of Free-masons, so well known in Great Britain, France, Germany, and several other parts of Europe.

An odd fort of diversion, common in the neighbourhood of Smyrna.

IN this country there are a great number of storks, who build and hatch their young very regularly. The inhabitants, in order to divert themselves at the expence of those birds, place hens eggs in the flork's nest, and when the young are hatched, the cock on feeing them of a different form from his own species, makes an hideous noise; which brings a crowd of other storks about the nest; and who to revenge the difgrace which they imagine the hen has brought upon her nest, destroy her, by pecking her to death: the cock, in the meantime, making the heaviest lamentation, as if bewailing his misfortune. which obliged him to have recourfe to fuch difagreeable feverities.

POETRY.

POETRY.

The FATAL SISTERS, an ODE, By Mr. GRAY.

(From the Norse Tongue.)

In the Orcades of Thormodus Torfæus; Hafniæ 1697, folio: and alfo in Bartholinus.

Park Rank Estar F A C E. ...

IN the eleventh century Sigard, Earl of the Orkney-Islands, went with a fleet of ships and a considerable body of troops into Ireland, to the affistance of Sistryg with the filken beard, who was then making war on his father-in-law Brian, King of Dublia: the Earl and all his forces were cut to pieces, and Sistryg was in danger of a total defeat; but the enemy had a greater loss by the death of Brian, their King, who fell in the action. On Christmas-day, (the day of the battle,) a native of Caithness in Scotland saw at a distance a number of persons on horseback riding full speed towards a hill, and seeming to enter into it. Curiosity led him to follow them, till looking through an opening in the rocks he saw twelve gigantic figures resembling women; they were all employed about a loom; and as they wove, they sung the following dreadful Song; which when they had finished, they tore the web into twelve pieces, and (each taking her portion) galloped fix to the North and as many to the South.

OW the storm begins to lower, (Haste, the loom of hell prepare,) Iron-sleet of arrowy shower † Hurtles in the darken'd air.

Glitt'ring lances are the loom, Where the dusky warp we strain, Weaving many a foldier's doom, Orkney's woe, and Randver's bane.

Note—The Valkyriur were female Divinities, servants of Odin (or Woden) in the Gothic mythology. Their name signifies Chusers of the slain. They were mounted on swift horses, with drawn swords in their hands; and in the throng of battle selected such as were destined to slaughter, and conducted them to Valkalla, the hall of Odin, or paradise of the brave; where they attended the banquet, and served the departed heroes with horns of mead and ale.

Milton's Paradise Regained. Shakespear's Jul. Cæsar.

^{*} How quick they wheel'd; and flying, behind them flot
Sharp fleet of arrowy flower

Milton's Paradi

[†] The noise of battle hurtled in the air.

See the griefly texture grow, ("Tis of human entrails made,) And the weights, that play below, Each a gasping warrior's head.

Shafts for shuttles, dipt in gore, Shoot the trembling cords along.
Sword, that once a monarch bore, Keep the tiffue close and strong.

Misa black, terrific maid,

Sangrida, and Hilda fee, Join the wayward work to aid: 'Tis the woof of victory.

Ere the ruddy fun be fet, Pikes must shiyer, javelins sing, Blade with clattering buckler meet, Hauberk crash, and helmet ring.

(Weave the crimfon web of war)
Let us go, and let us fly,
Where our friends the conflict share,
Where they triumph, where they die.

As the paths of fate we tread, Wading thro' th' enfanguin'd field: Gondula, and Geira, spread O'er the youthful King your shield.

We the reins to flaughter give, Ours to kill, and ours to fpare: Spite of danger he shall live. (Weave the crimson web of war.)

They, whom once the defart-beach Pent within its bleak domain, Soon their ample fway shall stretch O'er the plenty of the plain.

Low the dauntless Earl is laid, Gor'd with many a gaping wound: Fate demands a nobler head; Soon a King shall bite the ground.

Long his lofs shall Eirin weep, Ne'er again his likeness see; Long her strains in forrow steep, Strains of immortality!

Horror covers all the heath, Clouds of carnage blot the fun. Sisters, weave the web of death; Sisters, cease, the work is done. Hail the task, and hail the hands! Songs of joy and triumph sing! Joy to the victorious bands; Triumph to the younger King.

Mortal, thou that hear'st the tale, Learn the tenour of our song. Scotland, thro' each winding vale Far and wide the notes prolong.

Sifters, hence with fours of fpeed: Each her thundering fautchion wield; Each bestride her fable steed. Hurry, hurry to the field.

The DESCENT of ODIN. An ODE, (from the Norse Tongue,) in BARTHOLINUS, de causes contemnenda mortis; Hasnia, 1689, Quarto. By the same.

Prose the King of men with speed, And faddled ftrait his coal-black fteed; Down the yawning steep he rode, That leads to * HELA's drear abode. Him the dog of darkness spied, His shaggy throat he open'd wide, While from his jaws, with carnage fill'd, Foam and human gore distilled: Hoarse he bays with hideous dis, Eyes that glow, and fangs that grin; And long purfues, with fruitless yell, The father of the powerful spell: Onward still his way he takes, (The groaning earth beneath him shakes;) Till full before his fearlefs eyes The portals nine of hell arise. Right against the eastern gate, By the moss-grown pile he fate; Where long of yore to fleep was laid The dust of the prophetic maid. Facing to the northern clime, Thrice he traced the runic rhyme; Thrice pronounc'd, in accents dread, The thrilling verse that wakes the dead; Till from out the hollow ground

P 3

Slowly breath'd a fullen found:

^{*} Nisheimr, the hell of the Gothic nations, confisted of nine worlds, to which were devoted all such as died of sickness, old-age, or by any other means than in battle: Over it presided Hela, the Goddess of Death.

Pr. What call unknown, what charms presume To break the quiet of the tomb? Who thus afflicts my troubled sprite, And drags me from the realms of night? Long on these mould'ring bones have beat The winter's snow, the summer's heat, The drenching dews, and driving rain! Let me, let me sleep again. Who is he, with voice unblest, That calls me from the bed of rest?

O. A traveller, to thee unknown, Is he that calls, a warrior's fon. Thou the deeds of light shalt know; Tell me what is done below, For whom you glitt'ring board is spread, Drest for whom you golden bed.

PR. Mantling in the goblet fee The pure bev'rage of the bee, O'er it hangs the shield of gold; 'Tis the drink of Balder bold: Balder's head to death is given. Pain can reach the sons of heav'n! Unwilling I my lips unclose: Leave me, leave me to repose.

O. Once again my call obey. Prophetess, arise, and say, What dangers Odin's child await, Who the author of his fate.

PR. In Hoder's hand the heroe's doom: His brother fends him to the tomb. Now my weary lips I close: Leave me, leave me to repose.

O. Prophetes, my spell obey, Once again arise, and say, Who th' avenger of his guilt, By whom shall *Hoder*'s blood be spilt.

Pa. In the caverns of the west, By Odin's sierce embrace comprest, A wond'rous boy shall Rinda bear, Who ne'er shall comb his raven-hair, Nor wash his visage in the stream, Nor see the sun's departing beam; Till he on Hoder's corfe shall smile Flaming on the sun'ral pile. Now my weary lips I close:

Leave me, leave me to repose.

O. Yet a while my call obey. Prophetes, awake, and say,

What virgins these, in speechless woe, That bend to earth their solemn brow, That their slaxen tresses tear, And snowy veils, that sloat in air. Tell me whence their forrows rose: Then I leave thee to repose.

PR. Ha! no traveller art thou, King of men, I know thee now, Mightiest of a mighty line

O. No boding maid of skill divine Art thou, nor prophetess of good; But mother of the giant-brood!

PR. Hie thee hence, and boast at home, That never shall enquirer come To break my iron-sleep again; Till * Lok has burst his tenfold chain.

Never, till substantial night
Has reassum'd her ancient right;
Till wrap'd in slames, in ruin hurl'd, Sinks the fabric of the world.

The TRIUMPHS of OWEN. A FRAGMENT. From Mr. EVANS'S Specimens of Welch Poetry; London, 1764, Quarto. By the fame.

ADVERTISEMENT.

OWEN fucceeded his Father GRIFFIN in the Principality of North-Wales, A. D. 1120. This battle was fought near forty years afterwards.

WEN's praife demands my fong,
OWEN fwift, and OWEN ftrong;
Fairest flower of Roderic's stem,

† Gwyneth's shield, and Britain's gem.
He nor heaps his brooded stores,
Nor on all profusely pours;
Lord of every regal art,
Liberal hand, and open heart.

Big with hosts of mighty name,
Squadrons three against him came;
This the force of Eirin hiding,
Side by side as proudly riding,

† North-Wales.

^{*} Lok is the evil Being, who continues in chains till the twilight of the Gods approaches, when he shall break his bonds; the human race, the stars, and sun, shall disappear; the earth sink in the seas, and fire consume the skies; even Odin himself and his kindred-deities shall perish. For a farther explanation of this mythology, see Mallet's Introduction to the history of Denmark, 1755, Quarto.

FERNEY 1: An Epille to Mond. De Voltains.

By GEORGE KEATE, Elq;

While polish'd readers of a polish'd age
Delighted turn your animated page.
Shall these intruding lines the poet greet.
And find a welcome in his calm recreat?
Where, midst those shades his happier tuste improv'd.
He sits embowr'd, by ev'ry must be color'd:
Where all its native roles Genius sheds.
Where Rural Elegance a carpet spreads,
Where Art, with sweet Simplicity combin'd
Shines the fair emblom of the planter's mind?

* Denmark.

216

† The red Dragon is the device of Cadwallader, which all his descendents bore on their banners.

† FERNEY, a chateau and gardens, errored and inid out by Mr. De Voltairs, in the neighbourhood of Go evi, water contained the variety of prospect mentioned in the beginning of this years.

While

While o'er the distant scene stretch'd to the skies Earth's savage wonders to the sight arise; The tow'ring Alps uprear their stately mound, And shapeless piles th' extended prospect bound.

Here beauteous nature fills th' admiring eye With all the charms of wild variety. Here harvests wave, or purple vineyards glow, Or mountains whiten with eternal fnow. Cliffs, far remov'd their cloudy fummits rear, Or rocks like columns to the heav'ns appear; Cool flope the vales, wide spread the mantling woods, Bright shine the streams that seek the distant floods: Here a small ocean's peaceful waters sleep *, There raving torrents emulate the deep †. Unnumber'd villas rife on ev'ry fide, The feats of chearful prudence, not of pride; No fpot neglected, where the grateful foil Can pay with rich increase the peasant's toil. CONTENT and PEACE here fix their prosp'rous reign, And LIBERTY in filence guards the plain.

Midst scenes like these, the friend of human kind Can range the vast of science, unconfin'd For distant slights can wing th' excursive soul, Or glance with lightning's speed from pole to pole; Whether thro' nature's devious paths he strays, Pursues the planet's course, the comet's blaze;—Or less advent'rous quits th' aërial height To fix on mortal woes a mortal's sight;—Divest the heart of each dark veil it wears, Expose its hopes, its conslicts, and its cares; By bold examples fire the youthful blood, Appall the guilty, or consirm the good; Submit each dang'rous wish to reason's laws, And arm our passions in our virtue's cause.

While views like these, VOLTAIRE, your bosom warm The shades of solitude must ever charm.
From courts withdrawn, where'er your sootsteps bend,
The train you love, a faithful train, attend:
Swift at the beck'ning of your magic hand
They come, and FANCY leads th' ideal band.
WIT'S lighter offspring seeks the sunny glade,
While SATIRE skulks behind th' obscurer shade;
Near him his sister, Comic Maid, is seen,
Who checks, with laughing eyes, his rigid mien;
Combin'd, o'er worlds an empire they maintain,
And ev'ry vice and folly wears their chain.

^{*} The Lake of Geneva.

[†] The Rhone and the Arve, which unite just below the Lake.

Th' heroic muse majestic sweeps along, And thoughtful meditates her losty song; Unroll'd she bears on high same's bright record, And marks the triumphs of GREAT HENRY's sword *.

See too, VOLTAIRE, what wonders meet thine eyes, Behold where palaces, and temples rife, Where wak'd by thee, by thee conven'd to fame, The mighty dead their ancient femblance claim, Where laurel'd chiefs, where awful fages move,

And purple monarchs dignify the grove.

+ Lo! there, that bane of freedom, love, and truth, The dire feraglio barr'd on Zara's youth! Too foon shall fate a brother lost restore, And claim the parent who shall chide no more! Yet will not chance at last her hopes befriend, And happier hours the close of life attend! For her the mosque its thousand lamps displays, For her the crown prepares its regal blaze, For her with gems resplendent, slames the throne, And crowding millions wait for her alone—
They wait in vain—no Queen shall greet their eyes, Beneath suspicion's frantic steel she dies, While pausing o'er the wound his madness gave, The gen'rous murd'rer joins her in the grave.

† There good Alvarez fon by death reprov'd, Restores Alzira to her first-belov'd; By one great act redeems his errors past, And owns, his noblest triumphs were his last.

§ What proud affembly throngs yon hallow'd dome? Why nods the fculptur'd roof? why shakes the tomb? What daring form the bounds of death has crost? What great event demands yon scepter'd ghost? It speaks—oh! veil thy terrors, awful shade, And join in long repose the glorious dead! Obey'd already see thy dire command! Behold thy son in speechles horror stand! On that drear vault his blasted sight he bends, Whence pale in death Semiramis ascends.—Attend, ye pitying Magi, hide the scene, Hide the last consists of a murder'd Queen! Oh, bid the guiltless youth's distraction cease, And close his wretched mother's eyes in peace!

¶ Behold the north its barb'rous legions pour, FATE heads their march, and China is no more.

^{*} The Henriads. † Zayre. ‡ Alzire. § Semiramis. ¶ Lorphelin de la Chine.

What passions Zamti's rev'rend bosom shake, Who combats nature while his heart-strings break! Tho' down his cheek parental forrows roll, Confucius' morals fix his patriot soul; In vain his wife, his lov'd Idame, brings A claim that mocks the feebler claim of Kings, In honour firm, he feeks his country's good, And yields the son's, to save the Prince's blood.

* Ill-fated Herod! fpar'd by haughty Rome
To meet thy fum of wretchedness at home!
Happy! had Cæsar's arm withheld thy right,
Or hurl'd thee headlong from ambition's height!
No more in smiles thy faded cheek is drest,
Despair, and jealous rage divide thy breast.
Go tyrant, seek thy martyr'd Queen in vain,
While madness tells thee that she lives again!
Still, still thy thoughts her injur'd worth pursue,
Her matchless beauty rises still to view;
That worth, that beauty, thou shalt long deplore,
For know, fond Prince, the dead return no more!

For know, fond Prince, the dead return no more! + Hark! whence the groans that pierce that cloyfter's round!

Death, agonizing death, is in the found!
'Tis Mecca's chief—I know the hoary fage—
That faithful barrier 'gainst Mohammed's rage,
Who long religion's, virtue's champion stood,
Now falt'ring marks each painful step with blood.—
Too strong the steeting soul's convulsive strife!
Too swift the streams that drain the sount of life!
He sinks—and harder sate!—survives to know
His own misguided offspring dealt the blow.

Lo! where Messene's captive Queen appears
Serene in grief, magnificent in tears!
Haste, Poliphontes! haste, the shrine's prepar'd,
Go, meet the satal, but the just reward
Thy ripen'd crimes demand!—not Hymen now
But death intwines the chaplet for thy brow.
Thy Prince has burst his prison's dark abodes,
He shines confest the son of Grecian Gods:
To peaceful rites the shouts of war succeed,
Egysthus conquers, and the guilty bleed:
Foremost th' oppressor meets th' avenging blow,
And suries how! his nuptial song below!

§ But foft awhile—the tranquil scene disowns The pride of empire now, the pomp of thrones; Behold uprear'd before you rustic bow'rs A shrine of moss with intermingled slow'rs,

^{*} Mariamne. † Le Fanatisme, ou Mahomet. † Merope. § Les Scythes.

And thither led to seal their plighted truth;
An exil'd virgin and a Scythian youth!
Yet ere the bride concludes th' ill-omen'd Rite
Her once-lov'd Persian stashes on her sight.—
Return, unconscious Prince! where glory calls
Go seek Ecbatana's deserted walls;
To courts where pleasures lead their train, return,
Ere Scythia's echoes learn from thee to mourn!
Pass one short hour—the cruel task is thine
To part those hands which willing parents join!
To fix a blameless pair's eternal doom,
And change their festive altar to their tomb!

Tho' forms like these, VOLTAIRE, around thee rove, And haunt the limits of thy magic grove, and additionally such fights alone poetic eyes can share, Viewless, they mock the vulgar gaze with air!—With eareless thoughts let others range the glade, Ascend the slope, or pierce the verdant shade. Thro' parted woods the wand'ring streams pursue, And mountains sading to aërial blue; To charm their sense let scenes like these combine; To wake the dead, and talk with Kings is thine.

How blest the man with pow'rs superior born, Whose mind the muses with each grace adorn! In all his paths they strew fresh op'ning slow'rs, And deck for him imagination's bow'rs:

To pleasures there, from anxious life he runs, Forgets its forrows, and its tumult shuns. By some lov'd object while his soul is caught, Indulging all the luxury of thought, He peoples deserts, ranges worlds unknown, And bids arise creations of his own; Enamour'd still of nature's glowing theme, Entranc'd by sancy's ever flatt'ring dream, Thro' all her visionary realms he slies, And wakes to meet—Life's dull realities.

Yet why to learning's walks thy steps confine? The paths of social gaiety are thine; Thine sprightly wit, thine elegance and ease, With ev'ry art, with ev'ry wish to please.—But plac'd by fate on Britain's distant shore, I talk of pleasures I can share no more! Yet shall their fond impression ne'er depart; Their record six'd within a grateful heart In mem'ry's characters shall stand confest, Which time retracing deepens in my breast.

Say why, reproachful to a polish'd age Ungen'rous contests should the learn'd engage? The bards of ancient days bade discord cease, The Muses sons were still the sons of peace; With olive crown'd, to virtue's cause confin'd, In social bands the blameless minstrells join'd.—Now, chang'd the scene—with poets, poets jar, And waste Parnassus is the field of war.

Yes! jealous wits may still for empire strive, Still keep the flames of critic rage alive ; Our Shakespeare yet shall all his rights maintain, And crown the triumphs of Eliza's reign. Above controul, above each classic rule, His Tutress nature, and the world his school. On pinions fancy-plum'd, to him was giv'n. The pow'r to scale Invention's BRIGHTEST HEAV'N; Bid the charm'd foul to raptur'd heights afpire, And wake in ev'ry breast congenial fire. Revere his genius—to the dead be just, Nor blaft the laurels that o'ershade the dust.— Low fleeps the bard, IN COLD OBSTRUCTION LAID, Nor asks the chaplet from a rival's head. O'er the drear vault, ambition's utmost bound, Unheard shall fame her airy trumpet found: Yet while his Avon winds its filver way. His wreaths shall bloom unconscious of decay. -As Raphael's own creation grac'd his hearse *, And sham'd the pomp of ostentatious verse, So, felf-adorn'd, shall Shakespeare stand array'd, And nature perish ere his pictures fade. -

You too, fweet Ferner, shall preserve a name, And boast like Tempe's vale eternal same: In ages hence your groves will still be known, The Nine have blest, and mark'd them for their own. At their intreaty, 'Time (whose vengeful hand No frail memorials rais'd by men withstand, Whose ruthless eye beholds with like distain The low-brow'd cottage, and the tow'ring fane) His friendly wings around these bow'rs shall cast, Protect their shades, and bid their beauties last.—As he whose steps to those fair climes are led Near proud Parthenope's + aspiring head Ascends the cliff where nature's grateful hands Have plac'd the laurel Virgil's fame demands; In years remote, thus wand'ring from his home To seek thee, Ferney, shall the stranger come!

† The ancient name of NAPLES.

^{*} The Transfiguration, that well-known picture of Raphael, was carried before his body to the grave; doing more real honour to his memory, than either his epitaph in the Pantheon, the famous distich of Cardinal Bembo, or all the other adulatory verses written on the same occasion.

But while thy scenes his roving eyes employ
Sad thoughts shall rife, and cloud his dawning joy;
Sighing, perhaps, he'll say—" the great VOLTAIRE

"Once plann'd these walks, and made their shades his care!

"Yet, far sublimer tasks his genius knew!
"Twas his to grace the cheek with pity's dew!
"To slumb'ring conscience sound the dread alarm!

"Or pour in virtue's praise th' harmonious charm!
"Twas thus his ripen'd taste, his feeling heart,

"EMBELLISH'D NATURE, AND ENNOBLED ART!"

ODE for the NEW YEAR, January 1, 1768.

By William Whitehead, Esq; Poet Laureat.

ET the voice of music breathe,
Hail with song the new-born Year!
Tho' the frozen earth beneath
Feels not yet his influence near,
Already from his southern goal
The genial God who rules the day,
Has bid his glowing axle roll,
And promis'd the return of May.
You russian blasts, whose pinions sweep

Yon ruthan blafts, whose pinions sweet Impetuous o'er our northern deep,
Shall cease their founds of war:
And, gradual as his power prevails,
Shall mingle with the softer gales
That sport around his car.

Poets should be prophets too.—
Plenty in his train attends;
Fruits and slowers of various hue
Bloom where'er her step she bends.
Down the green hill's sloping side,
Winding to the vale below,
See, she pours her golden tide!
Whilst, upon its airy brow,

Amidst his flocks, whom Nature leads To slowery feasts on mountains heads, Th' exulting shepherd lies: And to th' horizon's utmost bound

And to th' horizon's utmost bound Rolls his eye with transport round, Then lifts it to the skies.

Let the voice of music breathe! Twine, ye swains, the sestal wreath!

Britain

Britain shall no more complain
Of niggard harvests, and a failing year:
No more the miser hoard his grain,
Regardless of the peasant's tear,
Whose hand laborious till'd the earth,
And gave those very treasures birth.

No more shall George, whose parent breast Feels every pang his subjects know, Behold a faithful land distrest, Or hear one sigh of real woe. But grateful mirth, whose decent bounds No riot swells, no fear confounds, And heart-selt ease, whose glow within Exalts contentments modest mien, In every face shall smile confest,

And in his people's joy, the monarch too be bleft.

PROLOGUE to the Good-natur'd Man. Written by Dr. Johnson.

Spoken by Mr. Bensley.

DREST by the load of life, the weary mind ' Surveys the general toil of human kind; With cool submission joins the labouring train, And focial forrow loses half its pain: Our anxious bard, without complaint, may share This buffling feafon's epidemic care. Like Cæfar's pilot, dignify'd by fate, Tost in one common storm with all the great; Distrest alike, the statesman and the wit, When one a borough courts, and one the pit, The bufy candidates for pow'r and fame, Have hopes, and fears, and wishes, just the same. Disabled both to combat, or to fly, Must hear all taunts, and hear without reply. Uncheck'd on both loud rabbles vent their rage, As mongrels bay the lion in a cage. Th' offended burgess hoards his angry tale, For that bleft year when all that vote may rail; Their schemes of spite the poet's foes dismiss, Till that glad night when all that hate may hifs. This day the powder'd curls and golden coat, Says swelling Crispin, begg'd a cobler's vote. This night, our wit, the pert apprentice cries, Lies at my feet, I his him, and he dies. The great, 'tis true, can charm th' electing tribe, The bard may supplicate, but cannot bribe,

Yet judg'd by those, whose voices ne'er were sold, He seels no want of all-persuading gold; But consident of praise, if praise be due, Trusts without fear, to merit and to you.

Mrs. PRITCHARD'S Farewel EPILOGUE. Spoke at Drury-Lane Theatre:

THE curtain dropt—my mimic life is past, That scene of sleep and terror was my last. Could I in fuch a scene my exit make, When ev'ry real feeling is awake? Which beating here, superior to all art, Bursts in full tides from a most grateful heart. I now appear myself—distress'd, dismay'd, More than in all the characters I've play'd; In acted passion, tears must seem to flow, "But I have that within that paffeth fhew." Before I go, and this lov'd fpot forfake, What gratitude can give, my wishes take; Upon your hearts may no affliction prey, Which cannot by the flage be chas'd away; And may the stage, to please each virtuous mind, Grow ev'ry day more moral, more refin'd. Refin'd from groffness, not by foreign skill: Weed out the poison, but be English still. To all my breth'ren, whom I leave behind, Still may your bounty, as to me, be kind; 'To me for many years, your favours flow'd Humbly receiv'd—on fmall defert bestow'd; For which I feel—what cannot be express'd— Words are too weak—my tears must speak the rest.

An anatomical Epitaph on an Invalid. Written by Himself.

Here lie two hands that often ach'd,
Here lie two hands that always shak'd;
Here lies a brain of odd conceit,
Here lies an heart that often beat;
Here lie two eyes that daily wept,
And in the night but feldom slept;
Here lies a tongue that whining talk'd,
Here lie two feet that feebly walk'd;
Here lie the midriff and the breast
With loads of indigestion press;
Here lies the liver, full of bile,
That ne'er secreted proper chyle;
Here lie the bowels, human tripes,
Tortur'd with wind and twisting gripes;

Here lies that livid dab, the spleen, The fource of life's fad tragic scene, That left fide weight that clogs the blood, And stagnates nature's circling flood; Here lie the nerves, so often twitch'd With painful cramps and poignant stitch; Here lies the back oft rack'd with pains, Corroding kidneys, loins, and reins; Here lies the skin per scurvy fed, With pimples and eruptions red.

Here lies the man from top to toe, That fabric fram'd for pain and woe; He catch'd a cold, but colder death Compress'd his lungs, and stopt his breath; The organs could no longer go, Because the bellows ceas'd to blow.

Thus I diffect this honest friend. Who ne'er till death was at wit's end; For want of spirits ere he fell, With higher spirits let him dwell, In future state of peace and love, Where just men's perfect spirits move.

An ODE, which was performed at the Castle of Dublin, on Monday the 8th of February, 1768, being the day appointed for celebrating the birth-day of her most Excellent and Sacred Majesty Queen CHARLOTTE. By the special command of his Excellency George Lord Viscount Townshend, Lord Lieutenant General and General Governor of Ireland. The music composed by Richard Hay, Esq; chief composer and master of the music attending his Majesty's State in Ireland, and master of the Royal Family's chamber concert.

> CTRIKE, the fweet Hibernian lyre, Every loyal heart inspire: See, they croud the joyous scene! Annual tribute to your Queen !

Adorn'd with ev'ry grace refin'd, With ev'ry virtue bless'd: Esteem'd, rever'd, by all mankind, And by the first cares'd. A mein whose awful honour shines, Where sense and sweetness move:

And angel innocence refines, The tenderness of love.

E C I T. R May heaven to crown her life with joy.

Celestial guardian care employ: Vol. XI.

And

And ev'ry fweetly circling hour, Ambrofial odours round her pour. Blest monarch! of such charms possess'd, Who lives ador'd in ev'ry breast.

A I R.

Great Queen belov'd, whose bounteous mind, Flows in compassion to mankind, See her diffuse the royal aid, And call forth merit from the shade; Forbid the burthen'd heart to sigh, And wipe the tear from forrow's eye.

R E C I T.
Peace o'er the land, extends her balmy wing,
And thus the grateful happy peafants ling.

From hill to dale, from grove to verdant fpring Sweet founds responsive, fill the ambient air, With Charlotte's name they make the vallies ring,

And banish thence the family of care.

C H O R U S.

To this lov'd fertile isle may union take her stand, And deal her sweets around, from Townshend's patriot hand, While plenty's copious horn, pours blessings o'er the land.

Abuse of NAMES of great Renown.

ORTUNE, alas! how sportest thou on earth! Fame, thou'rt a wind!—a bubble gave thee birth! Say, where those names which set the world on fire? Where does the pride of Greece and Rome retire. Hector's dread name now marks the butcher's dog! Cato keeps sheep, and Brutus drives a hog! Look ye for Pompey? Search the tanner's yard. You'll meet with Cæfar in yon orchard's guard; But rivals still for fame, unknown to fears, A bone, unpick'd, shall set them by the ears. See Scipio, bolt of war, the bull effay! Whilst Nero (blood-hound still) makes man his prey.— Thus fares it with renown!—Nor Gods retain One jot of reverence to their facred name; Juno, Mars, Venus, lap-dogs now and bitches, With mangey coats, are drown'd, and float in ditches .-Liv'd ye on earth, ye once fam'd pair of fages, Who view'd from different points the crimes of ages! How would'it * thou weep for greatness so burlesqu'd! How would'st + thou laugh at dogs in regal vest!

^{*} Heraclitus.

An EPITAPH, for the Rev. LAURENCE STERNE'S Tomb-stone.

By a LADY.

TERNE, rest for ever, and no longer fear
The critic's censure, or the coxcomb's sneer.
The gate of envy now is clos'd on thee,
And fame her hundred doors shall open free;
Ages unborn shall celebrate the page,
Where friendly join the satirist and sage;
O'er Yorick's tomb the brightest eyes shall weep,
And British genius mournful vigils keep;
Then, sighing, say, to vindicate thy same,
"Great were his faults, but glorious was his stame."

On the Same.

ORICK, farewell! peace dwell around thy flone;
Accept this tribute from a friend unknown.
In human breafts, while pity has a claim,
Le Fevre's flory shall enhance thy fame;
Toby's benevolence each heart expand,
And faithful Trim confess the master's hand.

* One generous tear unto the monk you gave;

† Oh let me weed this Nettle from thy grave."

The SACKING of COVENT-GARDEN. An Heroic Canto.

ROM Warwick-lane fell Difford took her flight,
To Covent-Garden, and the realms of night;
Tho' baffled now (flie cried) beyond my skill,
By fons of dulness, arm'd with cane and quill;
In mongrel Latin let them spend their days,
I'll crown my head with more heroic bays.

"In that fam'd square, where at the dawn of day Gardens and fields their richest tribute pay, In gayest colours clad, Vertumnus there, Perfumes with sweets the noxious city air; There dainty citizens their palates suit, As spreads Pomona all her choicest fruit; With them I hold one court in wrangling state, As Neptune's gifts I share at Billingsgate.

"Within a castle there sour chiefs reside, Rich in mock state, and great in mimic pride, Whose num'rous bands, if I am told aright, Act deeds heroic each important night; Again great Cæsar and stern Cato bleed, And harmless tyrants strut the hour decreed,

And

^{*} See Sentimental Journal. + Vide Tristram Shandy.

And wrath announce, until the curtain drops, Then fup in peace on porter and on chops. "Thither I'll hie, to realize their fport, And rout those tragic-mockers of my court." So faid, so done—A nymph then rul'd the place. She rul'd a ruler of the tragic race; Her Discord sought, and discontent inspir'd, Neglected merit was the thought she fir'd; She fir'd her lover, he his brother King, Whose hostile deeds, with hostile peers, I fing. Not fiercer wrath could fierce Achilles show. Not bolder deeds could bold Licentiates do. Two chiefs 'gainst two, in equal number told. But th' adverse two the tragic fortress hold; To them the bands adhere, difgraceful odds! Lessinda's chiefs appeal to men and gods. Vulcan affished on his wife's account, And fent of Cyclops to a large amount, Arm'd with fledge-hammers, arguments of weight! To storm the castle, force the castle-gate. Lessinda's petticoat upon a spear, For banner hung, now flutters in the air: Not that, which rescued from a rebel crew. Was with a boot expos'd to vulgar view. Of green baize that; this, crimfon filk, and bound With filver fringe for Juliet three times round.

To reap the laurels Fortune has decreed.

No Fabian maxims here protract the fray,
A quick affault fecures the glorious day;
By Pru sia's King, heroic Fred'ric, taught,
Themselves the news of their approaches brought.
The sun withdrew to shun the bloody sight,
And left their vengeful deeds to gloomy night.

The caffle-gate, tho' barr'd and guarded round,

To arms, she cried, and to the castle speed,

The brisk assalants other ent'rance found:
A close defile, by vigilance explor'd,
Did an unguarded happy port afford:
The brawny Cyclops here their hammers plied,
Till a sufficient breach was open'd wide:
In the besiegers rush'd: pell mell they fell
Drove out th' assonish'd guards, and gain'd the citadel.

One loaded car, heavy with warlike spoils, Triumphant guarded off, rewards their toils. Darius and his Queen of robes bereft, And Alexander not a garment left; His sword and target jolly Falstaffe moans, Caso his wig, his senators their gowns!

Why, cruel spoilers, were ye not content With noble trophies, regal ornament? Why should the indigent their chattels lose? The poor apothecary why abuse? His allegator and his weeds are gone! Drugger has not an apron to put on! Jobion has lost his awl, and Nell her gown! And Macbeth's witches not a rag can own!

These would the victor chiefs have left with scorn. But fierce Lessinda, a Virago born, Loaded herfelf: and when the car drove off. Order'd a torch to the remaining stuff; But Venus, watchful for the public good, Sav'd all her vot'ries in the neighbourhood. " Lessinda, stop thy furious hand, she cry'd, Enough is done to fatisfy thy pride: The routed garrifon can now no more Infult your merit, nor regain their store; Conclude no peace, and the deferted stage Remains a noble ruin of thy rage: Maintain thy empire o'er thy lover's heart, Nor in the least from thy pretensions part; So shall you either gain the wish'd-for prize, Or hurl destruction on your enemies."

The adverse bands and leaders now deplore Their pillag'd castle, and their tinsel store; Scatter'd abroad, invoke the Gods in vain, While In Pagns shout from Drury Lane! Learn, Princes! from the stage, and tinsel Kings, What dire effects from civil discord springs!

ODE for His MAJESTY'S Birth-day, June 4, 1768.

By WILLIAM WHITEHEAD, Esq; Poet-Laureat.

PREPARE, prepare your fongs of peaife,
The genial month returns again,
Her annual rites when Britain pays
To her own monarch of the main.
Not on Phenicia's bending shore,
Whence commerce first her wings essay'd,
And dar'd th' unfathom'd deep explore,
Sincerer vows the Tyrian paid
To that imaginary deity,

Who bade him boldly feize the empire of the fea.
What tho' no victim bull be led,
His front with fnow-white fillets bound;
Nor fable chaunt the neighing fleed;
That iffued when he fmote the ground;

Q 3

Our fields a living incense breathe: Nor Libanus, nor Carmel's brow, To dress the bower, or form the wreath, More liberal fragrance could bestow. We too have herds, and steeds, beside the rills That feed, and rove, protected, o'er a thousand hills. Secure, whilst GEORGE the scepter sways, (Whom will, whom int'rest, and whom duty draws To venerate and patronise the laws) Secure her open front does freedom raise. Secure the merchant ploughs the deep, His wealth his own: Secure the fwains Amidst their rural treasures sleep, Lords of their little kingdoms of the plains. Then to His day be honour given ! May every choicest boon of Heaven His bright, distinguish'd reign adorn! 'Till, white as Britain's fleece, old time shall shed His fnows upon His reverend head, Commanding filial awe from fenates yet unborn.

EPITAPH on BONNEL THORNTON, E/q;

One moment pause—and add a tear to mine,
A manly tear, to his fair mem'ry due,
Who felt such feelings as are known to sew;
Whose wit (tho' keen) benevolence supprest,
Who never penn'd a fatire, but in jest.
'Tis now, oh! death! thy poignant sting we own:
'Tis now, oh! grave! thy victory is shown!
For lo! herein full prematurely lie
The only part of Thornton which could die.

The following VERSES were pasted on the walls of Guildhall, during the Election.

VIRG.

Sacred walls! while in your midnight gloom,
Britannia's genius waits her final doom;
While yet one hour of freedom fate allows,
Hear and attest one honest Briton's vows!
By gold, by fear unbiass'd in my choice,
Where honour points, I raise my patriot voice,
O sacred pow'rs that guard our Albion's shore,
Let Freedom triumph, and I ask no more!

Let Freedom triumph in the dire debate; Then let me fall—pleas'd I refign to fate! Yet should corruption and her servile train, Your triumphs fully, and your shrines profane; Free and unconquer'd as their ambient waves, Tell them that Britons never shall be slaves! Tell them how oft, by Freedom's cries implor'd, Your great forefathers bar'd the vengeful fword. They rush'd indignant to their country's aid, And vanquish'd kings reluctantly obey'd. Tell them, that not unworthy of our fires, Their genius warms us, and their spirit fires! We too have fouls with native courage steel'd, We too have hearts, unknowing how to yield; At least, tho' heav'n, tho' hell success deny, He will not stoop to serve, that dares to die.

OSCAR.

Extempore on a Pipe of Tobacco.

HRO' worthless tube of brittle clay,
Will I some serious thoughts convey;
My native frailty here I trace,
A perfect type of human race:
Exotic is the noisome plant,
Exotic all, for which I pant;
With sick'ning sumes the air I choak;
What's worldly grandeur but a smoak!
The quick'ning whists declare the strife
Of those who gasp for parting life;
The heap of dust that's left behind,
Displays the fate of all mankind.

D. L.

A Fragment of SOLON, preserved in the Oration of Demosthenes de falsa legatione.

By Isaac Hawkins Browne, E/q;

THENS to tutelary Pallas dear,

Hath nothing from the gods to fear;

No, to her fons alone she owns her doom,

The dire distemper lurks at home;

Commons contending to be bought and sold,
Rulers who riot uncontroul'd,

Insatiate, though abounding, void of sense

To relish decent competence;

No ties or human or divine restrain,

So lawless is the lust of gain;

Each preys on each, yet with consenting zeal

All joins to rob the commonweal,

Q4

And

And claims it, as the birth-right of the strong. To leap the bounds of right and wrong; Yet justice, who the present sees and past, Though filent, will avenge at laft. These are the maladies, which soon or late, Bring desolation on a state; Hence civil discord springs, hence hostile rage Awaken'd, spares nor fex nor age; And cities, where none govern or obey, Must fall, to foreign arms a prey. Thus public evil spreads like a disease From house to house through all degrees; The rich against it bar their gates in vain, No bars, no fences fate restrain: Still she pursues, and haunts, where'er ye dwell, Or in a palace, or a cell. Learn hence, Athenians, timely learn to know, What ills from lawless licence flow; Good laws diffuse good order through the whole; 'Th' unjust by fit restraints controul, Polish rough manners, curb unbridled will, Daunt pride, and crop the buds of ill, Restore warpt justice, bid oppression cease, Sooth party-rancour into peace, Quell stubborn faction, heal litigious strife, And give and guard the sweets of life.

On P H OE B E. By the same.

THOUGH Phobe's lovely charms excel All that is charming in a Belle; Yet she, regardless of her face, Scarce owns her image in the glass, She knows, that she alone can find Her likeness in a lovely mind, Sees more exalted beauty there, Beauty, that lasts for ever fair; Discretion, innocence, and truth, Still flourish in unfading youth, Bloom through the winter of our days, And thrive, when outward form decays. Phoebe thus arm'd, the pow'r she gains Secures, and, where the conquers, reigns. Beaux may be caught with outward show, And belles will flutter at a beau, The wife are only charm'd to find Good nature, wit, and judgment join'd With each perfection of a beauteous mind.

On the Same. By the Same.

Early plant of tender years,
Beauty that blooms at once, and bears! Discretion mixt with sprightly wit, And innocence with tafte polite, A chearful, yet difcerning mind, And dignity with foftness join'd; While these assembled charms are seen All in the compass of fifteen, Maturer age abash'd declares, Wisdom is not the growth of years; No, 'tis a ray that darts from heav'n, Perfection is not taught, but giv'n. Let others by degrees advance, 'Till folly ripen into sense; Phœbe, consummate from her birth In artless charms, and native worth, Has all the virtues years enjoy, With all the graces they deftroy.

An EPISTLE. Written in 1764.

By a Gentleman of Oxford.

Nec vixit male qui natus moriensque fefellit.

Horat.

IX with the world, the polish'd world, 'you cry,' Nor waste thy prime in dull obscurity; Go, join affemblies of the great and gay, Thy worth, thy wit, thy genius there display; In towns, in courts, the road to greatness find, Improve thy manners, and enlarge thy mind; A place, a pension, or high-portion'd dame Thy fortune shall repair and finking name. -Hold, hold my friend! and first consult with care What fuits my genius, what my strength will bear; To education we our manners owe; And as you bend the twig the tree will grow. The mind once form'd, distort it how you will, Plain simple nature will be nature still. 'Twere strange to see a horse with human head; As strange that I, a rustic born and bred, My life half spent, shou'd now embrace the town, A mongrel beau engrafted on a clown: They who in wond'ring at the beaft concurr'd Wou'd his at me, a mixture more absurd. Shall I, an enemy to noise and strife, Who cannot relish turtle for my life,

Who fleep at midnight, and by day-light dine, Who hate French manners, and abhor French wine, To routs, to Ranelagh, and cards, a foe, Who on my dress but little care bestow, Fond of few words, and those of plainest kind, Shall I with wits and men of taste be join'd? Shall I with fashion through her follies range, Ape all her forms, and as the changes; change? Forbid it, prudence, common fense, forbid! My rustic manners never can be hid. Once, and but once, by vanity betray'd, In full-dress'd fashionable suit array'd, Like David in Saul's armour, I a beau Among the courtly crowd effay'd to go. O had you feen me with diffressful stare, As greatly conscious of no bus'ness there, On the wrought cieling, or the paintings pore, With many a wishful look turn'd tow'rds the door, Amidst surrounding multitudes, alone, Of every foul unknowing and unknown, Formal and grave, without one fingle word, With frequent stumbles o'er my dangling sword; Yourself had pitied the bewilder'd 'squire, Yourself had whisper'd-" My good friend, retire." Escap'd at length, for haste I bilk'd my chair, Ran to my lodgings, and in safety there Sigh'd for my plain blue plush, and rural air. At court—but peace to ministers and kings— I wash my hands of all such dang'rous things: And peace to fuch, and happiness be theirs, (So I no more afcend St. James's stairs) Who cringe for penfions, and for titles bow, And may they still stand foremost in the row; And as the royal whisper hackneys round, Still on each face may ready fmiles be found; For fmiles at court approve the heart fincere; But looks like mine can never prosper there; Like Cassius, I, a spare long-visag'd guest, Might raise suspicion in great Cæsar's breast; And fervitude how high foe'er it be, (A Briton speaks it) is too low for me. -You laugh at fables, and at proverbs too: I'll tell a tale, a recent tale and true. In you old mansion, wash'd by Derwent's slood,

In you old mansion, wash'd by Derwent's slood, 'Squire Toper liv'd, the Actaon of the wood; In sportive green he always rode array'd; A hunter's cap his turn of mind betray'd;

A healthy hue bespoke a length of years, His short brown wig cou'd scarce conceal his ears: · A velvet collar did his neck furround; His belt was stamp'd with many a tinfel hound; Of buck his breeches, which himself he slew: And his trim boots close to his ancles grew: Spearlike his fours; while many an echoing crack Lurk'd in his lath, obedient to the smack; Horses and hounds were his supreme delight, Of those he thought by day, and dream'd by night. With strong-brew'd beer his spacious vaults were stor'd, And beef and pudding fmoak'd upon his board. His rural neighbours there a welcome found; And Church and King, and Liberty went round. 'Midst an inglorious but a guiltless life, He lov'd his friend, Old England, and his wife. At length (the Dev'l ordain'd it) Toper went The country's choice to town and parl'ament. Alas, with grief the fequel I pursue! What cannot fashion, life, and London do? Plain Toper fay'st thou? ____ not for half the world! 'Tis fweet Sir Topaz, and his hair is curl'd. Behold him now of Ladies' favour vain, Affecting manners he can ne'er attain, Hear him unfold the mysteries of state, Or tell you what was told him by the great, With jumble strange of town and country words Let him discourse of Levees, and of Lords, Or mark his wisdom when with nicest care He criticifes on the bill of fare, Displays the merits of a poignant dish, And recommends his way of stewing fish; Reflect from what this man of taste began; And now restrain your laughter if you can. Himfelf he deems a wight of high renown, While the world counts him but a motley clown. Such patch-work manners must all palates loath, Half beau, half rustic, and despis'd by both. Distinction, hail! for thee we dress, we fight, Drink, game, and change the course of day and night. Thus Nero, dead to virtue and to shame, Fir'd the fair city to preserve his name.— -In vain I plead: you cry, "Get into life: "Gain wealth and pow'r, or in one word—a wife." There ends my fearch, whatever ills betide, All, all are cancell'd by a wealthy bride: Ill-natur'd, ugly, old, it matters not, The money'd dame is ever free from blot.

Indifference comes, difgust and downright hate, Mere trifles pois'd against the purse's weight. And am I thus made easy in the world, From heavy debts to heavier evils hurl'd? Shall I pronounce a vow I never meant, And give my hand without my heart's confent? Forbid it, virtue, honefly, and love! Far from my mind the hated thought remove. Awhile the golden prospect caught my view, As vanity the flatter'd picture drew; But foon I leathing turn'd, and heav'd a figh, As Laura's image cross'd reflection's eye. My dear lov'd Laura! from my youth began The tender flame, and ripen'd in the man. My dear lov'd Laura! till my latest age No future passion shall my vows engage. 'Tho' adverse fortune keeps our hands apart Thine are my thoughts, my wishes, and my heart. -For you, my friend, who labour to remove My partial fancy from the life I love, Vain is your reas'ning, vain your fubtle skill, My choice was early, I approve it still. These school-boy rhimes may testify the truth, Writ in the plain simplicity of youth " Let others vainly boast their glittering store " And rove to foreign climes in fearch of more; " Let them for splendid care and guilty gain " Explore new worlds, and tempt the deathful main; "Be his the prize, and his the dear-bought praise, Whom toils diftinguish, and whom dangers raise, " Whilst humbler I, and thankfully content " With what the hand of Providence hath fent, " No dupe to fortune, and no flave to fame, . Without one pride, except an honest name, " Move in the narrow sphere assign'd by fate, " Nor meanly wish to be ignobly great. " The gay, the fair, the wanton, and the proud, " May throng to cities, and in courts may crowd; "The brave, the great, the learned, and the wife, " May rank with princes, and with kings advise; "Whilst these attain their wish of wealth and pow'r, " And those in pleasures waste the sated hour,

"Whilst the rich robe that cloaths the proudest breast Hides not the latent care, its reftles guest,

"Let me unvex'd with all the storms of life, " From busy faction far, and party strife, 66 Beneath my rural roof contented live,

" And tafte that blifs which London cannot give."

-Thus bleft retirement, calm content and eafe, Took my young mind, and still their objects please: I praise the fate which kindly fix'd me down At least an hundred miles from court and town. In you fair vale my modest dwelling stands, Its humble fite no distant view commands; The narrow scene, by sloping hills confin'd, Speaks the contentment of its master's mind: A chrystal stream the verdant mead divides, Which by no torrent stain'd, unruffled glides Clear and ferene through all its winding ways; Such be the peaceful tenor of my days! On its fresh banks arise spontaneous flow'rs, Around her rural bleffings plenty pours. Nature almost prevents the farmer's toil, So rich the clime, fo fruitful is the foil. Soon in full growth the fapling wood you fee; And the fame hand that plants, may fell the tree. Great Pan with pleasure on these lawns might rove, And all * Arcadia lives in yonder grove. My life shall pass unknown, unenvied here, And health and peace attend me through the year. Here all their joys the varying feafons bring, Here will I listen to the choir of spring; In fummer's heat these cooling shades I chuse, To walk and trifle with the past'ral muse; The toil of autumn here let me behold; Here chace with exercise the wintry cold. Here, tho' no flatterers wait my fame to raise, Yet here shall truth my few plain merits praise. Still may fome virtues with the months roll round Still at my door warm charity be found: May foft humanity, the poor man's friend, Her aid to fickness and to misery lend; May all who need it, share my field's increase, And heav'n fo bless me, as I mean to bless! -Thus let me live, a plain unpractis'd youth, Who wish no more than honesty and truth; For airs polite most aukwardly unfit, And much too dull (I know it) for a wit. Thus through the world steal bashfully unknown, Save to my neighbour, and my friend alone; 'Tis theirs to tell you, if they tell you true, Plain tho' my manners, they are gentle too. Thus let me live, and live without a foe, The world will spare the man it does not know.

^{*} Alluding to a small wood, with a cottage, &c. in it.

The HERMITE'S ADDRESSE to YOUTHE.

Written in the Gardens of the Vauxhall at Bath.

SAY, gentle Youthe, that tread'st, untouch'd with care, Where nature hathe so guerdon'd Bathe's gay scene; Fedde with the songe that daunceth in the aire,

'Midst fairest wealthe of Flora's Magazine, Hathe eye or eare yet founde, thine steppes to blesse, That gem of life, y-clep'd true bappinesse?

With beautie reftes she not;—nor woes to lighte
Her hallowde taper at proude honour's slame;

Nor Circe's cuppe dothe crown; nor comes in flighte
Upon th' Icarian winge of bablinge fame;
Not shrine of golde doth this fair sainte embower,
She glides from heav'n, but not in Danae's shower.

Go blossome, wanton in suche joyous aire,

But, ah!——eft foone thy buxome blafte is o'er!
When the fleek pate shall grow far 'bove its haire,
And creeping age shall reape this piteous lore;
To broade o'er follie, and with the confess.

To broode o'er follie, and with me confesse,

"Earth's statt'ringe dainties prove but sweet distresse."

Bath, July 10.

The Olde Hermite.

Occasional Prologue on the appearance of the New Juliet at the Theatre-Royal in Covent Garden.

Written by Mr. COLMAN. Spoken by Mr. POWELL.

WHEN frighten'd poets give the town a play, Some bold or gentle prologue leads the way: But when new players their weak powers engage, And rifque their future fortune on the stage, No bard appears to plead their desp'rate cause, To silence censure, or bespeak applause. Authors too, cautious to direct your choice, Make empty echoes of the public voice, With less poetic sire than critic phlegm, Praise as you praise, and blame what you condemn.

Actors, as actors feel; and few fo fear'd, But well remember what they first appear'd; When sudden tumult shook the lab'ring breast, With hope and fear, and shame, at once possest When the big tear stood trembling in the eye, And the breath struggled with the rising sigh.

To night a trembling Juliet fills the scene, Fearful as young, and really not eighteen; Cold icy fear, like an untimely frost, Lies on her mind, and all her pow'rs are lost. Tis yours alone to distipate her fears,
To calm her troubled soul, and dry her tears.
But by the cank'ring East, the infant rose
Its sull blown honours never can disclose;
Oh, may no envious blast, no critic blight,
Fall on the tender plant we rear to-night;
So shall it thrive; and in some genial hour,
The opening bud may prove a beauteous slower.

On seeing Miss Morris in the Character of Juliet.

HEN Avon's pride his tender Juliet drew,
And artless grace beneath his pencil grew;
The charming portrait oft inspir'd his breast,
And oft Pygmalion's wish his heart confess'd:
But nature, who the poet's skill bestow'd,
Who in her mirrour each fair semblance shew'd,
Fearing his bosom to o'ercharge with joy,
Refus'd a living Juliet to his eye;
Else Morris, beauteous as the budding slower,
Exhaling sweetness in its vernal hour,
Array'd in Juliet's innocence, her youth,
Her winning softness, her inchanting truth,
Had, with unnumber'd graces, charm'd his breast,
And with new beauties, his big soul possest.
Ye British youths! whom Shakespeare's genius wa

Ye British youths! whom Shakespeare's genius warms; Ye virgin train! who rival Juliet's charms; No longer now your Cibber's loss deplore, Oft Juliet dies—She liv'd but once before.

A SAILOR'S Description of the late Masquerade.

ITTLE Moll, faith, and I, from Wapping came up,
To fee the fine shew and the folks;
But for fear of mistakes we thought best for to sup,
For these courtiers have comical jokes.

When first we came in, I was maz'd to behold, Night at once was all chang'd into day; The folks seem'd to roll like a vast sea of gold, And the gall'ry stuff'd full like a play.

Little Moll dropt aftern, being afraid to make fail, Till I at her helm took a spell;

When whip in a trice she steer'd up within hale Of the Devil, just landed from Hell. Lord bless me, says she, Ben! why where have we got?

This company's too good for we!

Sure at home he was cold, and's come here to be hot, For fuch Devils I never did fee!

The Devil! ne'er mind—heave-a-head, my dear girl, And I'll shew you the king of the crew;

Each duke, ev'ry dutchess—each lady and earl; And when I bump—do you courtsy—do!

Like a tragedy Queen, when Moll faw the King, Plump on her bare knees she fell down:

But, by Neptune, I foon made her rife with a fpring, And fwore she knew nought of the town.

We parted—and I, faith, who love to be fmart, Clapp'd on board of a shepherdes sweet,

Who, with no other crook than her eyes hook'd my heart As fast as if prest in the sleet.

She pull'd me about (till parch'd was my mouth)
At the rate of ten knots by the log:

But I foon found this king was no tar—but a youth, For he burgundy gave us as grog.

This gay little shepherdess, faith, was so smart, She tow'd me from pillar to post;

Some call'd me a lubber, unfit for my part, And wreck'd on the masquerade coast.

Mandarins and Nabobs were as plenty as rice, Jews, Negroes, Banyans, and what not? There were characters purchas'd at ev'ry price, Unless the raw, bra, letter'd Scot.

In this ocean of pleasures, egad, there were tars Who ne'er past the buoy of the Nore;

There were foldiers like Hymen, who knew not of wars, And domino fools by the fcore.

There were pilgrims and quakers, blacks, witches, and nuns, Minervas without fense or tongue,

Who falter'd and lifp'd out fome feminine puns:
"Do you know me;"—was all—faid or fung.

Grave conjurors too, who ne'er conjur'd before, And harlequins, heavy as drofs.

Mild Night too, who long shone the sun of this shore, But set in the fair Mrs. Ross.

Old wives were at once to dull gen'rals turn'd, And Tancred, in forrowful strain,

Wept Phillips's wrongs—and then instantly burn'd For Diana from lewd Drury-lane.

There

There was supper they said—we got nothing to eat; Here a fort, there a town, here St. Paul; But all cramm'd, as at short allowance of meat, Gorging garrisons, gardens, and all.

By ftrange kitchen alchymy, ev'ry dish Seem'd transmuted for Epicure Mammon: There was fishified flesh, and fleshified fish; A calfs-head seem'd a fine jole of falmon.

When I thought I took one thing, another I got; The French cook fo well knew his trade, That ev'ry thing look'd like what it was not, And the dishes were all Masquerade.

There were none lost their wit, there were some lost there sweat; In short, 'twas all Hebrew to me; So my anchor I tripp'd with my kind little Bet, And paid Moll with a top-sail at sea.

On the late Mrs. CIBBER. Written many years ago, upon her appearance at Dublin.——Never before published.

Thou to whom thy poet pays
The tribute of his earlieft praise!
The friendly song to merit due,
And honestly referv'd for you!
Amidst the many grave or gay
Parts, that with varying grace you play,
MARIA, tell; for sew divine
The part, that is by nature thine.
In thee with art's immingling dyes

In thee with art's immingling dyes So kindly blended nature lies, So close the wedded pair convene, That not a thought can pry between.

Alas! when you appear distrest'd, What passions throb in ev'ry breast! While your's is but a fancy'd pain, But our's the very fear you feign; And when some turn of kind deceit Averts the dreaded stroke of Fate, We lighten from a weight of woe, And tears of silent gladness slow.

But, ah! you tread a maze of wiles—See, fee, the queen of forrow fmiles! Away each ftately form is flung:
Attend, ye frolic, free, and young,
With VENUS, and her wanton doves,
And all the little laughing loves:

VOL. XI.

Behold! her eyes, no longer aw'd, Now fend the loofer glance abroad; The cold they kindle to defire, And call from age unwonted fire.

'Tis all illusion! O—beware! Nor trust the fwiftly changing fair; Too foon shall every hope be lost, And warmest youth be look'd to frost.

For, lo! from yonder glimm'ring light She rifes awful on the fight; As near, and nearer still she draws, All filent, she bespeaks applause; Behind attending graces play, While beauty brings her on her way. And now, each whifp'ring voice controul'd, Her lips their breathing sweets unfold. And tuneful as APOLLO's lyre, She stands amid the vocal choir. If folemn measures slowly move, Or LYDIAN airs invite to love. Her looks inform the trembling strings, And raise each passion that she sings; Each accent wafts enchantment round, And liftening fouls are caught by found.

While thus your flying form renews, How vain our baffled hope purfues! For, PROTEUS-like, in many a shape You tempt us, certain of escape. At once you firm your varying fex, Whate'er can please us, or perplex; The virtuous with the vain combin'd, Meek, haughty, giddy, coy and kind; On you all hearts that love to range May fix and find perpetual change.

O wondrous girl! how small a space Includes the girts of human race! For Nature, too profusely kind, To match your form, enrich'd your mind; From ev'ry breast her virtues drew, And mixed their effences in you. The little eye's pellucid round Thus holds the widely verdant ground, Sea, air, and starry heav'n, dispos'd, In order due, a world enclos'd.

But as some rich and teeming vale, Whose sweets the breathing winds exhale, Unfolds new beauties to the fight, And throws on every sense delight;

Yet holds conceal'd from mortal eyes, The fountain whence these sweets arise; With mines of undiscover'd ore, And fecret gems, a shining store; So you, whose native worth withdraws, And bashful shuns the world's applause; Seclude, from vulgar eyes suppress'd, The treasures cloister'd in your breast; More bright than ev'ry gem that shines, And richer than a thousand mines; That shunning praise, and hating art; Within conceals the gentlest heart, That warm with ev'ry female grace, And sweeter than thy sweetest face, To friendship holds all favour due, Save that, for which a thousand sue O! still that boon with care retain, And still let thousands sue-in vain.

The Hamadryads to Lord G-ve-r, on his preventing some beautiful rows of trees from being cut down, near a place of public entertainment.

S faunt'ring, without cash or care, Sir Sable stalk'd to breathe the air, Chance led him to that beauteous grove, Where Chelfea's Vet'rans love to rove: Here the maim'd soldier fumps along, And hears the blackbird's ev'ning song; Or stretch'd at ease, now safe from wars, Talks of old deeds, and counts his scars: Broad elms their branches intertwine, Birds tune their notes—almost divine! Around, his raptur'd Eye explores, Whilst from old Thames's sedgy shores, Responsive echo swells the sound, And makes the whole enchanted ground.

Attentive stood the knight a-while, And grinn'd—as if he meant to smile; But some curst Demon, stung with spite At Nature, pregnant with delight! With cringing compliments drew near, And thus the flatterer sooth'd his ear: '' My good old friend, by same renown'd, For spoiling many a piece of ground! Who op'st thy hospitable door To all good comers—but the poor! Yet here fair ladies, full as needy, Meet with relief both sure and speedy,

R 2

When

When gather'd from a fortnight's favings, Thou get'st good things to stop their cravings; And cramming down thy tarts and jellies, Stuff at both ends their hungry bellies: Who keep'st in friendship with the great, So long as thou can'st raise—a treat; And liv'st this sovereign truth to prove, That pudding is the bond of love!

"For these,—and more which I could tell,
My good old friend, I wish thee well;
To prove I am the friend I seem,
Now listen to a glorious scheme:
"Prick up thine ears, and raise thine eyes,
What notes! what beauteous scenes arise!
Who'll sty to R—gh thrice a week,
To hear them quaver, squall, and squeak;
And there o'er tea and cossee doze,
Whilst here they gratis can repose;
View intermingled groves and plains,
And listen to enchanting strains?"

Quoth knight, with most sagacious squint, Good Mr. Dev'l—I take your hint——Ere thrice the glorious sun goes round, These prostrate trees shall strew the ground."

Led hither by propitious fate,

Gr—n—r o'erheard the foul debate: While rage inflam'd his gen'rous breast, He thus the dismal pair addrest.

"Who are these slaves, who mean t'invade, With impious rage, this facred shade? Whose seeds a father's honour'd hand Lodg'd in this chosen spot of land; Pleas'd that a future shade should rise, A shelter from inclement skies! And he who hence shall dare convey, By fraud or force, one fingle fpray. Shall meet with treatment d-n'd uncivil, Be he a knight, mock duke, or devil. Sir Sable, faddled with difgrace, Put on a rueful length of face; He saw the fav'rite project quash'd, For e'en the devil look'd abash'd; And thinking now 'twas past a joke, Both vanish'd in a cloud of smoke.

By me the Hamadryads fend, And greet thee, Gr—n—r, for their friend; And foon as the revolving year Shall in the pride of fpring appear;

When nature dons her best array, Here humbly if thou deign'ft to ftray; Should Sol with fultry beams invade, Each tree shall pay thee with its shade. The little tenants of the grove For thee a while shall cease to love; Grateful, their sweetest notes prolong, And pay their quit-rent with a fong.

On GALLSTOWN-House. By the late Dr. DELANY.

I S fo old, and fo ugly, and yet fo convenient, You're fometimes in pleasure, tho' often in pain in't; 'Tis so large you may lodge a few friends with ease in't, You may turn and stretch at your length if you please in't; 'Tis fo little, the family live in a press in't, And poor lady Betty has scarce room to dress in't; 'Tis fo cold in the winter, you can't bear to lye in't, And so hot in the summer, you're ready to fry in't; 'Tis fo brittle, 'twould scarce bear the weight of a tun, Yet so staunch, that it keeps out a great deal of sun; 'Tis fo crazy, the weather with ease beats quite through it, And you're forc'd ev'ry year in some part to renew it; 'Tis so ugly, so useful, so big and so little, 'Tis fo staunch, and fo crazy, fo strong, and fo brittle: 'Tis at one time fo hot, and another fo cold, It is part of the new, and part of the old; It is just half a blessing, and just half a curse— I wish then, dear George, it were better or worse.

The MIDNIGHT MAGISTRATE. Wrote under a picture of Heinskirk's.

THE candle shines out, when bright Phæbus is gone, And, at night, Mr. Constable's great as Sir John; Enthron'd, here he fits, 'mid his myrmidon band, With his powerful peace-keeping staff in his hand, While fome of his cruizers before him are hauling An amorous couple, furpris'd caterwauling. Against the young rake-hell one loudly complains, How his lanthorn he broke, and half beat out his brains. " Is it fo!" fays his worship. "Young 'squire, do you see, Who my minister strikes makes assault upon me; In me the king's wounded; and thus, by fair reason. You are try'd and convicted of capital treason; Yet, because in your dress you genteelly appear, And to shew I'm a magistrate far from severe,

Give the man half a crown for a lathorn and plaister, And somewhat for drinking: and then, good night, master." Thus one cull acquitted, confederate whore Is dispatch'd, with a charge to decoy in some more.

On John Tissey, a late Punster.

FRRY was he for whom we now are fad; His jokes were many, and but few were bad; The gay, the jocund, sprightly active foul, No more shall pun, alas! no more shall bowl. Now at his tomb methinks I hear him fay I never lik'd to be in a grave way; Then by and by he cries, for all your scoffing, I now am only in a fit of coffin. Thy passing bell with heavy hearts we hear, For thee each paffing belle shall drop a tear; That fable hearfe which drew thy corpfe along Shall be rehears'd in difmal poet's fong; Ah how unlike! yet this is he, we're fure, Who once in Grafton's coach fat fo demure, Many a ball he gracefully began, Well may we bawl to lose so great a man: Thy friendly club their mighty loss deplore, Their faithful fecretary, now no more, Thou ne'er shalt secret tarry, though in death, While puns are puns, or punning men have breath.

His EPITAPH.

ENEATH this gravel and those stones;
Lie poor Jack Tissey's skin and bones;
His slesh, I oft have heard him say,
He hop'd in time would make good hay.
Quoth I, how can that come to pass?
And he replied, "All slesh is grass."

Grace after Dinner at a Mifer's.

HANKS for this miracle, it is no less Than finding manna in the wilderness; In midft of famine we have found relief, And seen the wonder of a chine of beef; Chimneys have smok'd that never smok'd before. And we have din'd where we shall dine no more. Mr. GARRICK fent the following lines to a Nobleman, who asked him if he did not intend to sit in parliament.

OR E than content with what my talents gain,
Of public favour though a little vain;
Yet not so vain my mind, so madly bent,
To wish to play the fool in parliament;
In each dramatic unity to err:
Mistaking time, and place, and character.
Were it my fate to quit the mimic art,
I'd "firut and fret," no more in any part;
No more in public scenes would I engage,
Or wear the cap and mask on any stage.

On DOWAGER LADY E. H. D. By the late Earl of B TH.

AIN are the charms of white and red, Which divide the blooming fair; Give me the nymph whose fnow is spread, Not o'er her breast, but hair. Of fmoother cheeks, the winning grace, As open forces I defy: But in the wrinkles of her face, Cupids, as in ambush, lie. If naked eyes fet hearts on blaze, And am'rous warmth inspire; Through glass who darts her pointed rays, Lights up a fiercer fire. Nor happy rivals, nor the train Of num'rous years my blifs destroys, Alive she gives no jealous pain, And then to please me dies.

REAL BEAUTY. Said to be written by the Author of Sermons to Young

THE diamond's and the ruby's blaze,
Difputes the palm with Beauty's queen:
Not Beauty's queen commands such praise,
Devoid of virtue, if she's seen.
But the soft tear in pity's eye
Outshines the diamond's brightest beams,
And the sweet blush of modesty
More beauteous than the ruby seems

Verses said to have been written by Samuel Johnson, L.L.D. at the request of a Gentleman to whom a Lady had given a sprig of myrtle.

HAT hopes, what terrors, does thy gift create, Ambiguous emblem of uncertain fate! The myrtle (enfign of fupreme command Confign'd by Venus to Melissa's hand)
Not less capricious than a reigning fair,
Oft favours, oft rejects a lover's pray'r:
In Myrtle shades oft sings the happy swain,
In Myrtle shades despairing ghosts complain;
The Myrtle crowns the happy lovers heads,
Th' unhappy lovers graves the Myrtle spreads:
O! then the meaning of thy gift impart,
And ease the throbbings of an anxious heart:
Soon must this bough, as you shall six his doom,
Adorn Philander's head, or grace his tomb.

On the Death of the Marchioness of TAVISTOCK.

To Tavistock's lamented name, The pensive muse devotes her lays: Pleas'd, if her grief transmits to same Lost worth, that merits endless praise.

Superior minds are little known
Till by severest evils tried;
And when the heav'nly ray is slown,
We learn too late the worth that died.

Such is the fine that virtue pays,
Such, noble minds are doom'd to bear;
How dear, alas! they purchase praise;
How dear the tribute of a tear.

O! mirror of connubial truth,
When vice o'erfpread a shameless age;
Thy love, thy grief, thy blooming youth,
Will ever live in virtue's page.

When the grim tyrant's ebon dart Robb'd thy lov'd Lord of vital Breath; Though aim'd at his, thy tender heart Receiv'd the blow, and shar'd the death,

Behold! the lovely mourning fair,
A lifeless picture fill devour
With longing eyes, whilst cruel care
Nipt beauty's sweet and blooming flower.

Those

Those eyes, which might each heart subdue, Are now consum'd by ceaseless woe; And charms, that brought the spring to view, Are sunk in winter's chilling snow.

Did fate mistake?—so bright a ray
Was fure design'd for better times,
And should, with Portia, light up day
In nobler ages, happier climes.

Yet round thy tomb, lamented fair, Shall sweetest flow'rs unbidden grow: And future times thy griefs shall share, And future bards feel all thy woe.

For thee the loves and graces mourn;
For thee weep innocence and youth;
And honour, bending o'er thy urn,
Laments the cruel test of truth.

EPITAPH.

Here youthful Russel, lovely Keppel lie. Their honour, virtue, truth, can never die.

An Account of Books for 1768.

AN account of the customs and manners of Italy; with observations on the mistakes of some travellers, with regard to that country. By Joseph Barretti. 2 Volumes 8vo.

A S the great end of philosophy is to combat and overthrow error, it requires no argument to fhew, that men of letters: should, upon every occasion, endeavour to remove, all those narrow, local, and illiberal prejudices, which are fo inherent to the vulgar, and which, in their effects, produce so many evils amongst mankind. It is much to be regretted, that this liberal mode of acting has been too often deviated from, by those gentlemen who have undertaken to write modern accounts of travels, and descriptions of countries. Few writings could be more generally ufeful, than those that gave just defcriptions of customs and manners; they would enlarge the mind, wear off local prejudices, and by bringing man acquainted with every part of his own species, promote that philanthropy which is fo much to be coveted. On the contrary, it happens but too unfortunately, that many of those writings, instead of removing, ferve only to rivet narrow prejudices; to heighten local vanity, and to give a fanction to the malignity of base or little minds.

It is to be hoped, that fome of the gentlemen who have erred upon this occasion, did not at the time perceive the evil tendency of their writings; but whether they were misguided by prejudice, by an intemperate zeal, or by a vanity that tempted them to treat of subjects which they either wanted information to know, or ability to understand; in any of those cases, the consequences are still equally disgraceful to literature, and pernicious to society. Through those means the worst passions of the human mind are, by the aid of letters, grafted upon error; and, from that nurture, shoot up to a luxuriance which they could never arrive at, if only softered by the simple hands of undesigning ignorance.

Upon the whole, it requires no moderate share of talents to be able to delineate the manners of any of the great denominations of men, and to strike out the hair-breadth line that marks the character of a nation, and distinguishes it from that of the rest of the species. To be qualified for this undertaking, the observer should be blest with a great, comprehensive, and enlightened mind; with a judgment accurate and well formed; and should, by long experience and study, be well versed in the equivocal appearances of the human mind, as well as in the various history of mankind. Above all, it would be necessary, that when he came to pronounce definitively upon perfections or imperfections, upon modes of thinking or acting, that he should first examine himself in the closest manner, lest any relicks of those local or partial prejudices, which he imbibed from his earliest infancy, are still lurking behind. Should this unhappily be the case, every object will appear to him through the medium of a jaundiced

eye, and when he condemns or applauds, his praise or censure, not founded in knowledge or good sense, may prove a bad guide to others, and a just disgrace to himself. Virtues and vices are the product of every soil; and perhaps, upon a diligent scrutiny, it might be sound, that, like happiness and its opposite, they are more equally distributed among the sons of men, than narrow minds are capable of

conceiving.

The agreeable and ingenious work before us, owes its birth to a well-known book published some time ago, and much read, entitled, "Letters from Italy," wrote by Samuel Sharpe, Efq; which letters were avowedly a description of the customs and manners of that coun-Mr. Barretti, who is a native of Italy, thinking his country most illiberally treated, and its cultoms and manners misrepresented in the groffest manner; stands forth a very animated champion in its defence. The Italian gentleman feems to have great advantages over his antagonist, who appears to have unwittingly engaged with an adversary of much fuperior powers: and, in the course of this work, he, as well as some other modern writers, upon the fame subject, are most severely handled.

Our author endeavours to prove, that Mr. Sharpe was totally unfit for the difficult task which he undertook of describing Italy and Italian manners and customs. Among other reasons, one, which seems very pertinent, is, that he was ignorant of the Italian language. He also says, that being but a private man, he could not mix with people of quality, and consequently could not know the manners of that rank

of people; and that being in a bad state of health, afflicted with bodily disorders, he was thereby shut out from acquiring a knowledge of any rank of men. He then accounts in an humorous manner for many of those absurdities with which he charges Mr. Sharpe, by a story of one Antonio, an arch travelling valet, from whom he says he had received the greater part of the information which supplied his letters.

Upon the whole, this work has very confiderable merit, and affords a great fund of entertainment, as well as of knowledge and informa-The extreme acrimony with which the author, upon every occafion, treats Mr. Sharpe, and which fometimes borders too closely upon coarfeness, is to be lamented, and perhaps to be censured too. He feems himself in some places to plead his provocation as the excuse for his acrimony; and, indeed, there is perhaps nothing a manly spirit is more fensible to than an illiberal reproach and invectives cast on his country; and of this we are forry to fay Mr. Sharpe does not stand totally acquitted. We must acknowledge, that of foreigners, Mr. Barretti has the most right to call for a favourable hearing of his country's cause; because no foreigner feeths fo delighted with our own country: and, besides what he fays in his book, one proof he has given of his attention to this country, is the wonderful perfection he has attained in our language.

When we confider Mr. Sharpe's character, we cannot but, in juffice to a fair reputation, suppose him inadvertently fallen into the error that has been but too common to travellers; especially those whose

works

works are grounded on short trips and little tours, rather than travelling. Nor is it indeed unnatural, however faulty it may be, that before a man has time to contemplate the motives and reasons which justify the customs and manners of a foreign nation, that he should be a little apt to indulge his old prejudices, and draw comparisons unfavourable to the foreign customs he does not understand, and favourable to those of his own country, which practice and habit have made dear to him.

Mr. Sharpe, however, is peculiarly unlucky to have given his fentiments of this kind in writing of Italy, while fuch an Italian as Mr. Barretti was resident, whose attentive industry has enabled him to express all his Italian indignation in as good English as ever was wrote. There is perhaps a little, it is however but a very little, of the foreign accent, if I may use the word, in his writing: But on the whole, for correctness of language, and manliness of expression, his work would have done credit to the most approved English pen.

Since the publication of this work, a pamphlet has appeared, titled, " A View of the Customs, Manners, Drama, &c. of Italy, as they are described in the Frusta Letteraria; and in the account of Italy in English, written by Mr. Barretti, compared with the letters from Italy written by Mr. Sharp." -The Frusta Letteraria was a satirical periodical work, published fome years ago in Venice; and it is supposed, if not entirely written, was at least conducted by Mr. Barretti. Nothing could at first fight feem a fairer test of the candour of

a writer, than a comparative examination of his works at one period, by those which he had published at another. This pamphlet does not, however, feem to answer the expected purpose. The Frusta lashes, with a severe hand, the follies and vices of his countrymen. He also gives the letters of his correspondents, who differ in opinion with each other, and perhaps with himfelf. In fuch a work the colouring is always greatly heightened; and it must be expected, frequently to meet with caricaturas instead of exact pictures of real life. It would be deemed ridiculous, as well as invidious, in a writer who pretended to characterize the manners of the English nation from the descriptions given of them by Swift and others of our fatirical writers; nor would the humorous defigns even of the Spectators and Tatlers be looked upon as fit models from whence to draw real likenesses: nor could any of those writings have fairly precluded those authors from standing forth for the honour of their country, had they supported her fair name, invidiously or unkindly defiled by a stranger's hand.

Mr. Sharpe, in this pamphlet, wrote by Samuel Sharpe, Esq; en- has given some passages from Goldoni, a dramatic writer, to shew that he had not been mistaken in fome particular instances in the defcription which he gave of the manners of the Italians. This authority carries the less weight, (at least in this contest) as Mr. Barretti had already described Goldoni as the most wretched of all dramatic writers: and to justify his opinion of him, has produced feveral instances from the English characters which that poet pretended to describe, which manifest his total ignorance

of the laws, customs, and geography of foreign countries; and others that no less openly declare his abfurd mifrepresentation of the public and well-known manners of his own. The inference that Mr. Sharp draws of the contemptible light that commerce is held in Italy, because merchants and traders, or their wives and daughters, are feldom admitted in affemblies of the nobility, feems far from being conclusive; as even in this country, where commerce deservedly meets with the greatest respect, it is not very customary to meet with the wives of merchants or traders in the affemblies of ladies of the highest rank.

It now remains that we give fome extracts from the work before us. Mr. Barretti fays in his preface:

" The following work was not undertaken folely with a defign to animadvert upon the remarks of Mr. Sharp and those of other English writers, who after a short tour have ventured to describe Italy and the Italians. Much less would I pass it upon my reader for a complete and fatisfactory account of that celebrated country, taken in any one of those many points of view, under which it may be confidered. I hope no body will fo much mistake the nature of my defign. I had long observed, with fome indignation, that the generality of travel-writers are apt to turn the thoughts of those young people who go abroad, upon frivolous and unprofitable objects, and to habituate them to premature and rash judgments, upon every thing they fee. I have therefore taken occafion, especially from this book of Mr. Sharp, to make them fenfible, if I can, of the errors they are led

into, and to point out to them some objects of inquiry more worthy of the curiosity of sensible persons, and caution them against being too ready to condemn every thing but what they have seen practised at home. An indiscriminate admiration of foreign manners and customs shows great folly; but an indiscriminate censure is both foolish and malignant."

In his first chapter he proceeds

thus :

" Few books are so acceptable to the greatest part of mankind, as those that abound in slander and invective. Hence almost all accounts of travels, published within my memory, have quickly circulated, and were perused, at least for a while, with great eagerness, because they have been strongly marked with these characters. Men are fond of the marvellous in manners and customs as well as in events; and a writer of travels, who would make himself fashionable in his own country, is generally politic enough to bring from abroad abundant materials for gratifying, at once, the malignity and the love of novelty, that must predominate in so many of his readers; and he who is to little conversant in the affairs of his own country, as not to have any of his speculations upon domestic affairs produced without ridicule, may with fafety, and fometimes with reputation, be very wife in those of other countries.

An author of this cast, after a slight survey of the provinces, through which he has had occafion to take a short ramble, returns home; and snatching up his pen in the rage of reformation, fills pages and pages with scurrilous narratives of pretended absurdities, intermixed

with

with the most shocking tales of fancied crimes; very gravely infifting, that those crimes and absurdities were not fingle actions of this and that individual, but general pictures of nature in the countries through which he has travelled. Every unexperienced reader will infallibly be pleased with an opportunity of laughing at the prodigious folly of him who lives on the other fide of the fea, and will always be glad to find that he may bless himself for not having been born in the wicked country beyond the mountain. Thus fallhood is palmed for truth upon the credulous, and thus are men confirmed in a narrow way of thinking, and in those local prejudices, of which it ought to be the great end of travelling, and books of travels, to cure them.

An itinerary lately published by Mr. Samuel Sharp on the customs and manners of Italy, feems to me above all others a book of this kind. Whether it is to be confidered as a candid and instructive account of a foreign country, or as the offspring of an ignorant, careless, and prejudiced writer, will be occasionally examined in the following sheets: and should I prove earnest in the defence of my country, of which he has given so very extraordinary an account, I hope I shall be excused by the generous sympathy of all Englishmen, who are so laudably partial to their own."

We shall next present the general character which the author gives in his fifth chapter of the common

-people in Italy.

"The common people are far from being all alike throughout Italy; and there is, for instance, a very remarkable difference between those at Naples and those of Bologna; those of Rome and those of

Venice; those of Ancona or Florence, and those of Milan, Turin, or Genoa. However, upon the whole, they are, in general, humble, courteous, loving, and of a friendly disposition. They are eivil to fuch a degree, that in towns they will always take care to give the wall to any body who has a tolerable appearance, and pull off their hats, in the country; whenever a gentleman goes by. Treat them with kindness, and call them often by their christian names, and you may depend upon their most fincere attachment. Instead of having any antipathy to strangers, they are fond of them to an unaccountable degree. A stranger is no very honourable appellation in England. In some parts of Spain, and still more in Portugal, it is opprobrious: but in some parts of Italy, A stranger means a fine fellow; and in some others, a wife man: I mean always amongst the common people. Let any body with a foreign dress or accent speak in their hearing, the Italians will imperceptibly steal near, and listen with attention to his words: then go home and tell their wives, children, or friends what they have heard; and feldom omit, in the warm elation of their goodness, a little embroidery of their own, in commendation of the stranger. They are credulous, because they are ignorant; and ignorant they certainly are to a great degree, as few of them can read or write. They are chearful for the greatest part; which does not imply a cruel disposition or temper; and love finging, fiddling, and dancing fo passionately, that, after church on holidays, no mailer or mistress must think of having their young maids or footmen at home before night,

as they will abfolutely go where there is a dance, generally in some field or other open place adjacent to their towns or villages; and there keep their legs in motion in the merriest manner till sunset. The men, on fuch occasions, pay the fiddles, giving some money to them before they begin their minuets, furlana's, ciaccona's, As fuch dances are corrente's constantly kept in the eyes of the public, you may be fure that the women put always on their modesteft looks; nor would any married woman be found there, if her hufband were not of the party. This is general. But it is fo hard to fay any thing universal of Italy, that I must say en passant, that dancing on holidays is not permitted, or not common, in the Pope's dominions.

The Italians are no rioters, and hate confusion; and they are, for the greatest part, total strangers to the idea of sedition; fo that they fearcely ever rife against government, not even in time of the greatest hardships. Few of the Italian nations will fuffer themselves to be feized by a violent and general rage once in a century, except at Naples, when the want of bread grows quite insupportable; but in the Venetian dominions, in Tuscany, in Lombardy, in Piedmont, and in other parts of Italy, I never heard of the least popular insurrection. When they meet in large crowds, they do mot turn infolent and ferocious, as it often happens in other countries; and Mr. Sharp himfelf took notice of vast multitudes, which behaved with fuch composure and quiet, that he could not help wondering; and he owns that it had not been the case in London, where, when

a large body of the common people come together, some are seen quarrelling, some fighting, some laughing, one half of them drunk, and all noisy; and to complete the confusion, two or three dead cats will be hurled about to one another.

When the Italians go to any opera, or play, or any other public spectacle, they applaud if they are pleased; and, if not, they talk to their acquaintance when they have any by, or keep filent; and never his or pelt the actors, and never throw any thing into the orchestra or the pit, totally unacquainted with the brutal manner of annoying or hurting those, who neither annoy nor hurt them. At Venice only there is a custom no less nasty than infamous, that of spitting from the boxes into the pit. This custom certainly arose from the contempt that the haughty nobles originally had, and have still, for the people. Yet the people fuffer most patiently this infult; and, what is still more furprising, love those very nobles who treat them in fuch an outrageous manner; scarcely giving vent to a little anger with fome short and comical exclamation, when their hands and faces feel the confequence of this beaftly custom.

The Italians are so tender-hearted, that they will shed tears at any mournful story; and when any criminal is executed, you will see the stoutest amongst them weep mot cordially, pray most devoutly, and give what little money they can spare to have masses celebrated for the repose of the poor suffering soul; and I think, that sometimes I called them sools for being so much affected on such occasions; though I own I could not help sympathising often with men, whom

Sharp is pleased to call diabolical in their nature.

It would be endless to tell how our common people are hospitable to strangers, serviceable to one another, and liberal of whatever they can spare to the necessitous; still keeping up the old friendly custom of presenting each other a little bread when they bake; fitting, walking, chatting, finging, dancing, or working together, always in good humour, and always pleafed when in company. They are most rigidly religious; or most foolishly superstitious, as Mr. Sharp would phrase it; nor would they ever dare to go to bed, without first faying loud their rofaries over, or finging their litanies, the whole family together kneeling before an image; never missing their masses and benedictions morning and evening every holiday; making their confessions and communions generally once a month; beating their breasts in the fervour of their devout ejaculations; never breaking lent or meagre days, if they are well; and if they are ill, never without asking first leave for fo doing of their ecclefiaftical superiors. Their religion is carried to fuperstition undoubtedly; but still they are religious.

However, though the common people of Italy be thus humble, courteous, peaceable, chearful, hospitable, compassionate, and religious, they have, on the other hand, such quick feelings, that even a disrespectful word or glance from an equal will suddenly kindle a good number of them, and make them fall upon one another with ther knives, I say from an equal; because from a superior, that is, from one who has the appearance

of a gentleman, they will bear much before they let their passion loose, being from their infancy accustomed to a very strict subordination. When a gentleman happens to fee any of them quarrelling, he usually steps between without incurring any danger, and if he cannot part them directly with expostulation, he will do it by raising his cane upon them both, and have the thanks of the by-standers for it. But if no gentleman interpofes, they will not be cooled in hafte, and fome mifchief will be done; especially if there is any matter of love at bottom, which is generally the only great fource of quarrels amongst our common people. In matters of love they must mutually beware how they deal; for he that has first declared himself the inamorato of a maiden, must have her all to himfelf; nor will he brook to hear a rival play on the guitar, or fing fongs at night under her window without his previous leave, which however is always granted when asked; and the asking, as well as the granting, confidered by both parties as a civility to be returned upon occasion. Without that previous leave, the resentment of a common Italian flames out, and is not limited to his rival only; for, if he has room to suspect his mistress of fickleness, after the has given her confent to his courtship, she will be herself in danger. However, the reader must not think that girls in Italy are frequently stabbed by their fweet-hearts, because, in general, they pique themselves of as much fidelity to their lovers, as their lovers to them. Yet the cafe. comparatively speaking, will happen in Italy oftener than in any of the countries I have visited; and it actually

actually happened in the neighbourhood of Ancona while I was there, that a young peafant got himself into the gallies by giving a dangerous blow to a pretty wench; and enquiring after the opinion that people of their rank had of this affair, I found, that both men and women were; upon the whole, rather favourable to the fellow, who had given her no motive for fickleness, and thought his sentence too hard; not pitying the girl much, as she had proved a jilt.

This touchy temper in our low people I am far from commending. Yet, if any thing was to be faid in extenuation of the few crimes that it causes, one might say, that as foon as a common Italian has fet his heart upon a maiden, she is sure, when married, that he will do his best as long as he lives to maintain her, and never swerve from his

conjugal fidelity.

And here I must remark, that whatever Mr. Sharp may affirm of the unparalleled indolence and fluggishness of the common people in Italy, a point which he knows in his conscience he never was at the trouble of examining, I may affirm, on the contrary, that it is not uncommon to find in the cottage of an Italian peafant the implements of agriculture along with the net and the loom; and that a great many of them are, at once, hufbandmen, fishermen; and weavers: See them work in the field, or any other place, they will redouble their diligence if they perceive that you mind what they are doing. There is a spirit of glory, or, if you please, of vanity in them, which I have not observed in Englishmen of the fame class: and when you depart, they will never do as peafants and Vor XI.

all forts of working people do in England, where they fo very frequently ask you for something to drink. The Italians ask nothing; and the greatest part of them would refuse; if you were to offer; and even defire you not to mistake them for

beggars.

Let me then conclude this chapter with observing, that I have now been for feventeen years a constant reader of the English newspapers: that in this long space of time more than ten thousand English (mafters and fervants) have been running up and down Italy, and the greatest part of them certainly not the best men that this country produces with regard to morals and prudence. Yet can any of my readers recollect of having ever read in the news-papers of any Englishman treacheroufly murdered in that land, so famous for its frequent murders and customary assassinations? Would this have been the case in any country, if ten thousand Italians, flushed with youth and money, and lovers of the bottle into the bargain, had run up and down it, with featcely any other view but that of giving themselves up to all manner of lewdness and debauchery."

The twentieth chapter, in which the author treats of the charges brought against his countrymen for their gross superstitions, and the conformity shewn between popery and paganism by Middleton and others, is handled in fo mafterly a manner; and the defence fo artfully made, that we shall lay an extract from it before our readers.

"To the above sketch of the general character of our friars, I beg leave to add a few thoughts towards alleviating a little the heavy charge we lie under in all protestant countries, of being almost as great idolaters as the ancient Greeks and Romans.

I have read with great pleafure Middleton's famous Letter from Rome, as well as many other English works of that kind, and am perfectly convinced that the conformity (in many external practices) between popery and paganism is very great: but what does that conformity prove? Nothing else, in my opinion, but that the first preachers of Christianity in Italy did not trouble themselves about many heathenish customs, which they either confidered as indifferent in themselves, or as politically good: it proves that the eradication of ancient customs is so very difficult, that no change of religion can totally efface them, how long foever it may continue: and it proves, that men will imperceptibly add fo many ornaments of their own to the primitive fimplicity of any religion, as to render that fimplicity scarcely discernable after a long revolution of centuries.

But there is no need of reading Middleton's letter, or any other fuch ingenious and learned performance, in order to be convinced, that men have always had, and always will have, a certain fet of ideas about religion, feemingly different, yet still the fame, and still moving in unvaried rotation; for there is in all religions something that is right, let them be ever so

erroneous.

I will allow, that the protestants in general, and the English in particular, have purified the language and simplified their notions of Christianity to a very great degree. But, when they think or speak of religion, are they able to conceive

ideas, and find words and phrases, intirely different from those of the ancient heathens, when they thought or spoke about religion? Two of the most predominant ideas in all religions are undoubtedly those of beaven and bell: but when protestants think of heaven, are they able to keep their imaginations from running about a celestial Eden? This heathenish idea will be prevalent whatever they may do, as long as they shall be so charmed as they are with their gardens and fields, as the ancient heathens were with theirs. And a protestant bell will likewise be something resembling a pagan tartarus, composed of everlasting fire, as long as men fuffer exquisite pain by exposing a finger to the rage of that element. Men, I repeat it, have a fet of ideas in common, that will for ever circulate, let their respective religions be ever so different. A protestant architect cannot build a St. Paul's or a St. Martin's upon any plan but those pagan ones of Mercury and Diana; and a protestant poet cannot draw Satan and Moloch with any other pencils but those used by the heathens in painting Pluto and Enceladus. A bishop must by all forts of Christians be distinguished from a common prieft, either by a different dress, or by some other mark of superiority, just as a pontiff of old was distinguished by fimilar means from a flamen. And how can we express worship and thanksgiving in our churches, be they protestant or popish, but by folemn finging, by decent fpeaking, by reverential filence, by kneeling, bowing, or proftration, just as the Gentiles did in their temples when they intended thankfgiving and worship? Nay, is it possible for protestants or papists to speak of the Almighty himself, without making use of the same heathenish fubstantives and adjectives used by the ancients when they spoke of their Jupiter? I will not drive this reasoning farther; but simply say, that it is impossible to escape a parallel between any two religions, be they ever so different, when a man of wit and learning will fet about it. Several of the ceremonies now used in Italy are as probably borrowed from the lews as from the heathens; and many authors have cenfured the Jewish religion for its conformity with the Egyptian in many fites and ceremonies. It would not even be a very difficult task to find some conformity between the Hottentots and the Jews: for what do the Hottentots do when they cut off one of their genitals? they only commit a mistake with regard to the proper place of circumcifion: and feveral authors have found strong marks of conformity even between the Jews and the people of America in many of their religious rites. But religious rites fignify very little to the substance of religion, though people, according to their feveral dispositions and habits, may find the practice or omission of them more or less useful to stir up a sense of religion: and it were well if Mr. Sharp, and those other writers, who are fo prodigious angry with every thing that they do not fee practifed at home, would imitate the moderation of the church of England, which, in regulating this point for herfelf, has had too much fense rashly to condemn other churches. See the preface to her commonprayer-book, where it is faid, "And in these our doings we con-

demn no other nations, nor prefcribe any thing but to our own " people only; for we think it " convenient that every country " should use such ceremonies as " they shall think best, to the setting forth of God's honour and " glory, and to the reducing of "their people to a more perfect " and godly living without error and fuperstition." What practices are but proper and decent in you, and what are improper and fuperstitious in us, is a point which hot and rash men of either side are not very well qualified to deter-We burn incense in our churches, and you do not: but where is the great mischief of perfuming a church with that fweet odour, especially in a country where a numerous meeting of people, all abundantly perspiring, would make the place difagreeable? We play upon fiddles and clarinets in our churches, and you play only upon the organ: but is there any greater fanctity in an organ than in a clarinet or a fiddle? and is the air more holily shaken by the vibration of one found than of another? and how can some protestants be so unchristianly enthusiastic, as to make use of the hard word abominable. when, for instance, we sprinkle ourfelves and others with a few drops of water mixed with falt? Where is the abomination of this and other fuch triffing customs? and what word would they use if, instead of sprinkling, we were all the while flinging stones at each other's heads? Our votive offerings are at bottom nothing else but tokens of our gratitude to heaven for having delivered us from evil; and I fee nothing amifs in this practice, although it has been used S 2

by heathens. And, if we have frequent processions on holidays, a procession has nothing facrilegious in it, nor does it appear to be a fuperstition of a very noxious quality: and if we have them, and you not, it is because our climate, less inconstant than yours, enables us to keep our people as harmlefsly occupied on those days, as the Roman heathers did theirs. There is nothing with which Mr. Sharp feems fo much affected as with these religious ceremonies. They offend him, they shock him, they stir his indignation up to the highest pitch; and he holds our ridiculous gestures and whimsical tricks, as well as our proud priests, in the greatest detestation: and yet while he was in Italy, as he tells us, he could never keep away from our churches, though he fretted to fee young men walking in a right line, dressed in red banians and white nightrails: but why is he not shocked to fee young men with bushy wigs, with black nightgowns, and white furplices over them, walking in a crooked line? is it that the colour of red provokes him, as it does bulls and turkey-cocks? And why fhould our bowings and kneelings, fittings' and rifings, praying fometimes with a low and fometimes with a loud voice, inspire him with fuch an uncommon rage, more than the fimilar practices which are used in his own church? There are people in these kingdoms who blame, with equal fury, many of those religious ceremonies that are used by the church of England; and just with as much reason as Mr. Sharp does those used by the church of Rome.

But what fignifies answering a multitude of such ridiculous accusations, always delivered in a most irreligious stile? There is no great need to give reasons for a thousand ceremonies, which though in themselves sometimes childish and infignificant, and even derived from heathenism, are yet in general either useful or harmless. All this, one way or other, is mere matter of fancy, and no way affecting the fubstance of religion, or the practife of virtue. And will any body fay, that it is possible to render Christianity perfectly uniform every where? I think it is not, whatever enthusiasts may dream. Suppose, for instance, the Hernhutters were to succeed in their present scheme of converting the Greenlanders, and make them embrace the gospel; and when this work is effected, suppose the Greenlanders intirely cut off from all intercourse with Europe: would it not then be easy, especially for fuch deep critics as Mr. Sharp, to find as much fault with their fcantiness of Christian practices, as with the superabundance of ours? And would not their Christian practices in fuch a cafe be very scanty? They certainly would, if we reflect that they could not even be able to find bread and wine for the eucharistic table. There is no need of enlarging upon this hint, and of proving that it would be abfolutely impossible for many nations to be Christians either after the English or the Italian manner.

The Narrative of the honourable John Byron, (commodore in a late expedition round the world) containing an account of the great distresses suffered by himself and his companions on the coast of Patagonia, from

from the year 1740, till their arvival in England, 1746. With a description of St. Jago de Chili, and the manners and customs of the inhabitants. Also, a relation of the loss of the Wager Man of War, one of Lord Anson's squadron. Written by Himself, and now first published. I vol. 8vo.

HIS Narrative is one of the most curious, interesting, and entertaining pieces that can be met with; and confidering that its authenticity is unquestionable, contains a feriesof the most extraordinary adventures, that perhaps have yet come within the knowledge of mankind. The erratic genius of man, in the wildest walks of fancy, has scarcely been able to conceive fuch a fuccession of imaginary calamities, as those real ones, which the author and his fellow-fufferers actually experienced. It is scarcely possible to trace their miferies without feeling the most exquisite sensibility at every step they make; and the heart involuntarily sympathizes in their distress, and throbs at every new danger that they encounter. At the fame time, it is far from being uselefs, to behold the amazing powers of human nature in certain fituations; and that there are scarcely any fufferings which it is not capable of enduring, nor difficulties which it is not able to furmount.

Though Mr. Byron has treated that part of the subject with great moderation and delicacy, yet every reader of this narrative, will find too many occasions to condemn the perverse and obtlinate temper of captain Cheap, and to lament the consequences of it: and at the same time, perhaps, lament that the subject is now brought again before

the public. His conduct is indeed an instance, that some inveterate habits of mind, are not to be overcome by the severest trials of adver-The complaints which had been formerly made, in a work published under the inspection of Lord Anson, of the very bad state of the ships and men employed on this expedition, and of their being fent out in an improper season, is, fo far as relates to the unfortunate Wager, fully confirmed by this narrative. The manner in which the whole expedition was conducted, is one of those striking instances, of the little estimation that power may fet upon the blood of the people, or the wealth and strength of the nation.

Our honourable author does not enter into the causes, that prevented the publication of these papers for so many years. In his presace, he gives the following account of the design of the work.

"It is well known that the Wager, one of Lord Anson's squadron, was cast away upon a desolate island in the South-feas. The subject of this book is a relation of the extraordinary difficulties and hardships through which, by the assistance of Divine Providence, a fmall part of her crew escaped to their native land; and a very fmall proportion of those made their way in a new and unheard-of manner, over a large and defart tract of land, between the western mouth of the Magellanic streight, and the capital of Chili; a country scarce to be paralleled in any part of the globe. in that it affords neither truits, grain, nor even roots proper for the fustenance of man; and what is still more rare, the very sea, which yields a plentiful fupport to many

S 3 a bar

a barren coast, on this tempestuous and inhospitable shore is found to be almost as barren as the land; and it must be confessed, that to those who cannot interest themselves with seeing human nature labouring, from day to day, to preserve its existence, under the continual want of such real necessaries as food and shelter from the most rigorous climate, the following sheets will afford but little entertainment.

Yet, after all, it must be allowed, there can be no other way of afcertaining the geography and natural history of a country, which is altogether morafs and rock, incapable of products or culture, than by fetting down every minute circumstance which was observed in traverfing it. The same may be faid of the inhabitants, their manners, religion, and language. fruits could an European reap from a more intimate acquaintance with them, than what he will find in the following accidental observations? We faw the most unprofitable fpot on the globe of the earth, and fuch it is described and afcertained to be.

It is to be hoped some little amends may be made by fuch an infight as is given into the interior part of the country; and I find what I have put down, has had the good fortune to be pleasing to some of my friends; infomuch, that the only fault I have yet had laid to my papers is, that of being too short in the article of the Spanish settlements. But here I must say, I have been dubious of the partiality of my friends; and, as I think, justly fearful left the world in general, who may perhaps find compassion and indulgence for a protracted tale of diffress, may not give the same allowance to a luxurious imagination, triumphing in a change of fortune, and fudden transition from the most dismal, to the gayest scenes in the universe, and thereby indulging an egotism equally offensive to the envious and censorious."

The circumstances attending the shipwreck are so extraordinary, that we doubt not but every reader will feel himself interested in them.

"In the morning, about four o'clock, the ship struck. The shock we received upon this occasion, though very great, being not unlike a blow of a heavy fea, fuch as in the feries of preceding florms we had often experienced, was taken for the fame; but we were foon undeceived by her striking again more violently than before, which laid her upon her beam ends, the fea making a fair breach over her. Every person that now could stir was prefently upon the quarter-deck; and many even of those were alert upon this occasion, that had not shewed their faces upon deck for above two months before: feveral poor wretches, who were in the last stage of the scurvy, and who could not get out of their hammocks, were immediately drowned.

In this dreadful fituation she lav for some little time, every soul on board looking upon the present minute as his last; for there was nothing to be feen but breakers all However, a mounaround us. tainous sea hove her off from thence; but she presently struck again, and broke her tiller. In this terrifying and critical juncture, to have observed all the various modes of horror, operating according to the feveral characters and complexions amongst us, it was necessary that the observer himself should

have

have been free from all impressions of danger. Instances there were. however, of behaviour fo very remarkable, they could not escape the notice of any one who was not intirely bereaved of his fenses; for fome were in this condition to all intents and purpofes; particularly one, in the ravings despair brought upon him, was feen stalking about the deck, flourishing a cutlass over his head, and calling himself king of the country, and striking every body he came near, till his companions feeing no other fecurity against his tyranny, knocked him down. Some, reduced before by long fickness and the fcurvy, became on this occasion as it were petrified and bereaved of all fense. like inanimate logs, and were bandied to and fro by the jerks and rolls of the ship, without exerting any efforts to help themselves. terrible was the scene of foaming breakers around us, that one of the bravest men we had could not help expressing his dismay at it, saying it was too shocking a fight to bear; and would have thrown himself over the rails of the quarter-deck into the sea, had he not been prevented: but at the same time there were not wanting those who preserved a prefence of mind truly heroic. The man at the helm, though both rudder and tiller were gone, kept his flation; and being asked by one of the officers, if the ship would steer or not, first took his time to make trial by the wheel, and then anfwered with as much respect and coolness as if the ship had been in the greatest safety; and immediately after applied himself, with his usual ferenity, to his duty, persuaded it did not become him to defert it as long as the ship kept together.

Mr. Jones, mate, who now not only furvives this wreck, but that of the Litchfield man of war, upon the coast of Barbary, at the time when the ship was in the most imminent danger, not only shewed himself undaunted, but endeavoured to infoire the same resolution in the men; faying "my friends, let us " not be discouraged : did you never " fee a ship amongst breakers be-"fore? Let us try to push her "through them. Come, lend a " hand; here is a sheet, and here " is a brace; lay hold; I don't "doubt but we may flick her vet " near enough to the land to fave our lives." This had so good an effect, that many who before were half dead, feemed active again, and now went to work in earnest. This Mr. Jones did purely to keep up the spirits of the people as long as possible: for he often said afterwards, he thought there was not the least chance of a fingle man's being faved. We now run in between an opening of the breakers, steering by the sheets and braces, when providentially we fluck fast between two great rocks; that to windward sheltering us in some measure from the violence of the fea. We immediately cut away the main and foremast; but the ship kept beating in such a manner, that we imagined she could hold together but a very little while. The day now broke, and the weather, that had been extremely thick. cleared away for a few moments, and gave us a glimple of the land not far from us. We now thought of nothing but faving our lives. To get the boats out, as our masts were gone, was a work of fome time; which when accomplished, many were ready to jump into the

first, by which means they narrowly escaped perishing before they reached the shore. I now went to captain Cheap (who had the misfortune to dislocate his shoulder by a fall the day before, as he was going forward to get the fore-yard (wayed-up) and asked him if he would not go on shore; but he told me, as he had done before, that he would be the last to leave the ship; and he ordered me to affift in getting the men out as foon as possible. I had been with him very often from the time the ship first struck, as he defired I would, to acquaint him with every thing that passed; and I particularly remarked, that he gave his orders at that time with as much coolness as ever he had done during the former part of the voyage.

The fcene was now greatly changed; for many who but a few minutes before had shewn the strongest signs of despair, and were on their knees praying for mercy, imagining they were now not in that immediate danger, grew very riotous, broke open every cheft and box that was at hand, flove-in the heads of casks of brandy and wine as they were born up to the hatchways, and got fo drunk, that feveral of them were drowned on board, and lay floating about the decks for fome days after. Before I left the ship, I went down to my chest, which was at the bulk-head of the wardroom, in order to fave fome little matters, if possible; but whilst I was there the ship thumped with fuch violence, and the water came in so fast, that I was forced to get upon the quarter-deck again, without faving a fingle rag but what was upon my back. The boatfwain, and some of the people, would not leave the ship so long as there was

any liquor to be got at; upon which captain Cheap fuffered himfelf to be helped out of his bed, put into the boat, and carried on thore.

It is natural to think, that to men thus upon the point of perishing by shipwreck, the getting to land was the highest attainment of their wishes; undoubtedly it was a defirable event; yet, all things confidered, our condition was but little Whichmended by the change. eyer way we looked, a scene of horror presented itself: on one side, the wreck (in which was all that we had in the world to support and fubfift us) together with a hoisterous fea, prefented us with the most dreary prospect; on the other, the land did not wear a much more favourable appearance: defolate and barren, without fign of culture, we could hope to receive little other benefit from it than the prefervation it afforded us from the fea. It must be confessed, this was a great and merciful deliverance from immediate destruction; but then we had wet, cold, and hunger, to ftruggle with, and no visible remedy against any of these evils. Exerting ourselves, however, though faint, benumbed, and almost helpless, to find some wretched covert against the extreme inclemency of weather, we discovered an Indian hut, at a small distance from the beach, within a wood, in which as many as possible, without distinction, crouded themselves, the night coming on exceedingly tempestuous and rainy. But here our fituation was fuch, as to exclude all rest and refreshment by sleep from most of us; for besides that we pressed upon one another extremely, we were not without our alarms

and apprehensions of being attacked by the Indians, from a discovery we made of some of their lances and other arms, in our hut; and our uncertainty of their strength and disposition, gave alarm to our imagination, and kept us in conti-

nual anxiety. In this miserable hovel, one of our company, a lieutenant of invalids, died this night; and of those who for want of room took shelter under a great tree, which stood them in very little stead, two more perished by the severity of that cold and rainy night. In the morning, the calls of hunger, which had been hitherto suppressed by our attention to more immediate dangers and difficulties, were now become too importunate to be refifted. We had most of us fasted eight and forty hours, some more; it was time, therefore, to make enquiry among ourselves, what store of sustenance had been brought from the wreck by the providence of some, and what could be procured on the island by the industry of others: but the produce of the one amounted to no more than two or three pounds of biscuit dust reserved in a bag; and all the fuccess of those who ventured abroad, the weather being still exceeding bad, was to kill one fea-gull, and pick fome wild fellery. These, therefore, were immediately put into a pot, with the addition of a large quantity of water, and made into a kind of foup, of which each partook as far as it would go; but we had no fooner thrown this down. than we were feized with the most painful fickness at our stomachs, violent reachings, swoonings, and other fymptoms of being poisoned. This was imputed to various causes, but in general to the herbs we made

use of, in the nature and quality of which we fancied ourselves mistaken; but a little surther enquiry let us into the real occasion of it, which was no other than this: the biscuit dust was the sweepings of the bread-room, but the bag in which they were put had been a tobacco bag; the contents of which not being intirely taken out, what remained mixed with the biscuit-dust, and proved a strong emetic.

We were in all about a hundred and forty who had got to shore; but some few remained still on board, detained either by drukennefs, or a view of pillaging the wreck, among which was the boatfwain. These were visited by an officer in the yawl, who was to en-deavour to prevail upon them to join the reft; but finding them in the greatest disorder, and disposed to mutiny, he was obliged to defift from his purpole, and return without them; . Though we were very defirous, and our necessities required that we should take some survey of the land we were upon; yet, being strongly prepossed that the favages were retired but some little distance from us, and waited to fee us divided, our parties did not make this day, any great excursions from the hut; but as far as we went, we found it very moraffy and unpromising. The fpot which we occupied was a bay, formed by hilly promontories; that to the north fo exceeding steep, that in order to ascend it, (for there was no going round, the bottom being washed by the sea) we were at the labour of cutting steps. This, which we called Mount Mifery, was of use to us in taking some observations afterwards, when the weather would permit: the fouthern

promontory was not fo inaccessible. Beyond this I, with some others, having reached another bay, found driven ashore some parts of the wreck, but no kind of provision: nor did we meet with any shell-fish, which we were chiefly in fearch of. We therefore returned to the rest, and for that day made no other repast than what the wild sellery afforded us. The ensuing night proved exceedingly tempestuous; and, the fea running very high, threatened those on board with immediate destruction, by the parting of the wreck. They then were as follicitous to get ashore, as they were before obstinate in refusing the affistance we sent them; and when they found the boat did not come to their relief at the instant they expected it, without confidering how impracticable a thing it was to fend it them in fuch a fea, they fired one of their quarter-deck guns at the hut; the ball of which did but just pass over the covering of it, and was plainly heard by the captain, and us who were within. Another attempt, therefore, was made to bring these madmen to land; which, however, by the violence of the fea, and other impediments, occasioned by the mast that lay alongfide, proved ineffectual. This unavoidable delay made the people on board outrageous: they fell to beating every thing to pieces that came in the way; and, carrying their intemperance to the greatest excess, broke open chests and cabbins for plunder, that could be of no use to them: and so earnest were they in this wantonness of theft, that one man had evidently been murdered on account of fome division of the spoil, or for the sake of the share that fell to him, having all the marks of a strangled corpse. One thing in this outrage they feemed particularly attentive to; which was, to provide themfelves with arms and ammunition, in order to support them in putting their mutinous defigns in execution, and afferting their claim to a lawless exemption from the authority of their officers, which they pretended must cease with the loss of the ship. But of these arms, which we stood in great need of, they were foon bereaved, upon coming ashore, by the resolution of captain Cheap, and lieutenant Hamilton of the marines. Among these mutineers, which had been left on board, as I observed before, was the boatswain; who, instead of exerting the authority he had over the rest, to keep them within bounds as much as possible, was himself a ringleader in their riot: him, without respect to the figure he then made, for he was in laced cloaths, captain Cheap, by a blow well laid on with his cane, felled to the ground. It was scarce possible to refrain from laughter, at the whimfical appearance these fellows made, who, having rifled the chefts of the officers best fuits, had put them on over their greafy trowfers and dirty checked thirts. They were foon stripped of their finery, as they had before been obliged to refign their arms."

Among the numberless hardships and miseries our author underwent, and the strange adventures he encountered, the following instance of compassion and humanity he met with from two Indian women, deferves to be remembered.

"Thus left, I was for some time at a loss what I had best do; for knowing that in the variety of dispositions observable among the In-

dians.

dians, the furly and favage temper is the most prevalent, I had good reason to conclude, that if I obtruded myfelf upon them, my reception would be but indifferent. Necessity, however, put me upon the risk; I accordingly pushed into the next wigwam upon my hands and knees; for the entrance into these kind of buildings is too low to admit of any other manner of getting into them. To give a short description of these temporary houses, called wigwams, may not be improper here, for the fatisfaction of those who never saw any; especially as they differ somewhat from those of North America, which are more generally known from the numerous accounts of that

country.

When the Indians of this part of the world have occasion to stop any where in their rambles, if it be only for a night or two, the men, who take this business upon them, while the women are employed in much more laborious offices, such as diving in the fea for fea-eggs, and fearching the rocks for shell-fish, getting fuel, &c. repair to the woods, and cutting a sufficient number of tall, strait branches, fix them in an irregular kind of circle, of uncertain dimensions; which having done, they bend the extremities of these branches fo as to meet in a centre at top, where they bind them by a kind of wood-bine, called supplejack, which they split by holding it in their teeth. This frame, or skeleton of a hut, is made tight against the weather, with a covering of boughs and bark; but as the bark is not got without some trouble, they generally take it with them when they remove, putting it at the bottom of their canoes:

the rest of the wigwam they leave standing. The fire is made in the middle of the wigwam, round which they fit upon boughs; and as there is no vent for the smoke, befides the door-way, which is very low, except through some crevices, which cannot eafily be stopped, they are not a little incommoded on that account; and the eyes of some of them are much affected by it.

But to return: in this wigwam, into which I took the liberty to introduce myself, I found only two women, who upon first seeing a figure they were not accustomed to, and fuch a figure too as I then made, were struck with astonishment. They were fitting by a fire, to which I approached without any apology. However inclined I might have been to make one, my ignorance of their language made it impossible to attempt it. One of these women appeared to be young, and very handsome, for an Indian; the other old, and as frightful as it is possible to conceive any thing in human shape to be. Having stared at me fome little time, they both went out; and I, without farther ceremony, fat me down by the fire to warm myself, and dry the rags I Yet I cannot fay my fituation was very eafy, as I expected every instant to see two or three men come in and thrust me out, if they did not deal with me in a rougher manner.

Soon after the two women came in again, having, as I supposed, conferred with the Indian, our conductor; and appearing to be in great good humour, began to chatter and laugh immoderately. Perceiving the wet and cold condition I was in, they feemed to have compassion on me, and the old woman

went out and brought fome wood, with which she made a good sire; but my hunger being impatient, I could not forbear expressing my defire, that they would extend their hospitality a little further, and bring me formething to eat. They foon comprehended my meaning, and the younger beginning to rummage under some pieces of bark that lay in the corner of the wigwam, produced a fine large fish: this they presently put upon the fire to broil; and when it was just warm through, they made a fign for me to eat. They had no need to repeat the invitation; I fell to, and dispatched it in fo short a time, that I was in hopes they would comprehend, without further tokens, that I was ready for another; but it was of no confequence, for their stock of eatables was entirely exhausted.

After fitting some time in conference together, in which converfation I could bear no part, the women made fome figns to me to lay down and go to fleep, first having strewed some dry boughs upon the ground. I laid myfelf down, and foon fell fast asleep; and about three or four hours after awaking, I found myfelf covered with a bit of blanket, made of the down of birds, which the women usually wear about their waist. The young woman, who had carefully covered me, whilst sleeping, with her own blanket, was lying close by me; the old woman lay on the other fide of her. The fire was low, and almost burnt out; but as soon as they found me awake they renewed it, by putting on more fuel. What I had hitherto eat, ferved only to sharpen my appetite; I could not help, therefore, being earnest with them to get me fome more victuals. Having understood my necessities,

they talked together fome little time; after which getting up, they both went out, taking with them a couple of dogs, which they train to affift them in fishing. After an hour's absence, they came in trembling with cold, and their hair streaming with water, and brought two fish; which having broiled, they gave me the largest share; and then we all laid down as before to rest.

Commentaries on the laws of England.

Book the third. By William Blackfrone, Efq; Sollicitor-General to her

Majesty. Oxford, printed at the
Clarendon press.

E have the fatisfaction not only to inform our readers of the publication of the third volume, but that the fourth, which will compleat the whole of this excellent work, is already promifed, As we acknowledged in our last the great pleafure we had received from the perufal of the two former books; fo we also gave a pretty full account of the general nature and defign of these commentaries. The utility of the work, and the great merit of the elegant and mafterly writer, are so generally understood as to require no additional illustration; and our readers will justly think the little room that our limits afford, much better supplied by quotations from the original, than by any observations we should make on it.

Mr. Blackstone introduces this book, by reminding his readers, that as "At the opening of these commentaries * municipal law was in general defined to be, "a rule of civil conduct, prescribed by the supreme powerin a state, com-

" manding

[#] Introd. § 2.

manding what is right, and pro-" hibiting what is wrong *." From hence therefore it followed, that the primary objects of the law are the establishment of rights, and the prohibition of wrongs. And this occasioned + the distribution of thefe collections into two general heads: under the former of which we have already confidered the rights that were defined and established, and under the latter are now to confider the wrongs that are forbidden and redreffed, by the laws

of England.

In the profecution of the first of these enquiries, we distinguished rights into two forts: first, fuch as concern or are annexed to the perfons of men, and are then called jura personarum, or the rights of perfons; which, together with the means of acquiring and losing them, composed the first book of these commentaries: and, fecondly, fuch as a man may acquire over external objects, or things unconnected with his person, which are called jura rerum, or the rights of things; and these, with the means of transferring them from man to man, were the subject of the second book. I am now therefore to proceed to the confideration of wrongs; which for the most part convey to us an idea merely negative, as being nothing else but a privation of right. For which reafon it was necessary, that, before we entered at all into the discussion of wrongs, we should entertain a clear and distinct notion of rights: the contemplation of what is jus being necessarily prior to what may be termed injuria, and the definition of fas precedent to that of nefas:

Wrongs are divisible into two forts or species; private wrongs,

and public avrongs. The former are an infringement or privation of the private or civil rights belonging to individuals, confidered as individuals; and are thereupon frequently termed civil injuries: the latter are a breach and violation of public rights and duties, which affect the whole community, confidered as a community; and are diffinguished by the harsher appellation of crimes and misdemesnors. To investigate the first of these species of wrongs, with their legal remedies, will be our employment in the prefent book; and the other species will be referved till the next or concluding volume,"

This book treats, in as many different chapters, of the following subjects: Of private wrongs; of the redress of private wrongs by the mere act of the parties; of redress by the mere operation of law; of courts in general; of the public courts of common law and equity; of courts ecclefiastical, military, and maritime; of courts of a special jurisdiction; of the cognizance of private wrongs; of wrongs, and their remedies, respecting the rights of persons; of injuries to personal property; of injuries to real property, and first of dispossession or ouster of the freehold; of dispossession or ouster of chattels real; of trefpass; of nulance; of waste; of fubiliraction; of disturbance; of injuries proceeding from, or affecting the crown; of the pursuit of remedies by action, and, first, of the original writ; of process; of pleading; of iffue and demurrer; of the several species of trial; of the trial by jury; of judgment, and its incidents; of proceedings in the nature of appeals; of execution; of proceedings in the courts of e-

^{*} Sanctio justa, jubens honesta, et probioens contraria. Cic. 11 Philipp. 12. Bract. l. 1. c. 3. + Book I, ch. 1.

quity. To this book the author has added an appendix, containing, N°. I. Proceedings on a writ of right patent: N°. II. Proceedings on an action of trespass in ejectment, by original, in the King's bench: N°. III. Proceedings on an action of debt in the court of common pleas; removed into the King's bench by writ of error.

Our author makes the following remarks on the erecting of courts of requests or conscience for the recovery of small debts; and the disuse of the ancient county and hundred

courts

"The anxious defire that has been shewn to obtain these several acts, proves clearly that the nation in general is truly fenfible of the great inconvenience, arising from the difuse of the antient county and hundred-courts; wherein causes of this small value were always formerly decided, with very little trouble and expence to the parties. But it is to be feared, that the general remedy which of late hath been principally applied to this inconvenience, (the erecting these new jurisdictions) may itself be attended in time with very ill confequences: as the method of proceeding therein is entirely in derogation of the common law; as their large difcretionary powers create a petty tyranny in a fet of standing commissioners; and as the disuse of the trial by jury may tend to estrange the minds of the people from that valuable prerogative of Englishmen, which has already been more than fufficiently excluded in many instances. How much rather is it to be wished, that the proceedings in the county and hundred-courts could again be revived, without burthening the freeholders with too frequent and tedious attendances, but at the fame time removing the delays that have infensibly crept into their proceedings, and the power that either party have of transferring at pleasure their fuits to the courts at Westminster! And we may with satisfaction observe, that this experiment has been actually tried, and has succeeded in the populous county of Middlesex; which might serve as an example for others."

We shall now give a short extract from the introductory part of our author's very full and accurate account of the trial by jury; and conclude with his eulogium on that no-

ble mode of trial.

" It's establishment however and use, in this island, of what date soever it be, though for a time greatly impaired and shaken by the introduction of the Norman trial by battel, was always fo highly efteemed and valued by the people, that no conquest, no change of government, could ever prevail to abolish it. In magna carta it is more than once infifted on as the bulwark of our liberties; but especially by chap. 29. that no freeman shall be hurt in either his person or property, " nisi per legale judicium parium " Suorum vel per legem terrae." A privilege which is couched in almost the fame words with that of the Emperor Conrad, two hundred years before *: " nemo benificium suum " perdat, nisi secundum consuetudinem antecessorum nostrorum et per " judicium parium suorum." And it was ever effeemed, in all countries, a privilege of the highest and most beneficial nature.

But I will not mifpend the reader's time in fruitless encomiums on this method of trial: but shall proceed to the diffection and examination of it in all it's parts, from whence indeed it's highest encomium will arise; fince, the more it is fearched into and understood, the more it is fure to be valued. And this is a species of knowledge most absolutely necessary for every gentleman in the kingdom: as well because he may be frequently called upon to determine in this capacity the rights of others, his fellow-subjects; as because his own property, his liberty, and his life, depend upon maintaining, in it's legal force, the constitutional trial by jury."

After fully performing his promife, and analysing every part of this method of trial, our author

goes on as follows:

"Upon these accounts the trial by jury ever has been, and I trust ever will be, looked upon as the glory of the English law. And, if it has fo great an advantage over others in regulating civil property, how much must that advantage be heightened, when it is applied to criminal cases! But this we must refer to the enfuing book of these commentaries: only observing for the present, that it is the most tranfcendent privilege which any fubject can enjoy, or wish for, that he cannot be affected either in his property, his liberty, or his person, but by the unanimous consent of twelve of his neighbours and equals. A constitution, that I may venture to affirm has, under providence, secured the just liberties of this nation for a long fuccession of ages. And therefore a celebrated French writer *, who concludes, that because Rome, Sparta, and Carthage have lost their liberties, therefore those of England in time must perish, should have recollected that Rome, Sparta,

and Carthage, were strangers to the

trial by jury.

Great as this eulogium may feem, it is no more than this admirable constitution, when traced to it's principles, will be found in fober reason to deserve. The impartial administration of justice, which secures both our perfons and our properties, is the great end of civil fo-ciety. But if that be entirely entrusted to the magistracy, a select body of men, and those generally selected by the prince or fuch as enjoy the highest offices in the state, their decisions, in spight of their own natural integrity, will have frequently an involuntary biass towards those of their own rank and dignity: it is not to be expected from human nature, that the few should be always attentive to the interests and good of the many. On the other hand, if the power of ju dicature were placed at random in the hands of the multitude, their decisions would be wild and capricious, and a new rule of action would be every day established in our courts. It is wisely therefore ordered, that the principles and axioms of law, which are general propositions, flowing from abstracted reafon, and not accommodated to times or to men, should be deposited in the breasts of the judges, to be occasionally applied to such sacts as come properly afcertained before them. For here partiality can have little scope: the law is well known, and is the fame for all ranks and degrees; it follows as a regular conclusion from the premises of fact pre-established. But in settling and adjusting a question of fact, when intrusted to any single magistrate, partiality and injustice have an ample field to range in; either by bold-

ly afferting that to be proved which is not so, or more artfully by suppressing some circumstances, stretching and warping others, and diftinguishing away the remainder. Here therefore a competent number of fenfible and upright jurymen, chosen by let from among those of the middle rank, will be found the best investigators of truth, and the furest guardians of public justice: For the most powerful individual in the state will be cautious of committing any flagrant invalion of another's right, when he knows that the fact of his oppression must be examined and decided by twelve indifferent men, not appointed till the hour of trial; and that, when once the fact is afcertained, the law must of course redress it. This therefore preferves in the hands of the people that share which they ought to have in the administration of public justice, and prevents the encreachments of the more powerful and wealthy citizens. Every new tribunal, erected for the decision of facts, without the intervention of a jury, (whether composed of justices of the peace, commissioners of the revenue, judges of a court of conscience, or any other standing magistrates) is a step towards establishing aristocracy, the most oppressive of absolute governments. The feodal fystem, which, for the fake of military fubordination, purfued an ariflocratical plan in all it's arrangements of property, had been intolerable in times of peace, had it not been wifely counterpoifed by that privilege, fo univerfally diffufed through every part of it, the trial by the feodal peers. And in every country on the continent, as the trial by the peers has been gradually district, so the nobles have

increased in power, till the state has been torn to pieces by rival factions; and oligarchy in effect has been established, though under the shadow of regal government; unless where the miserable commons have taken shelter under absolute monarchy, as the lighter evil of the two. And, particularly, it is a circumstance well worthy an Englishman's obfervation, that in Sweden the trial by jury, that bulwark of northern liberty, which continued in it's full vigour so lately as the middle of last century*, is now fallen into difuse +: and that there, though the regal power is in no country fo closely limited, yet the liberties of the commons are extinguished, and the government is degenerated into a mere aristocracy 1. It is therefore, upon the whole, a duty which every man owes to his country, his friends, his posterity, and himself, to maintain to the utmost of his power this valuable constitution in all it's rights; to restore it to it's antient dignity, if at all impaired by the different value of property, otherwise deviated from it's first institution; to amend it, wherever it is defective; and, above all, to guard with the most jealous circumspection against the introduction of new and arbitrary methods of trial, which, under a variety of plaufible pretences, may in time imperceptibly undermine this best preservative of English liberty."

We are forry that our limits at prefent prevent our giving some other extracts from this work, every one of which would be highly pleasing, as well as useful, to such of our readers as have not yet had an opportunity of seeing the ori-

ginal.

CONTENTS.

History of EUROPE.

CHAP. I.

Rupture between the two great empires of the East and North. Invasion of the island of Corsica by the French, in consequence of a treaty concluded with the Republic of Genoa, by which that island is ceded to the French King. Different opinions of the importance of Corsica, and some observations on the conduct of the neighbouring powers. Seizure of the Pope's territories in France and Italy. The strict union substiting between the Princes of the Bourbon line becomes more formidable from the conjunction of the House of Austria and Court of Portugal. Deplorable state of Poland. Some observations on the state and conduct of the great belligerant powers in the North. Germany.

CHAP. II.

Proceedings of the Grand Commission in Poland; among many other regulations, refolve to suppress the jurisdiction of the Nunciature. The Pope's Nuncia delivers briefs to the King, Primate, and Bishops, and a manifesto to the Great Chancellor, in which he threatens with excommunication those who subscribe to the acts of the Commissioners. The late Marshal of the Confederacy in Lithuania enters a protest against all the acts of the Grand Commission, and against every thing that shall be transacted under the influence of foreign arms. All the treaties between the Republic, the Empress of Russia, and the King of Prussia, are consirmed and renewed. Great immunities are granted to the Russian merchants. The Diet meets, and ratisses all the acts of the High Commission. The two great Confederacies are declared to be at an end; patriotic behaviour of the Grand Marshals. The Diet breaks up, and every thing is immediately after in consuston. Inconsistency of the accounts we receive, of the state and conduct of the different parties in that country.

CHAP. III.

A Confederacy formed in Podolia. The Confederates take the city and castle of Bar; and oblige the commander of the crown troops in that province to take refuge in the fortress of Kamineck. Several other Con-Vol. XI.

federacies formed, particularly at Halics, and in the city of Lublin; in the last of which places a skirmish ensued with the Russians, by which great mischief was done, and part of the city burnt. The Russian general Podhoriczani deseats a considerable body of the Consederates of Barnear Constantinow. The Consederates of Halics, under the Staroste Potocki, take the town of Brezani; but are soon after deseated by Colonel Weisman, and pursued into Moldavia. City of Cracow taken by the Consederates of Cracowia, who are besieged by the Russians. Engagements near Bar; the city and castle taken. Insurrection and barbarities of the Greek peasants in the Ukraine.

CHAP. IV.

Siege of Cracow. The Confederates desire a capitulation, which is refused by the Russian Generals. The city at length taken by storm. Deplorable state of the country. Insurrection of the Greek peasants at Mozyr in Lithuania. A new irruption of the Haydamacks into the Ukraine; and a second insurrection of the peasants in that country. Town of Zwaniec plundered and burnt by the Turks. Several Confederacies formed in Lithuania. Strange conduct of the Confederates in that dutchy; those of Ocsamia inwest Prince Radzivil, and are themselves surrounded and taken by the Russians. Motions of the Turks and Tartars. Manifesto's dispersed by the Confederates. The Russians form lines upon the frontiers.

CHAP. V.

Russia. Declaration on the war with Turky. Preparations for it. Adventurer. Stephano. Great bravery of the Montenerins; are at length defeated by the Turks. Conduct of the Porte with respect to Poland. Affair at Balta. New Vizir appointed. Russian Resident summoned to the Diwan; several articles proposed to him; is sent to the Castle of the Seven Towers. Turkish manifesto. Vast preparations for the war. M. Obrescow, the Russian Minister, is removed from the Castle of the Seven Towers to the Keeper's house, through the intervention of the English Ambassador. [26]

CHAP, VI.

The Empire. Conduct of the court of Vienna. Of the Electoral house of Saxony. King of Prussia. Liberal donation to his subjects in Silesia. Extraordinary disturbances at Neuschattel; murder of the Sieur Gaudot. Flourishing state of Denmark. Attention paid by the King to the arts, and encouragement given to the professor of them. An order given for a general survey of that kingdom. State of Sweden. Extraordinary exercion of vigour and spirit in the King. Abdicates the Crown. A proclamation issued, for an anticipated convocation of the States. The King resumes the Government.

CHAP. VII.

France. The King takes possession of the Pope's territories in Avignon and the Venaisin. Treaty with the Republic of Genoa, and a declaration in regard

regard to Corsica. Extraordinary powers granted by the King to the Grand Council; debates in the Parliament of Paris, and remonstrances upon that fubject. Great clamours and complaints in consequence of the scarcity of provisions. Remarkable remonstrance made by the Chamber of Vacations of the Parliament of Normandy. Regulations made by the King of Spain, to circumscribe the power of the Clergy in general, and of the Inquisition in particular; to reform the Clergy and Universities; and to enlarge the liberty of the Press. A company of French Merchants obtain a grant to work the Gold-mines in the province of Andalusia. An Edict against the importation of painted or printed linens or cottons; with a view to establish manusactures of that kind in Spain.

CHAP. VIII.

Italy. Pragmatic Sanction published by the Duke of Parma. Pope's Brief issued against the Duke. Expulsion of the Jesuits from Parma; and a declaration published in answer to the Brief. Debates in Rome about the Jesuits. Benevento; and Corvo, taken by the King of Naples. Jesuits expelled from the Island of Maita. Unsuccessful applications made to the Pope by the allied Powers, for the revocation of the Brief against the Duke of Parma. King of Naples lays claim to Castro and Romeiglione. Duke of Modena lays claim to the Dutchy of Ferrara. Militia raised in the Ecclesiastical state. Regulations made by the Republic of Venice. The banished Jesuits expelled from Corsica. Letter wrote by the Pontist to the Empress Queen. Coercive measures pursued by the court of Naples, in regard to the clergy.

CHAP. IX.

Corfica. Conduct of the French previous to the invasion. Engagements, between Bastia and Fiorenzo. The communication opened between these places. Furiani and several other places taken. French invade Casinca; are obliged to repass the Golo with loss. M. De Grand Maison sacks Oletta; is attacked by the Corsicans at Murato; obliged to desert his campat night, and retire to Oletta. French besieged in Borgo; M. De Chauvelin marches to their relief, is deseated by the Corsicans. Garrison of Borgo surrender prisoners of war. Inessectual attempts of the French, upon Pietra; and Isola Rosse.

CHAP. X.

War in India. Hyder Aly and the Nizam defeated by Colonel Smith:

Peace concluded with the Nizam. A squadron fitted out at Bomboy;

Mangalore taken, and Hyder Aly's ships seized. Great distaits action excited, by the new laws imposing duties in the Colonies. Boston resolutions. Circular letters sent by the Assembly. Secretary of State appointed for the Colonies. A requisition made to the new Assembly. Answers to the Secretary of State's letter, and to the messages from the Governor. The Assembly dissolved. Disturbances caused by the seizure of a sloop. The Commissioners of the Customs retire to Castle William. Proceedings of the Town-meeting; of the Commistee of Convention. Troops and ships of war arrive from Halifax and Ireland.

CHAP. XI.

State of the Ministry. The Parliament meets. The King in his Speech recommends a particular attention to the distresses of the people, occasioned by the high price of provisions. Petition from the City of London on that subject; proceedings and debates thereon. A new Bill for restraining East India dividends. Petition against it from the Company. Great debates on the subject; the Bill passes. Motion for bringing in the Nalium Tempus Bill. Transactions relative to that motion. Great debates thereon; the affair deserved to the next session. A Bill passed for limiting the duration of the Irish Parliaments. An end put to the session; Parliament dissolved, and writs issued for a general Election. New Parliament meets; address on the late dissurbances; Provision Bills renewed; the Parliament adjourns.
